To the first question, *ex vi termini*, there can be but one answer—in the affirmative. Nor, secondly, can we imagine that any change in the flags would alter the commercial relations of the two countries to the United States, or have any effect upon the spirit of enterprise which makes Norway's ships outnumber Sweden's upon the ocean, and Sweden's commerce greatly surpass Norway's in volume and importance.—Ed. Nation.]

A QUESTION OF GERMAN SYNTAX.

To the Editor of The Nation:

Sir: In a review of Sawyer's 'German Grammar' the *Nation* of October 19 says:

"But few blemishes betray that German is not the author's native language. On page 106 we find the rule that the pronoun follows the sex (and not the grammatical gender) in 'Ein Mädchen *die* etwas von sich hält,' and 'Welches Weib *die* zehn Groschen hat.' The contrary rule generally holds good in the best writers."

You have here hit upon a point in German syntax which, if it is to be discussed at all, deserves more careful treatment. If, however, only a brief statement is to be made, Professor Sawyer's is more nearly correct than his critic's.

Professor Whitney says:

"As a general rule, the pronoun of the third person, in the singular, takes the gender of the noun to which it relates. Excepted from this rule are such words as *Weib*, which are neuter, though designating female persons; also diminutives of personal appellations, such as *Mädchen, Fräulein, Knäblein:* a pronoun referring to one of these usually follows the natural gender, instead of the grammatical" ('German Grammar,' § 154, 1).

So Heyse's 'Schulgrammatik,' edition of 1872, page 362, reads:

"Wenn Personen mit sächlichen Substantiven benannt werden, namentlich mit Verkleinerungswörtern (wie: das Söhnchen, Mädchen, Fräulein, etc.), verkleinerten Eigennamen (wie: Hänschen, Gretchen, etc.), oder den Wörtern das Weib, das Frauenzimmer: so gebraucht man ein Adjectiv oder Pronomen im Verhältnisse der Beziehung zu einem solchen Substantiv in der Regel in der männlichen oder weiblichen Geschlechtsform, lässt also im Fortgange der Rede das Sprachgeschlecht dem natürlichen Geschlechte weichen. Dies geschieht jedoch allgemeiner beim weiblichen als beim männlichen Geschlecht, und um so nothwendiger, je entfernter und loser das Beziehungsverhältniss ist."

Finally, Sanders's 'Wörterbuch der Hauptschwierigkeiten in der deutschen Sprache,' edition of 1879, the most recent authority, contains the following:

"Fügung nach dem Sinn: 1) Namentlich bei Fürwörtern, in Bezug auf das natürliche statt des grammatischen Geschlechts: a) Verkleinerte weibliche Namen: *Das* (nicht: *die*) fleissige Hannchen, etc. Dagegen: 'Wie befindet sich Hannchen?' *Sie* (nicht: es) ist wohl. Mundartlich freilich auch hier das Neutrum, s. zahlreiche Belege in Auerbach's Dorfgeschichten, etc. . . . —c) Bei Fräulein finden sich selbst die davorstehnden Artikel, etc., im Femininum (neben dem Neutrum). . . . —o) Das Mädchen, häufiger folgt sie, etc., als es, etc. . . . —s) Ein Weib, *das*, etc.; *es*, etc.; häufiger: *die*, etc.; *sie*, etc., und in Vermischung beider Fügungen."

On considering these statements and examining the instances of this idiom which occur so often in German literature and in German conversation, it is apparent that agreement according to grammatical gender takes place only when the neuter substantive, as such, is distinctly in mind; but as soon as this impression fades, and only the personality referred to by the substantive is prominent in the mind, agreement according to natural gender at once takes place. So a relative pronoun immediately following its antecedent, especially when the pronoun is restrictive, readily (but not necessarily) agrees in grammatical gender with its antecedent, but a personal or a possessive pronoun, coming a little further on, almost invariably follows the natural gender.

Furthermore, a desire to speak accurately, when not accompanied by a thorough knowledge of those syntactical laws of which grammatical rules are but the development, often leads even good writers to twist their mother-tongue into a constrained and artificial form. So some Germans would say: "Ich habe das Mariechen gestern gesehen; es sollte mich nicht wundern wenn *es* nicht lange lebe." It is the same ignorant seeking after correctness that leads some among us to say: "It looks so *prettily*, but twenty-five cents *are* too much for it."

Very respectfully, GEORGE HEMPL.

LA PORTE, IND., October 22, 1882.

[Our remark had reference strictly to the *relative* pronoun immediately following the noun in the sentences quoted, and we qualified it by saying: "The contrary rule *generally* holds good in the best writers." Neither Professor Whitney nor Heyse contradicts us; both elucidate the subject with reference to the *personal* or *possessive* pronoun following the noun more or less remotely. We fully agree with their conclusions as summed up by Mr. Hempl. But does he not adopt our view when he states that "a *relative* pronoun immediately following its antecedent, especially when the pronoun is restrictive, *readily* (but not necessarily) agrees in grammatical gender with its antecedent"? With all deference to Sanders's "häufiger: *die*," it remains to be shown that the best writers do generally say: "Welches Weib *die*," etc., and "Ein Mädchen *die*," etc.—ED. NATION.]

THE *MONITOR* AT HAMPTON ROADS.

TO THE EDITOR OF THE NATION:

SIR: In my 'Young Folks' History of the War for the Union,' which you were kind enough to commend at the time of publication, occurs the following sentence (p. 235):

"The authorities at Washington, frightened at the prospect of a visit from the *Merrimac*, had telegraphed to have the *Monitor* sent there as soon as she should arrive at Fortress Monroe; but Captain Marston, thinking it important to do what he could to save the rest of the fleet, ordered Lieutenant John L. Worden, her commander, to go to the aid of the *Minnesota*."

Exceptions have been taken to this passage by some of the participators in the event, and as it has seemed to me important to settle the question of responsibility for the action of the *Monitor* on that ever-memorable Sunday, I have been at some pains to investigate the facts through official sources not easily attainable when the earlier histories of the war were written. From these it appears that the Navy Department concentrated at Hampton Roads five frigates, principally in expectation of the coming of the *Merrimac*; that the *Monitor*, then building, was urged to completion, and ordered to go there on the 20th of February; and that upon the solicitation of General Wool, who said that Newport News was to be attacked, two frigates—the *Congress* and the *Cumberland*—were anchored off that point. So far as the Navy Department was advised by the officers (both Army and Navy) at Hampton Roads, the force there was ample to take care of the *Merrimac*. There was nothing asked for that was not at once provided. The construction and projected raid of the Confederate vessel had been duly reported to Captain Marston, the senior naval officer at the Roads, by Union friends at Norfolk. As early as February 11, that officer wrote to the Department that a Russian who had worked on the *Merrimac* had informed him that she was coming out of dock, and was not a failure. His despatch closed by saying: "I trust that we shall be able to give the Rebels a warm reception." This was the tone of all letters, official and private.

General McClellan's plan to move the Army of the Potomac, in March, 1862, back to Annapolis, and thence down the Chesapeake and up the Rappahannock to Urbana, in the rear of the Confederates, was finally consented to by Mr. Lincoln, on condition that the major part of the army should go down the Potomac; and to effect this he desired that the Confederate batteries along the river should be taken. In consequence of this, and not on account of any fear of a visit from the *Merrimac*, a telegram, dated March 5, was sent to Baltimore, to go thence by boat to Hampton Roads, directing Captain Marston to send the *Monitor* to Washington. The next day it was found that she had not left New York, and a telegram of similar purport was sent there, but she had sailed before this was received. On the 6th, Captain Marston was directed to send two frigates into the Potomac, with the object of clearing it of Confederate batteries to permit the passage down of the army, as the President desired. But upon the representation of Assistant-Secretary of the Navy Fox that, as the *Merrimac* was expected daily, no part of the force at Hampton Roads should be withdrawn without the approval of the commanding officers there, Captain Marston was directed to suspend this order until the arrival of the Assistant Secretary of the Navy, who was sent to Hampton Roads by the President, to make such orders as the exigency demanded, after consultation with the commanding officers there.

Mr. Fox arrived at the Roads Sunday morning in time to witness the first iron-clad contest, but one day after the *Merrimac* had made an end of wooden navies forever. The *Monitor* had arrived the evening before, after the destruction of the *Congress* and *Cumberland*, and had found the *Minnesota* ashore and the whole fleet, so confident before, utterly helpless. Of course Captain Marston did not deliver to Lieutenant Worden the order of the Department to come to Washington. If he had done so, Worden, according to military usage, should have disobeyed it. History does not forgive Marshal Grouchy for standing on the technical orders of the Emperor, on the 18th of June, instead of marching to the field of Waterloo, the cannon of which he could hear.

After the repulse of the *Merrimac* and the saving of the *Minnesota*, telegraphic communication was established for the first time between Washington and Hampton Roads, and the Assistant Secretary sent to Mr. Welles a concise account of the fight. But during the interval of one day between the news of the havoc made by the *Merrimac*, and that of the arrival and gallant stand of the little *Monitor*, a panic arose, beginning at Hampton Roads with the reaction from over-assurance, which spread all over the North. Admiral Dahlgren and the Quartermaster-General proposed to block up the Potomac River; and Secretary Stanton ordered a telegram sent to Commodore Vanderbilt asking him to enter into a contract to destroy the *Merrimac*. In spite of this panic General McClellan determined to use Fortress Monroe as a base, and sent General McDowell to Assistant-Secretary Fox to get his opinion in regard to the *Merrimac's* field of operations. He received from the General the following telegram in answer:

"WASHINGTON, D. C.,
"March 13, 1862, 9:15 P. M.

"*Major-General McClellan:*

"I have seen Fox. He says the *Merrimac* is not able to come into the Chesapeake, and is slower than the *Monitor*. The latter fought under very disadvantageous circumstances, is uninjured, and is capable of mastering her adversary. He seems to regard the operations of the *Merrimac* as confined to Hampton Roads above the Fort. The Secretary has telegraphed concerning Burnside and Wool. No troops ordered to Fremont from this army. IRVIN MCDOWELL,
"Brigadier-General."

The Confederates justly claimed a victory on the 8th of March, and they tried hard to make their people believe that they drove the *Monitor* away on the 9th. But on that day J. P. Benjamin, their Secretary of War, telegraphed to General Huger at Norfolk to know why the *Virginia* withdrew "without destroying the *Minnesota*." Huger answered on the 10th: "Erickson battery prevented the *Virginia* from taking *Minnesota*, which got off, and has gone to Hampton Roads."

This is a confession of that which history has already settled—that Lieutenant Worden in the *Monitor* bravely prevented further destruction by the *Merrimac*. Furthermore, he acted wholly on his own responsibility, for it does not appear that he received any orders, either from Washington, or from his superiors at Hampton Roads. JOHN D. CHAMPLIN, JR.

FREE CANALS.

TO THE EDITOR OF THE NATION:

SIR: I have been somewhat disappointed every week for some time that my *Nation* has offered me nothing on the question of "free canals," except here and there what seems to me a tacit approval of the apparently popular notion that the constitutional amendment about to be voted for is a "good thing," and "should be carried." To me this is not so obvious as not to need discussion. I rather incline to the belief that the canals should not be free, and will vote in accordance unless I am otherwise convinced before the time for doing so.

If you can afford me space to repeat them, I find the advocate of "free canals" offering three main reasons for his views: first, they will regulate the charges of the railroads; second, they will reduce costs to the consumers; and, third, they will induce business to enter the State.

Now, as to the first, we know that at the same cost the railroad is the preferred carrier; hence if the railroad can compete with the canal as to cost, the canal will be worthless, and so, falling into disuse, will preclude any expense for maintenance. But if the canal, being free, can so far reduce the cost of transportation below the railroad as to become preferred, the railroad will be regulated "out of existence" as a freight carrier at every point where it meets the canal as a competitor, and this is far from desirable. Either case, then, seems to me to demonstrate that the railroad is a subject for other and better regulation than by the canal; namely, by a commission.

The second reason, I think, belies itself. For while in some cases in connection with this subject the taxpayer is a consumer, in most others the consumer is not a taxpayer. This is obvious when it is known that the canal carries for other States and countries than our own. But even if every consumer of the goods carried over the canal were a citizen and taxpayer of New York, I think it can be shown that the producer would receive some of the benefits of a free canal.

What is offered as a third reason, I am not prepared to deny as a simple fact; but its value as a reason strikes me as very slight. The canal as a highway is at best an artificial one, more so, to my thinking, than the railroad. I also think that trade which does not come naturally, will be found generally to benefit but comparatively few—how few in this case will be seen by any one who candidly considers the number and mode of distribution of our State's population. Should not, then, they who wish to follow a particular form of trade, do so at its natural place of settlement? This with reference to the particular class of men who seem most anxiously interested in the canal question.

Not to multiply words, I think that some reasons why the canal should not be free will be found in my consideration of those given as why it should. There are others important to be considered by the agriculturists of the State, whom they mostly concern.

These views are only presented to know whether their author or the great mass of his fellow-citizens most need enlightenment on the subject of them. If you show this, you will greatly favor at least the former, and perhaps many of the latter.—Very respectfully,

S. W. S.

New York, October 28, 1882.

Notes.

Mr. W. M. Griswold has added a tenth number to his Q. P. Indexes (Bangor, Me.), in the shape of a 'General Index to the *North American Review*' for vols. 92-134, covering the years 1861-1882. For the volumes 92-125 it competes with the corresponding portion of Mr. Cushing's *North American* Index, and, of course, is less full, though it adds some topics. Mr. Griswold has hit upon a most happy device for a seal or stamp or trade-mark upon the cover of this volume. In very artistic fashion it illustrates Pope's distich:

> "How index learning turns no student pale,
> Yet *holds the eel of science by the tail.*"

T. Whittaker will shortly issue 'Edens of Italy,' by the Rev. Joseph Cross, D. D., embellished with more than one hundred fine woodcuts, and duly provided with an index and a map.

Macmillan & Co. will be the publishers of the first complete edition of the poet Gray's writings ever attempted, the editor being Mr. E. W. Gosse, who has lately, in the "English Men of Letters," given evidence of special qualifications for the task. It is hardly probable that any of Gray's MSS. are preserved in this country, but Mr. Gosse desires to learn of them anywhere. His address is 29, Delamere Terrace, W., London.

While Mr. Bernard Quaritch is bringing out photolithographic facsimiles of the most important Shakspere Quartos, executed by W. Griggs, under the superintendence of Mr. F. J. Furnivall, a "Unique Edition" of the dramatist's works is being undertaken by William Paterson, Princes Street, Edinburgh (New York: J. W. Bouton). The text of the Folio of 1623 will be followed verbally and as regards the spelling and punctuation, in this edition, and "will thus," to quote the publisher's prospectus, "appear for the first time in a handy form and in clear, legible [last century] type." The second original feature will be thirty-eight etchings by M. Monziès, after designs by M. Pille; for this kind of art has never before been employed to illustrate Shakspere's collected works. The paper will also be of a sort never before used in book-printing. There will be four impressions, with every copy numbered; and the set of eight volumes will cost accordingly from $120 to $28.

Mr. Quaritch is engaged in publishing a series of photo-chromo-lithographic representations of the industrial art of all nations, chiefly selected from the collections of the South Kensington Museum, Mr. Griggs again being the executant. They appear in "portfolios" in shilling parts, containing two plates each.

The fourth volume of Stewart and Long's translation of 'Plutarch's Lives' (London: Geo. Bell & Sons) has come to hand. We have already, in the case of each of the preceding volumes, expressed our opinion of the task now completed, and deem it unnecessary to submit this one to a critical examination.

The Longfellow Engraving Co., of this city, send us a line-and-stipple engraving by Samuel Hollyer, representing the poet in his study, and as if pausing in the midst of composition. As a work of art this plate, which measures 14 x 20 inches, cannot be very highly praised either for the mechanical execution or for the draughtsmanship. Luckily, however, the face is the best part of the performance, and those who hang the print on their walls will have a fair reminder both of the man and of his workshop.

Latest of the series is 'The Bryant Birthday Book,' arranged by Janet E. Ruutz-Rees, and published by Appleton & Co. Its broad pages are rubricated, and there is an excellent steel-engraving of the poet.

And the newest calendar is 'Kate Sanborn's Sunshine Calendar' (Boston: Osgood), with the usual block for the days of the year, to each leaf of which a cheerful verse or prosé anecdote or sentiment is assigned.

Two "first numbers" of new periodicals lie on our table. One, a monthly, *Capital and Labor*, is the avowed "organ of the manufacturers in the labor question, and devoted to their interests generally"; but not alone to their interests, as is shown by several articles on "Industrial Arbitration and Conciliation," "Practical Operation of Arbitration and Conciliation in France and England," "Arbitration in the United States," and "Pensions and Benefits in Industrial Establishments." The editor and publisher is Mr. Charles Lenz, at 23 Park Row. The other magazine is a quarterly, and illustrated, and is called the *Gallery of Spirit Art*. It is enough to say that it supplies the world for the first time with an authentic likeness of Confucius (to mention no other of the famous men of antiquity whose portraits are also given). We owe these precious productions to Mr. and Mrs. Anderson, working under spirit influence (Leonardo da Vinci being "the ornamental artist," when his services are required). We are told that the picture is invariably painted upward from the feet, in order to give the spirits "all the time possible to practise on the face and expression."

It would be worth the cost of Lieut. Thomas Symons's 'Report of an Examination of the Upper Columbia River,' just issued from the Government Printing Office, if his suggestion looking to a new name for Washington Territory when it becomes a State should be carried into effect. He proposes Tacoma, which is the Indian name of Mt. Ranier, "the highest and grandest mountain" in the Territory, and of Alpine difficulty in the ascent. The report contains much interesting matter, original and incorporated, concerning a region destined to sustain a vast and prosperous population. The Upper Columbia is chartered anew.

The London *Spectator* has discovered perpetual motion. Recording the trial of a launch which was driven on the Thames eight miles an hour against the tide by forty-five electrical accumulators, each of ten-inch cube, it says "the practical problem must be to reduce the size and weight of the accumulators. Once small enough to be carried, they might drive a steamer across the Atlantic, *being perpetually recharged by a dynamo driven by the motion itself.*"

Following the example of Bibliophile Jacob, M. Arsène Houssaye reviews in *Le Livre* for October his own literary career, setting forth the order and origin of his writings, their successes and failures, and summing up the result with a melancholy forecast of speedy oblivion. On the other hand, *Le Livre* helps to perpetuate his memory by means of a fine engraving of his handsome English or German, rather than French, face. Among the book reviews we notice one of Mallock—'Vivre: la vie en vaut-elle la peine'; one of Yves Guyot, 'La Prostitution,' the too reckless author and his temperate reviewer agreeing that Government inspection of prostitutes is an evil which ought to be abolished; and one in highest praise of Larousse's new 'Grand Dictionnaire Universel du XIXe Siècle.' The news department contains the circular addressed to all the French councils-general by the committee in charge of the statue to be erected in honor of J. J. Rousseau.

—To a portrait of Col. Richard Varick (one of Arnold's military family at the time of his treason), in the November number of the *Magazine of American History*, the editor, Mr. Henry P. Johnston, adds some very interesting inedited particulars of the circumstances of the exposure and flight of Arnold. Mr. John B. Dunbar concludes his instructive papers on "The Pawnee Indians: their Habits and Customs"; and among the Minor Topics the question of the Washington pedigree is mooted in connection with representations of the carved coat of arms of the Northampton Washingtons at Sulgrave manor, and of the brass inscription of the tombstone of Lawrence Washington, Gent., 1564. The *Pennsylvania Magazine of History and Biography*, No. 22, has naturally much to say of William Penn and the bi-centenary which has just been observed. Mr. F. D. Stone, the Librarian of the Historical Society, reprints Philip Ford's "Vindication" of the founder during his absence from England, and in a separate paper discusses with much learning and fairness the question whether Penn's Treaty with the Indians took place in 1682 or 1683, making a good case in favor of the latter date. Mr. Stone even concludes that the Shackamaxon elm has a fair title to the honor ascribed to it by tradition of marking the spot where the treaty was concluded. We notice, by the way, that the late popular celebration of Penn's landing at Chester and Philadelphia was in accordance with the old-style date, and that the Historical Society stood upon its dignity, and will hold its

own festival on November 8. This well illustrates the contest between scholars and the public over the Pilgrim anniversary in Massachusetts. We may as well mention here a handsome privately-printed volume, in which Mr. George L. Harrison describes his bootless errand last year, as State Commissioner, to negotiate the transfer of Penn's remains to Pennsylvania, in accordance with a resolution taken by the State Legislature. The numerous views of Stoke-Poges, of the Penn graves and the adjoining Jordans' meeting-house, at Newport Pagnel, of Isaac Penington's Grange, of Milton's Cottage at Chalfont, etc., with the author's account of his visit to the obscure burial-lot, make 'The Remains of William Penn' a valuable memorial. But the student of character will perhaps find his edification, and certainly his amusement, rather in the documents showing the English Quaker way of thwarting the Commissioner. Mr. Harrison admits that he got no support from the Friends on either side as a body. One curious fact mentioned by him is that a Colonel Stuart, a lineal descendant of Penn, and his co-heirs in England, are in receipt of an annuity of $20,000 from the British Government, in recompense for the Penn estate in Pennsylvania confiscated during the Revolution. This group naturally preferred *quieta non movere*.

—The first number of *Longman's Magazine* contains a table of contents in which there are to be found in due proportion science, fiction, literature, poetry, and what for want of a better term we may call sociology. Mr. Howells has a pleasant article on Lexington, which will probably be read with a more intelligent interest by Americans than by Englishmen. Mr. Anstey, the author of 'Vice Versâ,' contributes a farcical story called "The Black Poodle"; the author of 'John Halifax,' a poem called "Departed"; Mr. Freeman, "Some Points in American Speech and Manners"; Mr. Tyndall, an article on "Atoms, Molecules, and Ether Waves"; James Payn, the opening chapters of a serial called "Thicker than Water," and Richard Owen, some comfort for anti-Darwinians in the shape of a discussion of "Our Origin as a Species." As all these writers' names may be found on the title-pages of other magazines, and the subjects they write about are not in the main new ones, it is not easy to see what special claim upon public attention *Longman's* is expected to have beyond its cheapness. This undoubtedly does constitute a claim, for cheap magazines containing varied tables of contents will probably always find readers. It is an evidence of the publishers' enterprise that they have not failed to secure in Mr. Freeman the services of an international observer. No magazine which tries to do its whole duty by its readers can afford to neglect this, and what Mr. Freeman has to say about American speech and customs will find *Longman's* some American readers. It is a very civil article, and not likely to offend any one on either side of the Atlantic. To our minds it is more readable than the other articles on America which Mr. Freeman has been publishing lately, though very little of it is new. A good deal of the current speculation about the differences between the American and English use of words is of little value, because it leads to nothing. Mr. Freeman confesses himself unable to solve the mysteries involved in our use of the words "store" and the term "dry-goods." We doubt if they can be solved. He does not notice the fact, by the way, that when ladies go to a "dry-goods store," they are always said to be "shopping" and never "storing." Will not some "Britisher," as Mr. Freeman calls himself, who has the leisure, look into this? Mr. Freeman appears to be an acute observer of linguistic differences, but having been in this country only a few weeks, he is hardly in a position to write with authority on minute dialectic differences. He pronounces the Virginian kyarter, kyar, kyard (carter, car, card) to be genuine "West-Saxon," which may be true, for all we know; he does not discuss the question whether a great deal of the softening and modification of vowels in the South is not due to West-African influence. When a man once fairly abandons himself to the passion for analyzing linguistic differences, the lengths to which he will go, no matter how great his original caution, are amazing. Mr. Freeman has a little essay on the last letter of the alphabet, in which he declares that in New England it is always *zee*, in the South *zed*, while "Pennsylvania seems to halt between two opinions." *Zee*, he says, is a "schoolmaster's device" for getting rid of the strange sounding *zed*, but really the letter ought to be pronounced *ez*—a sound unheard from the lips of child or adult, so far as we know, in any part of the British empire, or even in our own free land.

—Military desertion is discussed in a somewhat rambling way by Colonel Holabird in the *United Service* for November, with the promise of a continuation. The evil is grave, and our Army has suffered from it ever since we have had an army. But the bulk of the desertions during the Rebellion (to which the writer refers with what seems exaggeration) and those now going on are essentially different in cause. The present necessity for enlisting three men where two are wanted depends quite as much upon civil as upon military failings. The average civilian will harbor and protect the deserter—or certainly will not report him—under the feeling that he is shielding a fugitive from a merciless despotism. The same man would be prompt to point out a runaway policeman or a watchman who had betrayed his trust, while the soldier who violates his oath is regarded as a fugitive from bondage. It is partly owing to this false and lax public sentiment that the mass of desertions are of those who have served the shortest time. Recruits in their civil training have not been educated to regard the military oath with solemnity, and they repudiate the contract without compunction whenever it seems to them desirable, encouraged further by the knowledge that, once free from actual military surveillance, the odds are against their apprehension. Undoubtedly there are impelling causes from within; there are many inconveniences, there is often hardship, there is sometimes injustice. But that these are not vital, follows from the rarity with which old soldiers desert. The crime is in inverse proportion to the length of service. Colonel Holabird makes in this first paper various suggestions looking to the amelioration of the condition of the enlisted men, some of which seem practicable and others appear hardly feasible. But the subject is one of importance, both in dollars and in morals, and deserves all the study that civil and military philosophers can bestow.

—The *Churchman* has been guilty of a piece of "journalism" of which a religious paper ought to be ashamed, in asserting that the *Nation* had made "the rash statement" that when Dr. Pusey was called to a Professorship at Oxford "no clergyman in the Anglican Church knew any Hebrew." The *Nation* made no such statement. What it said was, that "the best that has been said for him [as a Hebraist] is, that the chair which he took when no clergyman in the Anglican Church knew any Hebrew, did not decline in his hands." This was true at the time it was written. Inaccurate quotation to the detriment of an adversary is a peculiarly grave offence in a religious paper.

—A recent number of the *St. James's Gazette* has given some interesting figures showing the growth of English commercial interests and the general progress of the nation during the reign of Queen Victoria. The increase in manufactures is fairly indicated by the figures connected with seven of the principal items of commercial activity. In 1840 the power of stationary engines employed was estimated at 600,000 horse-power, while in 1880 the estimate was 2,200,000. During the same forty years the production of pig-iron has increased from 1,396,000 tons to 8,326,000 per annum, and the production of coals from 36,000,000 to 147,000,000. The annual consumption of cotton has grown from 437,000,000 lbs. to 1,404,000,000, and the consumption of wool from 124,000,000 to 401,000,000. The value of cotton manufactures has increased during the same period from £26,000,000 to £95,000,000; and the number of yards of linen produced has grown from 186,000,000 to 429,000,000. These figures show that manufactures have increased in about equal ratio with the output of coal—that is to say, have about quadrupled. Meanwhile, the population has arisen only thirty-three per cent. It is interesting, also, to note that, while public wealth has more than doubled, it has multiplied the number of those who are above the need of public support. In 1850 the United Kingdom had 476 paupers per 10,000 inhabitants, while in 1880 the number was only 289 per 10,000—a decline of about forty per cent. In the same period the deposits in the savings banks arose from £28,000,000 to £81,000,000, or from the ratio of 21s. to 46s. per inhabitant. The probate returns also show that the proportion of persons leaving property at the time of their death has increased from one in thirty in the year 1837 to one in sixteen in 1880. Meanwhile the national debt has been reduced £19,000,000—from £788,000,000 to £769,000,000. These figures show that while in 1837 the debt amounted to 19.5 per cent. of the national wealth, in 1880 it amounted to only 8.8 per cent. The accumulative power of the country is still further shown by the fact that during the first decade of Queen Victoria's reign the number of new houses built annually was 39,100, while in the years from 1870-80 the average amounted to 80,300. This item alone shows that since 1840 the number of new houses built, not counting houses rebuilt, has been not less than about 2,218,000, representing an estimated value of £1,371,000,000, or about double the national debt. From these interesting figures the writer draws the singular conclusion that "bricklayers in twenty years have been able to pay off the public debt, or (which is the same) to increase the public wealth to that amount."

—There were three noteworthy educational events in Cleveland, Ohio, on Thursday of last week. Adelbert College, of Western Reserve University, was formally opened. Its name is significant. For many years Western Reserve College at Hudson, Ohio, has maintained a high position among all kindred institutions west of the Alleghanies. The Trustees have now removed the foundation from its rural site to an urban home, where two fine structures have been built by Mr. Amasa Stone in memory of his son Adelbert, who was drowned many years ago while a student in New Haven. The foundation, to which a medical school is already attached, will bear the name of Western Reserve University; and it is hoped that Adelbert College will prove to be the nucleus around which other educational establishments will be clustered, under a more complete university organization to be gradually developed. The nearest neighbor of Adelbert College will be the Case School of Science, which now occupies temporary quarters in the heart of the city, but will presently be removed to the fine site, at the eastern extremity of Euclid Avenue, given by the citizens of Cleveland to

the two kindred establishments. Just opposite this site is the Wade Park, a generous gift to the city from the gentleman whose name it bears. With these auspicious beginnings the citizens of Cleveland are not amiss in hoping ere long to see other magnificent gifts for such purposes as a library, a museum, an observatory, a laboratory, or a college for women. The outlook is one of the most promising in any part of the country. The opening ceremonies at Adelbert College included an address, on the "Dawn of a University," by President Gilman of the Johns Hopkins University, speeches in bestowing and accepting the gift by Mr. Stone, President Cutler, and ex-President Hayes, and after-dinner speeches by a large number of prominent men, chiefly from Cleveland and its neighborhood.

—In the afternoon of the same day, the Trustees of the John F. Slater Fund for the Education of Freedmen tendered the appointment of General Agent to Rev. Dr. Haygood, of Oxford, Georgia, who accepted it. He will at once begin to consider the methods for organizing the work intrusted to him, so as to mature a plan for the consideration of the Trustees when they meet in Atlanta next February or March. No income will be available for distribution until that time. As a basis for Dr. Haygood's plan, the Trustees have given him several suggestions looking toward the establishment of scholarships in existing institutions, which shall give instruction in manual arts as well as in mental training. Dr. Haygood impresses all who meet him as remarkably well qualified by character and disposition to deal with the great problem which he is called upon to investigate. Finally, on Thursday evening, before an immense assembly brought together by the American Missionary Association in the Tabernacle, the subject of national aid to public education was discussed in three admirable speeches—by ex-President Hayes, who reviewed the history of the various measures which have been brought forward in Congress, and presented the arguments from a statesman's point of view; by President A. D. White, who brought many historical illustrations to bear upon the problem, and incidentally proved the need of civil-service reform by showing how Congressmen were too busy with appointments, under existing circumstances, fairly to consider such a question as national preventives of ignorance; and, finally, by Dr. Curry, of Richmond, who appeared as the agent of the Peabody Trustees engaged in promoting Southern education through the operations of that fund.

—The three numbers of Memoirs of the Science Department of the University of Tokio (6, 7, 8) are among the most valuable as well as most interesting of the series. The "Report on the Meteorology of Tokio," and "The Wave-Lengths of some of the Principal Fraunhofer Lines of the Solar Spectrum," are by Professor T. C. Mendenhall, whose presence was noted at the Congress of Science at Montreal this summer. Since the birth of the science of spectroscopy, the length of a light-wave of given color has ranked among the most accurately determined physical constants; yet, as every student of spectroscopy is aware, these measurements (by Angström, Van der Willigen, and Mascart) differ very considerably, as is shown in Watts's Index of Spectra. The lack of agreement is so great—amounting in the case of some lines to two units—as to throw all the results seriously into doubt. The Tokio University having, early in 1880, received a spectrometer of unusual power and excellence of construction, the Professor of Physics spent the months of November and December, when unusually clear weather prevails in the Mikado's capital, in his researches. Employing the last refinements of the experimenter's art, and making due corrections, Professor Mendenhall secured results for eleven lines of the spectrum which accord very closely with Angström's, whose values have been held as the universally-recognized standard. The difference amounts in no case to a unit, whereas, in the case of other observers, the divergences amount to several units. In view of these facts, Professor Mendenhall's assertion is justified, "that any other wave-length measurements that differ widely or irregularly from these must be incorrect." It may be mentioned that Angström's splendid map of the spectrum, published in 1869, in which each characteristic ray is laid down according to its wave-length, contains about 800 lines. The laborious computation of eleven of these lines, yielding such closely agreeing results, strengthens the authority of Angström as well as adds to the reputation of the American investigator.

—Japanese weather appears to be far less fickle than common fame would lead us to suppose. By nearly all the apparatus known to the modern spy upon Nature, it has been scrutinized, interviewed, photographed, and reduced to diagrams. In addition to tables of barometer and thermometer readings, and charts of wind records, we have the force and direction of the moving air shown by loops or bags, which, despite their scientific surroundings, resemble closely the receptacle upon the back of Futen, the wind-imp or Boreas of native art. The rain-fall, humidity, the proportionate occurrence of wind and rain together, and the number of cloudy days are also depicted in the most suitable graphic designs, which the eye seizes at once. December is the finest month of the year, having the greatest number of clear days, and the rain or snow-fall being close to zero. January is nearly equal to December in fairness. The times of heavy rain are late in September, and in May or June. March is the month in which Futen is hardest at work, though, on October 4, wind reached a velocity of one hundred miles an hour. The column of mercury climbs highest in the thermometer in August, and in the barometer in February. Besides chapters on the local magnetism, and calculations of the height of Fuji-no-yama, the volume closes with an exhaustive essay on fires in Tokio, full of curious information, with a list of conflagrations since 1657. As even the capital city of the Mikado's Empire is built almost entirely of wood—until two decades ago having not one stone or brick house in it—the whole city is burned over twice in every century, and several of the most densely inhabited portions once in every seven years. These "flowers of Yedo" bloom very luxuriantly after earthquakes, which upset lamps and braziers, and attain their annual maximum in March, the month of high winds; so that a table of earthquakes and winds, and another of fires, make nearly parallel records. The abundant use of petroleum has of late years helped on the devastation. The average value of houses in Tokio is about $30 for every thirty-six square feet built upon, and, notwithstanding this cheapness of material, the absolute loss yearly to the citizens by fire is $3,000,000. Like the Americans, the Japanese prefer to pay a pound for prevention rather than apply an ounce of cure. Their building material is entirely from the lumber-yard. Their firemen, though brave, act without proper direction, and their apparatus is little better than a toy. Their only protection from the flames is heavy walled houses, which are nothing more than fire-proof safes set out on the street. These fire-proofs are made by plastering a foot of mud on heavy timber frames, and making the one door and very few windows of the shape and thickness of our ordinary office iron safes. On the approach of a fire, candles set in sockets are lighted to convert the air inside into carbonic-acid gas, in which no flame can live. The cracks of the shutters are smeared on the outside with mud, and the well-to-do shopkeeper sallies off to the lumber-yard to contract for new material before the wood-sawyers get up a strike, or the merchants a "corner" in building lumber. The recent introduction of brick as a material of construction may alter this state of things, which is, and has been for centuries, steadily draining the wealth of Japan.

—In the "Chemistry of Saké-Brewing," Professor R. W. Atkinson treats of the chemical history of the national beverage of the Japanese from the transmutation of the rice-grain into kōji or ferment until it becomes good beer —not "wine," as most tourists call it. Like almost all the arts of Japan, that of saké-brewing is referred to Corea. Perhaps we may say that it was not so much imported as brought over by a branch of the same race that anciently inhabited the peninsula and the archipelago alike. Saké is a clear, yellowish, unfoaming liquid, usually much stronger than common beer, which is drunk hot by the Japanese. To Westerners it has a more or less smoky taste, in which the raw alcohol does not appear properly covered up. Some varieties, however, are delicious, and others are sweetish. The saké receives various names which are more or less high-sounding. The native tapster, understanding well that the bouquet will be as fragrant, and the liquid taste inwardly better, by reason of quasi-medical names, wins over many an outwardly professing teetotaller and the Timothys of Tokio who crave a little wine for the stomach's sake. Without the aid of printer's ink, or the board-fence, he beats his American rival in advertising drams "strictly for medicinal purposes," and the plain brew of rice blooms on the shop signs as "Long-life-and-never-grow-old-Spirit," "Wine of a Thousand Years," "Tortoise-longevity Cordial." These tonics are warranted "to strengthen the body against the decay of old age, increase the energies, reform all trouble within the viscera, to smooth out wrinkles, and make the old face young again. The "Eye-openers," "Essence of Long Life," "Spirit of Violets," "Honeysuckle Nectar," and "Blood Purifier" are drunk in quantities which afford about one-fifth of the total revenue of the Government. Some idea of the industry of saké-brewing may be obtained by remembering that the total acreage of rice-fields in Japan in 1878 was 3,947,268 acres, yielding 138,964,000 bushels of rice, or, on an average, thirty-five bushels to the acre. Of this amount enough grain was taken to produce 206,756,409 gallons of rice-beer, which with license fees yielded in revenue 10,795,025 *yen* or dollars, the total estimated revenue of the Government being 56,616,907 *yen* or dollars. The annual consumption of saké is six gallons per head, reckoning the population at 33,000,000 souls; or, if diluted to the ordinary strength of English beer, the rate is twelve gallons per head. In England the rate of consumption of beer is thirty-four gallons per head. The difference is to be ascribed to the enormous consumption of tea in Japan, which serves at all times, in summer and in winter, as the most common beverage. The percentage of alcohol in ordinary saké is about twelve per cent. To preserve it in hot weather it must be heated repeatedly, and one purpose of Professor Atkinson's valuable monograph is to call the attention of Japanese brewers to improved European methods and machinery for abbreviating the tedious and expensive native process. We may add our hope that the Japanese Government may not, in consequence of its action in recently doubling the taxes on saké production, be troubled by the growth of "moonshiners"; and that the happy coöperation of workers in industrial and pure science illustrated in Professor Atkinson's me-

moir may continue, with increasing advantage to the sum total of existing knowledge.

—Theological literature has lost one of the most diligent workers in its field in the person of Johann Jakob Herzog, so widely known as the editor of the 'Realencyklopädie für protestantische Theologie und Kirche,' who died in Erlangen at the end of last month. He was born in Basel in 1805, studied at the university of his native city, and subsequently in Berlin, and in 1835 became Professor of Historical Theology at the Academy of Lausanne. Here he published, in 1843, a life of Œcolampadius, in two volumes. The religious strifes which in 1847 culminated in the war of the Swiss Sonderbund induced him to resign his professorship a year before the outbreak. He was shortly after appointed Professor at the University of Halle, and in 1851 was sent by the Prussian Government on a literary journey through western Europe, with the object of collecting materials for a history of the Waldenses, which he issued in 1853, under the title 'Die romanischen Waldenser.' In 1854 he became Professor at the University of Erlangen. In the same year he began the publication of the theological cyclopædia on which his fame rests. It was finished in 1868, in twenty-two large volumes, including a supplement. The coöperation of a vast number of scholars of eminent rank made it a work of high authority and great critical value, though the general tenor of its historical criticism was strongly affected by theological prepossessions. Herzog retired from the University in 1877, having previously begun a new edition of his cyclopædia, with the editorial assistance of Professor Plitt. On the death of the latter, Professor A. Hauck became associate editor. Of this edition ten volumes have appeared. Shortly before his death, Herzog completed his 'Abriss der gesammten Kirchengeschichte,' in three volumes.

—In John Arany (Arany János), whose death was announced a few days ago, Hungary has lost the last of her three favorite poets of the revolutionary era. The youngest and greatest of the three—the greatest, in fact, of all Magyar poets—Petöfi, born in the first hour of the year 1823, died as early as July 31, 1849, or at least disappeared on that day, on the battle-field of Schässburg in Transylvania, where the Hungarian army under Bem succumbed to the Russians. Tompa, born in 1819, died in 1868. Arany, the oldest, born in 1817, survived this rival fourteen years, and his unrivalled friend thirty-three years—"that genius," of whom he once sang that

> "He came and vanished, as the comets soar,
> But once seen by an age, and never more."

Arany died almost at the moment when the first national monument to Petöfi was unveiled at Buda-Pesth. The three poets were of a kindred spirit in life and song—patriotic, freedom-loving bards of nature; sentimental admirers of their country's plain; fanciful imitators of her folklore. Petöfi excelled chiefly in lyrics, Tompa in legends and fairy-tales, Arany in comic epics. Petöfi was the most original and most striking, Tompa the most feeling, Arany the most humorous. A peculiar national flavor distinguishes the verses of all the three; it is stronger in Tompa than in Petöfi, and surpassingly charming in Arany. None of them will ever be well translated; Arany's diction is perfectly inimitable. His fame will probably conventionally rest on his "Toldi" (an epic in twelve cantos, which won the prize of the Kisfaludy Society in 1847) and its complements, "Toldi estéje" ("Toldi's Evening," 1854) and "Toldi szerelme" ("Toldi's Love," 1880). The hero of the trilogy is a legendary Hungarian Samson, whom popular tradition vaguely connects with King Louis the Great in the fourteenth century, or King Matthias Corvinus in the fifteenth. The most prominent of the poet's other epics are "Nagyidai cigányok" ("The Gipsies of Nagy-Ida," 1852) and "Buda halála" ("Buda's Death," 1864). His minor poems are very numerous. He excelled also as a literary critic and editor, and as a translator, his translations including several plays of Shakspere. He became a member of the Hungarian Academy in 1858, and its Secretary in 1861.

—The spelling reformers may be pleased with the argument in their favor which is furnished by the continual mistakes of foreigners, even the most careful, in spelling extracts from English works. The *Bulletin Critique*, for instance, which revels in the mistakes of unlucky editors of Greek or Latin or early French texts, quotes from the *Athenæum* about Renan's 'Ecclesiastes,' "He accept nearly alle the emendations in the text proposed by prof. Graetz, and adde some of his own." And on the same page (v. iii., p. 158) it speaks of the 'Dictionary of Anonyms' of M. Halekt (Halkett). Petzholdt, in his *Neuer Anzeiger*, seldom quotes an English title without a misprint, mentioning, for example, "the *Bibliographer*, a journal of book-love," and citing from an English paper the fact that American libraries are "Boycolting English sensational fiction."

—Readers of 'Vingt ans après,' and of the 'Vicomte de Bragelonne,' may remember that the English of those entertaining works is far from being above reproach. And speaking generally, it is fair to say that only American auction catalogues equal the blunders of reputable foreign works. The last we have seen was from a place where errors might be expected, a Paris journal, which said that "*La France* a envoyé un de ses rédacteurs à Naples pour interwiewer M. de Lesseps." Perhaps it was thought in this case that the act—unknown twenty years ago in France—had become so thoroughly naturalized that it deserved a French orthography. How completely it has been adopted, so that in fact the pupils have far distanced the masters, was shown lately on occasion of Mlle. Feyghine's suicide on account of her desertion by the Duc de Morny. The reporter forced himself into the Duke's hôtel, in spite of the obstruction of the "concierge, homme poli mais glacial," and rewards the Duke for receiving him by describing him as having a "physionomie assez banale." Then he went to the Russian Church, where the second pope, who received him, is described as being in a most disorderly parlor, and having a dirty beard and, apparently, manners to correspond, for he declares that the doctor was right in calling Mlle. Feyghine mad—she must have been mad to kill herself for a De Morny: she ought to have spat in his face. Then he goes to the hôtel of Mlle. Feyghine, and thence to her teacher, M. Worms, of the Comédie-Française, who will not believe that she slew herself for love, since De Morny is "so insignificant." Finally, to leave no stone unturned, he "interwiews" the mistress of another duke, who may be supposed to know the rights of such matters, and here again the poor Duke comes off badly: "She might have become an artist, with study; as a woman she would have gained by losing the Duke." It is plain that in one branch of journalism the politest nation in Europe has nothing to learn from us.

MR. WILKINSON'S WEBSTER ODE.

Webster: An Ode. O nostrum et decus et columen. 1782–1852. Chas. Scribner's Sons.

He who fancies an ode to be a fountain of brilliant words, rising in symmetry and falling in spray, will hardly find what he expects in this sumptuous quarto volume. The ode on Webster has the somewhat rugged style that belonged to the verse of our revolutionary period, and rather suggests "Adams and Liberty" or the "Columbian Oracle" than an age of more smoothly-flowing strains. Indeed, these prolonged fifteen stanzas more resemble the heads of a discourse or the successive points of a lawyer's plea than any recognized poetic model.

This the author, indeed, frankly recognizes, for he honestly states that his object is truth, not poetry; that his work is "an attempt to revive a sentiment far gone toward being extinguished in the public mind" (p. 43); that, in short, he will be satisfied with nothing but a complete vindication of the public and private fame of Mr. Webster. "The attempt will not succeed," he admits, "and it ought not to, unless the accusations against the uprightness of Webster's character can be shown to be in the main unfounded" (p. 43). For this Mr. Wilkinson gives us forty pages of laborious rhyme; for this he adds more than eighty quarto pages of evidence, in small print, arranged with commendable fairness, and citing some of the severest criticism on Webster, as well as many statements in defence.

After all, it is a doubtful act of friendship. The maxim, "Qui s'excuse s'accuse," covers a man's friends as well as himself. No man feels prospective gratitude for the posthumous zeal of that admirer who shall celebrate his centennial by demonstrating that he did not rob a henroost or defraud his grandmother. There are charges which, whether true or false, can be best treated by ignoring them. Probably people think worse of Henry VIII., on the whole, than if Mr. Froude had not insisted on reopening the case and proving that he killed his successive wives from elevated motives. The defence has simply refreshed the world's memory of the charges. If this is true where sins are open and palpable, it is far more true of the personal foibles of a great man. The world is not so very severe, after all. If a man is an eminent lawyer, the members of "the profession" are not severe on his peccadilloes; if he has, being an eminent lawyer, spoken well of the Christian religion, the clergy are not disposed to unveil his infirmities. Mr. Wilkinson is an exception: more honest or more unkind than the rest, he calls attention to these alleged peccadilloes in order to maintain the proposition that they never existed. It is a questionable service.

On a man's centennial birthday, all charges against his private morals rest mainly on tradition. It is the most impalpable of all evidence, and therefore the most formidable. To admit that after a hundred years the belief in a man's undesirable habits is very general, so that respect for him in this direction is far gone toward being extinguished in the public mind, is to assert that the case is hopeless. The general conviction is made up, and the trouble is that, by the very nature of the case, there is no new evidence to introduce for the defence. What is called new evidence is merely negative testimony—the assertion of some one that he personally never saw the defendant do anything out of the way. But such testimony is powerless to reverse a popular verdict, when that verdict has simply registered the unwritten consensus of opinion among a man's own contemporaries.

It is easy to illustrate. It is almost the universal impression among those who have ever heard of Aaron Burr or Thomas Paine that the former was licentious and the latter intemperate; yet it may be safely asserted that there is not a person on earth who can prove either fact by his direct testimony. The grave covers

every mistress of the one, every boon companion of the other. Does that protect their memory? Unfortunately, it is fatal to it. The lapse of time, annihilating all possibility of rebutting evidence, leaves the popular impression in full force—an impression formed while the facts were accessible, and irrevocable now that they are beyond reach. The same is true, though perhaps in a less conspicuous degree, in the case of Mr. Webster. If there is a difference, it is to his disadvantage in this respect, that evidence is even now occasionally appearing against him—as in the letters of M. Bacourt, noticed in our very last number—which must count for more in the public mind than any number of eager disclaimers by admiring clergymen.

To show how frankly Mr. Wilkinson states the verdict he tries to reverse, we quote the following:

"More to abhor, abhorrent more to truth,
Lies foully fit to that soft, social heart
And genial warmth of vital temperament,
The tales they forge of reason, conscience, will—
That reason, and that conscience, and that will!—
Through sensual appetite sold into shame:
Shame that had been a tragedy of shame!
And shame that should, for me, abide not hid,
Full shown, a blot of contrast boldly black,
Against the clear, large splendor of his fame.

"Still, mother State, and though the hideous lie
Were hideous truth, still I would plead forgive—
Blame, but forgive, nor cast the shadow wide,
Making it one eclipse to darken all.

"But pity and forgiveness proudly spare!
Simple and pure, though faultless not, yet pure
Even to the end thy grave, great son remained" (p. 29).

In these last seven lines are condensed the difference between the attitude of an impartial posterity and that which Mr. Wilkinson would maintain. The existing generation has grown up in the belief, transmitted from the previous generation, that Mr. Webster, with all his magnificent gifts, had certain personal weaknesses. It is already willing—perhaps more than willing—to condone these faults in consideration of his personal services; but when Mr. Wilkinson insists on a posthumous verdict of acquittal, he asks what cannot now be obtained, and his asking it only calls attention anew to what was slowly fading from the public mind.

He is but little more fortunate when he comes to consider Mr. Webster's seventh of March speech. There again the public mind, ever since the Civil War, has been more and more ready to condone the offence in view of the great previous services of Mr. Webster in maintaining the Union sentiment. That the public mind held it as an offence is proved by another admission of Mr. Wilkinson's, where he says: "There have been two verdicts—the verdict of the few in his favor, and a verdict of the many against him. It is the verdict of the many against him concerning which I raise the question whether it should not be revised and reversed" (page 81). He then, after this very damaging admission, attempts this task as frankly as the other, reprinting for the purpose a paper by himself which appeared in *Scribner's Monthly* for July, 1876.

Mr. Wilkinson has here to attempt a feat harder than his previous one, because it includes a reversal of judgment not alone on Mr. Webster, but on all his associates at the so-called "compromise period." He includes avowedly such public men as Mr. Clay (page 98), and by implication such Northern divines as Rev. Moses Stuart (page 65). If Webster was right in his seventh of March speech, they were all right; and Mr. Wilkinson does not shrink from the alternative. His whole position may be reduced to this: that the compromises so much condemned by the anti-slavery press were in reality a benefit to the nation, by staving off the Civil War till the nation was ready for it, and was prepared to end it by making an end of slavery, which could not earlier have been the case.

We hold the position to be utterly untenable. Granting all you please about Webster's antecedent services to the Union, the fact remains that he and his fellow-compromisers, so far as they had influence, weakened instead of strengthening the moral sentiment without which slavery never would have been abolished. They postponed the battle; but they demoralized the forces. President Lincoln's anti-slavery proclamation was issued and enforced in spite of their influence, not by reason of it. The proof of this is that, as a rule, the men who had sustained Webster and the Fugitive Slave Law were found in bitter opposition to that proclamation; while the President's hands were held up by the public sentiment which had revolted against Webster. The "ten years gained," over which Mr. Wilkinson and others have exulted, would have been ten years lost but for the growth of the anti-slavery sentiment in spite of the great compromisers. Had their teachings had the weight they desired, there would have been no Proclamation of Emancipation at all. Undoubtedly the earlier labors of Mr. Webster in behalf of the sentiment of union in the nation were a great source of strength to it in carrying through the war. This is a fact which his sternest opponents have lived to recognize. But when any one goes beyond this, and tries to show that the seventh of March speech was a source of anything but aid and comfort to the Slave Power, he contradicts the common sense of the community. The Webster who helped us in the hour of conflict was not the Webster of the compromises, but of the reply to Hayne. Those who looked for later inspiration had to look quite another way. What did the "Webster Regiment" itself sing, as it marched through Boston to the front? The seventh of March speech set to music? Not at all; it sang the "John Brown Song."

OLD TROY AND NEW ILIUM.

Troia und Neu-Ilion. Von Dr. E. Brentano. Heilbronn: Gebr. Henninger. 1882.

Dr. Brentano, the same scholar, if we mistake not, who gave to the world a few years since some flighty speculations about the tradition of the comedies of Aristophanes, has published two lectures on the interminable question of Hissarlik, under the title of 'Troia und Neu-Ilion.' He has been for several years a determined opponent of the Schliemann theory, and this pamphlet is intended to present in a convenient form the literary and historical evidence that has come down to us about the Homeric and the Greek city. Bunarbashi Dr. Brentano considers out of the question, the so-called village of the Ilians in the valley of the Dumbrek being the only site that finds favor in his eyes. Nor is his confidence shaken by the recent excavations, which have only served to show the worthlessness of former conclusions, once eagerly accepted and hotly advocated. The diminutive size of Schliemann's first Ilios puzzled many persons of a sceptical turn, but it will be remembered how gallantly Mr. Gladstone came to the rescue by asserting that Homer never called Troy "broad-streeted"—a most convincing and ingenious observation, which, unfortunately, candor compelled him to withdraw almost as soon as made. But even though this difficulty be overcome and a more capacious city be unearthed, Dr. Brentano contends that spade and mattock are naught without historical evidence, and his lectures give us a clear and interesting summary of the documents. He has made use of Mr. Jebb's article in the *Journal of Hellenic Studies*, and is naturally delighted to have such good company in his admiration of Demetrius of Skepsis, about whom so much of the controversy revolves.

The first lecture treats of the Homeric, the second of the Greek Ilium. The site of the Homeric Ilium was familiar to the poet in all its topographical details. The city itself had vanished in the time of Homer; the walls and palaces existed only in his imagination, but the poet of the "Iliad" knew every foot of the ground, and Virchow's testimony is cited to show that Homer's description of the surroundings of Troy cannot have been mere theatrical scenery. Dr. Brentano thinks that such a view does not postulate the historical character of the Trojan war, but it is certainly worth noticing that since Schliemann's explorations the solar hypothesis has been growing fainter and fainter. That Troy was utterly destroyed in fulfilment of the prophecy of Hector—destroyed in sheer literalness, not one stone left on another, razed, ploughed under, and done away with—was the general belief of antiquity. So the tragic poets, so that careful literary gentleman, the orator Lycurgus, so Plato, so Isocrates. According to Demetrius of Skepsis, an antiquarian who flourished in the second half of the second century B. C., there was but one author who maintained the identity of this Homeric Ilion and the Greek Ilion, and this author was Hellanicus, an easy-going and obliging chronicler, who is said to have advocated the identity from a desire to curry favor with the inhabitants of the Greek Ilium, who were exceedingly proud of the identification and made abundant capital of it. Of course Schliemann and his following have done all they could to blast the reputation of Demetrius. Skepsis was in the neighborhood of Ilium, and Demetrius's criticism is attributed to mere local envy. Dr. Brentano, who considers Demetrius a great authority on his side, has much to say about his competency and honesty, and goes off into a long discourse on the Scamander and the Simois, which he identifies respectively with Menderes and Dumbrek. Both parties to the controversy cite Dion Chrysostomos. Dion's eleventh "oration" is nothing but an elaborate sophistic reversal of the tale of Troy—an anticipation of such mock reconstructions of history as Archbishop Whately's 'Historic Doubts'—and the persiflage of the claims of the Ilians does not enter into the argument at all. Dr. Brentano has no more right to cite him than Schliemann has; no more right to cite him than he has to spell his name *Chrysosthomos*, as he does persistently.

In the second lecture the fortunes and pretensions of the Greek Ilium are followed, and the importance of the place traced to the Palladium, which the priestess of Athena Ilias identified with the Trojan Palladium. The respect paid to the Greek city, the sacrifices offered by Xerxes, by the Spartan general Mindarus, by Alexander the Great, may be accounted for in this way without assuming the identification. New Ilium was on Trojan territory, and had been its religious centre even though it was not the sacred city of Troy itself. In summing up his argument, Dr. Brentano refuses to believe—and small blame to him—in the seven cities heaped one on the other in a space 100 metres broad and 76 metres deep; nor will he admit that non-Hellenic means necessarily pre-Hellenic. The primitive pottery of the barbarians might easily have been contemporaneous with the finer ceramics of the Greek inhabitants. Any German village would present the same conditions, and it might be added that an American town would show a still wilder confusion of styles. A landslide that should bury a resort of summer boarders in America would preserve for the future Schliemanns a jumble of styles which would make the problems of Hissarlik contemptibly easy in comparison.

Like all other antagonists of Schliemann, Dr. Brentano feels that he is in danger of incurring grave censure, as if dissent from Schliemann's views were an insult to the character of a man

whose energy and liberality have been crowned with brilliant success and rewarded with abundant honor. That is a German way of looking at things. We may acknowledge that we owe all that has been revealed by Schliemann's efforts to his vision of the buried world of Troy, and that all controversy must redound in one form or another to his praise. But the great explorer himself will hardly be satisfied with anything short of absolute coincidence. We must be prepared to follow him in all his speculations. It is not enough that we believe in the mask of Agamemnon, we must put our faith in the sty of Eumæus.

CHILDREN'S BOOKS.—I.

Mr. Geo. Cary Eggleston prefaces his book, 'Wreck of the Red Bird' (Putnams), with a dedication. The opportunity is one of which an indiscreet person might avail himself to become painfully effusive. Mr. Eggleston escapes this peril, and gives expression to his grief in a manner which cannot fail to secure for him the respect and sympathy of his readers. He has to tell of three lads, on the coast of South Carolina, who embark, for a brief excursion to a neighboring island, in a small boat. Although they arrive safely at their destination, and land their provisions, they shortly after meet with misfortune in the partial wreck of their craft. Deprived of means to return to the mainland, they set bravely to work to rebuild their little vessel; and while thus engaged they meet with a variety of adventures. The story is an interesting one, and has a peculiar attractiveness from the *mise-en-scène* among the Sea Islands.

'Off to the Wilds' (T. Y. Crowell & Co.) is an account of the doings of an Englishman and his two sons in the southern portions of Africa. Certain domestic complications, which will be found fully explained in the text, supply the *raison d'être* of the expedition. Mr. Rogers, for such is the name of the father, his two sons, a Zulu and his two boys, compose the expeditionary force. After a complete and careful outfit they leave civilization behind them, and enter the wilds of Africa. All the adventures and dangers of which the country is capable are encountered, and successfully overcome, and our explorers return to their homes vastly improved in health and spirits. Mr. Manville Fenn is a writer of experience, and has thoroughly saturated himself with the narratives of explorers of the "dark Continent"; consequently he tells his story fluently and with a verisimilitude which will impose pleasantly upon the most sceptical. It is, indeed, an excellent piece of work.

'Red Cloud, the Solitary Sioux,' by Lieut.-Col. Butler (Roberts Bros.), is an impossible Indian story, reminding one of a mixture of the 'Swiss Family Robinson' and a mild Jules Verne. An English lad, reared in Ireland until he is seventeen, immediately passes into the Saskatchewan country and falls in with an educated savage, who conducts him through a series of astonishing adventures, and bestows upon him a fortune in native gold—all within a year. The scenery follows nature, but the men and their situations are factitious as well as fictitious. But the plot is exciting, and the various thrilling escapes are ingenious to the last degree. Still, no American boy—certainly none above the age of twelve and the grade of a dime-novel reader—is likely to lose his head over such a romance, and wildly dash into the Northwest on such an expedition; and we suppose the English lads for whom it is specially written will also judiciously stay at home. In view of the well-known chief of that name, the title 'Red Cloud' is misleading; and no self-respecting Dakota will accept the nick-name "Sioux," as the hero persistently calls himself.

Mr. William O. Stoddard's 'The Talking Leaves' (Harpers), on the other hand, is a capital Indian story of Arizona, any incident of which might be true; and the whole bears evidence of local color studied on the spot. The author and the artist combine to furnish the Apaches with rather more clothing than the customs of the country warrant, and with a higher style of tepee. But a blemish in favor of decency is pardonable, and it is balanced by the fidelity to nature of the horses, which usually so sorely tempt the artist to transform them into thoroughbreds or monstrosities. There are fights and escapes enough to satisfy the most exacting youngster, but the combination is not impossible. There is a sprinkling of sarcastic comment which the brighter boys will appreciate and which the duller ones will not be the worse for. The action is rapid and natural, and the story thrilling, yet not likely to upset the imagination. The book is a good one for boys to read, and they can't help liking it.

The same author's 'Saltillo Boys' (Scribner) is a pleasant story, the scene of which is laid in a town in central New York thirty years ago. The boys described are from thirteen to sixteen years old, and belong to a school in which the master endeavors to impress the value of self-government upon his pupils. This lesson is fairly well brought out in the various incidents given of life in and out of school. The only instance in which it seems to us the author fails to leave a right impression is in his description of a cock-fight, where the interest in the victory of the boy's bird is rather stronger than the rebuke for "so cruel and brutal an amusement." Mr. Stoddard, in our opinion, would have been still more successful in his endeavor to teach his young readers true manliness had he adopted a different style in the narrative portions of his story. We do not find fault with his endeavor to represent the boys' talk to the eye by clipping words and running them together, though such realism is not to our taste and after a time becomes wearisome. But his narrative frequently reads like his boys' talk, and here, we think, he makes a mistake in art. There should run through a book which aims to enforce a moral the quiet and dignified tone and style which a master would have in school. This the author fails to give, though there are passages which show that his failure was not from lack of power, but from a mistaken desire to be always bright and interesting. With these reservations we can heartily recommend 'Saltillo Boys' as a thoroughly good book.

Of Mr. Towle's 'Drake, the Sea-King of Devon' (Lee & Shepard) it would be enough to say that it is one of the best, certainly one of the most interesting, of the excellent series ("Heroes of History") to which it belongs. As, however, it is announced that this work completes the series, we may say a word upon one or two features in which we could wish the author had followed a different plan. In the first place, the title is a misnomer: many of the subjects are true heroes—all of them may be so regarded from some point of view—but all are travellers and discoverers. A title should have been chosen which really described them in this distinctive character. In the next place, the illustrations are not of the kind that we like; they are, without exception, "made up," and some of them made up very badly: what in the world are the three truculent individuals standing for their portraits in the foreground of the picture opposite page 44 supposed to be doing? We ought at least to have a portrait of the hero of each volume. In the next place, the form in which the story is cast—neither a history nor a romance—is one in which it is difficult to maintain the balance between fiction and truth. The adventures here narrated are no doubt true; the conversations are probably fictitious; where is the line drawn between them? To illustrate what we mean: the adventures of Drake on the Spanish main form, we believe, the foundation in facts of the fascinating adventures of Sir Amyas Leigh in fiction. But the story of Sir Amyas Leigh does not profess to be anything but fiction, and we read it as comfortably as we should a novel of the present day. But in the book before us we are all the time tormented by a suspicion that this or that picturesque incident is the creation of the author. No doubt the boy reads and enjoys the whole without any such disquietude, but we do not know that this helps the matter. He is not merely enjoying himself—he is learning what may after all turn out to be false. We would not be understood as disparaging Mr. Towle's books, but rather as criticising the class of books of which they are among the best examples. He has avoided the faults indicated as much as could be expected, and has produced a set of books which ought to be in every library for the young.

There is hardly one of the familiar sports and amusements of boys twelve years and upward of age that is not described and explained in Mr. D. C. Beard's 'What to Do, and How to Do It: The American Boy's Handy-book' (Scribner). These and many which are unfamiliar are noticed under the headings of the season to which they are most appropriate. There is a long chapter on kites which might instruct even the Chinese; and one on "Knots, Bends, and Hitches," which, with that on the "Rigging and Sailing of Small Boats," forms the best two in the book. That on "How to Camp Without a Tent" has a good many useful hints, but, as some of the other chapters do, assumes an almost preternatural skill on the part of the boys in the use of tools, and a stock of industry such as few of them have. The chapters on fishing are not good: they describe various novel contrivances, but say nothing of the habits of fish or the best methods of catching them. The chapter on "Trapping" had better have been omitted: boys can find enough ways of destroying small and game-birds without learning how to make and use the numerous snares and springes Mr. Beard writes of. There is an excellent chapter on taxidermy for boys, and one on sleighs and snow-shoes; and the book concludes with a list of indoor amusements for winter. On the whole, it is a good book for boys—the best we have yet seen here of its kind. The printing and illustrations are capital.

Mr. Horace Scudder, in his loyalty to the "Bodley Family," follows them down even to 'The Bodley Grandchildren, and their Journey in Holland' (Houghton, Mifflin & Co.). This is a clever account of the relation of Holland to old New York, and to the Dutch episode of the wanderings of the Pilgrim Fathers—interwoven with a description of Holland at the present day. It is interesting in the first aspect, and graphic and accurate in the last—a good picture of modern Dutch life as it appears to New York children. It would not have been an ungraceful act for the publishers to credit Waring's 'A Farmer's Vacation' with some twenty of the better illustrations of the book, which are here inserted as belonging to the text.

Olive Thorne Miller has, in several acceptable books for the young, already betrayed an unusual gift for interesting this class of readers. Equal skill in method and in style marks her 'Little People of Asia' (Dutton & Co.), which takes account of the "salted baby" of Turkey, the Tartar "buttered baby," the Siamese "dyed baby," the Japanese "happiest of all" baby,

etc. It has cost much research, and called for judgment and accuracy in compilation. While bestowing attention principally on the little folk, of course it incidentally conveys much information concerning their parents. Children of eight or nine and upward will be charmed by it. The illustrations are numerous.

Life of Edwin H. Chapin, D.D. By Sumner Ellis, D.D. Boston: Universalist Publishing House. 1882. Pp. 332.

NEITHER the place nor date of Dr. Chapin's birth is given by his biographer, apparently from inability to fix on either, though the year 1816 is inferrible from a statement on page 39. The father, a most unstable character, was a strolling portrait painter, whose migratory habit made a matrimonial alliance with a member of the famous Bedouin family, the Hubbells, very natural and appropriate. Dr. Ellis insists that their issue owed much to his Hubbell lineage; but except the lot of a wanderer for the first half of his life, the heredity on this side is rather obscure. The only instructor who had any influence on his character and career, Mr. James Ballard, head of the academy at Bennington, was a relative on the mother's side, and is said to have been "an ardent lover of eloquence; and the more impassioned it was, the better it pleased him. It was no gentle breeze, but a whirlwind, of oratory that he admired and sought in his models and his pupils." Young Chapin, just arrived from the spouting Siddonian Club in Boston, and almost stage-struck, was at once taken in hand as a promising apprentice in the art of declamation.

This was his chief equipment when, in 1836, he went to Troy and began the study of law. It is admitted that he had no legal aptitude whatever, lacking the necessary application. Yet the discipline, such as it was (for it lasted but a few months, and was not even continuous), was all he had before he began preaching in Universalist pulpits in the space of less than two years after leaving the academy. He was a convert to Universalism, but he cared so little for it as a dogma that throughout his clerical service he abstained from enforcing it in his sermons. It is true, as he frankly admitted to his first congregation, that he did not "see it so clearly revealed in the Bible" as to "feel justified in pronouncing it a plain, unequivocal doctrine of the Gospel." But his further reason for having "dwelt but little upon the points of doctrine," viz., that, more than for sects and parties, he preferred to labor "for spiritual advancement, for moral and intellectual progress," would have permitted him to occupy a Calvinist pulpit.

Such a preference proved no obstacle to his preaching in a slave State like Virginia, at its capital, from which he had accepted his first call. He went to Richmond in May, 1838, and remained without mental or bodily discomfort till 1840, when a congregation in Charlestown, Mass., persuaded him to succeed the father of Starr King. Dr. Ellis gives a chapter to Chapin the Reformer. It is not long, and it might have been as brief as the chapter on snakes in Iceland. There were no reformers south of Mason and Dixon's line in 1838. Dr. Chapin, we may well believe, was always humane and sympathetic, but it never cost him the least effort to be silent on the subject of slavery while on slave soil. Consider, for example, the capacity of an address in a slave city (it was to the Odd-Fellows of Baltimore, in 1845), on "The Practical Recognition of Human Brotherhood the Great Want of Society," and then reflect that no notice could possibly be taken then and there of the greatest of all violations of human brotherhood staring the orator in the face and claiming reverence as a sacred institution. The mere selection of such a topic was a travesty on reform. Dr. Chapin's subsequent participation, in his fashion, in the anti-slavery, the temperance, and other causes proves nothing. They were so many fields for his elocution, but there is not the slightest evidence that he would ever have taken the initiative in an unpopular movement. On the other hand, it is notorious that the leading members of his congregation in New York were hostile to the Abolitionists and even to the War for the Union. He did not budge when pew-doors were slammed by departing occupants, but it was not exactly a reformer who retorted: "*I shall not go out of my way to seek these topics*, but when they are fairly before me I shall not turn aside to avoid them, though your pew-doors should clap to like platoons of musketry." What characterizes the reformer is, that he lugs in his topics.

The candor of Dr. Ellis checks at every point his overestimate of Dr. Chapin. He styles him, in the preface, "this truly great man and almost peerless orator," and then supplies the reader with data for forming a quite different opinion of him. That his greatness was inseparable from his oratory, we presume his admirers would be the first to admit. Now, of this Dr. Ellis gives not more than three or four samples; but here is one, spoken at the close of the Crimean War, of which he says: "With many strokes of thought and rhetoric equally pertinent and overpowering, he [Dr. Chapin] moved through his half-hour of eloquence":

"I love to hear the rumbling of the steam-power press better than the rattle and roar of artillery. It is silently attacking and vanquishing the Malakoffs of vice and the Redans of evil, and its approaches cannot be resisted. I like the click of the type in the composing-stick better than the click of the musket in the hand of the soldier. It bears a leaden messenger of deadlier power, of sublimer force, and a surer aim, which will hit its mark, though it is a thousand years ahead."

This passage is really only a metaphor, with hardly a trace of "thought" in it, and, while "pertinent," is very far from being "overpowering." Dr. Ellis thinks "it was a significant witness of Dr. Chapin's triumphant eloquence, that those who were wont to hear him generally regarded his last effort as his greatest. Their latest tumult of emotion made it quite impossible for them to exercise a rational remembrance." Judgments formed under such circumstances were apt to be very much tempered when an opportunity for reflection presented itself. Dr. Ellis intimates that Dr. Chapin's sermons were dull reading. They do not, whether in manuscript or in print, "disclose to the reader many of the looked-for passages by which he wrought overwhelming effects in delivery." And again:

"So great and perfect was his command of his muscles and vocal powers and passions that, if he saw fit, he could make a thrilling climax of a platitude, electrify and awe his hearers with a commonplace, make a molehill play the part of a mountain, with its crags and caverns and clouds; and the reader of one of his printed sermons would hardly be able to tell where, in the preaching of it, if it were preached in his mid-years, he swept his audience into breathless moods of wonder and rapture. In fact, he did it very much at his pleasure."

Naturally, his pleasure was to "do it" when his ideas were scantiest:

"The subtle mind of Starr King, his youthful parishioner, detected at a glance, as his eloquent young pastor entered the pulpit, the order of oratory which was about to be displayed. If Chapin came with poor outfit for the service, he dashed into the pulpit with a sort of frenzy (as King noticed), rushed from seat to desk, and desk to seat, worked his body into a fever and sweat, gave his arms to a wildness of gesture, and pressed his voice to an uproar."

When to the foregoing we add Dr. Ellis's very plain account of Chapin's mode of composing (he very seldom finished writing out his sermons), of patching together old and new, of ringing the changes on his "gems," we have a very fair measure of the preacher's mental powers. A little light still remains to be thrown upon them. It is well known that Dr. Chapin was a bibliophile, who amassed in the course of forty years a library of 10,000 volumes, and was an incessant reader of books. Yet, says Dr. Ellis, "he rarely made a reference, and more rarely a quotation, which indicated the range of his reading." And the more he read the less he yielded back. "In his earlier years he was much more given to reflecting his wealth of literary treasures than later in life. His first and last book reveal a marked contrast in this respect—not that the former is at all pedantic, but that the latter is strangely exempt from all echoes and glimpses of the great authors." In short, making every allowance for Dr. Chapin's good taste in refraining from incoherent embellishments which betray the lack of originality and of independent thinking, we must conclude that he was one of the *gens qui ont besoin de beaucoup lire et peu méditer*.

Dr. Chapin's success as a lecturer was as great as that as a preacher, and perhaps more remunerative. One lecture, on "Orders of Nobility," is estimated, from the recorded repetitions of it, to have netted him twenty thousand dollars. Among the exceptional rewards of literary labor this might rank very near the front. Chapin's popularity had much to do with swelling the class of high-priced declaimers who filled our lyceums before the war and brought the lecture system into contempt and decay. We fear that Dr. Ellis's eulogistic biography, despite its candor, will tend to encourage untrained and empty oratory.

The March to the Sea. Franklin and Nashville. By Jacob D. Cox, LL.D., Late Major-General Commanding Twenty-third Army Corps. [Campaigns of the Civil War.—X.] Charles Scribner's Sons.

IN this volume, the sequel to 'Atlanta,' General Cox has given us a concise but clear narrative of Thomas's defence of Tennessee against Hood in the fall of 1864, and of Sherman's "March to the Sea" and his subsequent campaign in the Carolinas down to the close of the war. His book is, indeed, a comprehensive sketch of those military operations in Sherman's department, during the last six months of the war, which brought speedy and complete disaster to the Confederate cause. The story is simply told: the situation after the fall of Atlanta is clearly set forth; the difficulties and perplexities which beset Sherman when he found Hood moving against his communications are, perhaps, too much elaborated; the well-devised plans of the Federal general for marching to the Georgia coast with the greater part of his army, while he provided for Thomas, in his rear, a force sufficient to overwhelm Hood, are clearly described. The operations of Schofield and Thomas in Tennessee, where the main interest of the campaign centred (for Sherman met with no serious opposition), are carefully and fully narrated. The picture of Thomas—his modesty in accepting command, his slowness in concentrating his forces, his hesitation in attacking Hood, even with greatly superior numbers, his stubborn tenacity when attacked, and his overpowering assault, at last, at Nashville, when driven to it by his superiors—is well drawn.

The absorbing interest of this campaign grows out of the influence it exercised on the fate of

the Confederacy. General Cox speaks of the difficulties which surrounded Sherman after the fall of Atlanta, and gives him credit for boldness in attempting the march to Savannah. Still, if Sherman's position at the head of 60,000 victorious troops, with 50,000 others gathering under Thomas to protect his rear, had difficulties, how small must they have been compared with those of Hood, who, with 40,000 defeated men and a country too exhausted to reinforce him, had to decide how to make headway against the large armies that threatened soon to close round him! The Confederate Government was at this time sorely straitened. It held its capital, against a great host, only by the veteran courage of a dwindling army and the consummate skill of its commander. From every quarter came the cry for reinforcements, while there were none to give. The utmost efforts of the Confederacy did not suffice to maintain the numbers already in the field. It seemed to the Richmond authorities that only by audacity, energy, and skill could the immense preponderance of force against them be neutralized. It was because Johnston's cautious policy seemed to them to promise nothing but certain, if slow, strangulation, that he had been removed and Hood substituted. The latter's efforts to save Atlanta had been failures, but active and aggressive operations still appeared, both to the Confederate general and to his superiors, the only course that promised any relief. The risks to be incurred were, of course, immense, but similar audacity had more than once in Virginia rolled back the tide of war from the James and the Rappahannock, to the Potomac. Hence Hood's plan to transfer his army to Sherman's rear, attack his long line of communications, break up his depots, regain possession of the State of Tennessee, and thus force Sherman to leave Georgia, was approved.

While Hood's plan must rest for its justification largely on the straits to which he was reduced, General Cox's narrative shows that it was feasible, and that had it been executed with an energy and skill equal to the boldness of its conception, it would, in all probability, have accomplished the object intended. Hood started on his campaign about the 1st of October, and after doing much damage in Sherman's rear, and drawing the main body of the Federal army as far as Rome and Kingston after him, reached the Tennessee River and secured a crossing by November 1. Now it was that Hood lost his chance of success by delay. Early in November Schofield's corps was sent back, by Sherman, to aid Thomas, who with that and the Fourth corps had, even before the troops ordered to him from Missouri arrived, an army of over 54,000 men with which to oppose Hood. Feeling now that Thomas would be strong enough to take care of Hood, Sherman, in those same early days of November, turned back from following him, and, concentrating his forces at Atlanta, set out about the middle of the month, with 62,000 men, on his march toward Savannah. Those first two weeks in November were priceless to Hood. Thomas's troops were not ready to oppose him early in November. Sherman was moving back toward Atlanta, but was not yet fully committed to his seaward march. Had Hood crossed the Tennessee and pushed boldly northward, by forced marches, he would have passed over more than half the distance to Nashville without opposition, and by falling upon such of Thomas's gathering forces as were in his path, might have gained important advantages, and reached Nashville before the enemy could have concentrated sufficiently to prevent it. This sudden and formidable irruption into the heart of Tennessee would have produced the recall of Sherman, to whose plan Grant and Lincoln had given only a hesitating approval. Hood charges his delay to the difficulty of obtaining supplies, and there can be no doubt that his trials on that score were severe enough. But this was a case when the utmost celerity was *indispensable*. Such difficulties as Hood met with might properly have prevented his undertaking the campaign at all. Once embarked on it, however, in a friendly country, with Forrest's large body of cavalry under his control to prevent interference with his foragers, the question of supplies should not have cost him three days, much less three weeks.

Hood finally moved north from Florence on November 20. Schofield fell back to Columbia, which position he was compelled to abandon by Hood, who crossed the river on his flanks and struck at Spring Hill in his rear. Here again Hood's movement, which had been boldly and skilfully managed, lost vigor at the critical moment, and the Federal army was permitted to retreat during the night, without material loss, in sight of the Confederate campfires. The errors of that day were atoned for in blood, at Franklin, on the next. Having permitted the Federals to gather a good force in his front, and, after dislodging this force from Columbia, having permitted it to reach Franklin in safety, Hood unwisely attacked Schofield at the latter place in a strong position, only to meet with fearful losses. Schofield retreated during the night so that he might unite with the other portions of Thomas's forces in front of Nashville, but he had struck Hood a terrible blow before doing it, and bore off all the real advantages of the combat.

The part of Hood's campaign most open to criticism now follows. After the heavy losses at Franklin, Hood could not muster 30,000 men present for duty, exclusive of Forrest's cavalry, and yet he advanced toward Nashville, where Thomas's forces were now swelled to nearly 70,000 men. He remained in the latter's front until attacked by the Federal commander on December 15, when he was defeated and driven southward. Hood's advance after Franklin is indefensible. General Cox does not hesitate to criticise Thomas's slowness in attacking Hood, and to admit that, notwithstanding his immense superiority of force, he had to be finally goaded to it by the Federal Administration. It is impossible to deny that the means under Thomas's control after the middle of November were sufficient, if used with energy and skill, to have stopped Hood far short of the heart of Tennessee.

Sherman's march to Savannah, and thence through the Carolinas, was that of a triumphant army to whose progress the Confederates could oppose but a few thousand men of fragmentary commands. The resistance was too feeble to constitute any serious obstacle to Sherman. Of the excesses of his army on this march General Cox speaks in a lenient tone, or in one of (at most) mild disapproval.

In the statement of comparative numbers, General Cox uniformly uses the "Present for duty" on the returns as giving the Federal strength, but declines to take the same columns on the Confederate returns for the same purpose. He uses the Confederate "Present" instead (which included all of the sick, extra-duty men, and those in arrest), under an erroneous impression that the extra-duty men were such as would go into ranks in a fight. As the Confederate conscription placed everybody in military service, all teamsters, etc., had to be detailed, and such constituted in large part the "extra-duty" men on the returns. This error is the more to be regretted because of the fairness of tone and general accuracy of statement which characterize this valuable contribution to the history of the war.

The Growth of English Industry and Commerce. By W. Cunningham, M.A., late Deputy to the Knightsbridge Professor in the University of Cambridge. Cambridge: At the University Press. 1882.

Mr. Cunningham has undertaken to produce one of the most important desiderata of political economy—a succinct, comprehensive, and judicious summary of the development of English commerce and industry. He has performed the task, in many respects, with great success. In his first chapters he treats of a great many disputed points, about which authorities would not agree that his statements are correct; but he has acted in such matters with good judgment, and he deserves the confidence of the class of readers for which he writes. It is hardly to be expected that his book will have any great effect on those people who are fitted out with a few stupid commonplaces about the industrial history of England. Of course, the current commonplaces are the widest possible generalizations. Mr. Cunningham does not deal in generalizations of that character; he offers the material by which a careful reader may correct errors. Experience proves, however, that people are very slow to avail themselves of such means of correcting old false notions.

Mr. Cunningham is disappointing when it comes to the critical observation of the forces at work in the history which he presents. There is great need that the history of the first industrial nation in the world should be critically analyzed by a strong and highly-trained scholar, who could give to the forces in it their due proportion, and could firmly repress the pet notions of our time. For instance, the history of the fourteenth century and the effects of the reduction of population by the Black Death, all of which are well described by our author, are rich in instruction for the student of social arrangements in regard to labor and land. How can it be affirmed, as Mr. Cunningham affirms (pp. 391, 392), that capital always has the advantage over labor, when the case referred to distinctly proves that no general assertion of that kind will hold? The condition of things in the United States at the present time is another clear instance to prove that the relations of labor and capital depend on the relations of supply and demand, and that sometimes one and sometimes the other has the advantage.

Mr. Cunningham very judiciously sets aside the question whether laborers are better off now than formerly, but he does not do this until he has given some attention to that question. He cannot find a standard of comparison, since indeed there is none. There is only one form in which the question could be put to give it any sense, and that is this: If any person now living, who has no capital, could understand the position and mode of life of a man similarly situated, who lived in the fourteenth century, would he envy the latter? It cannot be believed that he would do so. Yet there are readers of Cunningham and Thorold Rogers who have noted the comparative changes in prices and rates of wages, and have spoken as if the contrary were true. In all such speculations it is assumed that the "laborer" is a person having a fixed definition, and that "the laboring class" has been a closed caste which has been perpetuated without changing its social boundaries. There could be no more false assumption. Nearly all the middle capitalist class of England, and nearly all the population of the United States, have been produced out of those who were destitute of land and capital five centuries ago. Therefore, in measuring the advance of laborers in the last five hundred years, the whole gain of the *bourgeoisie* must be credited to their improvement. Mr. Cunningham thinks that society has gained during the

period in review, but he doubts if the individual man has gained. He thinks that, under competition, the individual is crushed down. This inference seems to us incorrect, because it is not in line with the facts. The fact which Mr. Cunningham's book plainly shows is this: With advancing population there has been advancing civilization—*i. e.*, increasing power to support population. The men of each generation have sought to win as much of this, each for himself, as possible. That is what free competition and civil liberty mean. Those who have won in this struggle have risen out of the laboring into the capitalist class, and the English nation and civilization have advanced by and through them. Those who have not succeeded and their children are the "laborers" of to-day. When the truth of the matter is thus apprehended there is no "social question" any more for anybody to make speeches and essays about, but only another repetition of the threadbare old precept to the individual man—if you are not satisfied with your position in life, go to work, save your product, and do as well for yourself as you can.

There is another lesson of this history which we should have been glad to see more clearly brought out; indeed, the author sometimes speaks as if he had not thoroughly perceived it himself. When the introduction of sheep-farming lowered the profits of tillage, the class of yeomen farmers began to disappear. There were those who lamented this change, and who thought that the state should try to check it (p. 269). No such step was taken, and in time the trouble cured itself. One such instance is of the utmost value as an illustration and warning of the folly of statesmen who are ready to interfere with the course of things which seems to be bringing what they do not like. It is also a warning to us that we are constantly liable to error if we stand ready with our little tape-measures to estimate the good or ill of the industrial and social changes which come in the course of time. The wise man is he who follows and adjusts himself to the changes which come about. The industrial history of any great nation shows us that the changes are never unmixed gains. New and incidental evils spring out of the improvements on which we pride ourselves most. The true view is that the life of the society goes on, bringing constant changes and developments. We have to "keep up," to learn the new and to discard the old. Every new chance brings a new responsibility. If it offers a greater gain, it offers a proportionately greater chance of loss, and the penalty of mistake is to perish while the society pushes on.

Hence we cannot regard it as profitable or to the point to say, as our author does: "The amount of social misery need not lead us to underestimate the greatness of the economic improvement, though it may lead us to see that the question how far economic improvements are matters for congratulation is one that admits of more difference of opinion than may at first sight appear" (p. 259). We are familiar with this kind of writing, but it belongs in another kind of literature than that to which Mr. Cunningham's book belongs. How can there be any question whether we should congratulate ourselves on economic improvement? We are working for it all the time. Can we possibly regret it or be indifferent to it? What we need to understand about economic improvement is that it is only a *chance*. It has no moral value in itself: its moral value depends on the use men make of it; but to win more chances for men to live happier lives, if they are wise enough to use the chances, is certainly a subject of congratulation.

Zoölogical Sketches. By Felix L. Oswald. Philadelphia: J. B. Lippincott & Co. 1883 (*sic*).

We have here ten chapters of zoölogical anecdotes related in a lively and entertaining fashion, and illustrated by thirty-six woodcuts after Hermann Faber. These last are artistic enough and not glaringly inaccurate, but are far from being comparable to the illustrations of Hamerton's 'Chapters about Animals,' for instance. The blurry technique which, by leaving much to the imagination, may prove effective for the representation of love-lorn damsels or distant landscape, is wholly unsuited for the art of animal-representation. The creatures' coats seem fresh from a mud-bath or paste-pot, and the strong free lines of muscle and bone, in nature merely draped by skin and fur, are lost in the blotchy and mushy illustrations with which magazine literature of late has teemed. Those gathered here are not by any means the worst of their kind, but we find their truth to nature diminishing (as perhaps might be expected) as we pass from the familiar dogs and monkeys to camels, bats, and even the bighorn of our Western mountains.

The text is more satisfactory, and exhibits more thorough study from the life than the illustrations. The anecdotes, if sometimes a little suspiciously *human*, are refreshingly new, and related with more of the art of the writer, and familiarity with the scientific side of the subject, than is usual in books of this sort. To the general reader the volume may be recommended, and even the naturalist will find something here and there to repay perusal. It is neatly printed and bound.

BOOKS OF THE WEEK.

Abbott, L. How to Succeed: a Series of Essays by Various Authors. G. P. Putnam's Sons. 50 cents.
Adams, H. John Randolph. [American Statesmen.] Boston: Houghton, Mifflin & Co. $1 25.
Baker, G. A., jr. Point Lace and Diamonds. R. Worthington. $1 25.

Henry Holt & Co.

Have Ready:

New Arabian Nights.

By R. L. Stevenson. 16mo (Leisure-Hour Series), $1.

"Fantastic stories of adventure with the scene pitched in contemporary London or Paris, but with a noble disregard for probability. . . . We deliberately consider them to be exceedingly good and original."—*Pall Mall Gazette.*

Heine's Romantic School.

Translated by S. L. Fleishman. 12mo, $1 50.

One of the most entertaining as well as suggestive of all pieces of literary criticism.

Cory's Guide to Modern English History.

By William Cory. Part II. MDCCCXXX-MDCCCXXXV. 8vo, cloth, $3 50.

"It is in every way a remarkable book, and we shall look with much interest for future volumes."—*London Saturday Review.*

Christ's Christianity.

Being the Precepts and Doctrines recorded in Matthew, Mark, Luke, and John, as taught by Jesus Christ. Analyzed and arranged according to subjects, by Albert H. Walker. 12mo, $1 25.

FANNY KEMBLE'S

Records of Later Life.

12mo (uniform with 'Records of a Girlhood'), $2 50.

Longman's Magazine.

The International News Company begs to announce that by special arrangement with MESSRS. LONGMANS, GREEN & CO., the above-named magazine will be issued monthly SIMULTANEOUSLY in ENGLAND and AMERICA.

THE FIRST NUMBER

is now ready.

Contents of No. I.:

THICKER THAN WATER, Chapters 1 to 4. By James Payn.

ATOMS, MOLECULES, AND ETHER WAVES. By John Tyndall, F.R.S.

LEXINGTON. By W. D. Howells.

DEPARTED. By the author of 'John Halifax, Gentleman.'

OUR ORIGIN AS A SPECIES. By Richard Owen, C.B., F.R.S.

A GOSSIP ON ROMANCE. By R. L. Stevenson.

SOME POINTS IN AMERICAN SPEECH AND CUSTOMS. I. By Edward A. Freeman, LL.D., D.C.L.

THE BLACK POODLE. By F. Anstey, author of 'Vice Versa.'

PRICE, 25 CENTS PER COPY.

To be obtained of all booksellers and newsdealers.

THE INTERNATIONAL NEWS COMPANY,
29 and 31 Beekman Street, New York.

BEST AND CHEAPEST PERIODICALS.

Blackwood and the Four Great British Quarterlies.

THE LONDON QUARTERLY, EDINBURGH, WESTMINSTER, and BRITISH QUARTERLY REVIEWS.

$2 50 a year each, or all four $8. Single number, 30 cts.

BLACKWOOD'S EDINBURGH MAGAZINE.

$3 a year. Single number, 30 cts.

ALL FIVE ONLY $10 A YEAR.

These Reviews have long been the recognized channels through which much of the best thought of modern times finds expression; and *Blackwood's Magazine* holds the foremost place among the monthlies.

REPRINTED BY

THE LEONARD SCOTT PUBLISHING CO.,
41 Barclay Street, New York.

A VALUABLE BOOK OF REFERENCE.

The Standard Authority in the Correct Use of the English Language.

THE

Grammar of English Grammars.

WITH AN INTRODUCTION, HISTORICAL AND CRITICAL,

By GOOLD BROWN,

Author of 'The Institutes of English Grammar,' 'The First Lines of English Grammar,' etc.

TENTH EDITION—REVISED AND IMPROVED.

ENLARGED BY THE ADDITION OF

A COPIOUS INDEX OF MATTER,

BY SAMUEL U. BERRIAN, A.M.

1,100 pages, royal 8vo. Price, bound in leather, $5; half morocco, $6 25.

PUBLISHED BY

WILLIAM WOOD & COMPANY,
56 and 58 Lafayette Place, New York.

Water-Color Painting:

DESCRIPTION OF MATERIALS,
WITH
Directions for their Use in Elementary Practice.

SKETCHING FROM NATURE IN WATER-COLOR.

By H. W. HERRICK. Illustrated with two Diagrams printed in Colors. 12mo, square, 125 pages, in cloth. General Edition, with the Diagrams printed in Colors, $1; *Artists' Edition*, containing the Diagrams printed in Colors, and 120 Examples of Water-Colors, *washed by hand on Water-Color Paper, gilt edged*, $3 25.

The work is issued in *two* editions: one containing all of the text and two colored diagrams; the other—"Artists' Edition"—having, in addition to the text and diagrams, examples washed in light and dark tones, of ONE HUNDRED AND TWENTY pigments, now in general use in Water-Color Art, being about forty more than are to be found in any list heretofore issued. The examples are washed from standard pigments on Water-Color paper, by the author, or under his immediate supervision, and include colors of English, German, and French manufacture; comprising, with two or three unimportant exceptions, all pigments used in modern Water-Color painting. The examples will prove of value to artists, as a book of ready reference for the hues of pigments, and will also be of service to teachers in art schools, and dealers in artists' materials. The present issue of the "Artists' Edition" is a limited one.

This book on Water Color, a branch becoming highly popular as a medium of general art instruction in schools, etc., is not a reprint, or a compilation from foreign art literature, but is the fruit of a long experience and careful research. It will be found to contain, in a concise form, much that will respond to the wants of amateurs and beginners in the use of color.

Direct to any dealer in Artists' Materials, or to the Publishers,

F. W. DEVOE & CO.,
Corner Fulton and William Sreets, New York.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 9, 1882.

The Week.

THE defeats of the Republican party in New York, Pennsylvania, Indiana, Connecticut, New Jersey, and even in Massachusetts, following upon that in Ohio, are extraordinary. The anti-Republican majorities in some of these States have scarcely any parallel. The so-called tidal wave of 1874 was only a lively ripple compared with this overwhelming flood. There has been nothing like it since the final downfall of the Whig party, perhaps not even since the breaking down of the old Federal party. No sensible man will pretend that this is a mere Democratic party triumph. Nothing can be more evident than that all over the country Republicans rose up by thousands against their own party, and deliberately voted against its candidates. In no other way can the majority of Mr. Cleveland be explained, which is somewhere between 150,000 and 200,000. It was obviously so in Pennsylvania, where more than 100,000 Republicans voted either for an Independent candidate of their own or directly for the candidate of the Democrats. It must have been so in Massachusetts, where General Butler was permitted to have a plurality by thousands of Republicans who stayed at home or frittered away their votes, and where they openly and demonstratively defeated some of the Republican candidates for Congress. What is the meaning of it? In some States there were certain local causes of dissatisfaction: in Ohio the temperance trouble, in Pennsylvania the especially despotic arrogance of Boss Cameron, in New York the interference of the National Administration with our State affairs, and the scandals at the Convention. But these things cannot account for the sweep of disaster all over the country unless they be regarded as symptoms of evils pervading the party more or less everywhere, and causing a general feeling of distrust and discomfort among its members. Tuesday's elections have left no doubt of this. The result was brought about, not by this or that local trouble, but by a trouble that prevails in a greater or less degree everywhere.

The defeat of Mr. Robeson in New Jersey shows that he was wrong when he said that not only was he what he had been, but that what he was he was going to remain. What he was—a member of Congress—he ought never to have been, and is not going to remain. He will now go back to the position which he ought never to have left—that of an industrious country lawyer. He has talents enough undoubtedly for a wider sphere, and, perhaps, has virtue enough too, but somehow he has utterly failed to persuade the country that he is honest. Ever since he was Secretary of the Navy there has been a widespread and unconquerable belief that he was grossly corrupt. He thought, apparently, that by getting elected to Congress he could vindicate himself, and put this belief down. But unhappily his appearance and doings in Congress only strengthened it and spread it, and he has been, for the last two years at least, since Speaker Keifer put the House of Representatives into his hands, a new burden for the unfortunate Republican party. The audacity with which he met the general odium has often pulled worse men than Mr. Robeson out of bad scrapes, but in his case it was total failure. His defeat will help the party to recover itself in time for 1884, and it may have a purifying influence on Mr. Robeson himself.

Butler had come sufficiently near the Governorship in Massachusetts already to make it plain that if he kept on trying, and should light on a year of great Republican apathy and discontent, like the present, he would probably succeed. The result has justified the anxiety which many Republicans in that State have been feeling for some weeks past. They had nothing to appeal to against him. The doings of the present Administration in the State were a distinct hindrance. The State delegation in Congress had discredited itself by a sort of new Hunkerism with regard to the tariff, with regard to Government expenditures, with regard to civil-service reform. It had nothing to say or to show to touch the imagination of the new generation. Even Senator Hoar could only say of Hubbell's operations that they were "indelicate," and his devotion to the tariff as it is had some of the features of fanaticism. When the storm came, therefore, there was nothing to resist it. The voters were eager for some means of showing their disgust, and Butler was ready at hand as an instrument of chastisement. It must be said, however, that some of the causes of his triumph are probably not so transient as these. The foreign population of Massachusetts, in which Butler finds most of his strength, is only thirty-three per cent. of the whole, and has only increased one per cent. since 1870. But the children of foreign parents are coming on the stage as voters pretty rapidly, and it is not rash to assume that they go to swell the element which does not share the disgust of the old New Englanders over Butler's demagogy, mendacity, and humbug. Nothing has been done, as we have said, within the last ten years to win these new voters over to Republicanism. The talk of the chiefs has been of

> "—old, unhappy, far-off things,
> And battles long ago,"

and they got into the habit—fatal for politicians in our day—of sneering at change and progress, and of preaching the perfection and permanence of everything that is. Butler's election to the Governorship is, of course, a bitter pill, but it will be wise to treat it as medicine, and not as misfortune simply. If the respectability and intelligence of Massachusetts wish to keep control of the Government, they must be led in politics by men of a more vigorous and aggressive type than they have put forward since the close of the anti-slavery struggle. One of the good signs of the crisis is that two of the old set of "practical men," who had been conspicuous in Congress by their contempt for civil-service reform—Messrs. Bowman and Candler—were singled out for punishment by the reformers, and both defeated; Mr. Candler's place being taken by an excellent member of the newer and better school of politicians, Mr. Theodore Lyman.

We must also observe that even the best Republicans in Massachusetts cannot divest themselves of all responsibility for Butler's being not only what he is, but where he is. As long ago as 1867 we began, at the cost of much obloquy and some ridicule, to point out in the *Nation* the danger which lay in fostering Butler as a politician by a party which professed to be based on the supremacy of moral ideas, and, in fact, drew its strength largely from that source, for it could not then be said to have given the country either prosperity or peace. Between that year and his final expulsion from the party in 1874, hardly a week passed in which we did not call attention to his vices and defects, both personal and political, and we have during the past month found some grim consolation in going back in our own columns, thirteen or fourteen years ago, to the very list of objections to him which we find in the Boston papers of to-day. They have literally produced nothing against him during the late canvass which the *Nation* had omitted. Nevertheless, when the late Mr. R. H. Dana gallantly took the field against him in 1868, to save the party from the disgrace of sending him back to Congress even three years after the war, he got no encouragement from any of the leading Republicans of the State. The handful who supported him, either with money or speeches, were comparatively unknown in the political field, and were sneered at for their pains. There can be no question, however, that the ostentatious and deliberate disregard, by the Republican party of the State, of personal character in a public man like Butler was as bad a lesson in political immorality as could have been taught to the younger or more ignorant voters, and that it prepared the way for the scandal and shame of his election to the Governorship. As he has himself often pointed out, it is useless to tell the colored people or the Irish now that he is too wicked for high office as a Democrat, when for ten years after the war he was, as a Republican, treated with positive consideration, and all his sins ignored or pooh-poohed. The descriptions of him in the *Advertiser*, *Transcript*, and *Journal*, odious as they are, were, unhappily, as correct in 1868 as they are to-day.

Governor Hoyt, of Pennsylvania, "revolted," before the election, in a letter to the Independents, in which he said he had, since the canvass began, expected to drift along with the regular Republican or Cameronian ticket; but even this passive rôle was too much for him, so he threw off the yoke and denounced the Boss and the Machine in the lusty fashion now so common.

The story he tells about himself is most pitiful, and would puzzle historians a century or two hence, if there were no newspaper accounts of the workings of the Machine, for it describes the "humiliation" inflicted upon him, the administrative impropriety to which he was compelled, and the "insulting methods applied to him by means of threats, intrigue, and bad faith" (he being the Governor of a great State), by a man who holds no State office at all, and who is not known to possess any of the ordinary claims to political power or popularity. A more striking illustration of the strength of the boss system we have not yet had, for Governor Hoyt is a much more powerful and independent man as regards the State Boss than Governor Cornell, who revolted also under very similar circumstances.

The decision of the Superior Court in the Williams and Hatch suits is a severe blow to the business of consolidation, brought to its present pitch of perfection, if not invented, by Jay Gould. If consolidation were what its name implies—the mere union of the stock of different companies in one—there would not be any harm in it; but if it meant this, Jay Gould would never have cared a straw about it. With Gould, to consolidate means first to get control of two companies by delicate manipulations of the stock, and then buy the stock of one with that of the other, watering, or, as the Superior Court Judges euphemistically term it, "diluting" the capital to provide means for doing it. Thus, when Gould consolidated the Western Union with the American Union and the Atlantic and Pacific Telegraph Companies, he made an agreement—in consolidating, it does not take two to make a bargain—by which the first company bought out the other two, at $15,000,000 and $8,400,000, and, to pay for this, increased the Western Union stock some $40,000,000, which was about $18,000,000 too much. To make it all right, it was provided by the same agreement that the greater part of this $18,000,000—to be exact, $15,526,590—should be issued as a stock dividend to Western Union shareholders. Gould being the chief shareholder, the net result of the consolidation is believed to have been profitable to Gould, and to have been against the interest of the companies.

However wrong this suspicion may be, and however admirable the arrangement may have been, it is evident that consolidation of this sort would place in the hands of wicked and unscrupulous operators a dangerous power, and therefore it is satisfactory to learn from the decision of the Superior Court that it is entirely illegal, and in direct violation of the following statute:

"It shall not be lawful for the directors or managers of any incorporated company in this State to make dividends except from the surplus profits arising from the business of such corporation; and it shall not be lawful for the directors of any such company to divide, withdraw, or in any way pay to the shareholders, or any part of them, any part of the capital stock of such company, or to reduce the said capital stock without the consent of the Legislature."

The theory on which the $15,000,000 had been divided was that it represented past surplus profits which the company had invested in the purchase, construction, and equipment of lines, wires, and general plant, and might, therefore, properly be treated as capital. As to this the Court says:

"It seems too clear for argument that in the face of that statute the issue of the stock to the shareholders of the Western Union Company cannot be upheld as a dividend from surplus profits because the profits were no longer on hand. They were converted into other property. Even if such other property remained and still is of equal value, it nevertheless took the place of profits. It became capital. Unless otherwise provided by the charter or by-laws of a corporation, the profits and surplus funds of a corporation whenever they have accrued are, until separated from the capital by the declaration of a dividend, a part of the stock itself, and will pass with the stock under this name in a transfer or bequest."

What the consequences of the decision will be it is too early to predict, for it is possible that the decision may be reversed, and it will in any case be difficult to settle equitably all the conflicting interests involved. The Court says that the charges of fraud in the consolidation are not proved; and both Gould and his lawyer, Judge Dillon, neither of whom is a dull man, insist that it will all come out right yet.

The vigor of the humorous faculty in Mr. Thurlow Weed at his advanced age is a very interesting phenomenon. It does not seem, either, to be in the least enfeebled by sickness, if we may judge from his letter in the *Tribune* of Saturday, which is even more racy and amusing than any of his late contributions to its columns. Of course, he is disturbed by the present condition of Republican politics in this State; but there are not many men of eighty-two or three with enough boyish mirth still bubbling within them to ascribe the trouble, as Mr. Weed does, to civil-service reform, which, he says, is "the first, if not the worst," of "the bad elements" with which "the atmosphere is charged." His assertion, too, that "the spoils system awakens and stimulates the best elements in the American character," and that if "we abolish the system and enact the civil-service project into law, political devotion, gallantry, and love of country will become obsolete," is worthy of Dean Swift in his best days, and indeed recalls some of the most comic passages in the "Advice to Servants." We are glad to see, too, that our venerable friend has caught and enjoys the joke about President Arthur's visit to this city "for the classification of his private papers." He says truly that if there had been less time given to this, and "there had been fewer Cabinet meetings on railroads and in hotels, the present outlook of the Republican party would have been much more satisfactory." Some of our country readers may not see the fun of this, but it lies in the fact that "classification of the President's private papers" means, in the slang of the Machine, Presidential "conferences" or interviews in New York with Clint, Steve, Mike, Barney, Jake, Bob, and Johnny.

We have always supposed Mr. Wayne MacVeagh to be a shrewd, perspicacious man of the world, and we think so still, but we confess an interview with him reported in the Philadelphia *Evening Telegraph* of Thursday is well calculated to shake the confidence of those who do not know him as well as we do, in both his shrewdness and perspicacity. The reporter went to see him about a letter of Mr. James G. Blaine to Mr. James W. Bosler, a very notorious person, who had been nominated in the Thirty-second Senatorial District in Pennsylvania in the Cameron interest. The letter is a very warm one, and runs as follows:

"If I were able to take the stump, it would give me the greatest pleasure to come to your district and urge your election as Senator. In addition to your eminent fitness for the position, I am sure every friend of mine in Cumberland and Adams will be ready to give you a cordial and cheerful support in recognition of the zeal and fidelity with which, in past political contests, you have always maintained my interests. But I can only send my good wishes, and await your election with confidence."

What the reporter wished to know from Mr. MacVeagh was, what he thought of that letter and what he thought of Bosler. Mr. MacVeagh said he regretted to see the letter very much, and thought that "it was probably written upon impulse and without proper reflection." The reason for this view is that Bosler has grown rich as a cattle contractor at the Indian Department at Washington, and even in that field had but a poor reputation; that in addition to this it was proved before a committee of Congress, before the Star-route prosecutions began—

"that Dorsey and Bosler were interested together in a good many of the routes Brady had expedited, that he acted as a clerk for them, and the records showed that in a single route—No. 40,104—Dorsey and Bosler were receiving at the rate of $24,000 per annum, without a pretence of doing anything whatever to earn it. When asked if anybody had any interest in this route but Dorsey, Rerdell answered: 'He and his partner, Mr. Bosler.' He had previously stated that he was then acting as a clerk for the firm of Dorsey & Co., and attending to their Star-route contracts. He was asked 'who constitute the firm you represent?' He answered, 'S. W. Dorsey and J. W. Bosler.'"

Mr. MacVeagh then added—and this is the singular part of his statement—

"I cannot believe that if Mr. Blaine had known these facts he would have asked Republicans to promote men of the Bosler type just now, when we are trying to set up higher standards, not lower, in our public service."

Now, our explanation of this is that Mr. MacVeagh, in the hurry of business, had not read Mr. Blaine's letter to Bosler carefully. Mr. Blaine does say there that Bosler is "eminently fit for the position," but he does not go into particulars on that point. What most affects him, he frankly avows, is the zeal and fidelity with which Bosler has, in times past, "always maintained his [my] interests." Well, it is the most natural thing in the world for the author of the Mulligan letters and the man who, as Speaker of the House, called the attention of the Arkansas and Fort Smith railroad speculators to the service he had rendered them in the Chair, and asked for his reward, to consider entitled to his sympathy any one who has grown rich as an Indian-cattle and Star-route contractor, and who has with Dorsey drawn $24,000 a year from the Post-office without any pretence of earning it; and to think that service rendered to him personally qualifies such a man for any office in the gift of the people which he (Blaine) does not happen to want for himself. So that Mr. MacVeagh's assumption that he wrote to Bosler in a moment of gush, without being aware of his antece-

dents, is somewhat startling to those who know that Mr. MacVeagh is a lawyer, in middle life, who has served in the same Cabinet with Mr. Blaine. They not unnaturally ask, Can it be possible that Mr. MacVeagh believes also that when Mr. Blaine selected the late General Hurlbut for the mission to Peru, as his agent in building up the great Pan-American Confederation, he did not know that Hurlbut had been convicted of fraud, forgery, and bribe-taking as a general in the war, and was not influenced by Hurlbut's attention to "his interests" in the Chicago Convention? And they ask further, Does Mr. MacVeagh really believe that when Mr. Blaine sent another Blaine delegate, General Kilpatrick, from the same Convention down as Minister to Chili, he did not know that he was the same General Kilpatrick who had to come home from that same quarter of the world under General Grant, for having disgraced the American name by the publicity and shamelessness of his vice?

The public debt was reduced $15,629,180 during the month of October, which makes a total reduction since July 1, the beginning of the fiscal year, of $60,423,418. The Treasury during the last week took in more money than it paid out, and the domestic exchanges so ruled that the New York banks were compelled to send currency to the South. Naturally enough, therefore, their reserve fell off, and, on an average statement for the week, was a little short of 25 per cent. of the deposit liabilities. Foreign exchange was weak. At the Stock Exchange, dulness was the chief characteristic, although at times this was relieved by the renewal of litigation respecting the telegraph and the elevated-railroad companies. Railroad earnings continue very large. Domestic trade is fairly good. The foreign-trade figures for the month of October show increasing exports and decreasing imports, although the latter continue to exceed the former.

The Adjutant-General of the Army of the United States reports that during the last fiscal year there have been 3,741 desertions from the ranks. The numerical strength of the Army is about 25,000. It appears, therefore, that nearly 15 per cent. of the Army deserted in one single year. It is needless to say that no army in any civilized country shows anything like such a proportion of desertions in time of peace. Our case is probably without parallel. In the Adjutant-General's opinion, "the chief cause of desertion is the fact that the money value of clothing drawn by the recruit after enlistment—a large amount, necessarily—is charged against him on the rolls, and, absorbing his pay for months, induces discontent and restlessness." He therefore suggests "that the first complete outfit of clothing to a recruit be settled only at the end of the first year of service." It can readily be imagined that a soldier will become discontented if during the first months of his service his whole pay consists in his clothes. But the cause and the remedy suggested would seem to apply only to cases of desertion that occur shortly after enlistment, probably a minority of the whole number. The evil certainly lies deeper. As a general rule, it may safely be assumed that but few men who have any desire to work, and see before them a tolerable chance of making an honest living, will enter our regular Army as privates in times of peace. The material enlisted is therefore not the most promising one. Young men of that class are apt to have but a slight sense of obligation, and when they find that army life does not give them as easy and amusing a time as they expected to find, the thought of getting a pleasant change by running away will be very apt to strike them. Such cases will not be cured by a mere amendment of the regulations with regard to clothing. In other armies a certain intellectual interest is imparted to military life by the attention which is devoted to the schooling of the men, not only in routine duty, but in the various elements of knowledge. Military service is thus made to supplement early education. If more general and intelligent efforts were made in this direction in our Army, they might serve not only to relieve the deadly dulness of the garrisons and frontier posts, but at the same time quicken the ambition and improve the character of the men. How far such efforts would reduce desertions we do not venture to predict, but the experiment is certainly worth making.

What may be called a neighborly murder occurred in Kentucky the other day which well illustrates the remarks we have recently been making on Southern homicides. The Stiverses and Scullys had adjoining farms, and the women of the two families quarrelled about turkeys, as is so often the case in the country. ("Hens," as the old lady said, "has been the cause of more trouble in families than any other one thing.") Whereupon the boy, Sherman Stivers, took his shotgun and shot certain turkeys claimed by the Scullys as their property. This resulted in Sherman's being taken out of a spring wagon by Mr. Scully and having his ears boxed. At the North the matter, if it went further, would have resulted in a lawsuit, or an exchange of vituperation. But Mr. Hooker Stivers, Sherman's elder brother, on hearing of it soon after, decided that it necessitated at least one death. So he calmly harnessed his horses, took with him his beloved shotgun, which seems in some parts of the South to be taking the place of the family Bible as a consoler in times of affliction and perplexity, and drove off in search of Mr. Scully without either heat or passion. On meeting Mr. Scully in the neighboring town of Paris, he called out to him, and on his approaching shot him dead. Mr. Stivers has been arrested, of course, but we fear that if anybody supposes he will be punished, that person will be greatly mistaken. He will be liberated on bail, and his trial will be a great show, at which he will prove not that his shot was fired without premeditation, in the heat of passion, but was committed under the influence of a solemn sense of duty to his brother and the Stivers family, and was done with great deliberation; and the jury will conclude that a man of his temperament, on hearing that his brother's ears had been boxed for killing a turkey, really could not be expected to act otherwise.

There appear to be materials for a very nice little controversy between Great Britain and Spain in the wrongful surrender to the Spaniards by a British magistrate at Gibraltar of three Cuban refugees. They were apparently arrested within the British lines, and carried before the magistrate, who surrendered them to the Spanish authorities, although England has no extradition treaty with Spain. Lord Granville has said that though the surrender was made by a magistrate, yet, as it was under a mistake, he thought it would be a graceful and courteous thing for the Spanish Government to restore them. To this the Spanish Minister has, it is said, replied that, anxious as he is to oblige England, he will not do anything of the sort. It is now expected by many that Lord Granville will speak in more peremptory fashion, but it is not likely. There is little to be gained by bullying the Spaniards, who are so sensitive about Gibraltar already that the Ministry could hardly afford to make concessions in any matter of disputed right or title connected with it. In fact, we are inclined to think that when the Minister asserts, as he has done, that the fugitives were captured on "Spanish soil," he means soil that is rightfully Spanish, but now held by Great Britain.

Dr. Schweinfurth, the explorer, who has thus far been the principal source of information as to the doings of the False Prophet, seems to have promised too much for that now notorious divine. He was by this time to have taken Khartum, after having massacred the bulk of the Egyptian Army, but Abd-el-Kader, who commands up there, telegraphs that he has defeated him at three different points. Khartum is therefore apparently in no danger. If it be also true, as Abd-el-Kader telegraphs, that the Prophet's followers were demoralized by the news that the English were coming, he cannot be much of a prophet, after all. If he were what he has been said to be, his disciples ought to be rejoiced to hear that the English were coming, so that they might have more infidels to convert or devour, for we presume that his "Man-eaters" always give an infidel not the pristine alternative of "the Koran or the sword," but the Koran or the pot or gridiron; and the question he would have to answer would be, "Will you believe or be cooked?" Conversions on an immense scale, we feel sure, would follow the trial of this method. But if the Prophet fears the infidel and flies from him, of course the spread of the true faith is impossible. Apropos of this, the Egyptian despatches from the front during the war have been published, and they are a very amusing mixture of piety and mendacity. Arabi, it appears, won great battles nearly every day, and bore testimony to the constant anxiety of the British troops to escape from their cruel taskmasters, the officers, and reach the Egyptian lines in order to embrace the Mussulman faith. The reports are interesting, inasmuch as there appears to be no doubt of Arabi's religious fervor and knowledge of the Koran, and they, therefore, raise the question whether the separation of religion from morals is going on as rapidly in Islam as it seems to be in some parts of Christendom.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 1, to TUESDAY, November 7, 1882, inclusive.]

DOMESTIC.

THE elections on Tuesday resulted in a "Democratic deluge." As we go to press it is impossible to give the result in all the States, but the Democrats have undoubtedly carried New York, Pennsylvania, Massachusetts, Connecticut, Delaware, Arkansas, and Texas. Both parties claim the victory in Colorado and California, but the Legislature of the latter State is probably Republican. In New Hampshire the Republicans are confident of Hale's election. State officers were elected in twenty-two States, members of Congress in thirty-three, and Legislatures in twenty-four.

In New York, Grover Cleveland, the Democratic candidate for Governor, was elected by a majority estimated at 170,000, which is the largest majority ever given a candidate in any State in the Union; and the Citizens' ticket in New York city was defeated by about 20,000 majority.

Gen. B. F. Butler has been elected Governor of Massachusetts by a majority of about 10,000. His Council and the Legislature are Republican.

Pattison, the Democratic candidate for Governor in Pennsylvania, has been elected by a plurality of about 35,000 over Beaver and Stewart. The latter, who was the Independent candidate, received about 75,000 votes.

In Connecticut, Waller, Democrat, was elected Governor.

The Democrats have undoubtedly secured a considerable majority in Congress, probably in the neighborhood of 174 members, against 150 Republicans. All these figures are only approximately correct, however.

Messrs. George William Curtis, Sherman S. Rogers, Charles T. Russell, Henry Hitchcock, and Charles J. Bonaparte, a committee appointed by the National Civil-Service Reform League, have presented to the voters of the United States, in behalf of the League, a statement of their principles of reform and the reasons for their adoption, and they ask the support of all good citizens therefor. The report concludes by saying that there is no question before the country of more commanding importance than the reform of the civil service, because it touches the fundamental principle of the Government—freedom of the suffrage—and advises good citizens in the Congressional elections to support only those candidates "who will actively favor in Congress the passage of the bills now pending in both Houses, or bills founded on the same general principle, establishing non-partisan and open competition and probation for subordinate appointments in the civil service. Such legislation would abolish the most dangerous survival of royal privilege in the country, restore political parties to their legitimate function, emancipate elections from dangerous corruption, purify American politics, and wipe a disgraceful stain from the American name."

Mr. James G. Blaine wrote a letter to Mr. J. W. Bosler, who is a candidate for State Senator in Pennsylvania, saying that it would give him the greatest pleasure to take the stump for him and urge his election if it were possible for him to do so. He added that every friend of his would cordially support him "in recognition of the zeal and fidelity with which in past political contests you have always maintained my interests." In a recent interview, ex-Attorney-General MacVeagh, commenting on this letter, said that Mr. Bosler was the partner of ex-Senator Dorsey in the Star-route frauds, being the second member of the firm for which Rerdell, recently convicted, acted as clerk. Mr. MacVeagh said he could hardly believe that the district would care to send such a man to the State Senate, and that he could not believe that Mr. Blaine knew the facts about the partnership when he urged Bosler's election. Ex-Postmaster-General James also sent a despatch to Mr. MacVeagh, cordially endorsing what he had said in regard to Bosler.

On Wednesday, Attorney-General Brewster sent despatches to the United States Marshal in Charleston, and to the United States Attorney at Columbia, South Carolina, in which he says that his attention has been called to the probability that recent homicides in Lancaster County in that State will tend to prevent a full and free ballot at the approaching election for member of Congress in that county, and directing that special attention be given to the county, and that the laws therein be strictly enforced.

The statement issued by the Treasury Department on the 1st of November shows that in the month of October the reduction of the public debt amounted to $15,629,180, which is $3,000,000 more than the average monthly reduction for the fiscal year which ended June 30, 1882. The decrease in the debt for the first four months of the current fiscal year has been more than $60,000,000. The 6 per cent. bonds of the loan of 1863, continued at 3½ per cent., disappear for the first time from the interest-bearing debt in the statement for November. The amount of debt bearing no interest has increased $22,750,000 since the issue of last month's statement, owing to an increase of $21,500,000 in gold certificates and a little more than $2,000,000 in silver certificates. There has been an increase of $28,500,000 in the total cash in the Treasury, owing mainly to the deposits of gold for the new gold certificates.

The report of the Post-office Department shows that the revenue of this department has doubled since 1871. For the fiscal year ending June 30, 1871, the revenue was $20,037,045; for the last fiscal year it was $41,876,410. The revenue of the Department already exceeds that of the mail service of any country in the world, being $10,000,000 more than that of the United Kingdom. While receipts are increasing at the rate of 14 per cent. per annum, the expenditures increase at the rate of less than 2 per cent. The excess of receipts over expenditures for the past year was over $1,500,000

On Wednesday, some Kentucky troops, detailed by Governor Blackburn to escort Neal and Craft, the Ashland murderers, from Catlettsburg to Lexington, were met at the former place by some citizens of Ashland, who demanded the prisoners. The demand was refused, and the troops, with the prisoners, embarked on a boat to proceed to Lexington. When they reached Ashland, the citizens took a ferryboat and put out to intercept them. A revolver was recklessly discharged by a boy on the ferryboat, and was answered by a volley from the soldiers. The balls pierced the boiler of the ferryboat and disabled the mob. Meanwhile a great crowd had gathered on the banks of the river, within range of the soldiers firing from the steamboat. The result was that three men and an infant in its mother's arms were killed and twenty-three persons wounded. There is great indignation against the soldiery. The commander of the soldiers has since made a statement that all the shots were directed at the mob on the ferryboat, and that if persons standing on the bank were injured, it was through carelessness in being near a lawless mob attacking State troops, and not because the troops fired at them.

Dr. Dudley A. Sargent, for the Athletic Committee of the Harvard Faculty, has issued a set of rules which will make a considerable change in the management and direction of athletic sports at Harvard. No club or athletic association of Harvard University is allowed to compete with professionals. No person is allowed to assume the functions of trainer or instructor in athletics in the College grounds without written authority from the Committee. No person after this year will be allowed to row in any College crew unless he can swim, and no base-ball match can hereafter be played outside of Cambridge on any other day than Saturday, without permission from the Committee.

FOREIGN.

In the House of Commons, on Wednesday, Lord Randolph Churchill made a long speech lecturing the Tory leaders on their "foolish action" in proposing a two-thirds majority in the closure resolutions. He said that such a course would be most damaging to the Conservatives, either in or out of power. On Thursday, Mr. Parnell made a speech on the closure. He thought the adoption of the closure would tend to increase rather than diminish the friction of Parliamentary business, and would stimulate the tendency of the House of Lords to throw out measures coming from the House of Commons. He said the Irish members would vote against Mr. Gibson's amendment, requiring for the declaration of closure a two-thirds majority instead of the bare majority proposed by the Government, but that, on the further question of closure or no closure, they left themselves free to act as the party might determine. After some further speaking, the House divided on the amendment, and it was rejected by a vote of 322 to 238. On Monday an amendment providing that any division on closure should be taken by secret ballot was rejected, and the Speaker then put the closure resolution to the House. Sir Stafford Northcote moved its rejection. He said he feared interference with free speech, and predicted that obstruction would only be encouraged and stimulated. A strange destiny, he said, seemed to dog the footsteps of the Government, whose doctrine, when assuming office, appeared to be that force was no remedy. Yet in Ireland, in Egypt, and in the House of Commons they seemed to have no other remedy but force. Sir William Harcourt asked the House to pass the resolution. The Liberals, he said, were as anxious for freedom of discussion as their opponents, and there was hardly one of the great Liberal reforms which had not seriously alarmed the Tories, but happily their fears were never realized.

On Monday, Lord Randolph Churchill published a long letter, in which he attempted to prove that the Government would only succeed in carrying the closure resolutions by a majority of from 15 to 30. He considered that if the closure succeeded by such a small majority, it would be the duty of Sir Stafford Northcote to announce that he refused to allow the question of procedure to go forward without an appeal to the constituencies, and the general election would probably be decisive against closure, for the number of Parnellites would be doubled, perhaps trebled, while it was highly improbable that the Conservatives would be weakened. If closure is not thus prevented, he said, the Liberals may in two or three years manipulate the electorate, and the chance of the Tories will then be gone.

Mr. P. J. Smyth, Member of Parliament for Tipperary, in a recent letter, said that the examples of unprincipled tergiversation, as shown in the voting of the Parnellites in the House of Commons for gag law, degrade the nation. Never, he says, since the world began, was a country saved by swindling, political or financial.

At a meeting in London, on Wednesday, of the Committee of the House of Commons to investigate the imprisonment of Mr. E. Dwyer Gray, it was decided by a vote of 10 to 4 that the proceedings should be private. The minority were Irish members. Mr. Gray was examined before the Committee, and made a long statement. He complained of Judge Lawson's vindictiveness, and explained that he did not attend to his duties as High Sheriff of Dublin because he had to attend to his Parliamentary duties. On Thursday the Committee

agreed that a copy of the minutes of its meetings should be sent to Judge Lawson, and that it should be left to his discretion whether he would appear before the Committee to answer the charges made against him, in regard to his treatment of Mr. Gray, by the Irish members.

On Friday, Mr. Gladstone stated in the House of Commons that the Government thought a contribution should be demanded from Egypt for the expenses of British occupation. Sir Stafford Northcote asked whether the Government could continue the occupation without the authority of Parliament. Mr. Gladstone replied that the occupation was the result of the war—which created a "general demonstration" in the House, as he had hitherto denied that England was at "war" with Egypt.

While addressing a large meeting of farmers at Newbridge, County Galway, Ireland, on Wednesday, Matthew Harris, a member of the late Land League, and certain others were arrested under the Prevention of Crime Act. Great excitement ensued, and a collision between the people and police occurred. Harris when arrested was urging the people to prevent hunting, and refused to stop the meeting when ordered to do so.

In a speech at a meeting at Inverness, Scotland, on Saturday, Mr. Davitt denounced the manner in which the depopulation of the Highlands was going on. This, he said, was an instance of the iniquity of the Land Law, and he advocated nationalization of land as a remedy.

The Prince of Wales has consented to act as Chairman of the Longfellow Memorial Committee. In a letter accepting the chairmanship he expresses much satisfaction in acceding to the request, and adds that he is very glad an opportunity has been afforded him to show the high respect he entertains for the memory of the greatest of American poets, and his appreciation of the value and excellence of Longfellow's works. On Wednesday a meeting of the Longfellow Memorial Committee was held in London. Lord Braye presided. Canon Rowsell, as a member of the Chapter of Westminster Abbey, addressed the meeting. He said a memorial of Longfellow would serve to cement the good feeling between England and the United States. Lord Granville said he had observed a growing feeling of cordiality between the two countries. He believed that Longfellow's death was as great a loss to England as it was to America. It was unanimously resolved that a bust of Longfellow be placed in the Poets' Corner of Westminster Abbey. One-third of the members of the Committee have already subscribed £500 toward the erection of the memorial.

The Socialistic disorders in France seem to have subsided. A secret dynamite factory is said to have been discovered at Charolles. Revolutionary manifestoes were placarded in Paris and Marseilles on Thursday night. At a Cabinet meeting on Thursday, M. Fallières, Minister of the Interior, said he believed the dispute between the master upholsterers and their workmen was at an end. The French Government addressed a complaint, couched in strong terms, to the Swiss Federal Council in regard to the proceedings of the Anarchists at Geneva, and the Federal Council ordered an investigation into the matter. A number of Anarchists were arrested on Monday at Creuzot, Lyons, Lille, and Marseilles.

The French Ministry, at a council on Saturday, discussed the bill of M. Devès, Minister of Justice, relating to the reform of the magistracy. The bill provides that the number of magistrates shall be reduced by 390. The system of appointment is to be by Government selection. The bill also provides for the institution of a Superior Judicial Council, to be composed mainly of members of the Court of Cassation, which shall have the right to dismiss magistrates upon motion of the Keeper of the Seals.

M. Tirard, Minister of Finance, has informed the Budget Committee that the receipts and expenditures for the current year will balance, without recourse to votes of credit.

The municipality of Paris has presented M. de Brazza, the African explorer, with a medal of the value of 3,000 francs, and has resolved to grant a subsidy for his next expedition in Africa.

The French will have complete control of the new Tunisian Government. The Bey's Cabinet will be under the presidency of Silazsis Bey. M. Cambon will be Minister of Foreign Affairs, General Forgemol Minister of War, and General Logerot Minister of Marine. It is believed that General Lambert will have charge of the Department of the Interior.

A correspondent at Berlin telegraphed on Monday to a London paper that Russian diplomacy was making great exertions to influence France to unite with Russia in a policy unfriendly to England. A despatch from Frankfort on the same day said that important diplomatic negotiations were in progress between Russia and France. If France accedes to the wishes of Russia in reference to the proposed extradition treaty, says the despatch, and limits the protection to be extended to political refugees, Russia will support the entire North-African policy of France, and more particularly her policy in regard to questions pending in Egypt and Tunis.

The acting French diplomatic agent at Cairo having asked Sherif Pasha, President of the Council, whether M. Brédif, the French Controller, would be invited to the sitting of the Council of Ministers, Sherif replied that the European Control being a joint institution, and Sir Auckland Colvin, the English Controller, having been instructed not to attend the sittings, the Council had decided not to invite M. Brédif to assist in its deliberations.

There are various rumors every day about the probable course of proceedings in Arabi's trial. It is said that evidence will be introduced to show that Arabi saved the life of Midshipman De Chair against the wish of Tulba Pasha, and also that he stopped the massacre at Alexandria by telegraphic order. It is said that the prosecution, on the other hand, will urge that it is impossible to believe that Arabi Pasha, who held the power, could not have prevented the massacre had he wished to. On Thursday the London *Times* said that it had reason to believe that a compromise had been offered, or was about to be offered, to the British Government, the purport of which was that Arabi should be allowed to expatriate himself and live in exile, but that the proposal was unacceptable. Mr. Broadley has protested against the Inquiry Commissioners examining witnesses in the absence of counsel. Ragheb Bey, who was the medium of communication between the Sultan and Arabi Pasha, will be summoned as a witness for the defence at the trial. Arabi's counsel say that they have reason to believe that when the translation of his papers is completed, the documents will prove that he had received direct encouragement from the Sultan. Among the papers is the text of the Sultan's firman, dated the 23d of June, conferring the order of the Medjidie upon Arabi, in recognition of his zeal, honesty, and intelligence. The idea which the Egyptian Ministry had entertained of employing English counsel to assist in the prosecution of Arabi and the other rebel leaders has been abandoned.

Alaiddin Pasha, Governor of the Egyptian Red Sea coast, is appointed to the command of the expedition to the Sudan against the False Prophet. In the House of Commons on Thursday Sir Charles Dilke said news had been received from Khartum, under date of October 30, that the False Prophet had been defeated with great slaughter last month, and that smallpox was raging among his followers. This, however, is not generally believed, as Dr. Schweinfurth, writing under date of Cairo, October 23, to the Anti-Slavery Society, said that all the provinces of Egypt lying south and east of Khartum were in the hands of the insurgents; that Khartum only hung by a thread, and that the Egyptian army had been cut down by constant disastrous combats with the False Prophet, and was reduced to half its original size. The mass of the people, he said, believe in the "ever-victorious False Prophet." Several amnestied officers who fought under Arabi Pasha, have expressed a desire to serve the Khedive in the Sudan, and several German officers will join the expedition. On Monday, it was telegraphed from Cairo, that Abd-el-Kader had telegraphed from Khartum, under date of November 5: "I have defeated the rebels at three different points. They were somewhat demoralized by the report that English troops were coming. Khartum is for the moment relieved."

The Porte was much alarmed at the decision of the British Government to send Lord Dufferin to Egypt, and the Council of Ministers decided to ask for explanations. The Grand Vizier on Wednesday requested Lord Dufferin to postpone his departure, but Lord Dufferin replied that it would be impossible for him to comply with the request. The Porte thereupon telegraphed to Lord Granville asking that his departure be delayed. Subsequently, however, Lord Dufferin had an interview with the Sultan in which he explained matters satisfactorily, so that he started for Egypt.

The elections for members of the Norwegian Storthing have resulted in a crushing defeat for the Government, four-fifths of the members returned being Radicals or Republicans.

At a council of the Spanish Ministers on Thursday, King Alfonso presiding, it was decided not to hand over the Cuban refugees to the British authorities. This decision has met with general approval in Spain. The Spanish Government, however, though persisting in its decision, has decided to institute an inquiry into the circumstances of the capture of the Cubans. A despatch from Madrid on Monday said that some interesting correspondence from American filibustering agents had been intercepted, showing that they were deeply interested in the liberation of the three Cuban leaders, and would work hard to accomplish their object.

On the reassembling of the Spanish Cortes it is understood that the Opposition will probably provoke debate in order to bring on a division. The Opposition journals estimate that on a division the Government will obtain only a majority of forty. It is thought that much will depend on the action of Señor Rodrigo, the leader of the group of fifty Liberals. The Ministry count upon his support, but the Opposition affirm that he will decide in favor of Marshal Serrano at the last moment.

The members of the Servian Cabinet have agreed to remain in office, King Milan having refused to accept their resignations, which they tendered, believing that he was dissatisfied with their failure to discover the recent plot to assassinate him.

The elections for members of the Italian Chamber of Deputies, held on the 29th of October, resulted in the return of 99 members of the Right, 65 of the Centre, 258 of the Left, 27 Radicals, and 2 Socialists. The elections throughout the country were orderly, except at Leghorn, where a mob attempted to destroy the urns and registers.

A despatch from Pressburg, Hungary, on Friday, said that excesses against the Jews had recommenced in that city, and that drunken rioters plundered their shops and killed a woman. Ten of the rioters were arrested.

MR. BOUTWELL ON THE CIVIL SERVICE.

THE dexterity of some of the friends of the spoils system in darkening counsel about civil-service reform was curiously illustrated in a speech of Mr. Boutwell's at Plymouth, Mass., last week. Mr. Boutwell is an old officeholder and officeseeker. For forty years, whenever he has not been holding office he has been seeking it, so that he speaks on the subject both with knowledge and experience. According to him, the notion held by the civil-service reformers that members of Congress "exert a great deal of influence in the appointment of officeholders, and thereby secure renominations and elections, and perpetuate themselves in power," is so fanciful that his audience, he said, "would, on reflection, all come to the conclusion that there can only be the slightest foundation for such a remark." This is almost, but not quite, up to the level of Mr. Thurlow Weed's humorous prediction that if the spoils system be abolished, "political devotion, gallantry, and love of country will become obsolete." The doings of the officeholders and their relations to Congressmen and politics are, of course, within the observation and knowledge of hundreds of thousands of persons all over the country. The charges made against the former by the civil-service reformers are not denied by them, and are met by the great bulk of the politicians with the answer that there is nothing wrong in what they do; so that when Mr. Boutwell mounts the platform to deny the fact before a body of intelligent Massachusetts voters, as if he were talking of something which was within his knowledge alone, he makes a display of what in a young man would be called an audacity which must be fatal to his future usefulness. The spoilsmen really must agree on their defence. It is ridiculous to have two-thirds of them pleading confession and avoidance, and the other third a general denial.

Mr. Boutwell is also troubled about the creation of an "officeholders' oligarchy," by which he meant, as he showed further on, not an officeholders' oligarchy at all, but a "profession of officeholders," thus indicating that when he used the former phrase he really did not know what he was saying, but was simply using one of the catchwords by which the Machine men try to frighten the public from interfering with their little games. He talked as if there were now no profession of officeholders, which every one knows is not the case. But it dawned on him as he went on that he himself was a striking illustration of the incorrectness of his assertion, so he confessed that it perhaps "did not come very well from a man who had held office almost all his life" to protest against the creation of such a profession. He was right in this. It came from him with a very bad grace indeed, and all the excuse he had to make for it was that he "had reached the point where he could speak not only with great freedom, but with an unusual absence of personal motive as to what he may say." But there is no point in a man's career at which he is entitled to be as inaccurate as he pleases, and it is not open to any one to justify an allegation which is not true, by the plea that he had nothing whatever to gain by making it.

About removals he was curiously evasive and slipshod. "It is asserted," said he, "that removals are frequent. It is not so. There are men in the revenue service of the country who have been there for twenty years. In 1869 and 1870 there were a large number of persons in the Treasury Department who had been there from a period before the war." Now, this seems to be a denial of something somebody has asserted. In reality it is nothing of the kind. To the assertion that "removals are frequent," every boy in the common schools above the age of twelve ought to know that the assertion that there are many men in the service who have been there for long periods, is not a negative. Mr. Boutwell might nearly as well reply that "it is not so; every clerk has half an hour for lunch." What the reformers say is that removals are so frequent that if a force of competent officers were not retained permanently, the service would go to pieces altogether; and this is literally true, and Mr. Boutwell does not deny it.

To competitive examinations he is violently opposed, of course, but on constitutional grounds he is in favor of the system which has been on the statute-book since 1853, but which he knows perfectly well has been a complete farce in practice—namely, of holding a pass-examination of those who have been nominated, to see if they are fit for the place. Of course, no one who is nominated by the right "influence" is ever found unfit; and it is not becoming for a man of Mr. Boutwell's years to allude to the subject at all in public without being perfectly frank about it. So far from this, he talked as if there were no such law in existence, but that it would be a good thing to pass one. He is not a great lawyer, and in fact we believe has had very little practice, and came to the study of the law late in life; and yet he declared with the utmost positiveness that to make competitive examinations imperative by statute, as to those officers whose appointment the Constitution allows Congress to vest "in the President alone, in the courts of law, or heads of departments," would be utterly unconstitutional. One does not need to argue a point of this sort with Mr. Boutwell. It is enough to say that vastly better lawyers than he is see nothing unconstitutional in defining the class of persons from which such officers shall be selected, and making it consist of those who have answered most questions in an open examination.

Mr. Boutwell and men of his time and training are kicking against the pricks, and fighting against the spirit of the age. The system in which they grew up and which they loved is doomed, and if they are wise, they will resign themselves with dignity to its destruction. They have the consolation of knowing that it is but sharing the fate of some of the best and noblest things in the world. Everything has its day and passes away—even the cloud-capped towers and gorgeous palaces, the laurel and the rose, great states and great creeds. Why should they expect spoils and rotation, and influence, and assessments, bosses and workers, to escape the fate which overtook Babylon, Nineveh, the Roman Empire, and the god Pan?

THE AMERICAN HEIR ABROAD.

ATTENTION was attracted a year ago to the proceedings taken by the Hedges family to recover an estate of $250,000,000, left them by a "common ancestor," and reported to have been accumulating in the Bank of England for some generations. It was also said that the Lord Chancellor had made a favorable decision as to the claim, and that practically all the Hedges family had to do was to go over, or send over, and collect the money. If we remember right, a meeting of the heirs was held, and able counsel retained for the purpose, who, we suppose, went to England; but since that time, as usual, not a word has been heard of the claim, at least as far as the newspapers are concerned, and, as our readers know, it is to the newspapers and not, as in other cases, to the law reports, that we have to go for information as to claims of this sort.

The procedure in England with regard to claims by American heirs is, as we have before now pointed out, very peculiar. In any other kind of claim there is always somebody in possession of the property who asserts that he has a better title than the claimant, and he usually produces a will or a deed under which he holds. But in the case of the American heir, the money is always discovered to be in the vaults of the Bank of England, no English descendants of the "common ancestor" seem to have claimed it, and the only judge who has jurisdiction over it is the Lord Chancellor, who, of course, tries the case—if he ever does try it—without a jury, or any of the safeguards thrown around the sanctity of property by the common law. As there are no defendants, it ought to be a very easy sort of case to try. The Bank can have no valid title to money deposited with it by an ancestor, yet the money must belong to somebody, and, on the production of proof of descent, all that the Lord Chancellor would have to do would be to direct the Bank to pay it over. But this is just what he never does. What he appears to do is to take the case and hold it under advisement, month after month, and year after year, with a view to tiring out the American heirs; and in this he seems to be uniformly successful. Not a dollar of the money has ever reached this country.

Now, we do not pretend to be able to explain this state of things, but there are certain facts which cannot be overlooked. The Lord Chancellor's is a political office, and he is a member of the Cabinet of the party in power. The Bank, if not a political machine, is dependent on Parliament for its existence and prosperity, and it is for its interest to be on good terms with both political parties. The Queen, no doubt a good woman, and beyond the suspicion of pecuniary corruption, is, as every one knows, a mere dummy in the hands of the Cabinet, and has to do what she is told. Again, we know that enormous sums of money are spent in all free countries, and especially England, in politics, of which no account is ever asked or rendered, and the English have not our system of assessing officeholders to resort to. Under these circumstances, the temptation to use the money of absent and unknown American heirs cannot but be great; and as long as the Lord

Chancellor can keep them at bay—and practically this can always be done—the money can be used by either party for the promotion of its own interests, and no one ever be a bit the wiser. We do not say that this is done; but if it were done, would it not amply account for the extraordinary secrecy which surrounds the use of money in English politics, and which offers so marked a contrast to the entire publicity of our own simple system? The money may, of course, be all in the Bank; but what is to prevent its being used in the way we have suggested; and if it is, how is the American heir to obtain redress? He could not proceed against the Queen or the Cabinet, for the same reason that he could get nothing out of the Bank—because the Lord Chancellor would, of course, take jurisdiction of the case, and then the heir would be just where he was at first.

Human ingenuity could not contrive a system of procedure better calculated than this to baffle an heir, and what has always puzzled us is that the American heir should not have abandoned the struggle long ago. The only other course open to him would be to get the State Department to take the matter up, and something like this course seems to have actually suggested itself to Mr. Blaine in connection with the Cochet claim against Peru. Had Mr. Blaine succeeded in that effort, he might have been induced to turn his attention to the case of the American heir in England, and, if he had, it would have been a better *casus belli* than any he had against Chili. The accumulations in the Bank belonging to the American heir are so vast (the best estimates that we have seen put them at $5,000,000,000) that they are well worth a war—to say nothing of the principle involved. But for work of this kind we need a bold man, and nothing can be hoped from a timid diplomat like Mr. Frelinghuysen.

But England, after all, is not the only country in which there have been common ancestors. Every country in Europe has contributed to our stock, and, considering the extraordinary procedure by which the heir is kept at bay in England, we have always been surprised that he has not turned his attention elsewhere. There are signs that he is now beginning to do so. The *Tribune* of Friday contained a full account of the five great estates in Holland, amounting in all to $2,000,000, which belong to the Haffs of Long Island. The chain of title, as the lawyers call it, is very interesting, not only from a legal, but from a purely philological point of view. The American ancestor in this case was William von der Holst, who came over to Gowanus, Long Island, two hundred years ago. From him are descended a number of families, the name having been gradually modified under the operation of Grimm's law, which it is unnecessary to say is valid in Holland and on Long Island, as follows: Von der Holst, Von Holst, Holst, Hooft, Huff, Haff, and we believe we violate no confidence in adding, Hiff, Hoof, Smith, Brown, and Jones. Peter, the Dutch ancestor, accumulated a fortune in Holland, and, in his Dutch way, invested part of the savings of his lifetime in a museum, which "successive Governments have kept open for the use of the public to this day." It was this museum, it seems, and "the story connected with it," the precise nature of which, for some no doubt excellent reason, is withheld, that "suggested the claims of the Haffs." It is not stated to whom it suggested them, but we risk little in saying that he was a legal gentleman.

At any rate, the Haffs have held a meeting to which some fifty odd claimants came. The most direct heir to the property is the Rev. Stephen Haff, of Bay Shore, a "strong, well-built, well-preserved man of sixty," who is the shoemaker of the village. Curiously enough, he is also pastor of the Bay Shore Congregational Church—a combination of occupations seldom met with at the East. He has a "big, generous heart" and a hopeful disposition, which is very fortunate. The agent of the Haffs, whose name is not given, has gone to Europe to look after the claim.

There is no Lord Chancellor in Holland, but there is a Bank of Amsterdam, and there, no doubt, the money is lying. But the question is, What is the Dutch procedure in such cases? Does the Bank pay it over on presentation of proper proofs of descent, or is there some official connected with the Government whose duty it is to baffle the heirs and keep them at bay? They have Roman law in Holland, and the chances of the American heir under that system may be better. On the other hand, they have representative institutions and constitutional party government as they have in England; and money, no doubt, is used in politics, though what is done with it is kept very close, as it is all over Europe. The King, too, may "square" the agent, which would be bad. All we can do is to await the result of this new attempt, and hope for the best.

AMERICA IN WESTMINSTER ABBEY.

THE London *Times* is objecting, rather ungraciously, to the placing of Mr. Longfellow's bust in Westminster Abbey, on the somewhat narrow ground that the Abbey should be reserved for memorials of English worthies exclusively, and that there is no space in it for international monuments. If this were all that could be said against giving American poets and scholars a place in it, we think it would be worth but little consideration. The great lights of English literature, wherever born, can never be foreigners, in the sense in which the *Times* uses the term, to the custodians of the Abbey, and they are not likely to be numerous enough in any age to make the question of room for their monuments a practical one.

The real difficulty seems to be much more serious. It does not arise in Mr. Longfellow's case, because there is a rare clearness in his title to his fame throughout the English-speaking world. But it will arise, we fear, in a great many cases for which the Longfellow Memorial will seem to furnish a precedent. It consists in the fact that it will be impossible for the guardians of the Abbey to decide American claims on their merits, partly through international delicacy, and partly through sheer and unavoidable ignorance. If Americans should ever get into the way of pushing the claims of their deceased worthies to monumental recognition in the Abbey—and that this is possible nobody can doubt who has seen anything of hero-worship—the Dean would find it an extremely ungracious and sometimes almost impossible task to repulse them as the advocates of an overestimated reputation, or, in other words, to tell them plainly that their deceased friend was not the man they supposed he was. In many cases, too, they would not accept his decision in a very gentle spirit, or treat it as the product of anything but English prejudice against American excellence. The rage for putting up monuments to other people as a means of making one's self known, has already shown itself among us, and Westminster Abbey is too attractive a theatre for this kind of display to have escaped observation. It would not be promotive of good feeling on either side of the water, and would be a distinct source of mortification to the best class of Americans, if it should become common for notoriety-hunters to beset the Dean of Westminster for the admission of monuments of Americans whose fame was acknowledged only by a limited circle of their own friends, one of these being a rich man, ready to draw his check for a first-class bust or statue on which his own name should be inscribed as the donor.

And then there is the great difficulty for Englishmen of deciding who our great men are. The ignorance of Englishmen, who know America only through books and newspapers, about the conditions of greatness in this country, is profound. They are very apt to suppose that a conspicuous man, who possesses what they have been taught to consider peculiarly "American traits," must be an object of respect, if not of reverence, to the best portion of his countrymen, when, as a matter of fact, he may be utterly repudiated as a national representative by the only class of Americans whose judgment Englishmen would be willing to take as a certificate of excellence in any intellectual or moral field. There are constantly, in England, Americans revelling in the receipt of consideration as American types which nobody at home would think of according them, who have in fact no social capital but their nativity and the novelty of their manners and ideas. So that Englishmen trying to satisfy themselves whether the American public would be flattered or gratified by the bestowal of an English honor on a given man of whom they know little or nothing themselves, would be plunged into a sea of trouble. They could not send over a commission of inquiry to find out whether Americans really rated A or B as highly as his friends in London said they did.

When Canon Kingsley was over here he delivered a lecture on Westminster Abbey, in the course of which he almost demanded a distinguished American for interment in the Abbey. The extremely humorous way in which the suggestion was met was an excellent illustration of the difficulty there would be in making the Abbey an Anglo-Saxon Valhalla. It elicited much nomination of living persons for the honor; but they were mostly persons of whom the public wished to get rid, and would be pleased to see buried anywhere—not of persons whom it would hold in revered remembrance. In other words, the Canon's proposal, to speak plainly, was treated as a huge joke. In fact, no one can reflect seriously on the question of monuments without

seeing the danger there is, always and everywhere, of putting up memorials of any but a very few of the greatest men immediately or very soon after their death. The popular judgment of any man who has played a conspicuous part, or been much talked of, is more or less disturbed by his disappearance from the scene. A year or two of reflection often reverses, always greatly modifies, the view taken even by his own countrymen of his character and services in the first days of mourning. This danger is doubly great when it is foreigners who have to decide whether he really reached the shining table-lands of deathless fame. For them it is almost a necessity to wait until more than one generation has passed on his work before setting up his image in their streets or churches.

THE CORRESPONDENCE OF GEORGE SAND.

PARIS, October 24, 1882.

THE third volume of the correspondence of Madame George Sand* begins at the French Revolution of 1848. On the eve of this great event Madame Sand had no suspicion of it. Speaking of a friend who felt uneasy, to her son Maurice, she said that she saw no reasonable pretext for a revolution in the affair of the *banquets*. "It is an intrigue between falling ministers and rising ministers. If there is a little noise around the banquet hall, there will be only a few murders committed by the police, and I see no reason why the people should side with M. Thiers against M. Guizot. Thiers, to be sure, is better; but he will not give any more bread to the people." She advises her son to avoid the neighborhood of the banqueting: "It would be too stupid to be killed for Odilon Barrot & Co." A few days afterward the Revolution was accomplished. Madame Sand had become the Egeria of some of its leaders: she was intimate with Michel de Bourges; she knew Ledru Rollin; she knew Jules Favre. The new Government sent to all the Communes a "Bulletin des Communes," and Madame Sand inspired this publication, which had for its object the defence of republican ideas. On the 6th of March she writes to her friend Girerd, at Nevers, where he was Commissioner of the Republic:

"The Republic is the best of families, the people is the best of friends. The Republic is saved in Paris; we must save it in the provinces, where its cause is not gained. I did not make your appointment, but I confirmed it, for the minister [Ledru Rollin] has made me, so to speak, responsible for the conduct of my friends, and has given me full powers for encouraging them, stimulating them, and reassuring them against all intrigue on the part of their enemies and all weakness on the part of the Government. So be vigorous, dear brother. In our situation, we need not only devotion and loyalty, we may need fanaticism."

She goes on in this vein; she says that the Government chosen by the people must be essentially revolutionary; that this Provisory Government must choose men as Commissioners who will "lancer l'élection dans une voie républicaine." Such were Madame Sand's ideas on the elections which were to give to France a Constituant Assembly. She felt that France was not republican in the provinces, and that she needed a little pressure. Politics were to her like a novel: the lover cannot succeed at once; he must be tender at times, and at times threatening.

Her peculiar horror was what she called "l'esprit bourgeois." The reign of Louis Philippe had been the triumph of the bourgeois; Madame Sand loved the workingman and the peasant, especially the workingman. "Il n'y a plus de démagogie," she said; she would not allow that odious word to be pronounced. Democracy and demagogy were the same thing. "The people has proved to be handsomer (*plus beau*), greater, purer than all the wealthy and the savants in the world." She would not hear of an aristocratic republic; she was essentially a socialist. Her enthusiasm at that first moment of the Revolution knew no bounds. This is her style:

"I have seen the people great, sublime, candid, generous—the French people in unison with the heart of France, with the heart of the world; the most admirable people in the universe! I have spent many nights without sleeping, many days without sitting down. We are mad, drunk, happy at having gone to sleep in the mud and waked up in the sky! The Republic is safe: we will all die rather than lose her."

She adds immediately that the members of the Provisory Government are all a little incomplete and insufficient. The *People* will do everything. She personifies constantly the People, as she does the Revolution; she is ready to die on the barricades in the defence of the new Republic. She writes to her son, who had been made Mayor of Nohant:

"I am as busy as a statesman. I have written two Government circulars to-day, one for the Minister of Public Instruction, the other for the Minister of the Interior. What amuses me is that as these are addressed to the mayors, you are going to receive officially the instructions of your *mother!* Ah, ah! Mr. Mayor, you will walk straight, and you will read every Sunday one of the 'Bulletins of the Republic' to your National Guard. After you have read it, you will explain it, and then you will post the bulletin on the door of the church."

Here and there curious details are found in the letters to Maurice: "Rothschild is *gardé à vue* by the Provisional Government; they will not let him run away with his money. The Government and the People are on the lookout for bad deputies, and are agreed to throw them out of the window. You will come, we will go together, and we will laugh." When Madame Sand says the People she means the people of Paris. It is impossible to express more candidly what she thought of the rich people, of the majority of the French electors, and of popular representation. If the elections are good—that is to say, go for us—very well; if they are bad, we will throw the deputies out of the window. The theatrical part of the Republic struck Madame Sand more than anything: "We plant liberty trees every day. I met three yesterday, great pines, borne on the shoulders of fifty workingmen; at their head a drum, a flag, and bands of these fine men, strong, grave, crowned with foliage, with axe or pick on their shoulders—it is magnificent!" In April, 1848, she wrote a letter to Lamartine, very characteristic, full of illusions, of hopes, of childish aspirations. It is almost apocalyptic in style; she prophesies the millennium, the reign of the *People*. "The reign of the People is nearer than you think, and if it is near, it is legitimate, it is holy, it is marked on the dial of the ages. . . . You believe that ruin has set in, that the last stones are falling," and so she goes on. I doubt if Lamartine, who was then at the head of the Government, paid much attention to this rambling epistle.

Poor Madame Sand! While she was in this state of fervor the elections took place in the provinces, and we learn from her own letters that in her dear Nohant a manifestation was made against her; the workingmen of La Châtre came in a procession before her château, screaming: "Down with Madame Dudevant! Down with Maurice Dudevant!" A reaction was beginning in Paris against the Communists; the National Guard and the workingmen, who were kept at work in the so-called *Ateliers Nationaux*, at the expense of the State, were at war. Madame Sand had given all her warmest sympathies to the cause of the workingmen, but almost all her personal friends were on the side of order, of conservatism, of the *moderate* Republic. Her heart was torn with conflicting emotions. She describes in her letters the numerous manifestations which were taking place almost daily around the Hôtel de Ville. She had the most extraordinary faculty of admiration. Barbès was "the most honest character she had ever come across; he is a hero." Caussidière was "very good," he was "une belle âme"; and so on, with all the gods and demigods of the democracy. She calls 1848 "l'année de la peur," and she wants to reassure everybody, and is furious with those who are always on the alert, waiting for the noise of the guns. One of her Bulletins, conceived in a sort of terrorist spirit, had produced a great irritation against her. "Je suis pourtant fort tranquille," said she. To be sure, *she* was; but the passions which she had flattered were at work, and were far from being tranquil. The Republic of 1848 was very sensational and operatic:

"The feast of Fraternity has been the finest day in our history. A million of men, forgetting all their differences, forgiving the past, laughing at the future, embracing each other from one end of Paris to the other, to the cry of 'Vive la fraternité!'—it was sublime. . . . From the summit of the Arch of Triumph the sky, the city, the horizon, the green country, the domes of the great buildings in the rain and in the sun—what a setting for the most gigantic human scene ever produced! From the Bastille, from the Observatory to the Arch of Triumph, and even further on, a distance of five leagues beyond Paris, 400,000 guns like a moving wall; the artillery, all the arms of the line, of the *mobile*, of the National Guard, all the costumes, all the pomps of the army, all the rags of the *sainte canaille* [this expression is taken from the 'Iambes' of Barbier]!"

Alas! alas! these four hundred thousand guns were not celebrating a feast of fraternity, and civil war was approaching. As soon as the new National Assembly met in Paris, the clubs made a manifestation against it; the Assembly was invaded, the deputies were expelled. Fortunately the National Guard met at once and saved the Assembly. Barbès, the hero, the leader of the manifestation, was thrown into prison. Madame Sand left Paris, and returned to Nohant. The bloody insurrection of June put an end to the struggle between the National Assembly of France and the clubs of Paris.

Madame Sand was now almost an exile at Nohant; she confided her thoughts only to distant friends—to Mazzini, for instance. She did not like the National Assembly; it was to her the personification of the bourgeoisie, though it had been elected by universal suffrage. All her tendencies were socialistic, and the Assembly was not socialistic. When she speaks of the bourgeoisie she becomes enraged. "Foolish caste! as rash as expiring monarchy, you are playing your last card," etc. She writes to Madame Marliani, in July, 1848: "I believe no longer in a republic which begins with killing its *prolétaires*." To Mazzini she writes, in September, 1848: "The majority of the French people are blind, credulous, ignorant, ungrateful, wicked, and stupid; in one word, bourgeois! There is a sublime minority in the industrial cities and in the great centres, without any connection with the peasants, and destined to be for a long time crushed by the majority. This minority is potentially the People of the future. It is the martyr of humanity." In the year 1849, Madame Sand corresponds with Barbès and with Mazzini. She is in despair; everything is going wrong. She is fallen from her Sinai; she sees the tide of reaction

* *George Sand. Correspondance.* 1812-1876. III. Paris: Calmann Lévy; New York: F. W. Christern.

rising everywhere. She has even ceased to believe in many men: she sees through Ledru Rollin, through Louis Blanc, through Proudhon; the leaders of the popular cause are not much in her eyes. She preserves her love for the People in the abstract: "I have ten times a day," she writes to Mazzini, "a serious desire to see no more of all this, and to blow my brains out." She is irritated at the slowness and ponderousness of progress. She has come to the conclusion that there is really "nothing to do."

Madame Sand was cheerful by nature, but she writes now in a despairing mood. She says to Mazzini: "I am very happy and tranquil here at Nohant, if one only looks at the surface. The misfortune of my life is in myself. It is in my secret appreciation of all the things which seem so cheerful, but which vibrate in the bottom of my soul such lugubrious chords. . . . Be easy. I wear my costume well, but nobody will probably ever suspect that I am dying of sorrow." This is probably a little exaggerated. Still, it is clear that Madame Sand was not happy, though she had been educated without any moral ideas, and came of a stock in which morality seemed to be extinct (read her 'Memoirs'). She was probably conscious that she had taken a wrong view of life and of its duties. She was not contented with herself, and she was not contented with the world. She was made for a quiet country life, and she had been thrown into a tempest of passions.

Correspondence.

SOUTHERN BONDS.

To the Editor of The Nation:

Sir: May another sufferer join the wail of his brother in affliction from Southern bonds? In this district the lands have been taxed for twelve years to pay for levees which were in many places never built. Large areas of our best lands have been sold to the State for taxes, and property has so depreciated that the State recently resold these same lands for less than the tax annually assessed on them, to pay the levee bonds. These bonds for these phantom levees, after twelve yearly payments, are still supposed to exceed in amount the original authorized issue. "One who trusted" and gave value for Southern bonds—a dollar, or ten cents for a dollar, as the case may have been—and loses them by repudiation, suffers a wrong. And the wrong, as he shows, avenges itself in the injured credit of the repudiating State. Though less known to the world, is there not hardship also in the case of the taxpayer who, through many years, pays for bonds he did not create, and from which, in many instances, he has derived no benefit?

Another Sufferer from Southern Bonds.

Friar's Point, Miss., October 30, 1882.

THE LATE ARKANSAS LOAN.

To the Editor of The Nation:

Sir: The statements in a communication in your paper of the 19th ultimo, headed "The Cure for Repudiation," are calculated to produce the impression abroad that the State of Arkansas has recently *failed* utterly to effect a loan of $100,000, after advertising for it. Permit me to say, in correction, that failure to secure the loan at the date bids were advertised to be opened, was due entirely to legal limitation of the *rate* of interest. Responsible bankers outside the State offered to take it at eight per cent., but the Board of Finance had no legal power to accept. Fortunately, the State did, a few days after the date of opening bids, and some two weeks before your correspondent's communication appeared in the *Nation*, effect at home the desired loan, for one year, at six per cent. interest.

It is unnecessary to controvert anything else in your correspondent's homily, but it may improve his frame of mind to learn that Arkansas has redeemed some $2,000,000 of floating and bonded debt since the escape from reconstruction processes, and so far, at least, deserves credit rather than abuse.—Respectfully, etc.,

W. E. Woodruff, Jr., Treasurer.

Little Rock, Ark., Nov. 1, 1882.

RESPECT FOR LIFE AT THE SOUTH.

To the Editor of The Nation:

Sir: As a Northern man residing in the South, and thus feeling both entitled and obligated to do my mite to stem the current of what I believe to be highly injurious and unjust opinion in regard to that afflicted section of the country, I would beg the privilege of your columns for a few remarks suggested by your last week's article on "The Influence of Homicide on Southern Progress," which implies rather than directly affirms that it is dangerous, or at least unwise, for a Northern man of "peaceful habits" to make his home in the South. I believe that this startling conclusion is entirely unwarranted by the general experience of the class of settlers to which it is intended to apply, and of which I myself am an humble member.

The best intentions of the North are constantly thwarted by the almost total absence of definite and trustworthy knowledge of the South. Misunderstanding is the mother of prejudice and bitterness, and it has proved prolific beyond expression in mutual wrong between the North and the South. It is the poison which alone keeps open and festering the scars and sores of sectional hate, and whose removal is the first condition for sectional harmony. This momentous task must devolve almost entirely on those who settle in the South for ordinary business purposes, who alone are identified with the interests of the South, are admitted to the political, business, and social confidence of the Southern people, and are thus enabled and induced to pass an honest and discerning judgment on Southern character. But little dependence can properly be placed on most of the accounts of Southern newspaper correspondents, who, unfortunately, furnish the bulk of the raw material for Northern public opinion. They often are sent, not in search of the truth, but of evidence to sustain opinions already prescribed for them by their employers. They are hired advocates, not candid judges; yet, sitting in the judgment-seat, they reverse the order of nature, and from ready-made verdicts evolve facts to match. Their letters are valuable in proportion as they are interesting; they are interesting in much the same degree that they are sensational; and, as sensation is a product requiring but a pitifully small outlay of honesty, sense, or industry, it is the staple resort of the mentally-famished correspondent.

Their methods all have a striking family likeness. For example, a little over a year ago, at Dallas, Texas, in an affray between two negroes, one struck the other on the head with a garden-rake, inflicting a wound from which he died the next day. A Northern despatch recited, in words of mysterious significance, that "a negro was killed at Dallas—murderer unknown," and this provided a text for more than one Northern newspaper sermon on *white leagues and intimidation*. The despatch was literally true, but adroitly worded to convey an impression grossly false. I mention this incident because I was present at the act and familiar with all the circumstances, and because it is a typical illustration of how truth is systematically prostituted to the purposes of falsehood.

It will also serve to illustrate an important truth which is generally overlooked, but which I am confident an intimate knowledge of the facts would establish, that the murderer and murdered are regularly of the same race and of the same social class. Castes and classes are well defined; they mingle without associating, and only exceptionally come into collision with each other. Desperadoes kill each other, but seldom annoy those who do not seek their associations. The surest protection is to go unprotected. Thus it is that "immigrants who above all things seek security" are as secure from violence in the South as they are anywhere. I say it with a profound conviction of its truth, that no Northern man who conducts himself with any regard for decency and propriety need fear but that his rights will be properly and peaceably respected. That light regard is too often shown for the value of human life, that the ghost of obsolete and perverted chivalry too often rises to dictate the mode of settling family feuds and broils—all this is unquestionably true; but it is equally unquestionable that these methods are confined to a very limited, and in that respect isolated, class, of which, like all bugbears, we hear very much and see very little, and whose eccentric performances are of about as much importance to ordinary citizens as are the mock duels of the German universities to the peasants of the Rhine. And so far is it from being the fact that "many murders take place of which we never hear," that more probably we hear of many murders which never take place. The South has long been regarded as the regular base of supplies for sensation mongers, and as the supply grows scantier the search grows warmer, until every petty symptom of violence is magnified in the microscope of malignant and hungry criticism into a crime of public depravity and portentous import. Great crimes sometimes occur, but it is as manifestly unjust to charge the whole people with the responsibility for these exceptional cases as it would be to visit the sins of the "Molly Maguires" in the Pennsylvania coal mines on the whole people of the North.

Reputation more often represents what its subject just *has been* than what it actually is: it is the follower, not the companion of conduct. The reputation of the South may possibly typify what the South has been; it certainly does great injustice to her present condition. The conclusion that murder is ever a "necessary incident of business," and that a murder trial must be a farce because "several of the jurors are probably murderers themselves, and all feel that they may have to murder any day as a condition of their residence in the locality," is a stretch of extravagant deduction many years at least behind the truth. No candid and capable person who has seen the South in her misery and degradation; who has received the warm welcome ever extended with a generous hand to all who know how to receive it; who has felt the true pulse of Southern sentiment, and has witnessed her heroic and ceaseless struggle to rise again from the mire of corruption and anarchy, can see without sorrow and pain the publication of such sentiments as these in a journal whose eminence stamps them with an authority which with many settles doubt, and places an injunction on investigation. While the tide of Western immigration is constantly rolling back in a vast undercurrent of discontent, it comparatively seldom occurs that bonâ fide Southern immigrants are disappointed. Surely this would not be the case if the shotgun of the assassin, the duellist, and the desperado were governor de facto over the terrorized victims of savage

ferocity; if the blood-wite of our heathen ancestors were the only mode of redress; if unprovoked and unpunished murder were a regular and "probable contingency of ordinary social life." These extravagant and terrible ideas are fictions of the present, woven from the traditions of the past, and, like a stump in the night which a fevered imagination has converted into a ghost, their terrors vanish on close acquaintance.

W. J. M.

NEW YORK, October 30, 1882.

[As to the first of our correspondent's objections, our answer is that it is wholly irrelevant. We have not been discussing negro murders or "outrages." We know all about the Northern stories on this subject which used to be got up and circulated for electioneering purposes. No journal has more persistently denounced and exposed them than the *Nation*, or began to do so earlier. All that is past, however. We are now concerned with a totally different matter, *the social murder of white men by white men*, and our evidence about them is not derived from the letters of the correspondents of Northern papers, but from Southern papers themselves. Moreover, our view of the matter is recognized as correct by such papers as the Vicksburg (Miss.) *Herald*, which copied our article as containing "many bitter and unpalatable truths, but truths nevertheless," and by the Louisville *Journal and Courier*, which copied it as "a timely article." Moreover, the last-named paper justifies it in an editorial article, which really disposes of our correspondent at one blow:

"Murder is no longer a crime; we reserve our pity and compassion for the 'unfortunate' man who is forced to take life in order to vindicate his honor or carry a political point, or to accomplish a personal end, and take no thought of his victim. Something in the atmosphere seems to have demoralized the very elect; perhaps the real secret of the matter is the fear which now haunts most of us, that some day we may be forced to do what society should make unnecessary—take the life of a man to save our own. . . .

"These are bitter words, but they are true every one of them. Public sentiment on this whole question is rotten to the core; juries are afflicted by it; officers are demoralized and lenient, and executive pardons make criminals of those who otherwise would await the due process of law, and stir up a mob spirit which only military force can suppress."

It is true, the writer refers to crimes occurring in Ohio, as well as in Southern States, in illustration of his thesis, but the rest of his scene is laid in the South.

Our correspondent, too, is in error in saying that we have laid any stress on the frequency of these murders. They *are* frequent, but the horror of them to us lies mainly in the fact that any one of any class in society is exposed to them, and that if at the South you should get into a quarrel with a neighbor, and he should announce his intention of killing you, you would get no support from the public in appealing to the police for protection. You have to arm yourself, and go out and fight like a savage or a wild beast, or else submit to social ostracism. You may live at the South for forty years without having this experience, but you may have it any day, if your boy kills a strange turkey, or your neighbor's cow breaks into your corn; and it is a risk which only the lion-hearted in our time like to incur.

Take the Harrall case, at Selma, Ala., in 1877. The Jones and Harrall families were friends, and people of good position. Young Jones and young Harrall, two boys, had a fight. Mrs. Jones thought her son was in the wrong and sent a note of apology to Mrs. Harrall, with a present of apples for the Harrall boy. Harrall received the note but did not open it, and set the boys to fight again outside his own door. Young Jones went home and told the pitiful tale, and his father, who was lame from a wound, then went to remonstrate with Mr. Harrall, and was met by him at his own door, with Mrs. Jones's apology in his hand, and shot dead. Could anything worse occur among the Ashantees? Yet this cowardly savage was an ex-officer of the Confederate Navy.

Take, again, the case of Colonel Alston in Georgia in 1879, who was murdered by one Cox, because his (Alston's) interest in a joint contract was sold to a person whom Cox did not like. Cox thereupon announced he would kill him, and he followed him with threats and challenges for several days, Alston all the while in great distress of mind, but evidently feeling that the law gave him no protection. He was at last attacked in the State Treasurer's office, and killed. Alston's uncle had been killed in a duel. His father murdered the slayer in the public street, and the slayer's brother soon after murdered him in the same manner.

Take the Cash-Shannon case in South Carolina last year, where an elderly lawyer, of high standing, had to fight a ruffian who did not like his conduct of a case in court, and was brutally murdered accordingly, and his murderer promptly acquitted. We could fill a volume with these horrors. They are numerous, they are atrocious; they cannot be defended, or palliated, or explained. They make Southern civilization a ghastly and shameful mockery. They have no longer the old excuse that they grew out of the hot temper bred by slavery. Slavery is dead. Every human being at the South lives now under the law. The country is blessed in sun, and soil, and station. It has churches, and schools, and courts, and police, and all the paraphernalia of culture, and a population capable of the greatest things either in war or peace, and yet it seems almost as indifferent to public bloodshed as a Central African tribe.—ED. NATION.]

ABRAHAM LINCOLN AS A CIVIL-SERVICE REFORMER.

TO THE EDITOR OF THE NATION:

SIR: The *Nation* is doing admirable service in the cause of political reform, and it will be gratifying to its editors to be informed that at least twenty-five years ago the honest, clear-headed and eminently patriotic Abraham Lincoln was very much of their present way of thinking as regards the civil service and the abominations of the "spoils system." I saw much of Mr. Lincoln during the few years immediately preceding his election to the Presidency, and had ample opportunities of ascertaining his "true inwardness" in reference to many subjects which were then, or have since become, questions of national thought and discussion.

I have a very distinct recollection of being present one evening, with a small company of "old Whig" friends, in Mr. Lincoln's room at the old Tremont House, in this city, in the autumn of 1857—he was in attendance at the United States Court, then in session here—when, among other things, the evils of partisan government, as carried out at Washington, were the subject of conversation. All present agreed that James Buchanan owed his nomination and election to the Presidency, the year before, to the potency of the official machinery of Pierce's Administration, which was brought to bear, with all its patronage and influence, in his favor. Mr. Lincoln was very emphatic in his expression of disgust with what is now known as the "spoils system" in politics. I do not recollect his exact words, but his sentiments I well remember. A political party, he said, that cannot maintain itself by virtue of the righteousness and popularity of its principles, and, when in official power, by earning and retaining the respect and confidence of the people, ought to find no permanent place in American politics. Out of power, and seeking power, it is a vagabond, and when in power a usurper and a tyrant. The system of rewards and punishments in party politics, as instituted by Andrew Jackson, and perpetuated by succeeding national administrations, he reprobated. A government, he thought, should be as prudent and discreet in its methods of business as a well-managed private manufacturing establishment, or a mercantile house, the managing heads of which seek trusty and efficient superintendents, agents, and clerks, and, having been fortunate enough to secure such, do not dismiss them without good cause; and when, by death or sale, a great business house changes proprietors and managers, the new administration is generally glad to retain, and deems it necessary to retain, all the experienced and faithful employees of the concern as long as they continue to fulfil their respective trusts. In private business, employers do not ask applicants for employment what their religion is, to which political party they belong, whom they voted for at the last election, or whom they are in favor of for the next President, Governor, or Sheriff; but seek to know whether or not the applicant is practically qualified for the work that he will be required to perform.

Some one suggested: "But did the Whigs keep Democratic appointees in their places when Taylor and Harrison were elected Presidents? and would the Republicans have kept Pierce's appointees in power if Fremont had been elected?" "No," remarked Mr. Lincoln, "there was a cold-blooded sweeping-out of all the Democrats when the Whigs came in, and so it would probably have been had Fremont been elected. But it is all wrong: the system is wrong; the principle of the thing is wrong, because it is not a *businesslike* way of doing business." It punishes the faithful servant by putting him out, merely because he belongs to the other party, and puts a new and untried man in his place simply because Senator Brown, Congressman Jones, or some State or county political leader wants to have him appointed as a reward for party or personal services performed or expected, no matter how mean, low, or dishonorable those services may be. The system is all wrong, Mr. Lincoln thought, and fraught with evil, and evil only. "Let every tub stand upon its own bottom," was one of his favorite expressions, and he thought every political party should be made to stand upon its own bottom of principles and intrinsic merits, and not be permitted to perpetuate itself as the governing power, in nation, State, or municipality, by the arbitrary and reckless use of official patronage, by which in time the very fountains of our political system would be corrupted and poisoned, and the governmental fabric itself go down in noisome rottenness.

I do not pretend to quote Mr. Lincoln's precise

language, but those who knew him well will not doubt the correctness of this report of his expressions, which does not depart materially from verbal fidelity, and is positively a true statement of his sentiments. I had been educated in the New York and Pennsylvania schools of politics, and his ideas, which struck me as very singular, coming from a recognized political leader, impressed me deeply; hence my distinct recollection of the conversation herein outlined. And I recall the fact, also, that nearly every one of the gentlemen present—active politicians—dissented from Mr. Lincoln's sentiments. They thought then, as so many politicians think now, that "to the victor belong the spoils." That brigandish sentiment had become an accepted proverb.

I do not doubt, with a knowledge of Mr. Lincoln's views and broad patriotism, that, but for the fact that a formidable rebellion and a long and bloody civil war absorbed and monopolized his attention during his entire Administration, he would have practically carried out his civil-service ideas, as above indicated, and that there would have been but few, if any, removals from office, except for cause other than political or partisan, and that in this respect his Administration would have been a model one.

May not the time come when, sick and disgusted with the wretched "spoils system," which has come to be the great bane and disgrace of American politics, the people of this country will insist upon placing at the head of the Government a man like Abraham Lincoln, who, relying upon the intrinsic righteousness and the genuine popularity of the *principles* which those represent who have placed him there, will have the courage and the patriotism to put a stop to the abominable system which has converted our Government, in its executive and legislative branches, into a mere machine for the use and the abuse of a horde of loaferish and hungry office-beggars? Lincoln was "the man for the times" as a war President; he met the demands of a very great emergency wisely and faithfully. I am satisfied that he would have done equally well as a peace President. Is it not possible for the American people to find another such as he was, to take his place? Lincoln saved the Government from the assaults of traitors; we need another such now, to save the Government from the assaults of a horde of spoilsmen who are as desperate as traitors, and almost as dangerous. And, in my humble judgment, we shall never have civil-service reform until we shall have established it at the very head of our national affairs—in the Presidential office itself. It must begin at the top, and work downward, until it shall have permeated and regenerated the entire body politic.—Respectfully yours,

ANDREW SHUMAN.

CHICAGO, October, 1882.

Notes.

"PATIENT waiters no losers," is every year brought home to the book-lover of small means. The American practice of making stereotype plates insures in time their use in the production of editions so cheap that even a library binding can be thrown in by the publishers. The latest editions of Mr. Geo. P. Marsh's works (Scribner) and of Hallam and May (Armstrong) are in point. Now we have from Roberts Brothers, Boston, for the admirers of Jean Ingelow, her novels — 'Sarah De Berenger,' 'Don John,' 'Fated to be Free,' and 'Off the Skelligs'—neatly bound in the semblance of calf, and boxed, and sold at a low figure; and, for Mr. P. G. Hamerton's admirers and readers (the terms in his case are almost synonymous, even when opinions differ), his works, got up in the same style, somewhat more elegantly stamped, and making ten volumes, not dearer, proportionately, than their greater size demands. These comprise his varied round of 'Thoughts about Art,' 'The Graphic Arts,' 'A Painter's Camp,' 'Life of Turner,' 'Modern Frenchmen,' 'The Sylvan Year and Unknown River,' 'Round My House,' 'Chapters on Animals,' 'The Intellectual Life,' and 'Wenderholme'—all works characterized by the author's charm of style and, in the critical portions, candor and fair-dealing. At the price fixed upon, many illustrations could not be given, we suppose. They are wholly wanting from the 'Chapters on Animals,' for example, and number but three all told—one a heliotype portrait of the author, another an etched portrait of Leonardo, and the third a woodcut vignette.

Henry Holt & Co. will be the American publishers of the concluding as of the earlier parts of Symonds's 'History of the Renaissance in Italy'—viz., 'The Italian Literature' (in two parts).

A. D. F. Randolph & Co. announce for speedy publication the 'Memoirs of Mrs. Prentiss,' and 'The English Versions [of the Bible],' including the Anglo Saxon, by J. I. Mombert, D.D.

Cassell, Petter, Galpin & Co. have in press for immediate publication 'Evangeline: The Place, the Story, and the Poem,' by Prof. Noah Porter, President of Yale College. It will make an elegant large folio volume, limited to 500 copies, numbered and signed by Prof. Porter, containing nineteen original illustrations by Frank Dicksee, A.R.A., fifteen of which are reproduced in photogravure by Messrs. Goupil & Co., of Paris, and four are proof impressions on India paper from the original blocks.

Mr. R. Caldecott had no difficulty as an Englishman in illustrating Irving's 'Bracebridge Hall' and 'Old Christmas' (Macmillan). The sixpenny quarto editions thus charmingly adorned give us back our own author and something more—Old England as taken off by an artist of skill, humor, and imagination, in a field where he is at home.

Ginn, Heath & Co. have issued separately the Notes and Vocabulary to Prof. H. B. Boisen's 'Preparatory Book of German Prose.'

Houghton, Mifflin & Co. have devised a "Longfellow Calendar" and an "Emerson Calendar," reminders of the double loss in one year which our letters have sustained. The principal design of the latter is the more artistic and less conventional, but the first involves a portrait of Mr. Longfellow. The blocks, of course, are provided with selections for every day.

Dr. O. W. Holmes's retirement from his Harvard professorship to devote himself to literary pursuits, we will not say once more, but more freely, means, among other things, that he will reappear in the pages of the *Atlantic* "frequently and exclusively" during the coming year—to quote the prospectus of that periodical.

Mr. W. H. Bishop's 'House of a Merchant Prince,' which has been running through the *Atlantic*, will take book shape in a few weeks. It has for New Yorkers the interest of local color.

We have received from the *Century* Co. the second bound volume of the new series of that magazine, rich, as usual, in valuable reading-matter and in woodcuts. The portraits of Lowell, Emerson, Wagner, Lincoln, and Cardinal Newman are among the memorable achievements with the graver. The foregoing was accompanied by two volumes of *St. Nicholas*, or the two parts of vol. ix., for 1882, which maintain the well-known character of this juvenile.

Geo. H. Ellis, Boston, has ready the seventh American edition of Miss Frances Power Cobbe's 'Duties of Women.' Her preface, written in September, opens with a reference to the passage during that month of the Married Women's Property Act, by which "the dreary legal fiction that 'husband and wife constitute one person, and that person is the husband,' has been at last renounced and abolished."

A revised edition of President Andrew D. White's 'Paper-Money Inflation in France' has been brought out as Economic Tracts No. vii. by the Society for Political Education (4 Morton Street, New York).

The Mercantile Library of Philadelphia adds one more Bulletin to those already in existence. It bears date of October 1, and contains a sketch of the history of the library, lists of new books, and an exposition of the new system of classification adopted by Mr. Edmands, the librarian.

Daniel Webster and The Gregorian Calendar are the topics of the October *Reference List* of the Providence Public Library.

The much-disputed Calaveras skull is figured and defended in the *American Naturalist* for November.

The *Deutsche Rundschau* for October speaks in terms of high praise, as well it may, of Mr. W. M. Griswold's author and subject-index of that representative magazine. A surprising gift from across the water, it calls it; a model of industry and accuracy; a little work of genius in its way, etc. And it confesses the German deficiency in the matter of indexing. The *Revue Critique*, by the by, transforms Mr. Griswold's trade-mark into "O. P. Index (*nom prédestiné*)."

The good *Polybiblion*, blundering likewise, mistakes Mr. Wyman's Bacon-Shakspere bibliography for a "treatise relative to this question," and says if the Baconian theory be not a joke, it can only have been advanced by a lunatic; evidently giving Mr. Wyman the horns of the dilemma.

Paul Lindau's 'Nüchterne Briefe aus Bayreuth,' published in 1876, has reached no less than eleven editions. His letters on the "Parsifal" festival, which were originally written for the Cologne *Gazette*, bid fair to rival their predecessors in popularity. The fifth edition of the pamphlet form has already been received by Westermann & Co. Lindau is one of the few North German critics whose wit preponderates over their erudition, and this accounts for his popularity. He has so far altered his views since 1876 that no Wagnerite can take offence at them; but there is sufficient criticism and banter to have afforded a London paper opportunity to misrepresent entirely Lindau's views by translating only these passages, and leaving out every word of praise "for want of space."

Good news comes from Germany that C. von Kalckstein is to add a sixth and seventh volume to the five in which Lanfrey began the history of Napoleon I. They will be in German, however, to accompany the second edition of C. von Glümer's translation of Lanfrey, which has just appeared at Minden (Bruns, publisher), with an introduction by Adolf Stahr.

In the course of a communication to the Academy of Inscriptions, M. Maspero mentioned a curious trick of the dealers in antiquities at Alexandria. They want to replenish their stock; they do not want to be at the expense of hiring diggers; and although they can, and no doubt do, have antiquities manufactured to order, it is cheaper still to persuade Europeans to undertake excavations by false stories of the existence of important tombs. Then they fish in the troubled waters—in other words, they pick up the fragments which are always turned up in large quantities whenever the soil of Alexandria is disturbed.

The organ of the German colony at Paris, the

Deutsche Pariser-Zeitung, is obliged to move its office of publication to Frankfort, because its printer in Paris, Pichon, is afraid to serve it in consequence of the attacks on the German Turnverein, and the other printers have unanimously refused to take his place. What with attacks on the Chinese in California and London, on the Jews in Germany, Austria, and Russia, and on the Germans in France, the last quarter of the nineteenth century will hardly go down to posterity as the Era of Brotherly Love.

We have already (in No. 893 of the *Nation*) described Dr. Otto Zöckler's 'Handbuch der Theologischen Wissenschaften.' Part 2 of the first volume, completing the Biblical Exegesis, now comes to us from B. Westermann & Co., at a date which precludes the idea that the work will be finished by Christmas, as there are two more volumes yet to appear. The same firm sends us Parts 50–53 of the colored edition of Brehm's 'Thierleben,' and Part 2 of Kürschner's 'Deutsche National-Literatur.' This last, by what seems a mistaken policy, is not a continuation of Part 1 (Goethe's 'Faust'), but a fragment of another age, work, and author—Grimmelshausen's 'Abenteuerlicher Simplicissmus' (1669), which has a leading place in the history of German romance. It is well equipped with an introduction, historical, biographical, and critical, with facsimiles, etc., but the reader who does not know when the end of the story will come to hand must lack the courage to begin. One might suspect this mode of publication to have regard to the convenience of the several co-laborers; but the break is made not in the prefatory matter, but in the reprint of the text—that is, in the portion requiring least labor on the editor's part.

—Whoever wishes to inspect a book "made to sell," if there be such a person, may fully gratify his curiosity and view a typical example in 'Our Lost Explorers: the Narrative of the *Jeannette* Arctic Expedition,' etc. (479 pp., 8vo, Hartford: American Publishing Co.). The title consists of ninety words, which, it seems, are insufficient, since to them are added two "&c." and one "etc." There are a large number of illustrations badly copied from the 'Voyage of the *Vega*' and other Arctic books, but they are good by comparison with the minority, which appear to be original. One octavo page is devoted to two wretched maps. There is no index. The introduction, by a doctor of divinity, compares stories of Arctic experiences to the adventures of Tom Sawyer. The volume purports to be revised by Mr. Newcomb, naturalist of the expedition. About one-fifth of the book is devoted to his narrative, and about half of that relates to the voyage proper and the retreat. In this portion a careful examination has failed to discover any contribution of importance either to the history of the expedition or the natural history of the polar regions. There may be official reasons for this, but they are not stated. The rest of the work is a mere compilation from works familiar to all students of Arctic matters, and from the columns of the New York *Herald*. It is a matter for regret that any member of the expedition should have lent his name to a publication so meagre in its scope and so mediocre in its execution.

—In 1878, Macmillan & Co. issued a prospectus of a facsimile reprint of the seven books printed by John Siberch, in 1521 and 1522, after which there was no more printing in Cambridge till 1584, owing to the claims of the Company of Stationers. Nothing is known of Siberch except that he printed these seven books. They are extremely rare; of one only a single copy is known, and of three there is no copy in the city where they were printed. Only 250 copies are to be reprinted, perhaps less. Plainly, nothing is wanting to excite the bibliophile to bibliomania, except that the price is so moderate, only three guineas for the set. The reprint of Linacre's translation of Galen 'De Temperamentis' has been issued, and is entirely satisfactory. The facsimilation is secured apparently by some photographic-lithographic process; the paper is an excellent imitation in color and texture of the hand-made paper of the period; a portrait of Linacre is prefixed, and an interesting Introduction of over forty pages by J. F. Payne, Fellow of Magdalen College, Oxford, in which the life of the author is detailed at length. Linacre, besides being one of the four contemporaries of Colet at Oxford, who had studied in Italy, was founder of the College of Physicians (a foundation which in a sense created the profession of physician in England), and translator of six works of Galen, and of Proclus's 'De Sphæra,' to say nothing of his 'Rudimenta Grammatices,' of which there are innumerable editions, and his 'De emendata Structura Latini Sermonis.'

—In the first volume of the Washington observations (1845) there is an account by Lieutenant Maury of how the whole Observatory (which had been carefully planned by Gilliss, a competent astronomer) was "rigged from a girt-line" and "got under way with raw hands." Most of that volume is a refutation of Lieutenant Maury's idea that, "from the nature of his calling, every Navy officer properly qualified and accomplished in his profession is also a practical astronomer." The good work of this volume was done by Professors Coffin, Hubbard, and Walker, who were not raw hands, even then. The work of the naval officers of the line, with one or two exceptions, was just what one would expect from "raw hands," and this work is to-day carefully separated from that of the professional astronomers when any precise datum is wanted. This is no disgrace to them, but is inherent in the nature of the case. The work of the Observatory for the years 1846, 1847, 1848, and 1849 fell more and more into the hands of the professional astronomers, and with the publication of the volume for the year 1846 the reputation of the Naval Observatory began to grow. After 1851, almost the whole force of the institution was devoted to the collection of data for the excellent wind and current charts of Lieutenant Maury. These were of high excellence, but they fell under the Hydrographic Office, then a department of the Observatory, but now a separate institution. No astronomical work was published from 1852 till 1861, when Maury deserted the naval service of the United States. After that date, the Observatory has either been in the hands of men of astronomical acquirements, or of others who had sympathy enough with the science, or fear enough of showing their own incapacity, to insure that the professional astronomers should practically control its purely astronomical activity. Its administrative head has always been a line officer of the Navy—usually a Rear Admiral. This plan has not worked very badly, for the reasons given, and also because the official relations with the Navy Department are necessarily close, and its purely routine business was very properly done in this way. The idea that a naval officer could be "ordered" to do anything, and by that fact become able to do it—as it were spontaneously and by the act of God—had become gradually extinct at the Naval Observatory after Lieutenant Maury's departure. This idea prevailed for a while at the Naval Academy, where naval officers were temporarily detached from sea-service to teach analytical chemistry, astronomy, or English grammar, as the case might be. It then declined, and the departments there are now under permanent and professional heads.

—With the death of the last Superintendent of the Naval Observatory, a new system has been adopted, or rather the exploded system of Lieutenant Maury's administration has been revived. The various instruments are being gradually turned over to line officers, and there appears to be a general disposition to recur to the pleasing delusion that a "detail" is all that is necessary to make a practical astronomer. The professional astronomers of the country wish all success to the Naval Observatory, which is so well provided with instruments and funds, and by which so much good and faithful work has been done. But it is certain that the system now revived will not work, and it is a matter of regret that a new generation will not learn from the experience of the past, but requires a brand-new demonstration. The experiment now being tried at the Observatory is worth watching for a little while. It will be amusing, and it is to be hoped that it will not be greatly harmful. If it becomes so, it is certain to come to an end promptly.

—We have several times referred to the work of the North Atlantic Expedition sent out in 1876-8 by the Norwegian Government, under the direction of Prof. H. Mohn and a commission appointed for the purpose, assisted by a scientific staff. Two additional numbers of the report are at hand. No. iv. of the series comprehends, in part 1, an historical account, by Captain Wille, of the Norwegian Navy, of the expedition, its beginnings and field operations. It originated in a petition by Professors Mohn and Sars, backed by the influence of the Norwegian Coast Survey, the University, and the fishing interests. A wooden steamer, the *Vöringen*, of about 350 tons, was hired for the purpose; she proved satisfactory and efficient under Captain Wille's command, but was destitute of anything like elegance in her fittings, and, in fact, as we know from personal inspection, afforded but crowded, bare, and uncomfortable quarters for the unsalaried scientific staff. Her portrait in the frontispiece is too flattering by half. The area examined might be almost wholly included by a line drawn from Bergen, in Norway, to the Faroe Islands, Iceland, Jan-Meyen, the northwest corner of Spitzbergen, Bear Island, and Hammerfest, which, with the coast of Norway, forms a large quadrilateral. The net cost of the expedition, on completion, was kr. 249,000, or about $62,225. This is exclusive of the annual grant since made by the Storthing, for the purpose of publishing these reports. Part 2, also by Captain Wille, describes the apparatus for deep-sea work and its use. Fine hemp line was used for sounding and dredging, only the Americans at that time having made a success with wire. The apparatus is well illustrated. It comprised, among other less interesting things, the water-bottle invented by Captain Wille; a pendulum governor of Lieutenant Petersen's, to cut off steam automatically when the pitching of the vessel in bad weather raised the propeller above water; and a modification of Brooke's sounding apparatus, much like the "Hydra" machine of Captain Shortland. The expedition spent, in three years, about nine months actually in the field, during which time were taken about 350 deep soundings, ninety-four sets of serial temperatures, and seventy-five hauls of dredge or trawl. Considering that one sounding in 2,000 fathoms with the hemp line may take fourteen hours to complete, the list speaks well for the energy of the expeditionary corps.

—Number v. contains three parts or articles: the first, on the astronomical observations by Professor Mohn, is chiefly interesting from the results, which place Jan-Meyen about nine miles west of its location on the sailing-charts, and for the new determinations at Advent Bey, Spitz-

bergen, which was surveyed and mapped for the first time. The second part relates to magnetic observations by Captain Wille, with an illustration of an azimuth compass invented by that officer and now officially adopted in the Norwegian Navy. Lastly, part third, by Professor Mohn, speaks of the geographical results and general observations in terrestrial natural history by the expedition. This chapter relates almost wholly to Jan-Meyen, of which the best existing account is to be found here. It is illustrated by chromotypes, artistically drawn, without exaggeration in color—real gems in their way—and there are a number of interesting cuts in the text. The island of Jan-Meyen is chiefly remarkable for the snow-clad cone of Beerenberg, which rises 6,400 feet above the sea, and is belted by a glacier which in several places reaches to the sea. Ten species of flowering plants were found, Arctic foxes, and eight or ten waterfowl. Changes of shore line and of glacial extension are indicated by a comparison of old with the new data. Spitzbergen, Bear Island, and Vestmänna have each a characteristic plate. These reports are now accessible through Sampson Low & Marston, London. That by Friele on the mollusca, and the report on the crustacea, are not yet issued.

—One of the leading characteristics of the late Charles Darwin was his avoidance of a direct expression of opinion in regard to religious matters. Great interest was therefore felt in a letter written by him to a student at Jena, published in the October number of the *Rundschau*, in the course of a lecture by Professor Haeckel on "Die Naturanschauung von Darwin, Goethe, und Laplace." Doubts having been raised in this young man's mind by a perusal of Darwin's books, he wrote to him for a clear statement of his views. His letter was answered by a relative of Darwin, who stated that the great naturalist was in too poor health and too busy to answer such difficult questions. A second letter, however, elicited a direct response in Darwin's own handwriting and signed by him. Literally translated from the German, as given in the *Rundschau*, the principal sentences read as follows: "Science and Christ have nothing to do with each other, except in so far as the habit of scientific investigation makes a man cautious about accepting any proofs. As regards myself, I do not believe that any revelation has ever been made. With regard to a future life, every one must draw his own conclusions from vague and contradictory probabilities." In regard to this letter, Mr. C. M. Ingleby, the Shaksperean scholar, writes to the London *Academy* that he thinks it is mispunctuated, and ought to read: "As regards myself, I do not believe that any revelation has ever been made in respect to a future life. Every man must make his decision between contradictory and undetermined probabilities." "What Darwin had it in hand to say," says Mr. Ingleby, "was that the curtain which veils the future had, in his view, never been lifted. He was the last man in the world to say that *no* revelation *of any sort* had ever been made." This view seems to be supported by Haeckel's statement that the student (who was one of his pupils) asked Darwin for an explanation "especially of his views on the immortality of the soul." But the German text does not admit of any such interpretation, on account of an *aber* (but) at the beginning of the last sentence. One interpretation is about as unfavorable to the orthodox view as the other; but it would be interesting nevertheless to know what Darwin did write. From what he says elsewhere of his knowledge of German, it does not seem probable that he wrote to the student in that language. If he wrote in English, cannot we have the original of his letter, and thus set at rest all doubts?

—Some one has found lately in Holland two priced inventories of pictures, one of the seventeenth, and one of the eighteenth century. In the list of 1649, Teniers's "Alchemist" is priced 25 florins, his "Peasants" the same, and six pictures by Cuyp are set at 45 to 52 florins. A century later a Teniers brought 70 florins, a Van Ostade the same, a Metzu 105 florins, and a marine scene by Vandevelde as high as 400 florins. From 40 to 70 florins in a century is certainly some advance for Teniers; but compare these prices with those of the Hamilton sale, where the Dutch pictures were especially sought for. There a Vandevelde brought £304, a Teniers £231, and another £945. A Jan Breughel, which sold in 1865 for £13.10, brought £304, and one which (with another) went for 19 guineas in 1822, was sold alone for £115 sixty years later. However, this enhancement of value is not confined to paintings. A service of "Meissen ware made between 1720 and 1730" was advertised recently in French papers for sale at 500,000 francs. Furniture was as dear at the Hamilton sale. Books were dearer at the Sunderland sale. In fact, we have it from good authority that the whole Sunderland library was offered to an institution in this country two or three years ago for £25,000, whereas the three-fifths of it already sold have brought over £36,500. Horses, too, are not cheap. Still, the best price at the sale of the Dangu breeding stud, £6,000 for Rayon d'Or (bought by an American), was not to be compared to the £12,500 that Blair Athol fetched. And yet Rayon d'Or won the St. Leger and £24,000 of stakes.

—Dr. Eugene Hubert, Professor of History in the Athenæum of Liége, has published, in a thick octavo, a dissertation (on taking the degree of Doctor in the Historical Sciences) upon a subject of especial interest to Americans—the condition of the Protestants in Belgium from Charles V. to Joseph II. This covers in part ground made familiar to us by Motley's histories; Belgium consisting of the southern portion of the seventeen provinces which took part in the revolt against Spain, and were temporarily united by the Pacification of Ghent (1576). The masterly policy of Alexander Farnese, succeeded in detaching these provinces from those to the north, and preserving them to Spain and Catholicism. This treatise is therefore in a sense a continuation of Motley's history, tracing the fortunes of the Reformed religion from the wars of the sixteenth century until the Edict of Toleration in 1781. In the opening chapter it is shown that the intolerance of Philip II. was but carrying out the policy of his father, who "drew up the terrible penal code against heresy" and introduced the Inquisition into the Netherlands. The author finds it hard to understand how Protestants can show so much favor to Charles V. as compared with his son. In his opinion, "if either of the two sovereigns is excusable, it is certainly Philip II.: he at least was firmly convinced of his providential mission, and believed himself a new Constantine, while it may be doubted whether Charles V. was guided by his faith ratherthan by his political views" (p. 33). The example of intolerance thus set was readily followed by the opposite party whenever it found itself in power, and the noble Religious Peace of William the Silent (1578) soon became a dead letter, in the Protestant as well as the Catholic provinces. The principal part of the work is occupied in tracing the history of the provinces while in the occupation of Spain and Austria.

—Francis Garnier, in a chapter on "Le Rôle de la France dans l'extrême Orient en Chine et en Indo-Chine," republished from the *Revue Scientifique* in his 'De Paris à Tibet,' just issued by Hachette, makes some remarks about the Catholic missionaries that may be interesting to our missionary societies. He does not believe that they will ever convert the Chinese, because that nation has no religious sentiment, and is only accessible to considerations of material interest. They might acquire an influence by scientific superiority, but instead of that they land with a great provision of theological knowledge, and entirely ignorant of the history and character of the people whom they come to Christianize, and hardly more advanced in physics, chemistry, medicine, than the Chinese themselves. Absolutely isolated, without books, receiving from home only the *Annales de la Propagation de la Foi*, which relate their own labors, in the course of fifteen or twenty years they become Chinese themselves. M. Garnier may be remembered as the young explorer and conqueror who took Hanoi and got possession of all lower Tonkin in less than a month.

—Those who entered the Brooklyn Academy of Music on Friday afternoon about 3 o'clock must have noticed a large number of ladies standing in the hall with long, disappointed faces. They were unable to get even admission tickets to the rehearsal for the first concert of the Philharmonic Society. Inside, the seats and aisles were so crowded that it was difficult to secure one's seat. The cause of this state of affairs lay in the numerous attractions offered—the superb orchestra, increased to 120 instrumentalists, and as usual under the direction of Mr. Thomas; the celebration of the twenty-fifth anniversary of the Society, and the character of the programme, one of the finest ever presented in Brooklyn or any other city. It began with Cherubini and led through Mozart to Liszt and Wagner. Cherubini's Lodoiska overture is a bright and lively composition with the grace of Mozart's works, but not their spontaneity. The orchestra played it with a brilliancy and finish that might have led one to imagine that this was the last instead of the first concert of the season. The Pastoral Symphony had the same good fortune, barring a momentary disturbance of the audience (not the orchestra or its impassive leader) by a false alarm of fire. The symphony was preceded and followed by vocal selections: Mozart's "Mia speranza adorata" and Liszt's famous "Loreley," one of the most admirable of modern songs. Miss Thursby, who sang these selections with a clear, silvery voice, is a great favorite in Brooklyn, and persistent efforts were made by some unreasonable people to make her sing again. The limitations of her voice in the sphere of passionate expression were more noticeable in the Liszt than in the Mozart song. After Liszt came the novelty of the evening, a portion of the third act of "Parsifal," which was, by the musicians themselves at Bayreuth and all competent judges, pronounced the finest act of the three from a musical point of view. Wagner has in his latest works more and more achieved his ideal of making words, music, and scenery so interwoven and dependent on each other, that a separation of these factors greatly impairs the effect. In "Parsifal" there are for this reason fewer passages adapted for concert use than in any of its predecessors; but there are a few, and the "Good Friday's Spell" selected by Mr. Thomas is perhaps the best of them. It is really a pastoral symphony in one movement, almost equal in quiet charm of color to the famous "Waldweben" or "Voices of the Forest" from "Siegfried," and as full of little buds and flowers of melody as the meadow on which *Parsifal* and *Gurnemanz* are supposed to be gazing. The vocal parts were well rendered by Mr. Werrenrath and Herr Holst Hansen, and in the orchestral part the quiet, whispering movement and rich color

were reproduced to perfection. The Benediction alone, which begins the movement, loses much of its grandeur, since on the operatic stage it comes in as a well-prepared climax. New York and Brooklyn audiences will soon become familiar with the various motives of the "Good Friday's Spell," and gladly see it recur on their programmes. The Introduction and Finale to "Tristan and Isolde" closed the concert. This ocean of passionate and turbulent sound is one of the greatest achievements of modern music. The force of the crescendo in the finale, the most sustained ever written, was reproduced by the orchestra in a manner never equalled within our experience.

—Dr. Damrosch opened his series of concerts last Saturday evening with an admirable programme. It comprised Beethoven's overture, "The Consecration of the House"—appropriate as an indication of the Society's emigration from Steinway Hall to the Academy of Music—the "Heroic" symphony, and the finale of the first act of Wagner's "Parsifal." The execution, unfortunately, was not equal to the programme. In former seasons Dr. Damrosch's orchestra embraced a large number of Philharmonic musicians, but this year it had to be made independent of that organization on account of several conflicts in concert dates. While the creation of two independent orchestras must be recognized as an advantage, it cannot be denied that the new orchestra is deficient in many of those qualities which entitle the Philharmonic to rank among the very first orchestras in existence. The brass is somewhat rough and clumsy, and the strings, although better than the brass, do not have the resonance, unanimity, and brilliant transparency to which we are accustomed. Nor do they always respond with that electric promptness which enables a conductor to play on an orchestra as on a Steinway grand. Some of these defects will doubtless be overcome in time; and in one respect Dr. Damrosch has already accomplished wonders: the shading in the Beethoven overture and symphony was very delicate and effective. But the "Parsifal" selections were very poorly rendered; five or six further rehearsals would have been required to do them justice. It would have been unfair to expect all the effect this music produces when the eye at the same time feasts on the magnificent spectacle of the knights seated at a semicircular table partaking of the last supper, or marching in solemn procession under the pillared dome, or beholding *Amfortas* holding up the crystal cup, which gradually assumes a deep purple hue and again grows dark, amid the mysterious orchestral harmonies; but it was fair to expect the confidence due to a thorough familiarity with the score, a perfect intonation and precision, and a thorough consensus of vocal and instrumental parts. Wagner's music generally consists of several interwoven motives, each of which demands its proper emphasis, or else the whole perspective is lost. This emphasis cannot be given unless the parts have been fully assimilated. Saturday's performance was wanting in clearness; it was like an object seen through an imperfectly adjusted telescope. The male chorus lacked confidence, and almost entirely missed its opportunities; the "youths" (tenors) were out of tune, and even the boys were not so satisfactory as they were at the last private rehearsal. The boys' voices were the weakest part of the Bayreuth performance, since it was impossible in so small a city to secure a sufficient number of good voices. It would, therefore, not have been very difficult to score a point in this respect. Add to this that a thin veil hovered over the bright orchestral colors and dimmed their lustre, and the unsatisfactory general result becomes apparent. We sincerely hope that, after thorough rehearsal, the finale will be repeated at a subsequent performance. In order to give prominence to the bell motive it will be necessary to secure four genuine Oriental tam-tams. The instruments used on Saturday were almost as deficient in pitch as a bass-drum. At the first Bayreuth performances a similar difficulty occurred; but it was subsequently overcome, as we noticed at the seventh repetition. The arrangement adopted at the Academy of placing the male chorus higher than the orchestra, the tenors in the first middle proscenium box, and the boys higher still, out of sight, was quite in accordance with Wagner's intentions. The selection was well received by the audience, and Dr. Damrosch was recalled with loud applause.

ROBERTSON SMITH'S LECTURES ON THE PROPHETS.

The Prophets of Israel, and their Place in History, to the Close of the Eighth Century B.C. Eight Lectures by W. Robertson Smith, LL.D. D. Appleton & Co. 1882.

REVELATION, as Professor Smith understands it, follows the laws of historical progress; grace does not break through the fixed laws of nature; the moral world has its order like the material cosmos; the sovereignty of revealing grace lies not in its arbitrariness, but in its dominion over the moral order of things. God's personal relations to man are perfected by the same methods as the personal relations of a man to his fellows. Revelation must have a history; it must grow up by slow degrees, obeying a principle of internal development. The notion of a mechanical series of covenants or dispensations is an obsolete one. All right thoughts of God in every nation come from God himself, but there is also a personal dealing of God with men, a special dealing with chosen individuals. Not every body's knowledge of God comes directly through the voice of conscience and nature; there is a positive element in all religion; there are new truths, acquired by some particular man or circle of men through personal divine revelation. Christianity must ultimately be traced back to such acts of revelation, following and completing each other at definite times in the same circle, in connection with the history of a limited section of mankind. One society only could receive the whole series of divine teachings in a consecutive form. That society, in remote antiquity, could be no other than a nation, free international interchange of ideas being then impossible. The true religion was developed in Israel in a national form. Its culmination in Christ coincided, "under divine providence," with the establishment of a cosmopolitan system of politics and culture under the first Roman emperors; it thus became a religion for all mankind. All this development shows a unity of scheme; it is unique. Was it miraculous? "It is not necessary," answers our author in a rather cautious way, "to encumber the argument by comparing the way in which individual divine communications were given to Israel with the way in which the highest thinkers of other nations came to grasp something of spiritual truth." The reality of miracles "is the very thing in the teaching of Scripture which it is most difficult to prove."

"We must remember above all things that the Bible knows nothing of that narrow definition of miracle which we have inherited from mediæval metaphysics. When Isaiah draws a distinction between Jehovah's *wonders* and the things of daily life, he thinks of something quite different from what we call miracle. 'Forasmuch as this people draw near me with their mouth, and with their lips do honor me, but have removed their heart far from me, and their fear toward me is a precept of men learned by rote; therefore, behold I will proceed to do a marvellous work among this people, even a marvellous work and a miracle, and the wisdom of their wise men shall perish, and the understanding of their prudent men shall be hid' (xxix. 13, 14). A marvel or miracle is a work of Jehovah directed to confound the religion of formalism, to teach men that Jehovah's rule is a real thing, and not a traditional convention to be acknowledged in formulas learned by rote. And the mark of such a work is not that it breaks through laws of nature—a conception which had no existence for Isaiah—but that all man's wisdom and foresight stand abashed before it."

The reader who is in any way familiar with recent literature on the Old Testament will at once perceive that Professor Smith shares the standpoint of Kuenen regarding the conception of Hebrew prophecy, as expounded by that Dutch scholar in his great work on the subject. Those who have read Smith's lectures on 'The Old Testament in the Jewish Church'—of which the present lectures are a kind of continuation, to be followed by another treating of the post-Exile period—or know on what grounds his contributions to the 'Encyclopædia Britannica' have been condemned by an over-zealous ecclesiastical tribunal, need not be told that in his critical view of the composition of the Pentateuch (and the Old Testament historical books in general) he is a stanch follower of Graf, Kuenen, and Wellhausen, whose powerful demonstrations have left little to the authorship of Moses—under whatever title authorship for him may be claimed—have divested the prophets of the character of interpreters of the written Law, and relegated the great mass of what was formerly deemed Mosaic legislation, including all the priestly enactments, to the Chaldæan and Persian periods of Hebrew history and literature. This theory has completely revolutionized the early history of Israel and of Israel's religion. "The Pentateuch as we now have it is not the immediate record of the institutions of Moses, but the last codification of the divine teaching begun by Moses, and carried on and perfected through many centuries by the discipline of history and the word of the prophets who took up Moses' work." Moses himself becomes a very shadowy historical personage, and his Jehovah a national god, not a metaphysical entity: "even the principle of the second commandment, that Jehovah is not to be worshipped by images, which is often appealed to as containing the most characteristic peculiarity of Mosaism, cannot, in the light of history, be viewed as having had so fundamental a place in the religion of early Israel." Neither did Samuel teach Israel any system of metaphysical theology. Even Elijah and Elisha combated only Baal, and not the calves of Bethel or Dan, which represented Jehovah.

The difference between the Jehovah of old and the Baals of the nations surrounding Israel "lies in the personal character of Jehovah, and in the relations corresponding to his character which he seeks to maintain with his people." The heathen deities had, properly speaking, no personal character. They were conceived, it is true, as persons, as capable of sensations, emotions, and affections; but the attributes ascribed to them were merely a reflex of those of their worshippers. The god was on the same ethical level with his people. Not so Jehovah. He had a will and purpose of his own—a higher, divine will and purpose. To know and serve him aright involved a moral effort, a frequent sacrifice of human inclination. His dealings with Israel displayed his character and will, both unchangeable. He purposed the felicity of Israel, but did not adapt himself to Israel's desire or convenience. Israel must rise to him, recog-

nize his character and walk in its light. He ruled Israel, as sovereign and judge, with absolute righteousness, and righteousness he demanded. Other nations were differently ruled by their capricious gods. "And the advance of the Old Testament religion is essentially identified with an increasing clearness of perception of the things which this character of the Deity involves. The name of Jehovah becomes more and more full of meaning as faith in his sovereignty and self-consistency is put to successive tests in the constantly-changing problems presented by the events of history." But down to the time of Amos, many centuries after Moses, the record of the religious life of the Hebrews is too fragmentary to allow the historian to follow it in detail. Our author avoids entering into inquiries as to how much of the law of the Pentateuch was already known to that "father of written prophecy"; he casts a veil over the Sinaitic legislation; he significantly points to the facts that in the time of Solomon the introduction of foreign worships passed without popular challenge, that in Judah the temples dedicated by that king to heathen divinities were left untouched till long after the time of Elijah, and that it was this prophet who, under Ahab, first violently agitated in the Northern Kingdom against the worship of any other divinity but Jehovah. To Elijah, Jehovah was preëminently a jealous God; where he was worshipped no other god could be recognized in any sense; he knew no rival. The God of Israel now rose above all the world.

When Amos and prophets like him speak of Jehovah as the Creator of heaven and earth, the omnipotent and righteous ruler of all nations, they utter no new truth, though the mass of the people still ignore what has long been taught. The key-note of Amos's prophecy lies in the words, "You only have I known of all families of the earth: therefore I will punish you for all your iniquities." Israel's guilt is its declension from a standard of morality neither common to all nations nor new, but already set before it by the unique Jehovah, who had chosen this nation. Prophets had taught Israel to know Jehovah as protector and judge, just and omnipotent, and had inculcated his precepts—not in the light of the Deuteronomic and Levitical laws, then yet unknown, but in that of living history, the heart, and the conscience. A vivid oral tradition had accumulated a rich stock of sacred story, which formed a powerful agency of religious education, and eventually became Biblical. Amos hears, while all around seem deaf, the voice of Jehovah thundering forth judgment; he understands the secret it reveals—not abstract theological truth, but God's supreme righteousness and the hideousness and fatal consequences of iniquity; he sees the Assyrian, the rod of his chastisement, looming up; and he cannot but prophesy. Not Israel alone is concerned, but all the nations around. Amos's Jehovah is "he that formed the mountains and created the wind, and treadeth upon the high places of the earth." He has brought Israel out of Egypt, but also the Philistines from Caphtor and the Aramæans from Kir. He views the crimes of Damascus, Ammon, Moab, or Edom, not with the eye of a king of Israel, but of a sovereign of the world. His wrath falls upon the heathen nations, not because they do not worship him like Israel, but because they have, like Israel, broken the universal laws of humanity. The sinners of Israel are not better in his sight than Ethiopians. In vain do they rely on their worship; he detests their feast days, their burnt-offerings and thank-offerings, the noise of their songs and the melody of their viols. What he demands is to "let justice flow like waters and righteousness as an unfailing stream." The ritual service is to Amos altogether a thing without importance in itself; the sanctuary has even become the centre of Israel's corruption; the palace and the sanctuary stand side by side—and they will fall together. Israel will be dragged into captivity, sifted of its sinners, and finally restored.

Amos says that Jehovah knows Israel; Hosea demands that Israel should know Jehovah. Though he is God and not man, the Holy One in the midst of a human society, his righteousness is not an impersonal, unlovable thing with which man can have no fellowship, and which he cannot comprehend. And to know Jehovah is to know him as a tender father, who taught his people to walk, holding them by their arms, drew them to himself with human cords, with bands of love. What Jehovah demands is *'hesed*, "dutiful love, as it shows itself in acts of kindliness and loyal affection. . . . Kindness and truth, kindness and justice are the sum of moral duty. Amos in such a case would speak of justice alone; his analysis of right and wrong pierces less deeply into the springs of human action." The kindness of which Hosea speaks is a word of common life expressive of such active personal affection as goes beyond legal obligation. Hosea recognizes Jehovah and Israel as united by a bond of moral obligation—not a covenant in legal terms, but

> "a bond of piety, of fatherly affection on the one hand, and loyal obedience on the other. Jehovah and Israel form, as it were, one community, and *'hesed* is the bond by which the whole community is knit together. It is not necessary to distinguish Jehovah's *'hesed* to Israel, which we would term his grace, Israel's duty of *'hesed* to Jehovah, which we would call piety, and the relation of *'hesed* between man and man, which embraces the duties of love and mutual consideration. To the Hebrew mind these three are essentially one, and all are comprised in the same covenant."

To Hosea, as to Amos, justice and civil righteousness are still the tests of fidelity to Jehovah, but the younger prophet refers these obligations to a deeper source. God's fatherhood takes the place of kingly righteousness as the fundamental idea of religion. Jehovah loves as a father, though he is God and not man; his love is divinely pure, unselfish, and invariable; love is the root and centre of Hosea's religion. Amos's starting-point is universal justice, and he bases religion on morality; Hosea deals with the subject "from the heart outward," and deduces morality from religion. And Hosea's God must be loved purely, not as a Baal; he must not be adored under false symbols; the golden calves which represent him are vile idols, seductive lies, the very source of Israel's sin and wretchedness.

Isaiah built on the foundations laid by Amos and Hosea, but his treatment of the religious problem is vastly more comprehensive. Amos denounced the breaches of civil righteousness, but supplied no standard for the reformation of worship, leaving even the golden calves untouched. Hosea "has a clear insight into the right moral attitude of the religious subject to God; but that subject is to him the personified nation, sinning and repenting as one man; . . . his prophecy leaves an unexplained hiatus between Israel's present sin and its future return to Jehovah. Isaiah, on the contrary, finds in Jehovah's holiness a principle equally applicable to the amendment of the state and the elevation of religious praxis" among "those within Israel who are striving after better things." Jehovah is holy, the Holy One of Israel, exalted over all. To be worthily his, Israel must be purified; impure Israel must pass through a fiery judgment "till only the holy seed, the vital and indestructible element of right national life, remain. 'Though but a tenth remain in it, it must pass again through the fire,' till all that remain in Zion are holy, 'even every one that is ordained to life in Jerusalem.'" For the plan of Jehovah's grace involves the preservation of Judah; Zion is indestructible, the stock of the people of Jehovah is imperishable; a precious remnant must survive all trials. To create and keep together such a nucleus of staunch followers of Jehovah was the great task of Isaiah's life. And that Zion braved the tempests of the Assyrian period was the achievement of his matchless faith and matchless words. His work, also, it was mainly—Micah worked entirely in his spirit—which made it possible for Jeremiah, a few generations later, to give up the idea of the indestructibility of Zion and its throne without giving up his faith in God, his universal justice, and future salvation. A remnant had been saved whose religion could brook the temporary suspension of the national existence. Jeremiah even saw in this suspension the necessary path to future glory. He and the best men of his time withdrew more and more from all forms of state religion, and in their hopes of salvation looked forward to days when Jehovah's precepts should be written on every heart.

With this glance beyond the compass of his task, our author's sketch of the religious development in Israel through prophetic teaching breaks off. Its merits consist rather in careful and systematic elaboration and in fulness of treatment than in novelty of ideas. The politico-historical background, which want of space has prevented us from touching upon here, is very ably drawn. The style of the lectures is both forcible and pleasing, and the notes appended to them show that the author is as capable of minute investigation—philological or chronological—as he is skilled in logical, and yet popular, and here and there almost dramatic, presentation.

TUCKERMAN'S HISTORY OF FICTION.

A History of English Prose Fiction. From Sir Thomas Mallory to George Eliot. By Bayard Tuckerman. New York: G. P. Putnam's Sons. 1882.

In a brief compass Mr. Tuckerman has attempted, as he says in his preface, "to trace the gradual progress of English prose fiction from the early romance to the novel of the present day in such connection with the social characteristics of the epochs to which these works respectively belong as may conduce to a better comprehension of their nature and significance." As the novel has inevitably grown out of these social characteristics, this form of treatment is likely to give a much fairer picture of the rise and progress of English fiction than any purely literary method. By means of it we see in progress under our eyes the changing social processes which give birth and vitality to new literary forms; and in the case of English fiction this is all the more necessary, because it has been from the first profoundly subjected to moral and social influences. Mr. Tuckerman's volume is in fact what may be called a history of the evolution of the Anglo-Saxon novel as illustrated by the progress of Anglo-Saxon civilization and morality. It does not deal, as such a book would have done a generation ago, and might again to-day, with the "laws" which govern the composition of prose fiction, but merely shows us in a succession of scenes the variety of forms which, under the influence of the various modifications of custom, opinion, and feeling that the race has undergone, the novel has assumed. If anything were wanting to prove the difficulty of formulating any laws on the subject, it would be such a review as this. The fact that strikes the reader more than any other in going through the long list of

the masterpieces of our fiction, from the time of the Restoration down to the present day, is that the modern English novel has always been what Mr. Tuckerman calls a novel of purpose. Almost every English or American novelist of the first rank has been a moralist—even those whose names we do not usually associate with morality, or even decency. Smollett sets up Count Fathom as "a beacon for the benefit of the inexperienced and unwary" with regard to treachery and fraud, exactly as Dickens sets up Pecksniff as a beacon to warn us away from the rocks of hypocrisy, or as Hawthorne is for ever painting the retribution attendant upon sin. The standard of taste in the eighteenth century was not what it is now, but it is amusing and instructive to recollect the fact to which Mr. Tuckerman calls attention, that Defoe wrote 'Moll Flanders' to teach a lesson, and thought he had done it; that Richardson's 'Pamela' was in part a sort of tract; that Fielding wrote 'Tom Jones' in a spirit not far removed from that of a reformer. All this cannot have been the result of any literary theory. It merely means that the English race exhibits in fiction that belief in the supreme importance of moral considerations which is confessedly one of its most marked traits in other departments of activity. This phenomenon is not to be found in French literature, where in fiction, as in the drama, literary canons are, as a general thing, alone recognized. It has become the fashion of late years for a certain school of English critics to sneer at the morality of the literature of the race, and a variety of attempts have been made to show how English fiction, both in prose and verse, would be written if an artistic were substituted for a moral purpose. The result has been, as might have been expected, the production of some very disgusting works, which, as Mr. Tuckerman points out, are far worse than the coarse novels which our ancestors in their simplicity read and enjoyed, because their authors, in their anxiety to avoid preaching, have fallen actively to work at corrupting the minds of their readers. It is possible, perhaps, to imagine a type of English novel in which the moral ideal should be blended with the literary, and form not sacrificed so completely, as has generally been the case, to matter. The best novels of Scott made as near an approach to this as any that we are likely to see for a long time to come.

From this it will be seen that Mr. Tuckerman does not look at English literature as the "Neo-Pagans" do; he treats it, as it seems to us it should always be treated, as the work of a race whose bent is in its literature to meditate upon and attempt to solve the problems of life and duty, and which never will be brought to content itself with regarding fiction as a merely artistic vehicle. Mr. James is the only successful novelist of our day who has attempted to write stories as an artist while studiously refraining from taking the anti-moral side. A moral lesson, however, he has never undertaken to teach. But does not the Anglo-Saxon novel-reader miss something in consequence? Is not his moral really just as dear to him as it was before he began to hear of literary art, its methods and canons, and the supreme importance of dismissing all ethical notions from his mind? This is a question which Mr. Tuckerman, in his review of the novel of the nineteenth century, does not directly discuss, having, as he says himself, left the task of criticism to others. But his descriptive history of the novel is itself a protest against the new gods and the idolatry of art. Possibly the most complete proof that the old ways are the best, is that it is as a moral engine, and in the hands of a most unartistic race, that the novel has attained its zenith; for, after all, much as French fiction may amuse and interest us, it is impossible for a moment to admit that it has ever attained the level of our own.

Mr. Tuckerman's style is easy and simple, and his book, both from its subject and treatment, interesting throughout. His account of the "Romance of Chivalry" (in the course of which he gives many illustrative extracts), of the age of Elizabeth, and of the Restoration, is very good, and will perhaps attract more attention than other parts of the book, because the periods are less familiar, and therefore afford more latitude for description, than the last two centuries. We can only regret that Mr. Tuckerman should have so rigidly confined himself to description. His critical observations, whenever he permits himself to indulge in them, are just and to the point, and the reader will find his account of "Euphuism" and the "Romantic Revival" well worth close study. In his examination of the successive periods of English society in which the novel has attained its various stages of development, he has drawn, of course, upon the best modern authorities for his materials, and to any one who really wishes to understand the rise and growth of what is perhaps the most striking product of English literature, his book will be found a most useful aid.

SOME HOLIDAY BOOKS.

SIXTEEN years ago, a small-quarto edition of Longfellow's 'Evangeline' was published with illustrations by Darley. These, we take it (the quarto not being at hand), have now been enlarged to small-folio size, to meet a corresponding enlargement of the page of text, and the whole issued with faultless taste by Houghton, Mifflin & Co. The type is large and beautiful, the press-work noticeably successful in carrying so much color without excess; and the buff alligator-skin of the covers completes the elegant attire of this gift-book. Mr. Darley's designs appear to lose something in tone by their expansion and reproduction by another process, and of course could not gain in subtlety.

Yellow raw-silk bonds and much gilt upon the green cover do not save 'The Artist's Year' (White & Stokes) from being irretrievably common. One fancies the lady who edits it and furnishes most of the poetry, to have adopted this method of working off verse that would have no commercial value if offered, say, to the magazines. The twelve autographic designs, while perhaps made to order, seem like the very emptyings of portfolios, and are in execution not superior to the sketches which illustrate our picture-exhibition catalogues. It is charitable not to mention names, some of which can only be injured by a publication like this.

An illustrated edition of 'The Lady of the Lake' (Boston: Osgood) is offered by the publisher as a souvenir to those who have visited the Scottish Highlands, and as a hand-book to future visitors. No pains have been spared in the manufacture, and the beautifully clear and handsome typography would be irreproachable if the punctuation were faultless. The designs are by a number of hands, but so far as they represent localities they are founded on sketches made by Mr. A. V. S. Anthony, the supervising engraver. The numerous landscapes, then, have in the main not only authority but artistic merit, fairly averaged among them, with exceptional gems like that on page 224. The figure pieces, on the other hand, have mostly been drawn by Mr. A. B. Frost, a clever artist, if we have one, but not equal to the melodramatic requirements of Scott's poem. A capital delineator of contemporary character and manners, his imagination breaks down and the limitations of his draughtmanship appear in the field of historical romance. His personages mostly seem as uncomfortable and awkward in their costumes as our actors do in hose and doublets, and too often their action lacks dignity. Mr. Frost is seen at his best in such a quiet and natural conception as that of the sleeping Fitz-James, on page 53.

Miss Charlotte F. Bates's illustrated 'Cambridge Book of Poetry and Song' (T. Y. Crowell & Co.) is suitably apparelled for the approaching season, but is of course offered to the appreciative without regard to times and dates. It ranks among the genial rather than the critical collections. The editor expressly says that she has aimed to enforce woman's right to fair representation in such a gathering; "to give those poets their just dues who have hitherto not had them"; and to save from poems voted too long or uninteresting, or prejudged in consequence of "ridicule and one-sided criticism," brief passages which merit a better fate. In the carrying out of this humane purpose, Miss Bates has drawn almost upon the cradle in one or two instances, and has now and again taken from the magazines specimens of the verse of writers who cannot as yet point to a volume all their own. So strictly personal has been her aim that she admits only two anonymous pieces, both comic; and this, we think, gives her nearly 900 pages a better title to be called original than her other principles of selection. Freshness is secured by extracts from so recent a collection as Boker's 'Book of the Dead,' and by no less than seven from Oscar Wilde. The standard poets, of course, furnish the staple of the present volume, but all alike suffer from carelessness of proof-reading and editing. There are worse instances than D. G. Rossetti's "Blessed Damozel," on page 467, which is shortened without notice and contains several gross errors. The print is good, and there are numerous indexes.

In spite of Miss Bates's desire to swell the portion of her own sex in her anthology, Miss Almira L. Hayward introduces in her pretty little 'Chimes and Rhymes for Holiday Times' (Boston: Osgood) no less than six poetesses unrecognized by the first-named editor. The scheme is a collection of appropriate verses for New-Year's Day, Washington's Birthday, Easter, Fast Day, Memorial Day, Fourth of July, Thanksgiving Day, and Christmas—holidays now observed in greater or less degree over the whole country. We shall admit at once the convenience of this volume in all formal and in some private celebrations; but unless we challenge the range or standard of selection, it would appear that the better class of poets alone would not have furnished the requisite number of pages for Miss Hayward's purpose. In other words, her choice as a whole is not calculated to elevate the poetic taste. However, poets of the better class have a sufficient representation here. The omission of any verse to Lincoln under "Memorial Day" must be thought unfortunate.

Mrs. Rosa Hartwick Thorpe, too, has been overlooked in compiling the 'Cambridge Book of Poetry.' She is the author of "Curfew Must not Toll To-Night," an American ballad of which the publishers (Lee & Shepard) say that "however much it may be criticised, it still possesses that indefinable element of attraction which no lover of the emotional and pathetic can possibly resist." They have accordingly printed it on heavy paper, and joined with it all the illustrations for which a pretext could be found. Some of these are better than any part of the poetry, but of none can it be said that they have an indefinable and irresistible attractiveness. The incongruity will probably escape those who begin by admiring the ballad.

The same publishers give a corresponding attire to the late Dr. E. H. Sears's "That Glorious Song of Old," in which by far the most felicitous

line is that from which the title is derived. Mr. Alfred Fredericks supplies the designs, which are not masterly.

T. Y. Crowell & Co., in putting forth 'The Poems of Goethe,' insist on a new American binding as a part of the excellence of this edition. It is a counterfeit "tree calf," and we are assured that experts could not detect it from the genuine article. We cannot answer for the experts, whose patriotism is doubtless a match for all emergencies, but the pretension seems to us considerably overstrained, and anyhow we think the printed pages ought to conform to the appearance of the covers rather than to their sham reality. Such is not the case. They are furnished with a red-line border for which the type selected is too large, the paper is thin, and the press-work mediocre. The translations are from a variety of sources, and are fairly representative.

Let us hasten to express our preference for the class of bindings exemplified in M. Augustin Challamel's 'History of Fashion in France,' translated by Mrs. Cashel Hoey and Mr. John Lillie (Scribner & Welford). Here the sides of the cover show a veneer of wood resembling bird's-eye maple, on which is stamped the design—not a very lovely one, as it happens. The back is cloth of a harmonious color. Doubtless such eccentricities are a passing fashion, but their fitness in the present case is obvious. As for the contents, which seem originally to have appeared in the *Magasin des Demoiselles*, they consist of formless but pleasant gossip divided off according to periods and reigns from Gallic and Gallo-Roman times to 1880. At the close is a rapid summary, by way of generalization, which it would not be amiss to read first. There is no attempt at philosophy, and even the well-known genesis of a fashion like that of crinoline under Napoleon III. is not alluded to. While colored plates illustrate the successive phases of female costume, there is great need of an index both to discover what one seeks and to show the recurrence of styles.

Andrew Jackson as a Public Man. What he was, what chances he had, and what he did with them. By William Graham Sumner, Professor of Political and Social Science in Yale College. Boston: Houghton, Mifflin and Co. 1882.

It was very fitting that the life of Andrew Jackson, in the series of "American Statesmen," should be put in the hands of an economist by profession, because the principal issues of Jackson's Administration were economical ones. It is a great satisfaction to have his Bank war related by a trained economist, and the vital questions connected with it—the condition and management of the Bank, the removal of the deposits, the "pet bank" system, and the connection of all these things with the crisis of 1837—considered by one who is thoroughly competent to answer them. Only, it must be confessed that these pages are dry reading; and if we have the author's final judgment upon questions stated clearly and compendiously, the grounds of the judgment and the details of the discussion are not in every case clear. This is not always the author's fault. It is a long story to be compressed into a volume of a prescribed size, and the necessity of brevity has often been the cause of obscurity. Nor is it easy to see what could have been omitted to make room for the needed explanations. Sometimes what is needed is familiarity on the part of the reader with the details of banking or with economical discussions. The use of cross-references, too, would have been of great assistance. For example, in the account of the Briscoe case (p. 359) there ought to be a reference to page 124. It is easily found in the index, to be sure, but a foot-note would save labor both here and in other places.

A valuable feature of the account of the Bank controversy—and one not generally familiar—is the connection it is shown to have with the earlier Bank contests in Kentucky. These are described with considerable fulness in Chapter VI., and are shown to have been of great importance, not only directly, but in the general preparation of the public mind for the policy of Jackson's Administration. It was in this school that Amos Kendall was trained; and as Amos Kendall may be pronounced the master spirit of Jackson's Administration, his Bank policy may be traced directly to this source. This leads us to another valuable feature of the book, and one of its most distinctive merits, the account of Jackson's "Kitchen Cabinet." The general subject is of course familiar; but we do not remember ever to have seen brought out with such force the fact that this famous chieftain was at bottom only the tool of this handful of men—Lewis, Kendall, Hill, and Blair. If any one thing caused Jackson's astonishing popularity, it was the universal belief in his firmness of conviction and tenacity of purpose—his executive ability. Perhaps Mr. Sumner's view is exaggerated; but we certainly gather from his pages the impression of a man of tenacity, indeed, but of very little independence of judgment, and whose narrowness, ignorance, and violence of temper made him easily played upon by men of more ability and coolness than himself, while all the time he thought himself, and was thought by the world at large, to be a model of strength and determination.

This suggests the question, which is a real puzzle, and which Mr. Sumner hardly attempts to answer, What was the source of this popularity? For the belief in his strength of character is not by itself enough to cause it. It is a constant surprise when one reads of the liberties which this wrong-headed man was able to take with the laws and the Constitution, not only without reproach from the majority of the people, but with extravagant commendation His popularity "crushed out reason and common sense. To the gravest arguments and remonstrances the answer was, literally, 'Hurrah for Jackson!'" One is tempted to explain it by the newness of the Government and of the people in their relation to it, and to think that the American people of the present day would have a sharper discernment as to qualities of statesmanship. It will not do to push this notion too far, considering the blindness of the popularity of certain of the public idols of the present day. Mr. Sumner, however, illustrates it as follows:

"Campaign literature took a new and special development in this campaign, and one is driven to wonder whether the American people of that day were such that all this drivel and vulgarity could affect their votes. It appears certain that they had not yet learned the art of reading newspapers, more especially campaign literature; an art in which the average American citizen has since become a great adept. It requires a very active party interest now to break down the cynicism and scepticism with which everything in a partisan newspaper is read by an educated man of forty" (p. 115).

Personal "magnetism" no doubt had much to do with Jackson's popularity; but probably we must ascribe it principally to the flood of radical democracy which at this moment poured over the country. It needed a hero, and found one in Andrew Jackson. The earlier chapters of this volume, especially that upon "The Relief System of Kentucky," already referred to, give some of the causes and the phases of this revolution. In all its aspects, however, Mr. Sumner has not space to describe it adequately, and the reader who would understand it thoroughly should turn to Von Holst's masterly chapter upon Jackson. The impression left by the book before us is of a political revolution, and a personal popularity and despotic power, which are without sufficient cause.

Mr. Sumner is a pronounced opponent of "the system of statecraft which makes public men undertake a tutelage of the nation, and teaches them not to be content to let the nation grow by its own forces, and according to the shaping of the forces and conditions" (p. 257). This is the theory of government which has been more or less consistently that of the Democratic party from its foundation to the present day. In Jackson's time it cropped out now and then, but his was in truth a personal government, the rule of a despot, under the name of democracy. Mr. Sumner shows—and this is another special feature of the book—that it was the "equal-rights" faction, or "locofocos," that brought back the party to its traditions:

"The equal-rights men maintained impracticable doctrines of civil authority and fantastic dogmas about equality, but when these were stripped away there remained in their platform sound doctrines and imperishable ideas. They first put the Democratic party on the platform which for five or six years it had been trying to find. When it did find that platform it was most true to itself, and it contributed most to the welfare of the country. To-day the Democratic party is, by tradition, a party of hard money, free trade, the non-interference theory of government, and no special legislation. If that tradition be traced up to its source, it will lead back, not to the Jackson party of 1829, but to the locofocos of 1835" (p. 372).

We have mentioned, we believe, the most striking merits of Mr. Sumner's book—those which may fairly be considered contributions to American history, if not as absolute novelties, at any rate from the force and clearness with which they are brought out. Of his style it must be said that it inclines too much to short sentences; but, on the other hand, this quality often produces a fine, ringing terseness. Take, for instance, this sentence (p. 312): "There is an unformulated dogma, which seems to command a great deal of faith, to this effect, that if a man is only sufficiently ignorant, his whims and notions constitute 'plain common sense.'"

The closing passage of the book (p. 386) is particularly good:

"He died June 8, 1845. He had had honors beyond anything which his own heart had ever coveted. His successes had outrun his ambition. He had held more power than any other American had ever possessed. He had been idolized by the great majority of his countrymen, and had been surfeited with adulation. He had been thwarted in hardly anything on which he had set his heart. He had had his desire upon all his enemies. He had lived to see Clay defeated again, and to help to bring it about. He saw Calhoun retire in despair and disgust. He saw the Bank in ruins, Biddle arraigned on a criminal charge, and then dead, broken-hearted. In his last years he joined the church, and on that occasion, under the exhortations of his spiritual adviser, he professed to forgive all his enemies in a body. It does not appear that he ever repented of anything, ever thought that he had been in the wrong in anything, or ever forgave an enemy as a specific individual."

The Story of the Volunteer Fire Department of the City of New York. By George W. Sheldon. Harper & Bros. 1882. 8vo.

Mr. Sheldon has produced in this volume an unique monograph, deeply interesting to the many older citizens who were members or supporters of the vigorous organization he describes, and curious to others who remember how marked and picturesque a feature of city life the volunteer fireman once was. Such a body of men could exist nowhere else than in this country. The blended daring and discipline, the excitement working under control, that attend a well-

ordered attack on fire, have a special fascination for the American temper. Our Dutch forefathers held their lives on condition of incessant contest with the elements of water. Their descendants display even greater aptness and eagerness in fighting the element of fire.

Perhaps his inflammable nature warned old Peter Stuyvesant, viewing in 1648 his highly combustible village of timber houses, thatched with reeds, and crowned with plank chimneys, to take order for its safety. The wooden-legged governor gave the wooden-built town its first fire department, naming as fire-wardens four men of substance and character, two of whom were Englishmen. A century later, in 1738, a legislative act created the first fire company, composed of "strong, able, discreet, honest, and sober freeholders." Of the thirty-five men selected as worthy of these epithets, all but three were Dutchmen. A few years earlier the first fire-engine had been imported, superseding by clumsy machinery the primitive use in extinguishing fires of leathern hand-buckets, passing full up one line of bystanders, and empty down another. The supply of water to the machines still flowed from this feeble source, while hose and hydrants were gradually replacing it, until in 1819 buckets went out of use, on the repeal of the strict laws imposing that burdensome charge on householders.

For twenty years longer the fire department struggled with imperfect machines and a precarious water supply. At length, in 1840, novel and efficient engines were bought in Philadelphia, and in 1842 the Croton aqueduct gave promise of floods ample to drown any fire. The idea of a steam fire-engine took shape about this date, but the first construction, combining enormous weight with clumsy working, was soon rejected and sold. It is singular that the ingenuity of New York mechanics seems to have neglected the fire-engine. The powerful and elegant steam-machines now in use, perfected first in Cincinnati, gained introduction here (in 1856) only after obstinate resistance. The most curious objection made to them was that they would do too much work, and injure property, by the mass of water thrown, more than fire would do.

After these improvements in the material forces for fighting fire came naturally the remodelling of the corporate body that directed them. The Volunteer Fire Department, incorporated in 1798, had grown, during two generations, unwieldy and insufficient for the changed conditions of the city. Emigration brought in multitudes of unruly spirits, eager to force their way into that service, to enjoy its privileges, relax its discipline, and lower its special professional and American character to the level of rowdy political clubs. The increased size of the city required the employment of a permanent body of expert firemen, while the use of steam led to dispensing with the services of a great number. In 1865 a legislative act created a paid fire department, under a board of commissioners, and during that year the volunteer force was quietly disbanded. At the time of its dissolution the number of firemen, exclusive of those who joined the new organization, was 3,810, and the number of companies of all kinds—engine, hose, and ladder—was 125.

Men of substance and character continued to lead and fill the ranks of the Volunteer Fire Department as long as it existed. Six mayors of the city and several millionaires have served that apprenticeship side by side with sons of the very best people among old New-Yorkers. The service tempted young spirits. It gave exemption from jury and military duty. It offered movement and dash, kindled emulation, and not seldom opened the way to heroic acts through risk of life. These pages record many stories of thrilling peril and gallant rescue. The several companies gathered picked men from all classes of society. Each section of the city manned its engine with members of the trade or occupation peculiar to it. Artisans, clerks, financiers, lawyers, merchants—all were represented in the Volunteer Fire Department, and every class gave only its vigorous and ardent élite. The meetings of these young men among scenes of excitement and danger, testing manhood in rivalry, taught them mutual knowledge and esteem; and in knitting this strong bond of sympathy between different classes, the Department indirectly served the general good of the city as it has been served by no other organization. In truth, no other institution ever drew within its range in New York so many of the best purely American elements, and gave such fostering to manliness, both of discipline and action, as did the Volunteer Fire Department in the day of its prime, between 1830 and 1850. There was the nucleus, if it could have been moulded into a compact and consentaneous body, of a great political force, fit to guide the government of New York, made up of the best native elements, hardy, disciplined, intelligent, proud and worthy of their inherited citizenship. But when the need came for such a nucleus of force, the opportunity was gone — war and change swept over the land—and out of the new disorder of things rises the difficult and incoherent struggle for reform.

In tracing this sketch of the Volunteer Fire Department, the author has had the happy idea of making it tell its own story, through the lips of the most conspicuous among its surviving members. Its history gains the freshness of personal recollections. Though none of the exempts can recall the burning of Trinity, nor that alarm of fire in 1811 "which proved to be nothing but the comet's tail," many of them were actors at the great fires of 1835 and 1845. Such a *noche trista* as that December frosty midnight of 1835 may never again lower over the city, thanks to Croton and steam, but their power to protect has yet to be tested in the case of fire wrapping one of the great apartment-houses or huge new business blocks soaring ten stories into the air. The volume is profusely illustrated with well-executed engravings of apparatus, buildings, and scenes that accompany its story, and, more interestingly still, with spirited portraits showing the resolute faces of chief engineers and leading members of the corps. As a memorial of the most peculiarly American institution the city can boast—a record of an organization which did not outlive its worth, but passed out of existence in full vigor, after its members "had continued faithfully to perform the duties which their obligations required"—these pages hold a place among the most valuable contributions to the complete annals of New York.

Sterne. By H. D. Traill. [English Men of Letters.] Harper & Bros. 1882.

THE materials for Sterne's life are scanty, but they are enough; for among authors who have achieved something memorable in literature there are few whose personality is more displeasing. It is not because he was a sentimentalist and feigned feeling for literary effect, displaying thereby a weak and frivolous mind; nor because, like other egotists who are first made much of late in life, he prattles of his dinners and "their lordships" as if he alone lived in the eye of the world; nor is it mainly for the reason that he shared in the talk of Medmenham and set forth the ludicrousness of things unclean, for others did this without wholly forfeiting respect. Sterne's errors in art, character, and taste are so thoroughgoing as to breed disease in his whole nature; they cease to be foibles of eccentricity, as he thought them, and become evils. He affords a true instance of the malady of the mind. He started out on his literary career with an admirable subject, not knowing how rich was his find; he created one original character for ever interesting to lovers of human nature; but, as he went on, he cared less for his theme than for his mode of handling it. Uncle Toby, indeed, by fortunate exception, kept his charm; but the other characters became puppets of the author's method, contrivances for palming off the tricks of the jester's booth, now set in motion, now laid aside while the ventriloquist's own head pops up to take applause to itself. On this matter Thackeray has said the last word. But Sterne imported his peculiar artistic method, if it be so termed, into his own life. He became an actor of Shandyism, and seems to have thought such acting the thing of real value in human intercourse; in this character he whimpered and sighed at the feet of his grass-widow and other flames. His domestic life, it is true, was infelicitous, but to barter it for such performances was not a happy exchange. He attitudinized usually, as man and as author, and his postures were irremediably vulgar. Vulgarity is the marked characteristic of his nature, both in its conscious and unconscious manifestations. Animalism is not incidental with him; it is not an interlude of humor, a part of contemporary life: it is something deliberately chosen, put on as a mask, always at hand in his theatrical furniture. It is hardly enough to describe it thus. This artificial and cultivated taste for uncleanness is always at work in his literary productions; it is omnipresent, permeating and coloring with its suggestions the pages where it is least apparent; it was as constant an element in his private life.

For such briefly-indicated reasons, we cannot regret the scantiness of the records for his biography, sufficient as they are to make a considerable volume. Mr. Traill has told the story with a sense of the disagreeableness of his subject, and with very frank avowal of the shortcomings of his hero. He questions how long Sterne will continue to be read, and endeavors to account for his contemporary popularity. It is an unfruitful question; for books of real humor are among the last to die, and we would by no means refuse to Sterne the name of humorist, any more than we would refuse to acknowledge the attractiveness of his style, its ease and colloquial garrulity—as charming in an author for a few chapters as in a man for an hour, though the English of both be slipshod. We can only regret that the admirable passages are so few, and their setting such as it is, and that to the student of character both the life and work of Sterne have so much of the interest of the "mind diseased."

BOOKS OF THE WEEK.

A Little Pilgrim. Reprinted from *Macmillan's Magazine*. Boston: Roberts Bros.
Bacon, H. Parisian Art and Artists. Boston: J. R. Osgood & Co. $3.

Fine Arts.

THE FALL EXHIBITION OF THE NATIONAL ACADEMY OF DESIGN.

In glancing cursorily around the galleries the average quality of work which meets the eye in this exhibition is certainly not higher than usual. The quantity of crude, garish, or feeble canvases as yet largely predominates. The works which go to make up these Academy exhibitions are largely of the same average character. They may be said to fall broadly into three classes: First, those of our older artists who adhere more or less fully to the conventional, and often feeble, ideas and methods which were more general twenty years ago; second, those of our younger artists who have studied in the modern popular schools of the Continent of Europe, and have acquired the ideas, and the facile, showy, and slight, though to some extent, also, strong and effective methods which characterize those schools; and third, those of wholly incompetent and untrained young and old persons, which ought never to form part of any public display. Concerning the works of this third class no special comments need be made. So long as hanging committees are willing to encumber their walls with them, the harm which they do, in crowding other pictures and wearying visitors, must be patiently borne. But of the first and second classes—though they exhibit in great measure a wearisome sameness which calls for little special remark—a few canvases, each year, rise out of the general average, and exhibit characteristics of greater or less merit, and, occasionally, of high, though mostly partial, excellence.

Chief, in many respects, among the more exceptional works in this exhibition is No. 402, "Lake Pleasant, Adirondacks," by R. W. Hubbard. We have never had in America a painter of truer poetic feeling than Mr. Hubbard. He belongs to the older group of our artists, and his art gives expression to some of the best motives which ever characterized that group. But Mr. Hubbard's vein of feeling and line of effort have always been peculiarly his own, though he has sympathized closely with his associates. His eye is quick to appreciate whatever elements of grace and beauty a subject that pleases him may offer, and he does not fail to present these qualities with delightful emphasis. In this picture the elaboration of the hill lines, in their united precision and mystery, is thoroughly exquisite. The choice of the point of view, which brings out the most lovely relations of magnitudes in the mountain masses, and the quiet truth of tone, giving wonderful expression of air and distance, are beyond all praise. Mr. Hubbard was strongly influenced in his early days, when studying in Europe, by the art of Claude. He then imbibed much of what is best in the feeling and style of that master, and since that time, in addition to what he has gained by constant study of nature, he has gathered and assimilated much from the best modern example, without ever imitating anybody or any school. The faults which we feel in his work are a tendency to monotony in color—as if the artist were in the habit of elaborating his color too exclusively in the studio, thus failing to secure the variety which results from direct practice in color from nature—and a degree of weakness and conventionality in the treatment of foregrounds, which he evidently has not studied with enough attention. His strength lies in distance and middle ground, where, as regards design and tone, he is equalled by few and surpassed by none. There is, in this work, no straining for effect, yet it is truly effective; no undue brilliance or emphasis anywhere. It is entirely quiet, and, with the exceptions just indicated, exemplary.

No. 124, "On the Island Creek near Albany, N. Y.," by Edward Gay, is a quiet and effective picture. It is very true and pleasant in tone, and it contains some excellent design and drawing in the group of trees which forms the principal mass of the composition. The ramification and spring of the main branches of these trees are at once true and graceful to a degree seldom reached by our landscape painters. We should be glad to see Mr. Gay add to the excellent larger qualities of this design more of that quiet elaboration, especially in the foreground, which is necessary to make painting entirely beautiful and satisfactory. No. 201, "Street View, Poughkeepsie," by George H. Smillie, is a well-composed little landscape. It is, however, the merest sketch, and must be regarded, therefore, as a suggestion rather than a sufficient realization of the subject.

No. 152, "Afternoon Tea," by C. Y. Turner, exhibits some of the qualties and the defects which often characterize the works of our artists who have been trained in the modern schools abroad. The drawing of general proportions and movements, and the vigorous handling, are good qualities; but the want of refinement in drawing, of quiet truth of color and chiaroscuro, and the insensitiveness to what is graceful in bodily pose and in general design, are faults which, so long as they are uncorrected, will defeat the attainment of high excellence. The chiaroscuro of this, as of many other pictures painted under modern foreign influence, is conceived without due reference to color. The various masses composing it do not tell broadly enough in their own respective colors. The minor modifications of local hues by light, shade, and reflection are made too much of, so that the design cannot be easily resolved into its pure color elements, as they always may be in nature and in thoroughly good painting. It is singular that this should be so conspicuous and constant a fault with that school of painters which theoretically lays most stress on the importance of color values. It comes, perhaps, largely from the practice of studying tones too much in black and white, coupled with the habit of arranging models under violent contrasts of light and shade. This practice tends to loss of color in shadow, which is both untrue to nature and ugly in effect. For instance, in this picture the lifted hand of the seated figure loses its color entirely in the shaded part.

No. 156, "A Modern Rebecca," by Edwin H. Blashfield, is an example of that clever technique which renders the look of things up to the point of average satisfaction, but which again stops short everywhere of real refinement and beauty—such as we feel sure Mr. Blashfield might easily attain if he would strive after it. The color is laid with monotonous equality of *impasto;* and the want of variety and tender feeling, both in respect to hue and handling, is especially manifest in the flesh. The work, however, exhibits a good deal of power over the more general color values, with comparatively few false hues in shadow. No. 277, by the same artist, is a strong sketch in this last respect, but the subject is treated ungracefully. No. 164, by A. G. Heaton, represents an old negress and a negro child, and shows considerable power of painting. The slaty gray color in the child's forehead, and the black shadows in the folds of its dress, are obvious defects. One could not look for much grace or beauty in such a subject, but the general pose of the figures and the leading lines of the drapery might easily have been rendered more agreeable.

Perhaps the most conspicuous picture of the exhibition is No. 359, "Planting Rape (Colza) in Normandy," by Mr. F. A. Bridgman. Mr. Bridgman has, we think, a true painter's instincts, and he possesses a good deal of technical power; but he fails to accomplish what he might were he not hampered by defective aims and methods. The want of variety in color, and of the habit of conceiving his subject in its broad color relations, is very marked in his work. He appears to be in the habit of laying in his subject in brown monochrome, and of preserving this undertone of brown, especially in shadows, to the last. A certain harmony is thus attained; but it is a conventional harmony, which does not consist with the variety and beauty of nature. We feel, too, that Mr. Bridgman makes too much of the textures of objects, as of drapery and the hides of animals. This giving undue prominence to textures is incompatible with a truly excellent style of painting—a style which subordinates all minor characteristics (though it does not omit them) to what is more essential. The principal group of figures and horses in this picture is composed and drawn with considerable skill, and the sentiment of the subject is a pleasant one.

Mr. J. G. Brown exhibits three pictures—Nos. 174, 336, and 397—which possess the same merits and the same defects that we noticed last spring. Attentive study of such works as those of the old English water-color painter, William Hunt, would, we think, be useful to Mr. Brown. And we may apply the same remark to Mr. Leon Moran, who exhibits No. 183, "The Milkmaid"; to Mr. Alfred Kappes, who exhibits a negro domestic scene, No. 179; and to nearly all our painters of genre and still life. Among the few works in this exhibition which, though by no means altogether exemplary, show something more of the qualities of chiaroscuro and color that we should like to see more general, are No. 213, by Mr. Walter Satterlee, No. 427, by Mr. William H. Lippincott, and No. 462, by Mr. George W. Maynard. No. 456, "In the Meadows—East Hampton, L. I.," by J. Douglass Woodward, is very good in expression of open sunlight and color, with well-arranged parts, good relations of masses, and well-composed lines. No. 111, "Sunny Morning," by James B. Sword, is in many ways a particularly good, unconven-

tional study of color, with expression of true feeling for beauty of line.

Mr. Cropsey exhibits three pictures, of which No. 157, "An English Roadside Scene," is one of the most conspicuous in the galleries. It is a pretty pastoral subject in the vein of Birket Foster, and of much the same quality as Birket Foster's work. Mr. Cropsey is an artist of much knowledge and feeling, but he is growing more and more mannered, and his color is becoming strangely crude, and almost garish. Mr. Arthur Parton gave considerable promise ten or fifteen years ago; but he appears to be losing somewhat of the healthful vigor and truth with which he formerly portrayed some very charming phases of landscape. His picture in the present exhibition, No. 225, "After the Shower," is forced in tone and pervaded by a conventional and very false brown hue. No. 238, also by him, is an ugly subject with the same faults. We feel sure that Mr. Parton may yet recover his old integrity if he will, and that, with his accumulated experience, he may then give us delightful landscapes.

We must, for once, depart from our general rule of silence respecting works of which we can find nothing good to say, and remark on the character of No. 168, "Peaches and Vase," and No. 287, "Fruit and Silver Goblet," both of which are hung in conspicuous places on the line. The skill of hand and eye which the painter of these has attained is not inconsiderable, but it is entirely thrown away on the tasteless and mechanical rendering of the most trivial external qualities of the objects represented. The proper object of still-life painting is clearly, we think, to set forth the beauty which such objects display, not merely to trick the eye by clever imitation. Whatever elaboration of the minor qualities of surface textures may be given to such a subject, it should, beyond question, be entirely subordinate to expression of the large and essential visual beauties of things. But the painter of these two subjects appears to have taken no interest whatever in the real elements of beauty which his models offered to his eye. His fruit has no beauty of color, his vases are ugly in form and decoration, and such graduated light and color as even such objects would show he has remained totally insensitive to. The mere skin-textures in the one, and the mere glassy or metallic lustre in the other, have absorbed his whole mind, and called forth his total powers of realization. It was characteristic of the old Dutch still-life painters to elaborate the trivial minutiæ of their subjects unduly, and, in consequence, to miss those large impressions which a Venetian always received and expressed. But in comparison with work like this which we are considering, the painting of an ordinary Dutch artist would deserve to rank with that of Titian. Further remarks seem uncalled for, since no essential characteristics, other than those which we have already noticed, are presented by the works of this exhibition.

HENRY HOLT & Co.

WILL PUBLISH SATURDAY NEXT:

Italian Literature.

By J. A. Symonds. 2 vols. 8vo, with portrait of the author, $7.

These volumes complete Mr. Symonds's great work on the *Renaissance in Italy*, the previously published volumes being—

THE AGE OF THE DESPOTS. 8vo, $3 50.

THE REVIVAL OF LEARNING. 8vo, $3 50.

THE FINE ARTS. 8vo, $3 50.

*** SYMONDS'S RENAISSANCE IN ITALY, 5 vols., uniform, in a box, $17 50, is a most desirable holiday gift.

RECENTLY PUBLISHED:

Heine's Romantic School.

Translated by S. L. Fleishman. 12mo, $1 50.

One of the most entertaining as well as suggestive of all pieces of literary criticism.

Cory's Guide to Modern English History.

By William Cory. Part II. MDCCCXXX-MDCCCXXXV. 8vo, cloth, $3 50.

"It is in every way a remarkable book."—*London Saturday Review.*

New Arabian Nights.

By R. L. Stevenson. 16mo (Leisure-Hour Series), $1.

A. H. SMYTHE, Columbus, Ohio,

Publisher of Historical Reference Lists. Prof. John T. Short, Ohio State University. Price 40 cents.

OHIO: A Sketch of Industrial Progress. By the same author. Cloth, 50 cents; paper, 25 cents. Invaluable to students. Should be in every library in the United States.

Sent on receipt of price by publisher.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 16, 1882.

The Week.

When President Arthur succeeded to the high office which he holds, he was accorded the respectful treatment which was his due. While he was not exactly welcomed to the place to which General Garfield had been elected, he was accepted with something more than tolerance. His behavior during the period that elapsed between the shooting and the death of the President had been such as to win a very considerable amount of public support and confidence. This confidence appeared to be well justified during some months immediately following the assembling of Congress. It appeared that the new President had been elevated to a plane corresponding to his new responsibilities, and that he was governed by no other motive than the best interests of the Republican party, considered as identical with the interests and well being of the whole country. In other words, it appeared that the President had definitively abandoned the maxims and practices of a local manager of Machine politics in New York with the shifts and expedients and "deals" which had illustrated his rise to political prominence. It may be said without exaggeration that until he began to make changes of officeholders to please the local "bosses," and introduce the methods of the New York Machine into national politics, he had satisfied every reasonable expectation, and that the party had received no harm at his hands. We need not recapitulate the steps by which the fair promise of these early months was frustrated. The consequences are now spread before the world in black and white. They show, as nothing else could show, that the Presidency of the United States cannot be made a personal instrument to build up this man or faction and to put down that man or faction. Whatever might have been done under different political conditions, this is evidently not a time when the dignity of the office can be thus trifled with.

The Supreme Court has made short work with the plea of Mr. N. M. Curtis that the statute under which he was convicted of levying assessments on officeholders was unconstitutional. It has decided that it is constitutional, and has denied him his habeas corpus. His fine of $1,000 has, we believe, been paid for him by Smyth's committee, but he will have a heavy bill of costs, which they will probably pay too. The use of campaign funds to pay fines inflicted for violation of the United States Statutes is certainly one of the oddest phenomena in Machine management. What we need now, and challenge the Democratic Congress to give us, if the Republican Congress does not, is an amendment to the Statutes, prohibiting the solicitation of assessments from officeholders by any officers of the Government, including members of Congress It is probably a grosser abuse in the case of these last than in that of any others.

The late elections have called out nothing droller in the way of suggestion than the Baltimore *American's* advice to the President, in an article entitled "Let Us Have Reform," that he should now imitate the English system, and try to "reorganize the National party on the basis of civil-service reform and administrative economy"; and that "the country having declared against Grant and bossism," he should reorganize his Cabinet as the Queen did after the defeat of Disraeli, and "call Blaine." Probably nobody would be more amused secretly than Blaine himself at receiving any such "call" as this, for with all his faults he enjoys a joke. If one may judge, too, by his selection of Kilpatrick and Hurlbut as his agents in founding the great Pan-American Confederation, his agents in carrying on the work of reform under such a call would probably be the queerest lot of "boys" that ever rallied round a kindly and open-handed leader.

Like Mr. Blaine, General Butler disclaims any intention on his part of becoming the next President of the United States. Although he has succeeded in persuading a majority of the voters of Massachusetts "to give the old man a chance," we must still be pardoned for saying that as to the Presidency we do not think he can be trusted. At any rate, Governor Cleveland, who, if he has not an eye on the Presidency yet, will soon have to yield to the urgent solicitations of his friends on this point, would do well to watch the new Governor of Massachusetts with vigilant attention. We risk nothing in predicting that the Massachusetts Barkis will be "willing" by the time that preparations for the next Democratic National Convention are made. And that will be very soon. We should not be surprised if Governor Butler thought that time had arrived already, and if this present exhibition of coyness were really in the nature of an invitation of manifestations of regret or of positive pressure. About the general situation of things, General Butler expresses himself with circumspection and a certain dignified reserve which contrast somewhat strangely with the slashing style peculiar to him before he was Governor-elect of Massachusetts. He is also strongly in favor of reducing taxation. But we regret to see his studies of political economy have not yet taught him that the whole burden of the tax on tobacco and whiskey cannot be borne exclusively by the people of the States in which those articles are produced, and exclusively by the consumers generally, at the same time. Probably General Butler wants both those classes to understand that they occupy an equal place in his heart.

Almost as gratifying a result of the late election as the defeat of Mr. Robeson in New Jersey is the complete extinguishment of Mr. Chauncey I. Filley, the Republican "boss" in Missouri. There was a revolt against him last summer when he, as Chairman of the State Committee, refused to call a Republican State Convention, and the anti-boss Republicans called a Convention of their own and appointed a new State Committee. Then he procured through his henchmen the nomination of local candidates in St. Louis, especially a candidate for a Judgeship, who ran conspicuously under Mr. Filley's auspices, and received of the 53,000 registered votes of St. Louis only 2,843. This is evidently the end of that boss, who in his person and political activity represented the worst tendencies of Machine politics, and of whom it is only surprising that the insolence of his rule was so long submitted to.

The returns from Nebraska are at last decisive as to the fate of the woman-suffrage amendment at the late election in that State. It has been lost by some twenty to thirty thousand majority. Against it voted, we are told in the only analysis we have seen, the colored people as a class, the foreign-born, the liquor-dealers and their "interest," and those who took offence at the presence and active "electioneering" of the woman-suffragists themselves. Why the colored vote should have been distinctively adverse we cannot imagine. Perhaps there were long memories of the attempt of the organization directed by Mrs. Stanton and Miss Anthony to block negro suffrage in Kansas in 1867, unless coupled with woman suffrage. The foreign-born, on the other hand, probably shared the fears as to prohibition which the liquor interest exhibited. It is well known that the ablest orator the woman-suffragists have ever had, Mrs. Livermore, has almost wholly withdrawn from the movement in order to devote herself to the temperance cause. It is not so well known in Nebraska that in Massachusetts, at least, perhaps the worst jockeying the suffragists ever got was at the hands of the Prohibitionists (in 1876). Finally, female electioneering at the polls may very likely have disgusted some voters, by reminding them that sex will largely disappear in practical politics. This disgust would have been deepened if the sharp practices of one wing of the suffragists in forestalling the other, even in the preliminary lecturing canvass, had publicly transpired. As there is contagion in our political innovations, success in Nebraska would probably have insured success in Oregon, the scene of the next contest. Only the most sanguine can now look for it in the latter State.

Mr. George Bliss, the most luminous and talkative of all the Arthur workers, has explained the late defeat, and his explanation has that true mark of genius which combines perfect simplicity with great reconditeness. Nobody else would ever have thought of it, and yet when you see it you wonder how you came not to think of it yourself. In the first place, the State of New York is naturally Democratic. In the second, the Republicans have been kept in power by the

stupidity of the Democrats. In the third, the newspapers got up a silly fuss about "bossism" and civil-service reform. But in the fourth place—and this is the most important cause of all—the Blaine and Garfield men were disgusted because they did not get the offices. About 200,000 of them, therefore, voted for Cleveland. Then, though last, not least, there was an injudicious fight between Mike Dady and Al. Daggett in Kings County. Mr. Bliss is also dissatisfied with the Republican organization in this city. Mr. Bliss goes through a great deal of harrowing changes of sensation about this organization. In 1876 he thought it was as perfect as could be expected. In 1879 he was utterly disgusted with it, exposed it, and said it had been degenerating for nine years, and implored Mr. Chester A. Arthur to reform it altogether. In 1881, when it was proposed in the State Convention to reform it, he violently opposed all change, and by the use of some of his pretty little ways defeated it. Now he denounces the organization again, and says that in "three-fourths of the organizations in the city no real regard is now had to the interest of the party, to fair dealing, or even to common decency." Mr. Bliss is a most interesting person.

The first veritable triumph of civil-service reform, pure and simple, at the polls has been achieved in Massachusetts by the election of Mr. Theodore Lyman in place of Mr. Candler, a "practical man," who had distinguished himself in Congress by sneering at reform and opposing the appropriation for it. His punishment was shared by Mr. Bowman, another sneerer, who was ousted by a Democrat supported by the reformers. These examples cannot but have a salutary effect; and, apropos of this, let us say that Butler's success is more readily understood when we learn that Senator Hoar, who represents the old régime, opposed Mr. Lyman and supported Mr. Candler, and severely condemned the bolting involved in Mr. Lyman's nomination. This gave Mr. Lyman an opportunity for a happy and stinging retort, for he was able to say that Senator Hoar had not thought ill of bolting when his brother, Judge Hoar, in 1876 accepted a bolting nomination against Butler, who was the regular candidate, and when Mr. Lyman took the stump for him. Circumstances always alter cases, but they have probably never altered cases so much as in the Republican party to-day. Butler's triumph is a mortifying thing, but we believe thousands of good Republicans in Massachusetts are secretly satisfied that nothing less thorough would have convinced the old managers that the war is over, and that there are now voters who were born after Fort Sumter was fired on.

We regret to learn from Texas that at Henrietta, in that State, C. M. Burgess, a defeated candidate for the County Judgeship, found it necessary to kill R. M. Donley, a young lawyer who had spoken ill of him during the canvass, and that as many as three shots were necessary to finish him. The despatch says that Donley was "an impulsive man," which is all we need to know of this tragedy. There are too many "impulsive men" in all parts of the country, and especially at the South, and it is well to thin them out, and the best time to do it is when, like Donley, they are young. It is high time, too, to put a stop to the practice of speaking ill of candidates for judicial offices. There is sometimes a great deal of it. Mr. Richard O'Gorman, of this city, who has just been elected to a Judgeship of the Superior Court, was during the canvass spoken of in the most injurious manner, and we trust he is not going to let it pass unavenged. We hope he will give a salutary warning by butchering one or two editors in cold blood, as our Southern brethren do, and the street, by the way, is the best place for the job. There is fine shooting ground around the Franklin monument. Donley's murder will be, of course, "deplored and regretted" in all the leading Southern cities. Let us add that no Northern man need be deterred by such occurrences from fixing his residence in the South. All he has to do is to avoid having differences with anybody about anything, or criticising candidates for office in an unpleasant manner. By adhering to this simple rule, no sober person will slaughter him except for purposes of robbery, and to this, of course, he cannot as a reasonable man object. There is no community where people have not now and then to be killed before being robbed.

Following the overwhelming Democratic victories at the recent elections, the speculative markets at the Stock Exchange were unsettled and depressed, but this lasted only for little more than a day. These markets then turned toward higher prices, and have since continued in that direction for the stocks of the leading railroads. One of the main reasons for the upward turn was the discovery that Mr. W. H. Vanderbilt, who, a few years ago, sold enough of his railroad stocks to buy between $50,000,000 and $60,000,000 of United States 4 per cent. bonds, had begun converting these into railroad securities, his first step having been to sell $10,000,000 of these bonds to a number of the savings banks and other institutions wanting such securities. The price which he obtained was about two per cent. below the market quotation at the time of sale. The construction put by Wall Street on this action of his was that if he, with an inside view of the railroad business of the country, and the best means for judging what it would be for the next six or eight months, was willing not only to use his cash in hand, but to turn a part of his choicest investment into cash, to buy railroad securities, the latter were, in the parlance of the Street, a "good purchase." Accordingly, others have been buyers, and we have had an advancing market. As the Treasury's disbursements exceeded its receipts, and the surplus revenues continued to increase, the Secretary of the Treasury called in another $15,000,000 of 3½ per cent bonds, and also ordered the prepayment without rebate of the $15,000,000 called before. The effect of this action was to change the money market from activity to ease, and to reduce the rate of loans from 10 to 30 per cent. (to and between which figures it had been manipulated) to plain 6 per cent. The foreign exchanges were without special feature during the week. Railroad earnings still increase, and show heavy gains over last year. Rates on freight are higher than then, and operating expenses are lower (so far as material goes), but the tonnage is not so large, although during the winter it promises to be larger, since Western products have generally been held back on account of low prices. General trade remains fairly good.

The telegraph reports that Mr. Gladstone, in his remarks on the closure in the House of Commons on the 8th inst., spoke of the profound interest he felt in the question of local self-government in Ireland, and the impossibility of dealing with it when the Irish members did all in their power to narrow the time for discussion by which alone legislation looking to local self-government could be enacted. This is perhaps as distinct an intimation as he could throw out that if the Irish help him with the closure, he will make them fresh concessions in the direction of Home Rule. They have, however, apparently decided to oppose the closure, and whether they can now be got to go back on their decision seems doubtful. They may and probably do argue that if the closure goes through, they will be at the mercy of the Ministry and of the majority in a greater degree than they are now, and will, therefore, not have the means of enforcing their demands of which they made such a triumphant use last year. They have not forgotten that when the present Ministry came into power, it had no immediate intention of dealing with Irish grievances at all. Its programme was wholly English. It was the Parnellite obstruction, backed up by "outrages," that caused the complete change of plan which devoted the session of 1881 almost exclusively to Irish legislation, and ended in the passage of that very drastic and in fact revolutionary measure, the Irish Land Act. No one now denies that, but for obstruction, it would not have been framed or carried. The same thing happened in the session of this year. Mr. Gladstone announced, when Parliament met, that the business of the session must be English; but he was compelled to bring in the Irish Arrears Bill, and that the fear of obstruction had much to do with this change of mind also is beyond doubt. We do not mean to say that Mr. Gladstone had no nobler motive, but we do mean to say that if the prospect of obstruction had not stared his followers in the face, he would never have been able to bring them to give any more time to Irish business. In fact, what the Irish have accomplished through this weapon in the teeth of hostile or indifferent English opinion is marvellous, and it is not altogether surprising that they are reluctant to give it up, and trust wholly to the effect of their arguments on bored or disgusted Englishmen.

The Committee of Inquiry appointed by the House of Commons to look into Mr. Gray's contempt case has, it is telegraphed, made three reports, representing different shades of opinion. The majority follow an opinion of the Attorney-General that Judge Lawson had the legal right to do what he did. If this is all they say, however, it does the Judge little

good, for there has been no doubt that he acted within his authority. If he had exceeded his legal powers, Mr. Gray might have been liberated on a habeas corpus. That no attempt was made to get a habeas corpus, or that, if one was made, nothing came of it, showed that no legal objection to the Judge's course could be raised. The charge against him was that he had abused his discretion, and if the report of the Committee says nothing on this point, it leaves him where it found him. The attempted assassination of the Judge apparently does not grow into a well-developed outrage. There is, it is reported, a suspicion in Dublin already, that the assassin wanted to be arrested, in order to get a job as "Queen's evidence." He certainly acted as if he did. Anyhow, the affair is very useful to the Judge, who has been suffering a good deal in reputation from his excess of zeal. He will now be, for a while at least, an object of sympathy.

The attempt on the Judge's life, as reported by cable, has an extremely suspicious appearance. He was known to have police protection ever since he sent Mr. Gray to jail, and was attended to his club on Saturday evening by two policemen, presumably in uniform, and was "watched" from the other side of the street by two army pensioners. Thereupon a ticket-of-leave man, well known to the police, came along, jostled one of the pensioners, and then said to him "in a confidential manner," "It's all right," and gave the pensioner the impression that "there was something suspicious in the man's manner." Having thus effectually secured his attention, the ex-convict started across the street to meet the Judge, with the butt of a revolver protruding from his breast pocket. Of course, the pensioner followed close behind, saw the revolver, gave a loud cry, closed with the ex-convict, and seized the revolver at the expense of a slight cut on his hand, and the Judge's life was saved. If the ticket-of-leave man was hired for the work by a secret society, it certainly cannot have been the one which planned the murder of Lord Frederick Cavendish and Mr. Burke. The conspirators might almost as well have written to the Judge to meet them alone in a vacant lot about midnight to undergo the punishment due to his crimes.

The French Chambers have met, and the Ministers have put forth a strong appeal for a working majority. They had nothing to say about Egypt, except that negotiations were pending for the settlement of the relations of France and England. The French representative there has been, under instructions from home, doubtless, adhering to the theory that the Joint Control was still in existence, an assumption which the English Minister, on the other hand, wholly repudiated. The Khedive has now set the matter at rest by a decree formally abolishing the Control, so that some wholly new scheme of financial reorganization will have to be resorted to, and it is not probable that under all the circumstances it will be satisfactory to the French. But their attention is likely to be called away from Egyptian finances during the present winter to the condition of their own, which is anything but satisfactory. We have twice within the past year commented in these columns on the really serious analyses by competent French authorities of the condition of the budget, one of them M. Leroy-Beaulieu. He has again returned to the charge, and has made such an exposure of the Treasury statements as apparently to have alarmed French investors, for rentes have fallen under it. He shows that the revenue has at last begun to show a loss of elasticity, that the deficit this year will be $12,000,000, and may reach $30,000,000. This state of things is partly the result of a vicious system of bookkeeping, inherited from the Empire, which prevents any proper relation between the estimates and the receipts, but is also the result of an unfortunate desire on the part of Republican Cabinets to earn popularity by too many public works. The French Government cannot make "river and harbor improvements" as ours can—without laying itself open to any other charge than folly and extravagance or corruption. If it makes them, it deranges its whole financial system, and damages the public credit.

The Italian Court of Appeal has confirmed the decision of the court below which included the Vatican within the jurisdiction of the law courts. The case arose out of the claim of an architect against the Pope's major-domo, on which he sued and got judgment. This caused the Pope to set up a court of his own within the Vatican in the nature of our Court of Claims, to hear and determine cases affecting resident members of his household, which excited some sensation as the first attempt of the present Pope to exercise powers of temporal sovereignty. This has now been promptly met by the decision of the Court of Appeal, which of course makes the Pope's Court a nullity. The Pope's adherents are therefore in their turn greatly outraged, because, they say, this decision makes the Guarantee of the Pope's inviolability practically worthless. They claim for him under this Guarantee the rights and immunities of a foreign ambassador, which, as every one knows, are, under the law of nations, those which the sovereign he represents would enjoy in a foreign city were he to shift his residence temporarily thither. Neither he nor his servants are subject to the jurisdiction of the local tribunal, and his house is, to all intents and purposes, on the territory of his own government. The Vatican is large enough, and contains people enough, to constitute a small principality, and thus far the Italian Government has refrained from claiming any civil or criminal jurisdiction over them. This has been made possible mainly by the fact, however, that the Pope's household, no matter how large, is necessarily an orderly one. It cannot contain turbulent or vicious persons. The Pope, indeed, may always be relied on in our day to exclude from its precincts anybody whose life or manners would bring discredit on it. In other words, he is sure to police it pretty effectually. He would do this even if his ecclesiastical position did not make him the most conspicuous guardian of morals in the world, in order to deprive the Italian Government of all excuse for meddling with what is left of his sovereignty. But the question of the amenability of the inhabitants of the Vatican to the jurisdiction of the civil courts was sure to come before very long. They do not support themselves with the products of their own labor. They toil not, neither do they spin. They have to buy what they need from the world outside, and in doing so have to make contracts, and for longer or shorter periods incur debts; and wherever there is buying and selling, and contracts and debts, there are sure to be disputes, and disputes have to be settled either by the shot-gun, or stiletto, or by litigation. Roman tradesmen, who supply the Vatican with provisions, or carpenters or masons who make repairs in it, are sure some time or other to have disagreements with the major-domo, and sure also not to be content with the decision of an officer of the household, the major's friend or superior, that they are wholly in the wrong, as long as there are other courts within reach.

The crisis has come, perhaps, a little sooner than was expected, but it was sure to come soon, and the courts have met it by the first step in a process which will probably end in bringing the Vatican within the jurisdiction of the Roman police. The courts, of course, will not grant judgments which they do not mean to be executed, and the execution of a judgment means the employment of force, if necessary. This decision was to be expected, too, for besides the standing tendency of all courts to enlarge their jurisdiction, all the winds in Italy now blow towards secularization and the destruction of ecclesiastical immunities and privileges. The matter has, however, little practical importance for the Pope. The amount of real inconvenience he is ever likely to experience from litigation is no greater than that to which the master of any great household is exposed in any country; probably much less, for he is surrounded by attendants whose interest it is to protect him against all petty mundane annoyances. He knows well, too, that his claim of temporal sovereignty is in Italy treated as an old man's whim, which has to be humored as a concession to foreign prejudice. What he is really contending for is the means of keeping up his dignity in the eyes of foreign prelates and pilgrims who come to visit him in Rome, and whose imagination is more or less affected by the feeling that, like Melchizedek, he is a king as well as a priest. That there is a certain reasonableness in al this, no one who has paid much attention to the history of Papal influence during the last ten years can deny. Somehow or other the voice of a simple bishop, living on voluntary contributions, does not, even when it comes from Rome, sound so impressive in men's ears as the voice of a prince who has his army and his police, and his jails, and his pardoning power, and his ambassadors, and all the other paraphernalia of earthly dominion. The struggle to retain even such a trifling relic of this dominion as the sovereignty of the Vatican is indeed a singular confession of the extent to which the spiritual power has declined.

SUMMARY OF THE WEEK'S NEWS.

WEDNESDAY, November 8, to TUESDAY, November 14, 1882, inclusive.]

DOMESTIC.

THE Democratic victory on Tuesday last turned out to be even more sweeping than was at first reported. The result in the different States in which elections were held was as follows:

In New Hampshire, the majority for Hale, Republican candidate for Governor, was only 559.

In Massachusetts, Butler was the only candidate on the Democratic State ticket who was elected, his plurality over Bishop and Almy being 13,088. Oliver Ames, the Republican candidate for Lieutenant-Governor, was elected by a plurality of over 16,000, and the remaining Republican candidates for State officers were all elected by substantial pluralities. The Executive Council will contain but one Democrat.

In Connecticut, the Democrats elected their State ticket, with the exception of the candidate for Comptroller, who was defeated by General Sloat, the Republican nominee. Waller was elected Governor by a plurality of about 4,150.

In New York, the success of the Democrats was overwhelming, the full returns bringing Cleveland's majority up to more than 196,000. Carroll, the Republican candidate for Congressman-at-large, ran slightly ahead of his ticket. The judiciary and free-canal amendments were both carried by large majorities.

In Pennsylvania, Pattison, Democrat, was elected Governor by a plurality of about 38,000 over Beaver, Regular Republican, and Stewart, Independent Republican. The latter polled about 40,000 votes. The Democrats will have a majority of 11 in the Legislature on joint ballot.

In Delaware, the entire Democratic ticket, with the exception of the Sheriff of New Castle County, was elected; Stockley, the Democratic candidate for Governor, receiving a majority of 1,938.

In New Jersey, the Democrats will have a majority on joint ballot in the Legislature.

In Virginia, Wise, Readjuster candidate for Congressman-at-large, was elected. The Congressional delegation will stand six Coalitionists to five Democrats.

The Democrats carried Indiana by a plurality of about 11,000, and will have control of the Legislature.

In Michigan, Kansas, and Colorado, Democratic Governors were elected, but the Legislatures will be Republican.

The Democrats swept California, electing the entire State ticket by a handsome majority. The entire Congressional delegation will be Democratic.

The Southern States went, as usual, Democratic, the majorities in Georgia and Texas being large. In certain Southern States, however, the Republicans made slight gains in Congressmen. The result, in short, has been that the Democrats elected their candidates for Governor in thirteen of the States, and have made great gains in nearly all of the thirty-three States which held elections on the 7th inst.

In the Forty-eighth Congress the Democrats will control the House of Representatives by a majority of seventy-one, the figures being Republicans 127, Democrats 198. The Democrats will have solid delegations from Alabama, Arkansas, California, Florida, Georgia, and Texas, and have secured Representatives in Iowa and Michigan which have unbroken Republican delegations in the present Congress. In the last-named State the Republican reverse is marked, for, instead of a solid delegation of Republicans, the State elects six Democrats to five Republicans. Of the fifty-seven chairmen of committees appointed by Speaker Keifer, only twenty-three have been sent back to Congress.

There is, of course, some doubt as yet in regard to the composition of the Senate in the Forty-eighth Congress, but, judging from the Legislatures of the States which are to elect Senators, the next Senate will probably consist of thirty-eight Republicans, thirty-six Democrats, and Mahone and Riddleberger, of Virginia, with a possibility of the return of David Davis by the Illinois Legislature instead of a Republican.

Various prominent politicians of both parties have expressed their views in "interviews" on the result of the elections. Mr. Blaine is credited with having said that he is not a candidate for the Presidency or for any other political office. "His position is, that the death of Garfield terminated the political era in which they both belonged," says a Boston despatch. He does not see in Tuesday's reverses anything to cause despondency respecting the future of the Republican party. The defeat is not so signal as that of 1874, and, like that, can be made to result in good to the party. He believes that the victory may be achieved in 1884 by presenting as a candidate for the Presidency a man who has the confidence of the country, and upon whom both factions of the party can unite. To the accomplishment of that result his influence as a private citizen will be exerted. He believes that Republican success in 1884 is essential to the welfare of the country.

Ex-Speaker Randall, who will naturally be a prominent candidate for Speaker of the next House of Representatives, was interviewed, and said the "recent Democratic and reform successes mean a declaration by the American people in favor of greatly reducing public expenses, both in the general and local governments." He regarded the result of the elections as a complete and final overthrow of "bossism." He thought the measures of reform which would and should be introduced by the Democratic party in the next Congress were the abolition of the internal-revenue system, the reform of the tariff and civil service, and the enactment of laws to prevent the enforced assessments on the salaries of officials of the Government. In conclusion, he said: "I think I can assure the public that nothing will be done by the Democratic House which will in any degree disturb, or even embarrass, our present business relations and prosperity, whether such may relate to commerce, manufactures, or agriculture."

Senator Bayard, in a recent interview, expressed his views with regard to the Democratic victory and the duties of the party on coming into power. He said that the reform of the civil service, the simplification of the tax laws, and insistance on the principle that revenue shall be the object and protection only an incident of tax laws, are the obvious duties of the party assuming to administer the affairs of our Government. He said that to state the tariff issue "broadly, and yet accurately, the people of the United States are threatened with the substitution of a plutocracy instead of Republicanism as the basis of their Government." This conclusion he drew from the fact that "certain favored classes of our citizens have brought themselves into the absurd belief that they have certain vested rights in the perpetuation of unequal taxes, to their personal benefit, upon the whole body of their fellow-countrymen."

Mr. David A. Wells addressed a large number of revenue reformers in the rooms of the New York Free Trade Club on Thursday. He urged the necessity of immediate legislation to reduce taxation and to promote revenue reform, on the ground that the present financial system results in the accumulation of $150,000,000 surplus yearly. The application of this sum to the payment of the national debt he held to be a blow at the national-banking system. Even with the reduction of taxation, he said, the time was not far distant when the basis of this system would be wiped out. Unless something in the way of relief was done at once, he held that there would be a financial cyclone which would shake the business interests of the country to their foundations. In conclusion, he urged the necessity of a union of civil-service reformers with revenue reformers for prompt, effective, and thorough political organization, on the ground that the election of Tuesday meant the disintegration of both the old political parties and the formation of a new one, with reform in the tariff, in the civil service, and in the administrative methods of the Government as its cardinal principles.

The Mississippi River Commission have submitted estimates for appropriations needed in the next fiscal year. They ask for about as much as was given at the last session of Congress, or something more than $4,000,000.

Mr. Henry George delivered a lecture, entitled "Progress and Poverty," in Washington, on Sunday night, under the auspices of the Federation of Labor Unions. His audience was a large and intelligent one, composed mainly of the better educated tradesmen, mechanics, and artisans of the city. The principal topics discussed by him were land tenure, the labor question, and the agitation in Ireland.

A complimentary dinner was given to Mr. Herbert Spencer at Delmonico's on Thursday night, at which a number of distinguished men were present. Mr. William M. Evarts presided. Mr. Spencer made a speech, in which he dwelt on the tendency in American life toward exclusive devotion to work, and consequent abstinence from recreation of any kind. The American, he said, eagerly pursues the future good, ignoring the good the passing day offers him. In conclusion, he said that we have had "somewhat too much of the 'gospel of work.' It is time to preach the gospel of relaxation."

The New York *Herald* on Thursday announced that a number of gentlemen, including Mr. James Gordon Bennett, proposed to lay a new cable between the United States and Europe. The money has been all subscribed, and it is expected that messages will be going through it next summer.

Frank H. Fall has prepared a confession of his complicity in the attempt to bribe the Star-route jurors. He gives full details of the arrangement which he entered into with Payne and Foote, by which the two latter were to induce the juror Brown to sign a contract to vote a certain way, in consideration of the payment of $2,500. Brown refused to sign the contract, as that would commit him to paper; but he agreed to be bribed if his word would be taken. Fall was the man who was dismissed from the detective force of the Department of Justice for having suggested that he should be provided with a few Government clerkships for distribution as bribes to the jury.

The United States Revenue cutter, *Thomas Corwin*, brings particulars of recent fights with Indians in Alaska. The *Thomas Corwin* destroyed a village, the inhabitants of which had attacked a whaling launch, and captured two white men. Hearing also that Indians had taken possession of one of the American Fur-Trading Company's stations, and held all the employees prisoners, Commander Healey, of the *Thomas Corwin*, went to their relief, and found the Indians very hostile. He shelled their village, and released all the men held as prisoners.

FOREIGN.

In the House of Commons on Wednesday debate on the closure was resumed. Mr. Gladstone made a speech opposing Sir Stafford Northcote's amendment for the rejection of the closure rules. With regard to the Irish party Mr. Gladstone said he believed that a complete and effective system of rules

was essential for meeting the wants of Ireland. There was no subject, he said, in which he felt more profound interest than local government for Ireland, but it was mockery for the Irish members to come into the House and tell the Government to establish local government for Ireland, when they did all in their power to narrow the time for discussion by which alone such legislation could be enacted and given to Ireland. Mr. Stanhope, Conservative, denounced the closure, and charged Mr. Gladstone with bidding for Irish votes by his talk about Irish self-government, for which his affection was only of recent birth. On Friday the debate was resumed. Mr. O'Shea, Liberal, appealed to the Irish members to support the Government. Mr. Cowen, Radical Reformer, denounced the closure rules as an interference with the liberties of the House which would be fatal to the existence of minorities in Parliament. A change was necessary, he said, but this change was excessive and bewildering, and amounted to a revolution in the proprieties of the House. Mr. Charles Russell, Liberal, said that if the Government abused the proposed rules a healthy public opinion would soon hurl them from power. He could not understand why the Home Rulers proposed to vote with the Tory coercionists. Sir Henry James (Liberal) pointed out, referring to Mr. Stanhope's speech, that the Queen's speech from the throne in 1881 held out a promise of the establishment of county boards in Ireland. After some further speeches a division was had, and Sir Stafford Northcote's motion that the first closure resolution be rejected was defeated by a vote of 304 to 260. The Parnellites voted for, and the other Irish members against, the motion.

On Monday, Mr. Gladstone moved that the second procedure resolution be considered. Lord Randolph Churchill, in moving an amendment to the resolution, referred to the treaty alleged to have been entered into by the Government with the Irish members imprisoned in Kilmainham Jail, by which the latter were said to have effected their release. Mr. Gladstone said that no such treaty had been made, and challenged the Opposition to move an inquiry into the subject. Mr. Yorke, Conservative, then asked if Mr. Gladstone would give a day therefor, and Mr. Gladstone replied, "Yes, at once." On Tuesday Mr. Yorke moved that a Select Committee be appointed to inquire into the circumstances under which Messrs. Parnell, Dillon, and O'Kelly were released from Kilmainham Jail.

Debate on the second procedure resolution was resumed on Tuesday night. Mr. Gladstone assented, though with considerable misgiving, to an amendment providing that a member may obtain leave to move an adjournment during the pendency of questions, provided that forty members rise in their places and favor such motion. This is looked on as a considerable concession from the Government, who originally demanded that a motion for adjournment should not be put unless leave was granted by a majority of the House.

Mr. Gladstone made a statement in the House of Commons on Tuesday relative to Egypt. He said that there were now 12,000 troops there, but that the Government had no idea of allowing so large a force to remain there long. The next step would be to conclude a convention relative to a temporary arrangement for the security of the country, including the charges for the maintenance of the troops. This convention, he said, would be modelled on that concluded with France after the battle of Waterloo.

In the House of Commons on Monday, the Speaker read a letter from Mr. Bradlaugh asking the House to permit him to state at the bar the grounds of the law on which he claims his right to take the seat for Northampton, for which he was elected. On the same day Mr. Gladstone stated that it would be impossible to forecast when the trial of Arabi Bey would begin or finish. The Government, he said, was anxious to expedite the proceedings. Arabi would not be executed without the consent of the Government. He said that Lord Dufferin would conclude no final arrangements with Egypt, but that the Government was now engaged in considering with Lord Dufferin the establishment of institutions in which Egyptians would be represented, and which would have control over the administration of the expenditures. Until further progress was made, he said, it would be premature to enter into the question of submitting the arrangements to the sanction of the Sultan or to the European concert.

In a speech at the Lord Mayor's banquet on Thursday, Mr. Gladstone said he could now record his convictions that a new tone of sentiment was dawning among the Irish, to seek an amelioration of their condition by peaceful efforts at law. He said the foundations of society in Ireland were now in little danger. The monthly return of agrarian outrages was but 111, as compared with 511 in October, 1881. If the Irish were content to walk in the ways of legality, the Empire was strong and free enough to entertain in a friendly and kindly spirit any demand that might be made for free discussion and perfect publicity in matters relating to its Irish policy. He highly praised the conduct of the British forces in the Egyptian campaign, which he believed would be memorable in history. Lord Granville and Mr. Childers also delivered speeches.

An attempt was made to assassinate Judge Lawson in Dublin on Saturday evening. He was on his way to his club, guarded by policemen in citizens' clothes, when a man was seen to cross the road toward Judge Lawson and to put his hand into the breast of his coat, whereupon he was knocked down by the policemen and found to be holding a six-chambered revolver. The prisoner is known to be a foreman carpenter, and the attempt is believed to have originated in a secret society. A rumor, however, is current that Delaney, the prisoner, only feigned an attempt to shoot the Judge, in order that, being arrested, he might turn informer and obtain a Government reward.

At a meeting of the Corporation of Dublin, on Friday, a heated discussion occurred on a motion to thank the Irish regiments which served in Egypt for their gallantry, and to confer the freedom of the city on Sir Garnet Wolseley. Crowds thronged the vicinity of the hall where the debate was going on, and great interest was manifested in the result. Some of the Irish members of Parliament had hurried to Dublin to assist in defeating the motion. An amendment by Mr. Sullivan, M.P., declaring that Ireland had no interest in the Egyptian war, which had only resulted in increasing taxation and carrying ruin to Irish homes, was ultimately carried by a vote of 27 to 21.

A despatch to the London *Daily News* from Cairo said that the Commission of Inquiry preliminary to the trial of Arabi Pasha had repudiated the forms of procedure agreed upon between Arabi's counsel and the prosecution. The Commission insists that witnesses cannot be cross-examined directly, and that the trial must be finished by Christmas. The counsel have protested.

Advices from Egypt say that the medical reports show that there have been forty-one deaths in the British Army of occupation from the 1st to the 9th instant, and that nearly ten per cent. of the Army is on the sick list. Lord Dufferin is said to have made an excellent impression on the Egyptian ministers. He told them that he had not come there to take the direction of affairs out of the hands of Sir Edward Malet, but to work with the latter on terms of perfect equality. On Thursday a note was issued by the Egyptian Government announcing the abolition of the European Control. The note points out that the Control, as reconstituted by the Khedive in 1879, no longer offers any guarantee to bondholders, but has become an institution of a dual and political character which has proved the cause of many administrative difficulties. In the House of Commons on Friday, however, Sir Charles Dilke said that although the Egyptian Government had proposed the abolition of the Control it had not issued a decree of abolition. In the course of this same debate Mr. Gladstone expressed the fullest confidence in the Khedive and the Egyptian Government as to the fairness of Arabi's trial.

The steamer *Westphalia*, of the Hamburg Line, collided off Beachy Head, England, on Monday morning, with an unknown steamer. The *Westphalia* reached Portsmouth with difficulty, but the unknown steamer is supposed to have sunk with all hands, as no trace of her has been found.

The Court of Appeals at Rome has confirmed the decision of the Court of the First Instance, that the jurisdiction of the Italian tribunals extends within the walls of the Vatican. The point arose in connection with a case in which a man employed as an architect in the Vatican sued the major-domo of the Pope before the Italian Courts. The clerical press is indignant at the decision, and declares that it makes the Law of Papal Guarantees a farce.

The French Chambers reassembled on Thursday. The declaration of the Government's policy stated that the object of the Government would be to efface the divisions in the Republican party, and thereby enable it to resist the attacks of hostile factions; to do its utmost to repress any factious demonstrations, from whatever quarter. The declaration said that the Government asks the Chambers to discuss the budget before everything, and afterward to consider a bill dealing with habitual criminals. Bills will also be introduced dealing with the organization of judicial tribunals, and the organization of the administration of Tunis. The Ministry says that it relies upon the support of Parliament, and believes that a majority exists which is resolved to give the country a strong and durable government, which shall vigorously exact absolute respect for the laws. On these conditions the Ministers are ready to continue their task.

After the meeting of the Chambers the members of the Extreme Left held a meeting, at which they resolved to favor the revision of the Constitution.

On Friday the Chamber of Deputies discussed the estimates for Public Worship. The Minister of the Interior announced that the Government had decided to oppose any proposition tending to the abrogation of the Concordat. The Radicals urged a reduction of the estimates.

The Greek Minister of Finance on Friday presented to the Chamber of Deputies his estimate of receipts and expenditures for the coming year. The budget showed a surplus of 1,041,602 drachmas.

A despatch to the London *Post*, from Berlin, says that the new German Minister to the United States has been instructed to obtain a revision of the existing Treaty of Naturalization, or the conclusion of a new one of uniform character.

A despatch from Belgrade says that Mr. Eugene Schuyler, U. S. Minister Resident and Consul-General for Servia and Rumania, presented his credentials to King Milan on Monday. Ratifications of the Servo-American commercial treaty were afterward exchanged.

The Bey of Tunis has intrusted the French commander with all matters relating to the military and naval services of the Regency. Generals Forgemol and Logerot have declined the posts of Minister of War and Marine.

THE NOVEMBER ELECTIONS.

THE Democrats will have a majority in the next House of Representatives large enough to give them almost unlimited freedom of action in that body. They will at the same time have before their eyes an unusually good chance of success at the next Presidential election. Their capacity for blundering while in possession of power has become proverbial, and their success this autumn has been so astonishing that their heads may again be turned by the apparent certainty of future triumphs. It cannot be denied that at present there is more reason for such confidence on their part than ever before. The Republican party, utterly broken up by its crushing defeat, cannot and will not rally and reorganize its forces under the old leadership. That is out of the question. And the rebuilding, upon correct principles, of an organization in opposition to the Democratic party strong enough to achieve success, may require more time than from this day to the opening of the next Presidential election. Such, at least, is the present aspect of the situation. The prospects of the future are therefore uncommonly seductive for the light heads in the Democratic party, and there is just a possibility that they may again throw away their chances by uncommonly foolish conduct. But it would be astonishing if the Democrats had not learned at least something in the way of prudence.

In the next session of Congress the Republicans will still hold a majority, and the Democrats will still appear in the attitude of an Opposition. The course of the latter will therefore not materially differ from what it has been heretofore. They will have much to say about economy in public expenditures, and occasionally vote in that direction; we say "occasionally," for it is well known that in those measures of lavish extravagance which were especially offensive to the people, the Democrats in Congress were fully as much concerned as the Republicans. But it is to be expected that at the next session of Congress the Republicans will appear very much sobered by defeat, and rather intent upon making a reputation for economy—except, perhaps, those members who know that they will never rise to the surface again, and now want to avail themselves of their last chance for a haul. On the whole, a comparatively economical session of Congress is probable, in which each party will take care to have in that respect as many good things as possible to say of itself. When, therefore, the distressed Republicans ask themselves in what way they can measurably repair the disaster that has overtaken them, by improving their moral standing before the country, they will find that, in the matter of economy, they can, indeed, by wise conduct protect themselves against additional reproach, but they can scarcely hope to put the Democrats at a disadvantage. Also, with regard to the tariff question and the reduction of taxation, they may somewhat disarm the distrust, or rather disgust, with which their failure to perceive the requirements of the time and to act accordingly has filled the public mind; but there also the Democrats, although their attitude hitherto has not been by any means reassuring, are not likely to permit them to make any exclusive capital.

But there is one point on which the Republicans in Congress can achieve a decided advantage over the Democrats at the approaching session. Never has the popular feeling against the demoralizing abuses of the spoils system been as definite, sincere, and strong as it is now. Never has the demand for the abolition of that system, and for a thorough reform of the civil service, been as loud and as general as it is to-day. The candidates for Congress of both parties at the late elections vied with one another in protesting their adherence to the cause of that reform. The approval and support of bills pending before the present Congress were made the test of the sincerity of those professions. Here is the chance of the Republicans at the next session, where they still hold power. They can bring those bills to a vote, and use their majority to pass them. The sincere friends of the reform among them will be glad to avail themselves of this last chance. Even the Machine politicians among them may understand that now, with the prospect of the Democrats going into power before them, they have in the abolition of the spoils system nothing to lose for themselves, while they may make a good point for their side in public opinion. On the other hand, the Democrats, if forced to the issue, will have to deal with the civil-service reform question in the face of the probability that the spoils of the National Government may soon fall into their hands. Even to many of those who have as candidates publicly proclaimed their fidelity to that cause, civil-service reform may appear in a new light under such circumstances. Their sincerity will have to pass through a severe ordeal, and public duty as well as party policy demands of the Republicans in Congress that Democratic sincerity with regard to civil-service reform be put at once to a direct test.

In the general analysis of the causes of the Republican disaster which is now going on all over the country, one cannot but be struck by the omission of all mention of what is perhaps the most remarkable phenomenon of the crisis—the failure of all the prominent Republicans in public life to utter any really emphatic note of warning about it. Usually, when a great political revolution is impending, there are plenty of prophets to foretell what is coming, even among the friends and allies of the party in power. The evil day is almost always foreshadowed by secessions or protests. The overthrow of the Beaconsfield Ministry in England in 1880 is the event of recent history which most nearly resembles our own elections of last week as an impetuous outburst of popular disapproval. But its coming was indicated long beforehand by such incidents as the resignation of Lords Derby and Carnarvon from the Cabinet, and by declining majorities in the House of Commons.

The Republican party here received no such signals from its leading politicians. The press was left to do the whole work of preparing it for the immense reverse which has overtaken it. One cannot point to a single speech in or out of Congress, from one of its chiefs of any wing, saying boldly that the doings of the managers were imperilling the continuance of the party in power, or indeed indicating in any way that they themselves had any conception that the temper of the public was rising. This is the more extraordinary because the party has, since the Chicago Convention, been rent by bitter dissensions. The chiefs are not only not all Stalwarts, but a large body of them are separated from the Stalwarts by fierce and deep animosities, and the Administration has done nothing to conciliate its opponents. It has not attempted to silence their criticisms by favors. On the contrary, it has gone its gait in a way which showed clearly enough that it did not care what any one said. Nevertheless, all that we have heard from its enemies in public life by way of censure has been that it was acting unfairly in the distribution of patronage, either by "slaughtering" or failing to recognize the "Garfield Republicans." No leading man has come forward to say boldly, by speech or letter, that its whole system was at fault, and that the general treatment by the majority in Congress of the questions by which the popular mind was agitated, was dangerous to the very existence of the party. There have been from one or two quarters of influence slight hints that things were not going quite as they ought to go, but surely such tremendous defeats as have occurred in this State, in Pennsylvania, and in Massachusetts ought long ago to have found prophets to warn us of them in trumpet tones. Surely there ought to be now somebody—even one man—among the party leaders able to come forward and say, "I told you so."

Apparently there is not one; and to any one who considers the long training as an observer of public opinion which every American politician of prominence apparently undergoes before reaching high office, this is a most surprising phenomenon, and one which would well repay the investigation of any political philosopher. We presume the explanation of it which lies nearest the surface is, that under our present nominating system every man who reaches high office has owed so much of his advancement to some kind of Machine, and has become so impressed with its power, that he gradually ceases to look beyond it, or outside of it, for signs of the times. To such a man, for instance, the doings in the New York Machine really did not seem so very unfortunate, because they might have been repaired or obviated by a slight change in the composition of the State Committee or in the distribution of the nominations. In other words, he could see nothing wrong there which could not be cured by a "conference" or a "new deal." In Massachusetts also, although things were not perhaps looking very satisfactory, yet there was no considerable trouble among the men in power. Bishop was not quite what they wanted in the way of a Governor, but they never dreamed that there was anything so wrong about him as to make Butler preferable to the voters. Hubbellism, too, was distasteful to many Republican chiefs, but only distasteful. There was not in the Congressional Committee for which he professed to act a suspicion of the popular indignation which he was arousing.

The members were so far removed from it, and knew so little of it, that they actually allowed him to distribute as a campaign document a speech of one of their own number in defence of assessments; and a man so far removed from the category of ordinary politicians as Senator Hoar actually only thought Hubbellism "indelicate" within three weeks of the deluge. Yet in Senator Hoar's State, nominating conventions are more nearly true representative bodies than perhaps in any other in the Union.

We can, on the whole, only recall one office-holding politician, even of the second or third order, who saw what was coming and got ready for it, and that was Mr. Stewart L. Woodford. His appearance on the stump a fortnight before the election as an implacable civil-service reformer was clearly a moving of his household goods and cattle to the high ground, by a man who had seen cracks in the dam.

AMERICAN OVERWORK.

Mr. Herbert Spencer, at the dinner given him last week, added his corroboration to the immense mass of testimony which has, ever since the introduction of railroads and telegraphs, been convicting Americans of taking too little relaxation. It would be very interesting, apropos of these criticisms, to know exactly how Americans compare in this matter with other commercial nations. Probably no statistics on this point can be collected, but we suspect that it would be found that in our day the commercial Englishman who has not made his fortune works, if not as hard, as assiduously—that is, spends as many hours in the year in his office or store—as the American. With the business men of all countries vacation is very much a matter of money. Most men take it if they think they can afford it, or if the doctor orders it as a remedy for a specific ailment; otherwise they stick to their oar. American clerks, we imagine, get about the same amount of holiday as English clerks—that is, a fortnight—but clerks on a salary feel in no country the real drafts that business makes on the nervous system. It is the employers of labor generally, or the professional men, to whose duties and responsibilities there is no definite limit, but who have to do all that their place in the social system gives them to do, who suffer from want of relaxation. In England there is a small body of these men living in London who can afford to keep a horse and ride in Rotten Row in the afternoon for an hour or two, and get their liver shaken up in the midst of a scene of great social animation and variety; but it would be ludicrous to infer anything from what one sees in Rotten Row on a fine day as to the opportunities of exercise and entertainment possessed by the great bulk of middle-class Englishmen. The vast majority of them, after their first youth is past, stick to their desks through long days, with the object of increasing their incomes or accumulating a fortune.

They are better off than the Americans in two ways only. One is that they have within their reach the great American remedy of "going to Europe" for about a quarter of the cost in time and money. A tired Englishman can, in other words, take "Europe" in as small doses as he pleases. He can take a week of it, if that is all he can afford, by running across the Channel into France, or Switzerland, or Germany, or Norway, and get an enormous amount of change and the refreshment that comes from change in that time. The tired American, on the other hand, if he needs Europe, must take at least two months of it, and spend three weeks in reaching it and coming back from it. The ocean, it is true, is a rest and refreshment to some, but not to many. To most people it brings simple vacuity, and after a day or two vacuity itself becomes tiresome. For a weary business man there is nothing like Europe, and Europe means change of scene, and surroundings that will interest and excite. It is in the fact that Europe is not to be had on this continent that most of the American difficulty about vacation lies. Go West, North, or South, and we see the same manners, customs, language, costume, laws, buildings, conveyances, traditions, and cuisine; and when the weary business man has seen the principal scenery of the continent once, therefore, there is no more Europe for him on this side of the ocean. It is true that if he is a sportsman he may get more or less Europe by going off fishing or hunting, but the number of men who in middle life love the rod or gun sufficiently to find Europe in it is very small. There is thus nothing left in summer for a man who wishes to take vacation but a few weeks, which are apt to be monotonous, with his family in some seaside or mountain farmhouse or hotel, where the morning papers come regularly, and perhaps indeed the "ticker" ticks in the hall, and the nearest approach to relaxation is business talks with other business men on the piazza. It is not surprising that vacation spent in this way does not greatly tempt the toilers of the great cities who have not yet reached the age that finds Europe in sitting still in an easy-chair.

The other advantage the Englishman, and, in fact, the European generally, has over the American, is that he gets a good deal of Europe in his meat and drink. In other words, there is a touch of Europe in his dinner in the evening, to which he looks forward during the day, and hurries home with pleased anticipation. The active and busy Americans, on the other hand, who care for what are called "the pleasures of the table" are very few. The number of those who really do not care what they eat or drink, and often do not know, and who take food simply to get rid of the sensation of hunger and exhaustion is very large. Any sociologist who got at the reason why eating has so little social importance in America, and supplies so little Europe to Americans, would, we suspect, come very near explaining why Americans appear to suffer more from overwork than Europeans, if such be the case.

It is constantly forgotten, in discussing these subjects, that, to the majority of men trained to industry in any country, rest and refreshment are not to be had by simple idleness. In fact, to most men of this kind idleness is but an aggravation of their troubles. They do not know how to lounge, or "loaf," and detest objectless walks, or perhaps hate walking altogether. They have probably lost the habit of reading, which always involves the power of continuous attention, have for years never practised conversation, are not sportsmen, and, in short, do not know how to amuse themselves. To ask these men to cut loose from their business without offering them Europe, is simply asking them to plunge into the horrors of ennui. Probably the best advice that can be given to the mass of business men is not to work less, but the very old one, to cultivate from the beginning of business life some outdoor taste, to the gratification of which one may betake himself with gusto when the holiday season comes round. But this has to be begun in youth and kept up with almost as much perseverance and assiduity as the pursuit of fortune; and it is needless to say, therefore, that the number of those who do it, or probably can ever be got to do it, is small. But there has unquestionably been a great change in this regard in the habits of our young men within twenty years, and the result will very likely be seen in the middle-aged and old of the coming generation. There will be more of them seen seeking Europe in the saddle, or the bicycle, or the sailboat, or in the enjoyment of a good dinner, and possibly in conversation about other things than stocks and bonds.

THE REASSEMBLING OF PARLIAMENT.

London, October 28, 1882.

As your readers are aware, the practice—almost invariable of late years—according to which Parliament takes a vacation from August till February, has this year been broken through by its adjournment for a period of two months only. It is now meeting for the sole and special purpose of dealing with those rules of procedure which the Government brought forward in February last, but whose consideration was interrupted by the disorders of Ireland, so that, although several days were spent in discussing them, no substantial progress had been made when the House rose. Mr. Gladstone declared in the most emphatic language that there was no use in bringing in any new projects of legislation until the machinery of legislation had been thoroughly reformed and reorganized; and as it had proved impossible to accomplish this reform in the usual session, and its postponement till next year would have seriously trenched upon the working time of that session, no course remained except to fix a special time for taking it up, and to let that time come out of the autumnal recess. The usual course would have been to have a special session for the purpose. But this would have involved a Queen's speech, an address to the throne, and a debate on that address, whereby large opportunities would have been given to the Opposition and the Parnellite members of getting up a general debate, possibly very protracted, upon the whole policy of the Government. Much time might thus have been consumed; and to save that time it was arranged that Parliament should not be prorogued, but should merely adjourn in August, so that on its reassembling in October it should apply itself forthwith to the consideration of those rules of procedure. The wish of the Government was to prevent any topic whatever except procedure from being debated. This, however, they cannot hope to secure. Parliament being once assembled, it is impossible to prevent other subjects of a pressing nature from being mooted.

To refuse the time for their discussion would look like timidity, or might be thought to be a denial of the rights of the legislature to know how the executive proposes to act in important current matters. It is therefore probable that before the prorogation takes place there will be a debate on Egyptian affairs, and also one, if not on the condition of Ireland generally, at least upon the action of Judge Lawson in committing to prison for contempt of court Mr. Gray, High Sheriff of Dublin, and also editor and proprietor of the *Freeman's Journal;* and no one can yet say that other debates on other points may not be forced upon the House, however desirous the Ministry may be to avoid them.

The last few weeks of vacation were used by the Tory leaders in a provincial campaign against the Government, some short accounts of which you have probably read. The time did not seem an auspicious one for making such attacks. The Government had, after several severe blows received in the course of the summer, recovered its prestige in August and September, firstly, by its victory over the House of Lords in the matter of the Irish Arrears Bill, and secondly by the successful close of the expedition to Egypt. The charge which the Tory party has most frequently and most earnestly, and, it must also be said, most honestly, brought against Liberal Ministries in general, and Mr. Gladstone's in particular, is that they are indifferent both to the national honor of England and to her material interests in foreign countries. It was supposed, and as I have just said, honestly believed, that the doctrines of non-intervention and peace-at-any-price had been accepted by the bulk of the Liberal party, and would guide their policy. Many were the appeals made to national pride on this score, many the contrasts drawn between the confident and high-toned energy of Lord Beaconsfield and the timorousness or short-sightedness of his successors. It was also, of course, predicted that even if a Liberal Government did engage in war, it would conduct that war in such a half-hearted, stingy, and incompetent fashion that no complete success, no vindication of the ancient prowess of the British arms, could be looked for. When, therefore, Mr. Gladstone not only despatched an expedition to Egypt, but despatched it with great promptitude and vigor, there was some surprise. When that expedition obtained a victory more speedy and more complete than either England or Europe had expected, the Conservative orators felt that the bread was taken out of their mouths. As patriots they were bound to rejoice, as party men they must have had feelings of a less jubilant kind. The usual line of attack, the line they really liked, had now to be abandoned, and some new one discovered.

It was under these difficulties that Sir Stafford Northcote and his lieutenants undertook their provincial stumping tour. People asked whether it would not have been wiser to postpone it till the impression of the victories in Egypt had passed away. Perhaps it might, if the object of the Tory leader had really been to arraign the policy of the Government and damage them in the eyes of the country, for every week and month that passes obliterates the effect of success, and brings with it occasions for mistakes or misfortunes by which an administration is damaged. But it may be conjectured that his purpose rather was to encourage and stimulate his own followers to perfect their organization by coming personally among them, and showing them that their efforts to strengthen the party, even in Scotland, where it is weakest, were appreciated. The Conservatives are under the impression that the Liberal victory of 1880 was chiefly due to the efficient organization of the Liberal party, and believe that, with a similar system of local associations working heartily together, they might recover their lost position. Hence, although they are always denouncing what it is the fashion to call the Birmingham caucus, they are endeavoring to create something which bears no very distant resemblance to that system. There is no better means for this purpose than for the chiefs of the party to go through the country, make their faces and voices familiar to the local politicians, and supply these with arguments against the Ministry, which, whatever effect they may have upon dispassionate minds, will do well enough for meetings where everybody is already of one mind. This is what not only Sir Stafford, but also some of the most effective speakers of his party, such as Mr. Gibson, Sir Hardinge Giffard (the ex-Solicitor-General), Mr. E. Clarke, and Mr. Lowther (ex-Secretary for Ireland) have been doing, and so far their labors have not been thrown away. On the country at large no effect has been produced. When Mr. Gladstone's Cabinet is accused of having copied that very aggressive policy of Lord Beaconsfield which its members had denounced while in opposition, or again when it is alleged that if they had shown more firmness in the initial stages of the Egyptian difficulty, they might have avoided the necessity of war at all, people feel that these things are said only because an Opposition must say something; and they pity Sir Stafford for not having a better case to fight. Every one knows that neither Mr. Gladstone nor Lord Granville ever accepted or enounced the doctrine of non-intervention; every one feels that it is idle to speculate now on what might have happened if the Cabinet had been endowed with the gift of prophecy. Some mistakes they certainly did make—but the public is, on the whole, disposed to think that, considering the numerous rocks and shoals through which the ship had to be steered, the jealousies of France and Russia and Italy, the faithlessness of Turkey, the dangers which might have followed an explosion of Mohammedan fanaticism in the Levant, the pilots have done quite as well as the passengers had a right to expect.

At the same time it would be easy to overestimate the amount of strength which the Government have gained by the success of their Eastern policy. A considerable section of the Liberal party, and in particular the working-class Radicals and the Nonconformists, have never liked this Egyptian expedition. They acquiesced in it, or at least they did not openly oppose it, because they have an almost boundless confidence in Mr. Gladsone, and not in his ability merely, but in his moral feelings and his love of peace. They supposed it must be necessary, or else he would not have sanctioned it. But they feel no exultation in the success of our arms, no such pleasure in mere military glory as would display itself in Germany or France. This sentiment does no doubt exist in the upper or richer class, and in that part of the middle class which apes the class above it. But then those sections of the nation are already Tory in their politics, and far too decidedly Tory to be won over to Liberalism by the transient success, or what they would call the sudden conversion, of a Liberal Ministry. They are, of course, for the moment less hostile to Mr. Gladstone than they would be if he had refused to interfere in Egypt, or if his expedition had failed. But their position is not permanently affected; and at the next general election they will vote for Conservative candidates just as much as they would have done five months ago, when there were loud complaints of his inactivity generally, and neglect of the Suez Canal in particular.

It must further be remembered that we have by no means yet emerged from our Egyptian difficulties. What is, perhaps, the most troublesome part of the whole task remains: the resettlement of the country and the determination of our future relations to it. This is a subject too large for me to discuss at the end of a letter, and the materials for predicting the action of the Government are very scanty. They have abstained from giving any indication of their intentions, and may probably not have yet formed anything that can be called a regular scheme, such as could be submitted to the other European Powers. Possibly it will be weeks or months before they do so. From public opinion, which seems paralyzed by its ignorance and its sense of the objections to every hitherto suggested course, they have little light to expect. Any arrangement is sure to be severely criticised, and is almost sure to produce future embarrassments. Meantime the Tory party in the House of Commons is as active as ever, full of spirit and combat, fully disposed to prolong the struggle over the Rules of Procedure. It is convinced that Mr. Gladstone's object is, under the pretence of dealing with Parnellite obstruction, to suppress Conservative opposition by obtaining a power of closing debates; and it is prepared to resist such a closing power with the utmost vehemence. So far as can be seen at present, the debates on the new rules, which, if approached without party feeling, could be concluded in a fortnight, are likely to extend over six or seven weeks. It is, however, always possible that weariness may suddenly supervene, for this special session is an unwelcome interruption to the amusements of autumn and early winter, a time which the English rich spend either at their country houses, shooting or hunting, or in the sunshine of the southern coasts of France. It may be found, after a few weeks, difficult to keep members together in London; and in that case the inordinately prolonged discussion of the first rule (that which creates the closing power, and therefore excites most opposition) will be followed, as commonly happens, by a hasty and inadequate consideration of all the rest. Y.

ENGLISH POPULAR OPINION ABOUT EGYPT.

LONDON, October 28, 1882.

MY aim in this letter is simply to describe a peculiar phase of public opinion. To prevent misconception, it may be well to add that my remarks have reference almost exclusively to the opinions about Egypt entertained by Liberals. A fair picture of Conservative feeling ought to be drawn by a Conservative.

There is, as far as my observation goes, much less of irrational exultation over our success in Egypt than might be supposed by a careless reader of the daily newspapers. Of course people are pleased that our troops should not have done themselves discredit. People are also pleased, and with more reason, to observe that the present military arrangements have worked well, and that officers and civilians seem at last to have learned the lesson that success in warfare is, like every other kind of success, a matter of prudence, of preparation, and, in short, of applying the right means to the attainment of the desired ends. To any one who, like myself, can remember the expedition to the Crimea, the contrast between the carelessness which marked our attack on the Russian Empire and the careful forethought devoted to our attack upon an Egyptian insurgent is instructive, and, from a patriotic point of view, gratifying. But every one knows and admits that the defeat of fellahs, many of whom were not even trained as soldiers, is not a matter on which Englishmen ought to plume themselves. Moreover, Liberal

electors, and especially the Dissenters, whose energy contributed more than anything else to Mr. Gladstone's success in 1880, are puzzled and, it may be suspected, a little troubled, by the warlike success which has been achieved by the Liberal party. There is, after all, a spice, though only a spice, of truth in the remark of a Conservative paper, that the last character in which Mr. Gladstone could ever have been expected to appear is the character of the conquering hero. It is not for a moment to be supposed that either Mr. Gladstone or the great majority of his followers think the Egyptian war wrong. To argue that anything in the Midlothian speeches pledged the Premier never under any circumstances to lead the nation into war, is one of those absurdities which are naturally propounded by the hack-scribes and hack-speakers of the Conservative Opposition, but which, after all, do not influence the opinions of any man of common sense. Still, it is perfectly true that the intention, both of Mr. Gladstone and of the voters who put him in power, was to act peaceably toward all men. Liberal electors do not, I conceive, for the most part, think the Egyptian war wrong. They suppose that the bombardment of Alexandria and the taking of Tel-el-Kebir were acts of necessity. But they are, for all this, heartily sorry that the necessity for warfare which cannot fairly be called defensive should have arisen while the Liberal Ministry were in power.

There is, moreover, reason to suppose that among the workingmen, at any rate, grave doubts exist whether wars such as that which has just been brought to a close are not opposed to the interest of the laboring classes. Artisans in modern times find it easy to understand that war increases taxation, and otherwise diverts to unprofitable purposes resources which might else be employed for the benefit of the people. They do not find it easy to enter into the necessity for the strict observance of all international obligations, nor do they perhaps fully understand the almost inevitable connection between the maintenance of a wide Empire and the readiness to meet in arms every foe, small or great, who really menaces imperial interests. This state of feeling may be transitory. Dogmatists who now assert that democracies must necessarily be peaceful, may turn out in the long run to have gone quite as far from the truth as the intelligent thinkers who have hitherto constantly argued that democracies are certain to be fond of war. My suspicion is, that the pacific sentiments of 1882 are to a great extent a temporary reaction from the Jingoism and sham imperialism which was fostered by Lord Beaconsfield from 1874 to 1880. However this may be, the fact is pretty certain that Liberals—that is, the majority of the electors—are for the moment little elated by the turn of affairs in Egypt. On the whole, their attitude is one of confidence in Mr. Gladstone. As far as they have any distinct wishes about the course of policy to be pursued by England, their bonafide desire is that justice should be done the Egyptians, and also that the interests of England should not be neglected. At this point, however, there comes into notice that feature in the present phase of opinion which is, to my mind, far more noteworthy than satisfactory. The electors wish to act justly and humanely, but they entertain with regard to the demands of justice and humanity two opinions which, if logically worked out, lead to inconsistent results.

The first of these opinions is that Egypt ought to be left to the Egyptians, and that the inhabitants of the country have a right to govern themselves in their own way. Persons who take this view naturally maintain that what is right is also in the long run expedient; that England has scarcely any real interest in limiting Egyptian independence, and that to leave things alone is the wisest of all rules for the conduct of practical politics. From the utterances of the persons whom one may term official Radicals, it is impossible not to infer that this particular application of the general doctrine of *laissez-faire* approves itself to a good number of Radical leaders. Whoever reads Mr. Courteney's speeches, or studies with care the *Pall Mall Gazette* (which is by far the ablest literary organ of Liberalism), can hardly doubt that a great number of vigorous Radicals believe that the only satisfactory solution of the difficulties presented by any attempt to deal with the affairs of Egypt is, to cease to deal with them at all, to bring the whole English army back as soon as possible to England, and, as Mr. Courteney expresses it, with more vigor than grace or humanity, to "let the Egyptians 'stew in their own juice.'" I do not profess to feel anything like complete sympathy with the general line of thought and feeling which lies at the bottom of the view, that our only present duty is to leave Egypt alone, but no one who has noted the current and set of recent opinion and sentiment can doubt that the policy, or negation of policy, advocated by Mr. Courteney is likely to commend itself, and does commend itself, to large bodies of Radical electors. One great and real recommendation of the course proposed is, that it does for the moment free England from all the difficulties inherent in any attempt to provide for the government of Egypt. A far stronger and more creditable recommendation is, that to leave Egypt alone seems to many Radicals an obvious and legitimate application of the principle that every nation ought to be allowed to choose its own form of government. It is impossible that the mass of the electors should realize the very narrow limits within which such doctrines as the so-called doctrine of nationality can be treated as absolutely true. The idea that a nation, in the sense in which that term is known in Europe, may actually not exist in an Eastern country like Egypt; the conviction that the question is not whether Egypt shall or shall not be let alone, but rather which are the European Powers who shall be allowed to control her Government; the notion that the fellahs are almost certain to be the helpless victims of some tyrant, and that, so far as their interests are concerned, the main question is, which is the form of government under which they will suffer least oppression—are all conceptions which it is hard to make intelligible to large numbers of English men and English women.

Meanwhile (and this is one of the most remarkable phenomena of the day) the suspicion, well or ill-founded—and I am afraid it has a great deal of foundation—that even the best of European statesmen and administrators injure rather than benefit Eastern races by forcing upon them the doubtful blessings of a foreign form of civilization, is making its way throughout the country. It already exerts a perceptible influence on public opinion, and is destined to produce very serious results. Liberal electors, it must be added, are very little affected by the charges against the foreign policy of the Government which, rightly or wrongly, excite such rancorous indignation in the minds of Conservative literary men. Mr. Gladstone's apology, if apology it was, to the Austrian Ambassador, the withdrawal from Afghanistan, the convention with the Boers, made Lord Cairns (if my memory does not deceive me) rhetorically "blush" for the condition of England. It was but the other day that I read a diatribe in a Conservative paper written especially for educated persons, in which the patriotic indignation of the writer against Mr. Gladstone ultimately turned to savage and contemptuous wrath against the country which tolerated or admired the Prime Minister. But for all these things which harass Tory spirits, the country, as far as it is represented by Liberal electors, cares little. Not a meeting was held to denounce the treaty with the Boers. It is, therefore, to my mind, more than probable that thousands on whose support Mr. Gladstone relies, are at least half convinced that the wisest and best thing which the Ministry could do would be to clear out of Egypt, and leave the protection and administration of the country to the Egyptian Government.

I purposely use the expression "half convinced," because it is pretty clear to any careful observer that, side by side with the opinion which I have tried to describe, lies in the mind, often of one and the same man, another opinion of a very different character. The Egyptian Government having been restored to power by English arms, it is the duty, think many people, no less than the right of England, to insist that Egypt shall be governed in accordance with European and English notions of what is fair and just. What gives force and weight to this view is that it rests on two undoubted facts: If the Khedive is on his throne, if he is not lodged in the dungeon now occupied by Arabi, if his life is safe, he owes these blessings to Sir Garnet Wolseley and Sir Garnet Wolseley's soldiers. This is a fact which no one can dispute. Another fact which, though some persons may dispute it, seems to me and will seem to your readers equally certain, is, that European notions of fairness and humanity are far in advance of the moral conceptions prevalent in the East. Civilization is, after all, not a mere name. The Khedive's servants probably do not treat Arabi a bit worse than Arabi, if he had been victorious at Tel-el-Kebir, would have treated the Khedive. But it is impossible to read the descriptions given by Englishmen of the insults offered to Arabi and his family without feeling that Englishmen may well hesitate at even indirectly sanctioning conduct which would have disgraced the minions of King Bomba. This is the sentiment which is becoming more or less prevalent among English electors. The Egyptian Government ought to be left free, they think, but ought not to be free to do injustice. They hardly realize that freedom to do right absolutely involves liberty to do wrong. Hence a whole mass of confused feeling, likely to lead, as far as it influences the policy of the country, to a whole mass of confused action in regard to Arabi. We sent troops to Egypt to put down Arabi's revolt. No sooner is Arabi defeated than we begin to think that a rebel may be a patriot, that a patriot is a hero, and that it is disgraceful to punish the action of a lover of his country. Hence, after routing Arabi's forces, we have assumed the character of Arabi's defenders. We have insisted upon the Egyptian Government treating a soldier guilty of armed revolt as certainly no Eastern nation, and probably no European nation, would treat a man in the like position. If Arabi had been a Sepoy officer, and had done in India what he has done in Egypt, his trial, if he had got one, would have been measured by hours, not by days, and he long ago would have found rest in death. The plain truth is that, as between Arabi and the Egyptian Government, there is not a single valid argument against his immediate execution. On one ground, and one only, the English Government could legitimately have saved his life, and in my judgment would have done well to do so. The English general might have refused to surrender to the Khedive any prisoners of war. An enemy

who has once given up his sword to an English officer, may be considered to have escaped in a sense to England. It would have been far better to say to the Khedive, "England cannot allow the punishment of men who, though rebels, are English prisoners of war," than to give up our prisoners of war to the Khedive, who could never have taken them, and then interpose so as to prevent their being treated as the Egyptian Government would naturally treat rebels. There is much, as regards the interest and honor of England, in favor of saving the life of Arabi. But even now the best and most honorable way of protecting him would be to ask or demand his life from the Khedive on the ground that he was our prisoner-of-war. As it is, the indirect and almost absurd attempts to protect the Egyptian rebel by forcing upon the Egyptian courts the appearance—it can be nothing more than the appearance—of a trial according to English law, is one of those shams very likely not to benefit Arabi, and certain to bring discredit on England.

The point, however, for your readers to notice is that all these irregular and illogical attempts to intervene in favor of a man whom we ourselves have allowed to be put on trial as a criminal, and who undoubtedly has committed offences, both as the head of a military revolt and as the leader of a rebellion, which in any European country would cause him to be shot, hung, or guillotined, are in fact concessions to the opinion that England is responsible for the government of Egypt. This opinion may be right or it may be wrong, but, whatever may be said in its favor, it is at bottom absolutely inconsistent with the notion that the right course for England is to leave Egypt alone. If Egypt is to govern itself, Egypt cannot be governed by us. If the Egyptians are not to be allowed to fall below the standard of good administration which approves itself to English ideas of justice, it is quite certain that England must, sooner or later, undertake the government of the Nile Valley. The English electorate—perhaps it may be said the English people at the present moment—wish that Egypt should be free, and also that the Egyptian Government should carry out our ideas of policy, of justice, and of humanity. The wish is a natural one. Two things only can be said against it: it rests upon the belief in two opinions which are, at bottom, inconsistent; its realization is opposed to the nature of things. Meanwhile, observers may notice the strange effects produced in politics by the temporary prevalence of two ideas as to Egyptian policy which cannot both be consistently carried out, and one of which must ultimately prevail over the other.

A. V. Dicey.

THE PRUSSIAN ELECTIONS.

Berlin, October 30, 1882.

I am sorry to confess that I was mistaken in my estimate, in my last letter, of the results of the then approaching elections for the Prussian Landtag. They took place on the 26th instant, and have surprised all parties. The Conservatives had expected a great loss of votes, and consequently a decline of their weight in the Councils of the State; the Ultramontanes, although they can rely on their always obedient followers, apprehended a Liberal preponderance which would injure the Catholic balance of power; and the Liberals unanimously counted upon a victory for themselves. If it had only been their aim to secure for themselves the same number of seats which they occupied in the last Landtag, they could be satisfied with the result. But the Liberal agitators sought to break down the influence of the allied Conservatives and Ultramontanes, and to become the leading factor in the development of our home policy. In this respect they have sadly failed. The new Landtag, in its composition and party relations, will on the whole be just like the last one, and will have neither a Liberal nor a Conservative majority.

As in all indirect elections, the participation was small: not fifty per cent. of the electors appeared at the polls. Besides, the Government did all in its power to raise the Conservative breeze, which, it pretended, was sweeping all over the country. Mr. von Puttkamer, the Secretary of the Interior, gerrymandered with great success, and intimidated his subordinates or even ordered them to appear at the boxes and vote for a Conservative. Suspected officers were threatened in the newspapers and by anonymous letters, and had to defend themselves against the charge of having voted for an opposition candidate. Thus Mr. Greiff, director (chief assistant) of the Minister of Public Instruction, had to publish a card in which he denied such an imputation. The Göttingen Professor Dove answered with more independence and pluck. Having been arraigned by the Government press as a fanatical Progressist, he retorted in the following sharp and bitter reply: "I dispute the solidarity of the really Conservative interests with Ultramontanism; I consider the Conservative-Clerical compromises a great danger to the rights of the Crown and to Protestantism; and I find the Court preacher Stoecker's so-called Christian Socialism not less unevangelical than his clerico-political doctrines." In some places—as, for instance, at Erfurt—the elections assumed quite a new feature. The numerous railroad employees who, when the roads were private property, had voted the Liberal ticket, now, the roads having meantime become State property, under compulsion of their superiors voted for the Conservative candidate. An eastern farmer, on being asked why this time he had voted for a Conservative, while a year ago, in the elections for the Reichstag, he had declared himself in favor of a Liberal candidate, answered that at present he wanted to have all the taxes done away with, and that a year ago he had only intended by his vote that no new ones should be imposed.

The great apathy of the people proves that the lamentable result of the election was not effected by the firm political resolve of the country, but by the entire lack of it. The voters cared as little for the Government's adherents as for its opponents. Yet, despite the small vote and its disfavor to the Liberals, I am of opinion that the latter have gained in numerical, although not in parliamentary strength. If they have lost some seats in the east, they have won as many new ones in Holstein and Hanover. In round numbers, the whole body of Liberals musters 140 votes, the Conservatives of all shades 185, and the Centre, with the Guelphs, 100. Of the whole number of 433 members, 217 are required for a majority, which the Government, consequently, does not command, the Conservatives being short of it by thirty-two votes. It will therefore have to fall back on the good offices of the Centre. As to professional calling, the new Landtag numbers thirty-eight Landräthe (with the exception of two, the unconditional followers of the Government), six Regierungs-Praesidenten (unscrupulous partisans of the Minister of the Interior, like the French prefects), five active Ministers of State, and six Government Councillors, making in all fifty-three strong supporters of any royal demand or measure. Besides, there are twenty Catholic priests and two Protestant clergymen, among the latter the notorious Stoecker. Why all the above Government officials have been elected is a mystery to me. They are paid for maintaining the Government's policy, have no will of their own, and therefore cannot serve the people's interest in case of a conflict.

Strong efforts will be made to do away with Liberal laws and institutions, the Government being bound to realize its political-economical designs as far as they belong to the competency of the Landtag; but a satisfactory result is very doubtful, if not impossible, and the legislative business will for the next three years be crippled, if not brought to a standstill, for the Centre will on one side ask too high a price for its coöperation, and on the other in its own interest cannot sacrifice the last bulwarks of freedom. Eager as the Conservatives may be to abolish all the laws passed between 1807 and 1878, they can only attain their end by compromising with the Centre, and the anxiety of being cheated out of their share of the booty is so great as to make harmonious action impossible. The Liberals again, instead of being able to form a majority and to embody their tendencies in some new organic laws, continue, as they have been, a mere minority, which can only defend what it created under more favorable auspices. They have themselves to blame for their want of success. Instead of concentrating all their endeavors in fighting the common enemy, some of their leaders fell out and quarrelled among themselves. In some parts of the country the so-called Progressists tried to conquer seats from the National Liberals, and were partly successful in this nefarious and suicidal policy. Years of sad experience must pass before German politicians will learn to do away with side issues, and to subordinate their petty jealousies and pet measures to a great common cause. In the above-named provinces of Holstein and Hanover the Liberals carried the great majority of the elections, for the sole reason that they followed the advice of Mr. Haenel, of whom I wrote in my last letter, and offered a united front to the Conservatives, while in Brandenburg and Saxony they were badly beaten, because they were split by the intrigues of some wily demagogues. In the large cities, with the sole exception of Cologne, the Liberals have maintained the ground which they have always possessed. Here all their mistakes and shortcomings could not injure their cause, but in the country, beginning with the suburbs of Berlin, they have suffered partial defeats.

While no party reached its aims, the only man who came victorious out of the last struggle is the Secretary of the Interior, Mr. von Puttkamer. Whether he will be able to follow up his victory remains to be seen. In my opinion all legislative business in Prussia that is not based upon the liberal ideas and forces of the middle classes is doomed to sterility. In no respect is the effect of the last election to be more regretted than in its relations to the contest with Rome, and the treatment of the so-called *Kulturkampf*. Our ultra-Conservatives have been and still are eagerly working to enter into a most intimate alliance with the Centre; the so-called Free Conservatives still pretend to be shy and fastidious, and parade their principles; but whenever the proper moment comes the Government will order them to follow suit, and, being (in their majority) a set of dependent officeholders, they must obey Bismarck's dictates. The only chance of salvation lies in the Ultramontanes themselves. They of late have become more overbearing than ever, for they know very well that they can impose terms upon the Government. I hope that their demands will prove so extravagant that even the Gerlachs, Stoeckers, Kleists, and the small fry will be forced to let matters stand as they

are now. In the matter of "simultaneous" schools—*i. e.*, primary schools, in which the children, irrespective of their creed, are instructed in Biblical history and religious elementary knowledge—the Government has already yielded, but the Senate does not thank it for this important concession, and accepts it only as its due. Mr. Schloezer in Rome, able diplomat as he may be, cannot affect anything, because he has nothing or not enough to offer to insatiable Rome. On the eve of leaving Berlin, in a conversation with a friend, he expressed his longing for Washington, where he found himself more comfortable and less troubled.

The Landtag will be convened by the middle of November. At the end of the year you will hear more from me on the Roman campaign.

Correspondence.

JEFFERSON'S PORTRAIT OF COLUMBUS.

To the Editor of The Nation:

Sir: Jefferson, when American Minister in Paris about a hundred years ago, obtained the best copy possible of what he considered an original portrait of Columbus, in the Uffizi gallery in Florence. He deemed it, as he wrote, "of public concern that our country should not be without it." In 1814 he spoke of it as one of his chief jewels at Monticello. In his drawing-room there, it hung the second among four portraits on the left as one entered. What has become of this pictorial memorial? is a very natural question, and the more after one has vainly sought for any further notice of it either in Jefferson's complete works or in the volume on his 'Domestic Life.' Having applied to Lossing and Parton without gaining any inkling of its fate, I betook myself to Miss Randolph, the granddaughter of Jefferson, who has written about him so much and so well. Her answer to my inquiries was that the Columbus, having been reserved at the sale of Mr. Jefferson's effects, was sent to Boston, where it was supposed there would be a better chance of selling it to advantage. She added:

"It was intrusted to Mr. Coolidge, who married my aunt. They are both now dead, and I wrote to their daughter, telling her of your desire to know about the Columbus. She writes that she knows nothing of it, and would not know that such a picture had been at Monticello but for the fact that it is mentioned in my book. I have often wished to trace this picture up, but suppose there is now no hope of doing so. My uncle has been dead only three years, and a single word from him would have told all."

Thus my research seemed fruitless. Yet it was my fortune to discover the lost likeness—if not America, at least its discoverer. The word "Boston" put me on the track. The curious portrait, I knew, must gravitate to that old curiosity shop, the Massachusetts Historical Society. I found it noticed in their Proceedings (vol. ii., pp. 23, 25) as presented by Israel Thorndike in 1835, and described by him as "a copy from an original in the gallery of Medicis at Florence for Thomas Jefferson." It was gratifying to discover that Jefferson's favorite hangs just where he would have it—in a hall of that Historical Society which has done most to elucidate the annals of the country over which Jefferson presided, and of the continent which Columbus revealed.

No one will object to my claim to have *discovered* the Jeffersonian Columbus who considers that it was unknown not only to such a specialist as Parton, but even to the writer of the article on portraits of Columbus in the catalogue of books bequeathed to the Boston Public Library by George Ticknor. If that writer had known of it, he could not have passed it in silence; for, besides a dozen portraits, he gives accounts of many engravings, and even woodcuts and photographs. He was, however, ignorant not only of Jefferson's copy, but of its original in Florence, which, though itself a copy, is older than any one whatever in all his long list can be proved to be. Whence it came is too long a story for the heel of a letter, but worth telling.

J. D. Butler.

Madison, Wis., Nov. 2, 1882.

EXTRA-HAZARDOUS FIREMEN'S SERVICE IN WISCONSIN.

To the Editor of The Nation:

Sir: In the November 2 issue of the *Nation*, in commenting upon the decision of the Supreme Court of Wisconsin in Reif *v.* Page, you make use of the following language:

"The Supreme Court of Wisconsin has decided that it is not in all cases the duty of firemen to rescue people from burning buildings. Some time ago, when the Beckwith House at Oshkosh was in flames, one Paige offered $5,000 to any one who would save his wife. Charles Reif, a fireman on duty at the time, closed with Mr. Paige, saved Mrs. Paige, and claimed the reward. Mr. Paige refused to pay, and Reif brought a suit against him, which he lost. The Supreme Court, however, has now ordered a new trial on the ground that the rescue involved 'imminent peril' to the plaintiff's life, and that it was not his duty to expose himself to such peril."

This statement is scarcely correct. Every decision must be considered with reference to the facts upon which it is based. The act of the plaintiff was almost foolhardy. Two attempts to rescue Mrs. Paige had failed, and under the circumstances any possibility of rescuing anything but the body of Mrs. Paige seemed hopeless, and, as a matter of fact, only her body was recovered. Under the circumstances *it was not contended* by the defendant that it was the duty of the plaintiff to attempt the rescue, but it was simply insisted that the act of the plaintiff "was in the nature of extra or extra-hazardous services in the line or scope of his duty," and being so, the law would not allow him to make a contract for a reward. Issue was not joined upon the question whether or not the peril was so great as to release Reif from any further duty in the matter, but it was conceded that it was; and the Supreme Court simply held that, it not being his duty to attempt the rescue, the act when performed could not be held to be a service within the "line or scope" of plaintiff's duty, so as to preclude his entering into a contract for its performance.

I think a careful reading of the opinion in connection with the facts will show that the facts themselves, the provisions of the charter of Oshkosh, and the *admissions* of counsel for the defence, took the question of plaintiff's *duty as fireman* out of the case, and left only the question whether he could enter into a contract for a reward for services not his duty to perform, and that this was all the Supreme Court attempted to decide. Anything more would have been *obiter*.—Very respectfully,

Bradley G. Schley.

Milwaukee, Wis., Nov. 8, 1882.

To the Editor of The Nation:

Sir: Allow me to correct an error in your issue of November 2 which causes you to misrepresent an upright and honorable man. In your criticism of the decision of the Supreme Court of Wisconsin in Reif *v.* Paige, you say: "One Paige offered $5,000 to any one who would save his wife. Charles Reif . . . closed with Mr. Paige, saved Mrs. Paige, and claimed the reward. Mr. Paige refused to pay, and Reif brought suit. . . ." The truth is, the offer of Mr. Paige existed only in the allegations of the plaintiff. At the beginning of the fire Mr. Paige was out of town, and knew nothing of the peril of his wife till after the firemen had begun their attempt to save her. If Mr. Paige had made the offer attributed to him, the case of Reif *v.* Paige would never have reached a court docket, and the Supreme Court of Wisconsin would have escaped rendering a very discreditable decision, and have saved itself the well-merited criticism of the *Nation*.—Very respectfully,

James A. Haight.

Bismarck, D. T., Nov. 8, 1882.

THE THEATRE OF EPIDAUROS.

To the Editor of The Nation:

Sir: In the notice of the excavations of the Theatre of Epidauros by Mr. Ludlow, based on the reports of the ephor charged with the work, I see repeated the absurd story of the discovery of the Hygieia of Polykleitos. I visited Epidauros shortly after the uncovering of the theatre, and saw the so-called Hygieia, which may be an Hygieia or any other female goddess, but is not by Polykleitos or any artist of his epoch, but a bad piece of late archaicism—as wretched a piece of Roman work as anybody ever saw in Greece. Nobody but Kavvadias held the opinion of its being the work of Polykleitos, and a fellow-ephor who accompanied me over the ground laughed very heartily over what he called one of Kavvadias's discoveries. The statue is so bad that though I went chiefly to photograph it, I declined to waste a plate on it. Nor was there any very good fragment among those discovered up to that time—all were late Roman work. I understood, just before leaving Athens, that there had recently been found between the theatre and tholus some very good fragments; but there is no one among the ephors whose judgment on a matter of purely artistic excellence I would give much for, though I hope such blunders as this attribution of the so-called Hygieia to the time of Polykleitos would be found to be rare with them. There was, *à priori*, no reason to hope for the discovery of any statues in the theatre; but in that part of the sanctuary between the theatre and tholus, and in the tholus, there was hope that some of the statues and inscriptions described by Pausanias might be found. There was visible above ground no trace of the limits of the peribolus, but the position of the tholus is clearly shown by a portion of the wall.

The most remarkable fact brought out, not into new but clearer light, was the indifference of the Greeks as to the solidity of the structures they were supposed to regard with most pride. The auditorium is simply scooped out of a hillside of soil, not rock, except in one or two points; and the stone-work of the passages and seats is laid directly on the earth, without any preparation or foundation. The stones were everywhere upheaved by the roots and stems of trees which had gone down or come up between them. There was not even loose rubble to lay them on. This indifference of the most artistic builders to the permanence of their work is repeated in St. Mark's at Venice, where the piers were laid on piles six feet long, covered with a yard of loose rubble.

The remains of the scena and the passage-walls leading to the orchestra show, by the thoroughly calcined marble, that the theatre was destroyed by fire.

W. J. S.

Florence, Oct. 25, 1882.

POLITICAL "NEXTS."

To the Editor of The Nation:

Sir: It was not the Republican party which was defeated yesterday. The Republican rank and file, the "political nobodies" who constitute the bone and sinew of the party, simply whipped out of the camp the drum-majors who were not leaders and who would not be led. They whipped them well that they might know that they were whipped and were no more wanted. The remedy is bitter—and not least that, in the overwhelming, such things have happened as that Massachusetts men must, for the first time, blush to own their birthright. The old Bay State permits the most arrant demagogue within her borders to present himself as at this time her typical and representative citizen—her choice as chief. For this, also, the Republican party has to thank its "leaders."

When the "scratching" movement, one among the several small beginnings of the overwhelming Independent sentiment of to-day, was started in New York in 1879, its promoters sincerely believed that only by fearless and even "reckless" protest against Machine management and bad nominations could their party be saved from defeat in 1880. The *Nation* was one of the first among the few journals, amid the chorus of jeers now transformed into a pæan of praise for "young men in politics," which fearlessly recognized the truth of this position. That position has since been doubly made good in the victory of Garfield and in the defeat of Arthur. Had Garfield lived, and shown in living the same splendid courage that he showed in dying, it goes without saying that the Republican party would have held its own (the words have literal meaning) to-day.

It has been doubly unfortunate that the President made by Guiteau's shot is, as he was, a drum-major and not a general. There is no magic in a vote to change a political manager in the twinkling of an eye into a statesman. And there seems to be here a lesson in the necessity of fearlessness and thorough methods if political reform is to be won. When the Chicago Convention was held the Young Republicans of Massachusetts and the Independents of Pennsylvania joined with the "scratchers" of New York in sending a representation which was in daily session at Chicago under the chairmanship of Wayne MacVeagh. It was a committee of this body that, in the galleries of the Convention, drafted the original of the civil-service plank, which, despite Mr. Conkling's efforts, was put into the platform by the pluck of the Massachusetts delegates on the floor of the Convention and the inspired blunder of Flanagan of Texas. To the vigor chiefly of some of the Pennsylvania Independents, with the awful example of the 20,000 New York "scratchers" to prove that "if you nominate Grant, you can't elect him," it was in good part due that the "Grant column" was prevented from recruiting, and the selection of Garfield made a possibility. These two points gained, the younger men proposed to keep at work till the third point was won and the victory clinched by the nomination of a Vice-President in keeping. Certain of the elder Independents feared, and induced them against their will and faith to "let well enough alone." General Garfield's friends "gave away" the Vice-Presidency to placate Mr. Conkling, and the result of placating Mr. Conkling we know to-day. The fearlessness of Republican Independents, so far as it went, made victory possible in 1880, and had they been as fully fearless in 1880 as in 1882, the defeat of 1882 might not have been.

The men who cast the balance-of-power vote which rolled up yesterday's majorities against a Republican Administration simply fulfilled the "duties of an American citizen" well set forth in Nordhoff's 'Politics for Young Americans':

"It is your duty to act generally with some political party, and to exert your influence upon its leaders to induce the nomination of capable and honest men for office. And it is your duty, if your party nominates a bad man, to vote against him, and thus keep the public and general good before your eyes, and set an example of true public spirit before your fellows.

"It is your duty to watch the conduct of public officers, to see that they perform their duties and observe their constitutional limitations; and if they do not, then it is your duty to help to expose them, and at the elections to punish them. For it is only by such vigilance that a nation can preserve its liberties unimpaired."

I take it that these men, despite yesterday's results, are still Republicans, anxious to vote with the Republican party if they are permitted. They require good men—deeds, not words—a clean party. They have rejected President Arthur and Stalwartism; nor do they take more kindly to Mr. Blaine and Jingoism. They look upon the Republican party as on the whole embodying the intelligence and self-governing capacity of the safe middle class, and representing that "liberty regulated by law" which is "the spirit of Saxon progress," albeit with a tendency to over-centralization which it is their desire to check. They have seen the Democratic party, until the nomination of Cleveland, cap every Republican blunder with a greater blunder of its own; they fear that under the domination of its more ignorant lower class, overruling the leadership of its better men, liberty would become license; and they do not see in it the strength to resist, after victory, the pressure of its hungry hordes. But they mean to be patriots, not partisans, and to vote according to facts.

If, therefore, the Republican party, having still a year's grace of Congressional majority, uses that year to redeem the civil service, and to take such reasonable steps toward tariff reform as Republican revenue reformers require, and otherwise to meet the popular demand, it will deserve and recall the balance-of-power vote. If, in default of this, the Democratic party, victorious in New York, proves its willingness to promote civil service reform in the nation by legalizing it in the State, and otherwise shows a self-restraint that will make power safe in its hands, it will deserve and obtain the balance-of-power vote. If both parties continue rotten, double-faced, and blind, Independents must make up their minds to stand out by themselves, to cast a conscience vote for a third candidate in 1884, and to organize as a third party, which shall eventually be one of two.

I take it that the principles which Independents desire to see put in practice by the Republican party, and on which, should need come, they will unite by themselves, are mainly these:

Civil-service reform—the "paramount necessity," without which no party, old or new, can stay in power and keep pure.

Revenue reform—to the extent of the abandonment of tariff monopolies and of extreme duties; the freeing of our shipping from present restrictions; and the removal of duties on raw materials in the true interest of American manufactures and of American commerce, so that America may compete with England in the markets of the world, and American workingmen in turn have the best the world can send them at a fair price.

Honest money—so far as this again becomes an issue in connection with repudiation and "readjustment," the silver schemes, and the banking system.

Restriction of monopolies from abuse of privilege.

Municipal Home Rule, independent of party, on a business basis, and with municipal elections separated from National and State elections.

The following, it may be suggested, are also desiderata in political methods to be sought by Independents:

(*a*) The making of the House of Representatives more responsive to the people by holding elections so that members shall take their seats at once, instead of a year behind the issues on which they were elected.

(*b*) Wider freedom of choice of Congressmen within the State, so that if an able Representative is rejected by party machinations in his own district, public opinion will support him in seeking a constituency elsewhere.

(*c*) The election of President and Vice-President by a more direct vote, so that an unfit candidate for Vice-President need not be voted for with the Presidential candidate. And proper provision for the Presidential count.

(*d*) The supply of voting papers by the election authorities, with the names of all the candidates, from which to designate a choice, as a remedy against fraud, "trading," and the waste and cost to candidates of the present system.

(*e*) The protection of primary elections by legal enactments against fraud.

There is, nevertheless, no greater mistake than to suppose that any political nostrum or panacea can cure all political ills, or obviate imperfections which will continue as long as human nature lasts. Civil-service reform itself will not dispense with the need for the wholesome and alert public opinion which is the true safeguard of popular institutions, and the reawakening of which has been, after all, the great service of the independent movement. R. R. Bowker.

New York, November 8, 1882.

Notes.

D. Appleton & Co. have what any house might esteem the privilege of putting their American imprint on the captivating Parchment Series of Kegan Paul, Trench & Co. These handy volumes prove that clearness of print is an equivalent for largeness of type, while the smaller letter both makes the elegance of the page and allows of much stowage in a small compass. The two volumes to which we are speaking are Mr. Austin Dobson's entertaining collection of 'Eighteenth Century Essays,' already noticed by us during the past summer, and the first volume of the Parchment Shakspere—one of twelve—which has a larger type than the work just mentioned. The price is far from dear. This series will be continued by the publication of 'The Christian Year,' 'Gay's Fables,' edited by Mr. Austin Dobson, a selection of 'Shelley's Letters,' by Mr. Richard Garnett, Mr. Mark Pattison's annotated edition of 'Milton's Sonnets,' Tennyson's earlier poems in two volumes, and 'French Lyrics,' selected and arranged by Mr. G. Saintsbury.

On the other hand, a Scotch publisher, Mr. David Douglas, of Edinburgh, whose publications have a rare excellence of manufacture, is giving Mr. Howells's novels a very taking shape. His pocket issues of 'A Foregone Conclusion' and 'Their Wedding Journey,' though bound in paper, are elegant in those particulars which determine the taste of book-making. We must add that this is an author's edition, and that it will be continued.

Harper & Bros. have added 'The Friendships of Mary Russell Mitford' to their Franklin Square Library, besides giving it the more enduring book form; and, in the Shakspere series edited by Mr. W. J. Rolfe, have brought out in as many volumes the three parts of "King Henry the Sixth."

The eighth part of Reiss and Stübel's 'Necropolis of Ancon in Peru' (Dodd, Mead & Co.) has a very varied assortment of colored plates, beginning with a charming landscape showing the mode of burial under great potsherds. Then the little belongings of the deceased buried with him are pictured—sundry fabrics, and provisions for the long journey. Fringed loin girdles of fine colors are another curiosity, and there is a liberal array of woollen and cotton satchels, handbags, pouches, and nets of dainty design. Calabashes with incised or in-burnt ornamentation; metal ornaments and utensils of copper, silver, and their alloy, and one lead ball with a bit of mother-of pearl let in; delicate wooden implements for weaving; cloths of cotton trimmed with woollen borders, on one of which the llama furnishes the decorative motive; and, finally, the clothes and toys of dolls, even to sandals such as are still worn—these are the subjects of the remaining plates, exquisitely delineated.

The tenth 'Publishers' Trade List Annual' (F. Leypoldt) has an improvement which will be appreciated by every one who has occasion to consult this collection of publishers' catalogues. In place of the so-called reference list of books recorded during the year in the *Publishers' Weekly*, the monthly record from July to July is given with the appended notes, which are always a useful guide to the character of the works on which they are bestowed. The loss of convenience in not having the whole series under one alphabet as hitherto is fully compensated by a subject and author-index.

The "making of England," to say nothing of France and Germany, insures to Cæsar's 'Commentaries on the Gallic War' a lasting preëminence above all other Latin prose for beginners of Anglo-Saxon birth. For this reason, doubtless, the same writer's 'Civil War' has taken a subordinate place as a text-book or been wholly neglected. Its comparative brevity, however, and hardly greater difficulty make it excellently well adapted for reading at sight after the 'Gallic War' has been mastered; while its personal and historical interest justifies the extra time that may be given to it. Prof. Perrin's edition, just published in the best manner by the University Publishing Company, is one of the most thoroughly equipped text-books we have ever met with. Perhaps for beginners the explanatory notes are too helpful; but for students who come to them from the 'Gallic War' they will serve the purposes of a review, while the various appendices supply compact and easily remembered information of much value as to the chief actors in the narrative, the constitution of the later Republic, the organization of Cæsar's army, etc. The book has a vocabulary.

Griffith & Farran, London, have published a threepenny pamphlet, 'Key to all the Waverley Novels, in Chronological Sequence,' by Henry Grey (New York: E. P. Dutton & Co.). These are "condensed novels" in another than the Bret Harte sense. A list of the principal characters follows the title of each one, and the story is then briefly outlined, 'Ivanhoe,' for example, being compressed into less than a page, while 'The Pirate' takes a little more. Such abstracts have their use both for those who have, and those who have not, read Scott. One of our countrywomen's industry has already provided a 'Waverley Dictionary' (Chicago: S. C. Griggs & Co.).

A companion or rival to 'Uncle Remus,' namely, 'Uncle Gabe Tucker: a Collection of Poems and Sketches in Negro Dialect,' by J. A. Macon, is in the press of J. B. Lippincott & Co.

An article in the *Library Journal* for October, on the selection of books for Sunday-school libraries, and their introduction to children, by Mr. S. S. Green, of the Worcester Free Library has a practical interest for all parents, ministers, and superintendents who cannot abide the Sunday-school literature of past years.

Harvard University Bulletin No. 23 concludes Mr. Scudder's "Bibliography of Fossil Insects," the "Calendar of the Lee MSS.," and the "List of American Authors in Geology and Palæontology." The index to the maps in Petermann's *Mittheilungen* is continued.

A list of special subjects and books of reference, for use in connection with Dr. W. H. Carpenter's actual course of lectures on the Old Norse Literature, has been published by the Johns Hopkins University.

Beginning with the first Saturday in January of the coming year, the monthly New York *Medical Journal* will be issued as a weekly, following the example of similar periodicals in other cities.

J. W. Bouton will be the American publisher of F. G. Dumas's forthcoming *Art Annual* (*Annuaire illustré des Beaux-Arts*), uniform with the same editor's Catalogue of the Paris Salon. It will contain original drawings after the principal pictures in the Exhibitions of London, Paris, Antwerp, Lausanne, Rome, Moscow, Buda-Pesth, Edinburgh, Glasgow, Dublin, New York, and the Vienna International Exhibition.

A new novel, 'L'Évangéliste,' by Alphonse Daudet, will appear simultaneously in French and German toward the end of January.

It may be recalled by some that M. Francisque Sarcey, the eminent French dramatic critic, was graduated from the École Normale, fourth in a class in which M. Taine and M. About were first and second. M. Sarcey is writing a series of "Souvenirs Personnels" in the *Revue Politique et Littéraire*, and the last two numbers have contained an interesting account of the sayings and doings of this remarkable class at the School. From M. About we might expect jokes, but it is with some surprise that we read of the schoolboy pranks in which the grave and erudite M. Taine took part.

—A correspondent thinks that the late Bayard Taylor was himself in error in censuring (in the preface to the first volume of his translation of 'Faust') Hayward's rendering of the line: "Mein Lied ertönt der unbekannten Menge," "My sorrow voices itself to the strange throng," instead of "My song sounds to the unknown multitude." "Other English translators, I notice," says Mr. Taylor, "have followed Mr. Hayward in mistaking *Lied* for *Leid*." But the question is not so clear as our correspondent imagines. *Leid* appeared in the first edition (1808) of the first part of 'Faust,' which was the basis of all the later editions, many being printed from the same plates. Goethe was notoriously careless regarding the text of his works, and later complete editions were not always corrected by him, even when manifest typographical and other errors existed. Two editions of 'Faust' appeared in 1825, one having *Lied* and one *Leid*. Goethe's secretaries, Riemer and Eckermann, undertook an edition of Goethe's works (1836–7) after his death, based upon the original manuscripts. In this, *Lied* appears. Some editions follow Goethe's last edition ("Ausgabe aus letzter Hand"), which has *Leid*, and others Riemer. The two most recent commentators, Von Loeper and Schroer, give *Leid*, while equally critical scholars, as Goedeke, Kurz, Düntzer, and Carriere adopt *Lied*, which is most generally accepted.

—Karl Knortz's 'Shakespeare in Amerika: Eine literarhistorische Studie' (Berlin: T. Hofmann; 1882; pp. 85, 8vo) is the first considerable attempt, to our knowledge, to give an account of the development of the study of Shakspere in this country. It has an interest, therefore, wholly apart from its merits, as a contribution to a special department of our literary history. The author has had access to some of our most valuable collections, and has evidently made a diligent search for information. The notice of these collections, with which he naturally begins his book, is chiefly devoted to the description of a few in private hands. The one in the Boston Public Library is simply referred to as having a good copy of the First Folio and a catalogue, and mention is made of the "sogenannte Lenox Library im Staate Massachusetts" (the so-called Lenox Library in the State of Massachusetts). Works relating to Shakspere's life and opinions are first treated, considerable space being given to some perfectly worthless productions, so far as Shakspere is concerned, of temperance advocates and spiritualist writers. So, in the account of the Baconian theory of the authorship of the plays, several pages are about books of no value whatever, while that of Judge Holmes is dismissed with a mere mention. The more prominent critics and editors of the forty different editions of Shakspere's works with which Mr. Knortz credits this country have, with a few exceptions, brief notices. On White and Furness particularly he bestows well-merited praise. The most attention is paid to the veteran Hudson, of whom he says that he has done more than any living writer to make Shakspere's works accessible and intelligible to the masses. Mr. Knortz curiously ascribes the popularity of Shakspere in America, in large measure, to the influence of the clergy, and to the custom which publishers of periodicals have of offering copies of his works as premiums for new subscribers. Of the influence which was felt half a century before a critic began to write, or an edition was published, and has far outweighed every other since, that of the stage, Mr. Knortz says nothing. In the concluding paragraphs of his book he mentions as the actors who have distinguished themselves in Shaksperian characters "the elder and younger Booth, Forrest, and Janauschek." This monograph, to sum up, lacks both completeness and perspective.

—Francis George Shaw, whose person, name, and good works have been familiar to New-Yorkers for the past thirty years, died on Nov. 8 at his home on Staten Island, aged seventy-three. He was born in Boston in 1809, the son of Robert Gould Shaw, one of the merchant princes of that city. He took, we believe, a part of the course at Harvard College, and thereupon entered his father's firm. In 1840 he retired upon a competence, and in 1849 removed to this city. His only son, Colonel Robert Gould Shaw, fell, as is well known, at the head of a Massachusetts regiment of colored troops at Fort Wagner in 1863. Of four daughters, one married Col. Charles R. Lowell, who fell at Cedar Creek in 1864; another, Gen. Francis C. Barlow; and the other two, Messrs. George William Curtis and Robert B. Minturn respectively. Mr. Shaw was an early abolitionist, and a warm personal friend of William Lloyd Garrison. The movement set on foot in the second year of the war on behalf of the freedmen powerfully enlisted his sympathies; and more than ever after the death of his son he dedicated his leisure and his means to the elevation and protection of these unfortunates. He became the president of the New York association for the relief of the freedmen, and, on the consolidation of the various local societies under one harmonizing management established at New York, had an active share in the direction of the American Freedmen's Aid Association. This was his last prominent public ser-

vice. Mr. Shaw possessed a very ardent temperament, animated by a spirit of pure philanthropy, and controlled by the utmost tenderness and delicacy of feeling and the highest breeding. Like the type which he exemplified, his ideals were strongly socialistic. In 1848 he translated Pellerin's 'Life of Fourier'; and within a year he has supplied every member of the Society for Political Education, at his own expense, with a copy of Mr. Henry George's 'Progress and Poverty.' He was an uncompromising free-trader. His home was the centre of great intellectual vivacity, and the scene of the most beautiful and unstinted hospitality. Mr. Shaw's literary monument is not inconsiderable. In addition to the biography already named, he translated several of the works of George Sand—'Consuelo,' 'M. Sylvestre,' 'Le Compagnon du Tour de France'—and Zschokke's 'History of Switzerland.'

—From the near approach of the planet Venus to the earth in the latter months of the present year, and the occurrence of a favorable epoch for searching for a supposed satellite of the planet, unusual interest attaches to a communication in the last number of *Copernicus*, by Dr. Schjellerup, of Copenhagen. For more than a century this satellite has maintained its character as one of the myths of astronomy, and the rapid progress in the art of telescope-making has availed nothing toward clearing it up. Dr. Schorr has written a book about it, indeed, in which he sets down all the known observations which may be interpreted as pointing to the existence of a satellite of Venus. It was on comparing his list with the old ledgers of the Copenhagen Observatory that Dr. Schjellerup discovered the omission of seven observations made in 1761 by Roedkiaer, and one in 1768 by C. Horrebow and two other observers. These observations had never been published, and their exact transcription, together with the original observations of 1764, form the substance of Dr. Schjellerup's paper. He remarks, further, that to any one wishing to explain them it will always cause the greatest difficulty that all the observations of the supposed satellite, except those of Fontana, Cassini, and Short, were made within the space of ten years (1759–68), while nothing of the kind has ever been seen since. On the occasion of the last transit of Venus, in 1874, not a few observers scrutinized the solar disk very closely, but none of them remarked a satellite; and Venus was observed by Professors Hall and Holden, with the great telescope of the Naval Observatory, from October, 1877, until March, 1878, but no satellite was ever seen. The discovery of such a body would be of the last importance in astronomy, as the data would speedily accumulate for an accurate evaluation of the mass of Venus—a constant otherwise determinable only with great labor, and at present known only with meagre precision.

—There is in the possession of a Russian bibliophile one of the most remarkable *unica* in the world. M. Feuillet de Conches, the author of the 'Causeries d'un Curieux,' and Master of Ceremonies to Napoleon III., had La Fontaine's 'Fables' translated into a number of languages, and a single copy magnificently printed by Didot. He then sent the volume, an enormous folio with large margins, into "all the kingdoms of the world," with requests from the Ambassadors of the various Powers that artists in the different countries should illustrate the great fabulist, each in his own style and after the fashion of the country. And as when some clerk sends a postal card around the world, with a request that each postmaster shall put upon it the stamp of his office and a note of the time when it passed through his hands, and the card thus cast upon the waters returns after many days, so the volume of the "Curieux" returned laden with the contributions of many illustrious hands: the Sultan Abdul-Aziz, the King of Portugal, the King of Sweden, and, nearer home, Ingres, Eugène Delacroix, Paul Delaroche, Corot, Millet, the Duc d' Orléans, the Princess Marie, the Princess Mathilde, and many more.

—"Das Wissen der Gegenwart" is the title of a new series of popular works projected by the house of G. Freytag, in Leipzig. It is in two divisions, History and Natural History. The volumes, of nearly 300 pages, are neatly and clearly printed, bound in cloth, and astonishingly cheap—one mark (twenty-five cents) apiece. In the Natural History section, treatises upon Meteorology, Insects, the Sun, etc.; in the Historical, four volumes upon Australia, one each upon the Modern Drama, Russia, Morocco, etc., are announced. The series begins with a very valuable work, a History of the Thirty Years' War, in three volumes, by the distinguished historian, Anton Gindely, of Prague. These three neat volumes, costing less than a dollar all told, give us the ripe results of the studies of the highest living authority upon this important period; and, as Gindely's great work has as yet hardly advanced beyond its threshold, we have here conclusions for which we should otherwise have had to wait for years. For he tells us in his preface that his studies in the archives are completed for a large portion of the war, and his opinions are formed, although their full proof is not yet forthcoming. On the vexed question of Waldstein's guilt (the correct form of the name) his mind is not yet fully made up, although he inclines to accept the old opinion, that he was false to his master. The book is written in a sober, earnest style, worthy of its subject. It is illustrated with between thirty and forty cuts: portraits of Ferdinand II., Gustavus Adolphus, Waldstein, Tilly, etc., views of Vienna, Leipzig, Prague, Magdeburg, etc., battle of Lützen, Wimpfen, Wittstock, etc., diets, councils, etc., from contemporary engravings.

—The programme of the Congress of the Sorbonne in 1883 presents a number of interesting questions: 1. Best method of investigating the origin of names of places in France. 2. Date, place, and causes of the foundation of new cities and of *bastides* (country seats). 3. Origin and development of the communal militias. 4. Route which the French pilgrims usually took on their way to Italy or to the Holy Land. 5. What documents reveal the origin, character, organization, and object of the religious confraternities and the industrial corporations? 6. History of the preparation of the *coutumes;* what local *coutumes* remain unpublished? 7. Unpublished documents on the provincial assemblies. 8. Conditions of eligibility and electorship in the communes. 9. What addition can be made by research in archives and local libraries to the documents on the origin and progress of dramatic art as far as the sixteenth century, inclusively? 10. Point out the documents historically important contained in the old court records, the parochial registers, and in notaries' minutes. 11. History of schools before 1789: sources of information, statistics at various periods, origin, progress, number in each diocese and parish, from what sources the teachers were drawn, their pay, discipline, course of study, attendance, pecuniary assistance furnished, relations between the assistance given in the schools and in the University, text-books used. 12. What cities in France had printing establishments before the middle of the sixteenth century? Circumstances of their foundation and action. It will be seen that questions 5 and 11 have an interest not merely archæological—especially question 11, for the effect of the Revolution on popular education has been warmly debated of late between those who think '89 the sunrise of real civilization and those who regret the *ancien régime*.

—Wolff's time-honored 'Poetischer Hausschatz,' in spite of its bulk and typographical unattractiveness, has not yet been supplanted in public favor, and but few collections of modern German poetry fitly supplement it. One of the best, even if not the most comprehensive, we are acquainted with is the lately published 'Deutsche Lyrik der Gegenwart seit 1850,' by Ferdinand Avenarius (Dresden: Louis Ehlermann). It is very attractive in appearance without the aid of illustrations, generally considered indispensable in German works of this class, and is more than a mere compilation from easily accessible sources, several of the poems being here published for the first time. Good taste has guided the editor in his selections, which afford a very favorable view of the present poetic activity of Germany, although, of the eighty poets represented, many had done their best work before 1850. Thus, the names of Karl Beck, "Anastasius Grün," Hoffmann von Fallersleben, Eduard Mörike, etc., are associated with a period of German literary history which seems far removed from the present. Heine's "Für die Mouche" falls technically within the limits of the work, but it is difficult to account for the introduction of his "Asra" and "Altes Lied," except on the principle that "a thing of beauty is a joy for ever." More strictly as to time, though not characteristically, Freiligrath is represented by "Hurrah, Germania!" and by "Die Trompete von Gravelotte," the best patriotic poem which the war of 1870-71 called forth. Much space is justly assigned to Emanuel Geibel, *facile princeps* among living German poets, unless the 'Songs of Mirza Schaffy' be sufficient to establish the preëminence of Friedrich Bodenstedt. Paul Heyse, equally graceful in prose and poetry, is particularly favored by Herr Avenarius, while, in giving nine poems of Heinrich Leuthold, he does no more than justice to a writer who, three years ago, died in an insane asylum before Germany knew that she possessed in him a genuine poet. In cursorily looking over a collection of contemporaneous German poetry, one cannot help noticing the still predominating influence of Heine, resulting, in the case of "Ada Christen," in imitations of more than ordinary skill. Goethe's repose and antique perfection of form naturally find few imitators, although Arthur Fitger's "Lätizia" directly challenges comparison with the master's "Römische Elegien." A clever writer in other fields than poetry, Karl Emil Franzos, appears here in a new and by no means favorable light, and it becomes more and more inexplicable why, since the death of David Friedrich Strauss, his few occasional verses should be paraded by ill-advised admirers as evidences of poetic genius. Popular tradition has always pictured the average German poet as the most melancholy of his craft, and this collection as a whole confirms the suspicion that the German Parnassus of to-day is not too cheerful an abode. More than one note of sadness is struck, nor is it the least poetic minds whose strains are saddest. "Dranmor" and "Hieronymus Lorm" are deeply tinged with modern pessimism, but neither do they recall, nor does the gifted Wilhelm Jensen, the irresistible charm of Lenau's melancholy chord. On the other hand, the school of humorous poets evoked by Victor von Scheffel flourishes in Julius Wolff, Rudolf Baumbach, and others, although not all his disciples have, like him, found genuine inspiration in the days and ways of the Minnesingers. Nor should the dialect humorists, P. K. Rosegger (the delightful Styrian peasant-poet), Franz von Kobell (a professor of mineralogy and

contributor to the *Fliegende Blätter*), and others be forgotten who have deservedly found a place in this collection. It remains to be added that the 500 literary ladies of Germany who, according to Professor Heinrich Gross's work on 'The Female Poets and Writers of Germany,' are at present busy with their pens, are here represented only by "Ada Christen" and "Betty Paoli."

—Cowen's "Scandinavian Symphony" and the prelude to "Parsifal" were the novelties at the first Philharmonic concert on Saturday night. The symphony was produced last winter in London, and also at Vienna, where Hans Richter put it on one of the Philharmonic programmes, and where it was well received. The English have been insisting for some years that they are not such an unmusical nation as they are commonly supposed to be. Various cogent facts have been adduced in support of this claim, but the crucial test—an original and distinctly national composer—has still been wanting. Not that London lacks musicians who can write scholarly works, but, so far as known, they are usually based on German models (not always the best), and not exuberant in ideas. Whether Mr. Cowen is to be looked upon as the coming man is a question which must be held in abeyance. His symphony is certainly not English, its structure and scoring being distinctively German, and bearing evidence of his sojourn at Berlin and Leipzig. Nor is it Scandinavian, notwithstanding its title. National or local color is as difficult to impart to a work of art at will as the peculiarities of another author's style, and although in the "Scandinavian Symphony" a few characteristic peculiarities of rhythm, modulation, and melodic progression are introduced, they do not suggest the name adopted. This is not intended as unfavorable criticism. We simply wish to make it clear that Mr. Cowen's symphony is not English in the sense in which Sullivan's operettas are English, nor Scandinavian in the sense in which, for example, Gade's Ossian overture, which no German or Frenchman could have written, is Scandinavian. The first movement of the symphony is by far the best of the four. Its themes are vigorous, and the parts effectively contrasted. In the adagio, which is less original, the horn-quartet heard at a distance, and intended to represent "a party of revellers drifting down the moonlit waters," is a pretty device, which would be more effective if the theme were not rather commonplace. The frisky scherzo, with its muted violins, is described as an attempt to represent a sleigh-ride; and in the final allegro the workmanship rather exceeds in value the ideas employed. The instrumentation is discreet and effective, the strings being admirably employed to secure broad melodious effects or beautiful "floating harmonies." The reeds are several times combined in a rather uncouth fashion, and the brass "tacet" as a rule. As a whole the symphony is good enough to deserve repetition. The prelude to "Parsifal" is not a symphonic poem, like that to "Lohengrin," or Beethoven's great Leonora overture, but, like all the preludes to Wagner's later music-dramas, simply a composition intended to prepare the audience for the opening scene of the music-drama. This scene represents a large tree in the foreground, under which an old man and two pages lie asleep, but presently wake up and kneel down to say their morning prayers. The prelude is therefore very quiet and religious in character throughout, uniting as it does several of the most beautiful motives which pervade the whole drama. The mediæval, ecclesiastic modulations at first sound strange to the ear, but soon exert a wonderful fascination; and the magic charm of the instrumental combinations—the Grail motive sounded by the brass, the ascending tremulos of the violins, and the arpeggios at the beginning—are effects unsurpassed in any of Wagner's previous works. Both the novelties were favorably received by the large audience.

DETMOLD'S MACHIAVELLI.

The Historical, Political, and Diplomatic Writings of Niccolo Machiavelli. Translated from the Italian by C. E. Detmold. Boston: J. R. Osgood & Co. 4 vols. 8vo.

We read in the preface to these superbly printed volumes: "If by the present translation I succeed in causing a more accurate acquaintance with the works of this remarkable man, I shall feel doubly rewarded, having already had ample compensation in the work itself, which, during several years of compulsory inactivity from impaired health, has afforded me constant, agreeable, and most instructive occupation." It is, therefore, a work of love that Mr. Detmold has undertaken, and accomplished most creditably.

Translations into English of separate works of Machiavelli were made even within a few years after his death, such as 'The Art of Warre, set forth in Englishe,' by Peter Whitehouse, 1562, dedicated to Queen Elizabeth; 'The Florentine Historie, Translated into Englishe,' by Thomas Bedingfield, 1594; 'Discourses upon the First Decade of Livy,' translated by Edward Dacres, 1636, etc. But the best-known is Ellis Farneworth's translation of Machiavelli's works, 1752, republished with notes, anecdotes, and life, in 1761, and more widely spread in the "carefully revised edition" of Bohn's Standard Library, 1847. In the present translation the first volume contains a sketch of the life of Machiavelli and the 'History of Florence,' with an excellent heliograph taken from the portrait by Bronzino; the second, 'The Prince,' the 'Discourses on the First Ten Books of Titus Livius,' and the 'Thoughts of a Statesman,' with a portrait of Lorenzo de' Medici, by Vasari; the third, the 'Embassies' to the several courts of Italy, France, and Germany, with a portrait of Cæsar Borgia, by Raphael; and the fourth, the continuation of the 'Embassies' and 'Miscellaneous Papers,' with Machiavelli's monument in Santa Croce at Florence. They embrace, therefore, the most important works of Machiavelli in a compact form, and well deserve a niche in every historical library.

It would be out of place to enter here upon the dispute, which has already lasted three centuries, as to the political morality of Machiavelli's works, especially in regard to 'The Prince,' which some call famous, others infamous. We will only remark that, to judge of an author, one must read *all* his works, and not a single one. Machiavelli, in his 'Prince,' did not present the living picture of a wily, heartless, bloody tyrant in order to teach kings how to rule despotically, for the despots that lived in his days, and long before him—Charles V., Henry VIII., Francis I., Alexander VI., and his son Cæsar Borgia—needed no instruction in the art of tyranny. His real design seems to have been to hold the mirror to the despotic nature of arbitrary power, and show vice his own image; to have the despot, in fact, painted to the life as our rare monsters are, and underwrit, "Here may you see the tyrant." Giovanni Matteo Toscano, a contemporary of Machiavelli, relates that he often heard the Florentines repeat the words which Machiavelli himself often used about 'The Prince': "I have taught princes in this manner in order that those who now oppress Italy so tyrannically may become still worse; whereby the Italians, driven finally by despair, may rise against them." We advise the reader to compare in this respect the 'Thoughts of a Statesman' with 'The Prince'; for the man who can lay down as a maxim that "that government alone is durable which rests upon the free will of the governed" could not have been the panderer to the treachery and cruelty of tyrants.

It is pertinent to add here that one of the first to do justice to Machiavelli was Macaulay, in his essay on that statesman, when, summing up his writings, he says:

"His works were misrepresented by the learned, misconstrued by the ignorant, censured by the Church, abused with all the rancor of simulated virtue by the tools of a base Government and the priests of a baser superstition. The name of the man whose genius had illuminated all the dark places of policy, and to whose patriotic wisdom an oppressed people had owed their last chance of emancipation and revenge, passed into a proverb of infamy."

Much light has since been thrown upon Machiavelli and his works, but the most able and exhaustive study is Professor Villari's 'Niccolo Machiavelli and his Times,' faithfully translated by his highly-gifted English wife, Linda Villari.

But to return to Mr. Detmold's translation. Machiavelli is one of the purest of the so-called *cinquecentisti* (fifteenth-century) writers, in spite of the decree of the Academia della Crusca, in its compilation of the Italian vocabulary, that his writings should be consulted "with discretion." (As to that, in its pedantic worship of the *trecentisti*, the Academy ostracised even the 'Jerusalem' of Tasso.) His style is clear, forcible, and terse, though employing the familiar language of the times. In his histories, especially, he approaches perfection—lucid and simple in his form, majestic in his periods, with now and then an intermixture of short, sparkling sentences; his words wonderfully well chosen, and his diction so dignified that he is called the creator of the modern style of history, to be compared only with Herodotus and Tacitus among the ancients, and superior to all his contemporaries and followers until Montesquieu.

In Mr. Detmold's translation we lose all this; for, though he has done his work faithfully, he has not held closely to the original. The meaning he has caught, as Machiavelli is seldom obscure, but in rendering it he not only comments but very often paraphrases a sentence; and, what is worse, he usually cuts whole periods into short sentences, which breaks the fluency and roundness of the Italian phrase.

We have quoted, for instance, the following passages at haphazard from the 'History of Florence,' giving the original first:

"Un Duca d'Atene, *privato condottiero vostro, l'ha soggiogata.* Ma quando l'è stata unita, non l'ha potuta superare un arcivescovo di Milano ed un Papa, i quali dopo tanti anni di guerra sono rimasi con vergogna."

"A Duke of Athens, *originally a private condottiere of yours, subjugated her when she was thus divided.* But when she was united, an Archbishop of Milan and a Pope himself failed to subdue her, and after many years of war gained nothing but shame" (vol. i., p. 136).

"I Signori volendo far prova di comporre con loro poi che per forza non vedevano modo a frenargli, chiamarono quattro de' loro Collegi, e quelli al palagio del Potestà per *intendere la mente loro* mandarono; i quali trovarono che i capi della plebe, con i Sindachi delle Arti ed alcuni cittadini, avevano quello che volevano alla Signoria deliberato domandare."

"The Signori, desirous of giving proof of their willingness to make terms with the rioters, seeing their own inability to control them by force, sent four members of their colleges to proceed to the palace of the Podesta and *state their wishes to the rioters.* This deputation found that the leaders of the populace, together with the syndics of the guilds and some citizens, had already prepared the demands which they intended to make of the Signori" (*id.*, p. 143).

In this last passage there is an actual error in the translation: *intendere la mente loro* means 'to learn what was the rioters' mind (or wishes),' not, "to state their [the colleges'] wishes to the rioters."

"Aveva, quando la plebe entrò in palagio, l'insegna del Gonfaloniere di giustizia in mano un Michele di Lando, pettinatore di lana. Costui, *scalzo e con poco indosso, con tutta la turba dietro*, salì sopra la scala," etc.

"When the mob entered the palace, one Michele di Lando, a wool-carder by trade, was carrying the standard of the Gonfaloniere. He *took off his shoes, and, not being encumbered with much clothing on his back*, leaped upstairs," etc. (*id.*, p. 145).

Scalzo does not mean that he "took off his shoes," but that he was already without shoes—viz., barefooted; while the next phrase should read: 'and with scant clothing (*poco indosso*), followed by the whole mob (*con tutta la turba dietro*)', but it is left untranslated, unless it is mistranslated in "much clothing on his back."

A few passages taken, also at random, from 'The Prince,' will show the tendency of the translator to paraphrase the original. For instance:

"Dall' altra parte Cesare Borgia, chiamato dal volgo duca Valentino, acquistò lo stato con la fortuna del padre, *e con quella lo perdette*."

"On the other hand, Cæsar Borgia, commonly called Duke Valentino, acquired his state by the good fortune of his father, *but lost it when no longer sustained by that good fortune*" (vol. ii., p. 22).

"E per esperienza si vede i principi soli e le republiche *armate fare progressi grandissimi*, e le armi mercenarie non fare mai se non danno," etc.

"Experience has shown that princes as well as republics *achieve the greatest success in war when they themselves direct the movements of their own armies*, while mercenary troops do nothing but damage" (*id.*, p. 42).

And further on:

"I Svizzeri sono *armatissimi e liberissimi*."

"The Swiss are *most thoroughly armed, and consequently enjoy the greatest independence and liberty*" (*id.*).

"Quello che non vinse fu Giovanni Acuto, *del quale non vincendo non si potea conoscere la fede*."

"Amongst those who were not victorious was Giovanni Acuto (John Sharpe, an English soldier of fortune), *whose good faith was never put to the test, he having been unsuccessful in the field*" (*id.*).

This continues throughout the translation, of which we consider it the greatest blemish. As already said, the translator seldom errs in the meaning of the original, but occasionally a too idiomatic passage or a narrative with too local coloring proves a sad stumbling-block. For instance, Machiavelli, in his 'History,' describes the rising of the nobility and people of Florence against Gauthier, Duke of Athens, a creature of Charles d'Anjou, Duke of Calabria, son of Robert, King of Naples. This French soldier of fortune had been proclaimed Prince of Florence a year before, and had ruled so tyrannically as to disgust even his strongest adherents. The text is:

"Venuto adunque *l'altro giorno, al suono di nona*, secondo l'ordine dato, si prese le armi, e il popolo tutto alla voce della libertà si armò, e *ciascuno si fece forte nelle sue contrade* sotto *insegne con le armi del popolo*, le quali dai congiurati segretamente erano state fatte."

This is translated as follows:

"On the following *morning*, therefore, according to the order agreed upon, *at the hour of nine*, the conspirators took up arms, and at the cry of 'Liberty!' the people armed themselves and *threw up barricades*, and *raised the banner* that had been secretly provided by the conspirators" (vol. i., p. 109).

This sentence absolutely falsifies the simple and straightforward original. *L'altro giorno al suono di nona* does not mean "the following morning at the hour of nine," which might be taken for nine o'clock in the morning, but 'the following *day at the sound of the noon bells*.' At that period (1343) there were no clocks in the cities, and the hours were indicated by the ringing of the canonical hours by the church bells; and *nona* meant, and means now, *noon*, and after *nona*, any time from noon till three o'clock—in fact, the English word *noon* is derived from *nona*. *Ciascuno si fece forte nelle sue contrade* should not be translated "they threw up barricades"; this in our day would mean street-barricades, while in Florence it then meant 'fortified themselves in their streets and houses,' *contrada* applying to both. The houses and palaces of Florence were built almost like fortresses for such very purposes, even having contrivances for projecting bridges across the streets from window to window, the iron supports of which can be seen to this day. *Sotto insegne colle armi del popolo* is not "the people raised the banner," but 'under banners with the device (or coat-of-arms) of the people.' The Florentines at that time were divided into six wards, called *sestieri*, and a number of guilds; each of these had its banner or *gonfalone* with its special coat-of-arms. These particular banners are here said to have been prepared by the conspirators. We will acknowledge, however, that such erroneous renderings occur very seldom in the first two volumes, which we have carefully compared with the original.

The 'Missions' (rather to be translated 'Embassies,' in our opinion), contained in the last two volumes, and which are for the first time translated into English, as we believe, are exceedingly interesting and instructive for students of the histories of the period. This official correspondence of the Florentine Secretary brings us face to face with most of the prominent characters of his time, and their Machiavellian politics, of which Machiavelli was a witness, and again a victim, rather than a teacher—the Lord of Piombino, in the service of the Republic of Florence, manœuvring for his pay; the Countess Sforza of Forlì, who made her son Ottaviano, a young condottiere of nineteen, play fast and loose with the Republic, in whose service he was engaged for two years; the several captains of fortune, both Italian and foreign—German, Swiss, French—in her service in the war against the Pisans, among whom Machiavelli was a Commissioner. We read graphic reports of his mission to Louis XII. of France about this Pisan imbroglio, in which the French court is constantly asking for money, money, money, from the Florentine Republic, if she wishes to retain France as an ally in that enterprise; of his mission to the infamous Cæsar Borgia, whose friendship the Republic wished to retain as an ally of France—the more so because he could interfere with her commerce. In this embassy Machiavelli is particularly instructed "to ask of Duke Valentino, in our name, to grant security and safe conduct to the goods of our merchants on their passage through his states and territories on their way to and from the Levant," which he obtained.

This correspondence, which began October 5, 1502, and lasted till the next January, 1503, gives us a full description of the doings of that prototype of Papal nepotism, Cæsar Borgia, who, during his father's Popedom, held the destinies of Romagna in his hands. The wisdom shown by Machiavelli in treating with him is most remarkable. He seldom expresses any opinion, but narrates with impartial fidelity events as they occurred from day to day, and the conversations held with the Duke; only now and then warily observing to the Signoria something as follows:

"Your Lordships are now informed of the language held by the Duke, and you will now weigh the matter with your usual sagacity, *having due regard to the individual who uttered it*." "The negotiations for an arrangement are favorable to the Duke, and he entertains them willingly; *but I will not pretend to judge what his real intentions are*."

We get also harrowing accounts of how the poor Italian cities were treated by these condottieri with the titles of Dukes and Princes. Thus, Cæsar Borgia having transferred his court from Imola to Cesena, with Machiavelli and the other ambassadors in his suite, the Secretary writes to the Signoria:

"The Duke and the troops are lodged in the city and vicinity, and live at discretion; that is to say, according to their own pleasure, and not according to that of the persons who lodge them. Your Lordships may imagine how things go on here, and how they went on at Imola, where the court remained three months, and the whole army two months, and where they consumed everything to the very stones."

Then follows the embassy to Rome, after the death of Alexander VI., in which the most interesting part is the report of the manner in which Julius II. got rid of the Duke Cæsar Borgia; later to Louis XII. of France; to Rome again, and to several minor courts of Italy.

The fourth volume contains, among others, the important embassy to the Emperor of Germany. It is interesting to note throughout these embassies the parsimony of republics to their ambassadors. Machiavelli constantly complains of the smallness of his appointment, and that he had often to pay for his couriers; and in this German embassy, writing from Botzen, Jan. 17, 1508, the first thing he mentions is, that "he had been delayed by the great distance, bad condition of the roads, worn-out horses, and *shortness of money*." Nevertheless, he always keeps his eyes open, gets information everywhere, and gives full descriptions of the "condition and manners of the people" he visits, both in Switzerland and Germany. This correspondence also includes the despatches of Francesco Vettori, the resident minister, to whom Machiavelli was sent as an additional and special envoy, and, though the former signs the documents, in the body of them Machiavelli is constantly mentioned as adviser. In one of these, dated Trent, February 8, 1508, Vettori says: "Machiavelli is very short of money, although I have thus far not failed to supply him; but on no account in the world would it do to recall him, and I entreat your Lordships to approve his remaining here until all matters are settled. His presence here is necessary."

Immediately after his return from the above embassy, Machiavelli was despatched as Commissioner to the army besieging Pisa, and, as Professor Villari states, "he was the very soul of it." This mission ended with the surrender of that town to Florence. Next come the reports of his embassies to the Duke of Mantua, again to Louis XII. of France, then to Sienna and Monaco, for the fourth time to France, and finally to Pisa, to the celebrated Ecclesiastical Council convened there, at the instigation of Louis XII. of France, to depose the warlike Pope Julius II. Here the correspondence ceases, for, on the return of the Medici family, August, 1512, Machiavelli was deprived of his office, and lived neglected for eight years on his small estate, where he wrote his immortal works. It is only resumed in 1521, on the occasion of two or three embassies of very little importance, and the volume ends with fragmentary papers interesting solely as sketches of the times.

Barring the few exceptions mentioned above, Mr. Detmold is worthy of all commendation for his patient and faithful labor in giving to us, in an English dress, these works of that remarka-

ble statesman on whose monument, in the Westminster Abbey of Florence, the Italians have deservedly written, "TANTO NOMINI NVLLVM PAR ELOGIVM."

BOOKS ABOUT THE STAGE.

Charles Albert Fechter. By Kate Field. [American Actor Series.] Boston: J. R. Osgood & Co. 16mo, pp. 205.

Rachel d'après sa Correspondance. Par Georges d'Heylli. Paris: Librairie des Bibliophiles; New York: F. W. Christern. 1882. 8vo, pp. viii.-308.

Rose Rozier. Par Henry Gréville. Paris: Plon; New York: F. W. Christern. 1882. 2 vols., pp. 244, 246.

Essays in Theatrical Criticism. By Mowbray Morris. London: Remington; New York: Scribner & Welford. 1882. 8vo, pp. 226.

Theatrical Anecdotes. By Jacob Larwood. [Mayfair Library.] London: Chatto & Windus; New York: Scribner & Welford. 16mo.

MISS FIELD'S sketch of Fechter's life is decidedly the poorest of the six volumes now published of the "American Actor Series," and yet it will probably please that mythical person, the average reader, better than Mr. Ireland's painstaking biography of Mrs. Duff. It is a lively bit of writing, not to call it pert; it would have been exactly in place in the columns of a daily or weekly paper immediately after Fechter's death—that is to say, it is a journalistic extemporization, and really has very slight claims to be considered as literature. There are numberless little slips in the account of Fechter's career on the French stage, which show plainly that Miss Field has not taken the trouble to understand the position of the Comédie-Française or of Fechter among his fellow-Frenchmen. She absurdly overrates the rank held by Fechter in Paris, and apparently believes that he had the French theatrical world at his feet. There is a tradition that the Comédie-Française refused him a final engagement because of his English accent, and it is certain that at no time was he more than a prominent stock actor. It may be said that Fechter was never reckoned among the great histrionic notabilities of Paris. To represent him as in a position to patronize Scribe (as Miss Field does on page 43), is to show a hopeless incapacity to understand the relative rank of the two men. In France Fechter was recognized as primarily a melodramatic actor—that is to say, an actor to whom situation was of more importance than character; one who thought more of what a man did than of what he was. As such he was held to be the inferior of Frédérick Lemaître, Bocage (here misprinted Boccage), and Mélingue. He had a quick eye for the picturesque, and an incapacity to understand the higher reaches of dramatic poetry. Hence his failure in "Othello" and in "Tartufe," in which latter part he made a most lamentable exhibition of his inability to comprehend Molière, though Miss Field seems to think that his *Tartufe* succeeded triumphantly. Hence, also, his success in "Hamlet," which has a highly-interesting plot, full of accident and incident, and concerning which we may recall Lewes's dictum, that no good actor ever failed in "Hamlet." Fechter pleased many people in this play because it lends itself to a melodramatic and pictorial treatment; he failed in "Othello" and "Tartufe" because those plays are not so accommodating.

Yet Miss Field's book is not wholly worthless, for besides the sketch of Fechter's career it gives us criticisms of his acting in "Hamlet," the "Lady of Lyons," the "Corsican Brothers," "Monte Cristo," "Don César de Bazan," and "On demande un Gouverneur" (known in English as "A Bachelor of Arts," though Miss Field fails to tell us this). The criticism of "Hamlet" is Miss Field's one contribution of real value. It fills some thirty pages, and is a running commentary on the way Fechter played the part. Now, it is needless to say that as an actor leaves little behind him, it is of great importance that some one should set down in detail his manner of playing the chief parts of Shakspere. It would be a great thing if we had thirty pages of minute notes of the "readings" and the "stage business" of *Hamlet* as played by Betterton and Garrick and Kemble. Following these criticisms are recollections by Mr. Herman Vezin, Mr. Edmund Yates, and Mr. Wilkie Collins. Mr. Yates provides two pages of idle chatter, omitting, characteristically enough, to tell us that he collaborated with Fechter in the "Golden Daggers," a drama which failed. Mr. Wilkie Collins gives us twenty pages on Fechter in public and in private, and affords a more distinct idea of Fechter as an actor and as a man than can be derived from all the rest of the book: such is the advantage of understanding the art of writing. It only remains to be noted that the volume has the elaborate index common to all the series. The illustrations are good.

To pass to M. d'Heylli's well-made volume on Rachel's correspondence is to take a long step indeed. As Miss Field was too flighty, so is M. d'Heylli almost too serious and methodical. Instead of giving us at once such letters of Rachel's as he could get together, with such editing and prefacing as he might think best, he has seen fit to prepare a lot of little chapters on Rachel's family, on Rachel and the Comédie-Française, on Rachel and Samson, on Rachel in the provinces and on her travels, and in America and on her sick-bed, and so on and so forth; and into these chapters he has put many scraps of Rachel's writing and a few full letters of hers and much of his own prose. So we get a good deal of M. d'Heylli's opinion of Rachel, about which we care very little; and we get here and there a glimpse of the real Rachel, about which we care very much. And for this little we must needs be thankful, for it is not likely that the full story of Rachel's life will be told yet awhile, or would even bear telling just yet; and, after all, M. d'Heylli's is the best of the several books about her. Mme. de Bury's biography is of no great value; Jules Janin's 'Rachel et la Tragédie' is of no value at all, save as a psychological index to its author; and M. Beauvallet's 'Rachel en Amérique,' of which there exists an American translation, is a thoroughly empty performance. But M. d'Heylli is at least careful and industrious. He has got together many curious facts, though he presents them too emphatically; and in the chapter on Rachel and "Médée" he has prepared the way for M. Legouvé's study of Rachel in his forthcoming 'Études de Théâtre,' certain of which have already appeared in the *Temps*. Both M. d'Heylli and M. Legouvé give evidence in support of the opinion recorded by Mrs. Kemble recently, that there was at times something *canaille* about the great tragic actress. M. d'Heylli takes the muse from off her pedestal, and shows her to us as a woman and as a wit; and M. Legouvé has revealed for the first time the dangerous personal and diabolically feminine rivalry which she ventured on against Signora Ristori, and which she had wit enough to forego when she saw that success would cost more than failure. So far as a stranger and a foreigner can see into Rachel's character, she was one of the most extraordinary of women. She was positively plain, yet with success she bloomed into beauty or something very like it. She was without education, yet she held her own among the best and brightest people in Europe, and with no false shame or concealment. She had a common streak in her nature, an animal taint, and yet she played the purely spiritual heroines of French tragedy with an elevation never before equalled. It is easy to construct a list of paradoxes. What remains in the final analysis is that she was the finest actress of the century, as Kean was the finest actor. Like Kean's, her art had marked limitations, and she often played a series of effects rather than a whole character. M. d'Heylli's book is beautifully printed, and it is adorned with four etchings by M. Massard, one of which is from a portrait of Rachel by Müller, painted in 1852, and now owned by M. Alexandre Walewski, her son, and the grandson of Napoleon I. There is also a facsimile of a four-page letter; and there are various appendices, but no index.

Mme. Henry Gréville's story belongs among books about the stage because it is a tale of theatrical character. Of late, French novelists have been fond of writing stories of the stage and of making studies of histrionic character. We have had M. Cadol's 'Rose: Splendeurs et Misères de la Vie théâtrale,' M. Claretie's 'Troisième Dessous,' M. Monteil's 'Cornebois,' M. de Goncourt's 'La Faustin,' and M. Dreyfuss's most amusing 'Scènes de la Vie théâtrale'; and any one of these is better than this novel of Mme. Gréville's. It is lacking in knowledge of life behind the scenes, and its histrionic psychology is lamentably weak. Mme. Gréville's earlier tales of Russian life were delightful—in part, no doubt, because they were written out of the fulness of knowledge. 'Rose Rozier' shows signs of effort, and has none of the ease and natural flow of incident which made a slight sketch like 'Sonia' so charming. Even the style has fallen off, and we cannot but miss the simplicity and freshness of the elder tales. The chief situations of 'Rose Rozier' are old, and they are not skilfully combined—the joints creak. The main idea of this story was vigorously treated in M. Dumas's 'Comtesse Romani,' and again, in an animal and "naturalistic" fashion, in 'La Faustin'; here it is handled in a forced, artificial, and ineffective manner. The tone of the book is unhealthy.

Mr. Mowbray Morris was, until recently, the dramatic critic of the London *Times*, and the most of the present volume is reprinted from that paper. It was well worth reprinting. A great change has come over the English stage in the past ten or fifteen years, the signs of further improvement are abundant, and the theatre chances to be fashionable not only among the fast and frivolous, but also among the literary and the learned, though in a less degree. Still, there are many things in British dramatic art, as one may now see it in London, which are not as they should be, though an amiable public is pleased to be pleased. Mr. Morris rudely broke in on this dream of perfection; he has not been afraid to speak right out in meeting; he has managed to be on the right side when it was unpopular to be on the right; and he has at all times tried to remember that the drama is a department of literature, and not merely a branch of the "show business." The present compilation deserves to be read by all who are interested in the drama as it is and as it ought to be. Although calculated for the meridian of London, there is much that will apply further west. We have suffered here from the plague of British melodramas—"Youth" and "The World," and the like—and we are to suffer soon from Mr. Henry Irving's painful peculiarities of speech, all the more painful because of this actor's undeniable cleverness. On both of these subjects Mr. Morris frees his mind, and for this he has been roundly abused in a recent number

of the *Theatre*, the trade monthly of the British stage. The essays on "American Plays and Players" and on "Othello at the Lyceum" (when Mr. Booth acted with Mr. Irving) are less satisfactory, because Mr. Morris shares the customary British misunderstanding of all things American. But the book as a whole is one to read and to keep.

Mr. Larwood's theatrical clippings are of no great importance. A really good collection of theatrical anecdotes, containing only well-authenticated stories, and giving a reference for each, is still a desideratum. Mr. Larwood gives credit for his borrowings sometimes, but not always: he does not mention, for instance, the American book on the 'Theatres of Paris' from which he has taken half-a-dozen passages or more.

CHILDREN'S BOOKS.—II.

THERE can be no doubt that the time is coming when the phrase "general culture" will imply as thorough an acquaintance with Teutonic as with Greek mythology. The old Nibelungen Lied may not fully deserve the name of "German Iliad," but in connection with the Elder and Younger Eddas and the Völsunga Saga it supplies an abundance of imaginative material which is more and more attracting the attention of modern poets. Hebbel, Jordan, and Geibel in Germany, and Wm. Morris in England, have based some of their best works on this material; and Richard Wagner has, in his "Ring of the Nibelung," utilized and adapted some of the dramatic motives which abound in it. As the stage is the most effective means of popularizing a theme, the younger German generation is already almost as familiar with Wotan, Brünnhilde, Siegfried, and Gunther as with Jupiter and Juno, Mars and Venus. An opportunity is now afforded young Americans, too, of acquainting themselves with some of these poetic legends. Mr. James Baldwin's 'Story of Siegfried' (Scribner) tells in simple but vivid style some of the incidents which, in the old works above named, are grouped around this fascinating "hero." In the general arrangement, and in some of the details, the author has followed poetic precedent and deviated from the older versions; but all the principal features are retained. Young folks in reading this book will not only enjoy it for its own sake, but will prepare themselves for a better appreciation of Morris's "Sigurd the Volsung," and of those musical works which will before very many years take possession of our operatic stage. Mr. Howard Pyle's illustrations are much above the ordinary in imagination and in artistic feeling.

Roberts Brothers have reprinted the 'Proverb Stories' which were Miss Alcott's earliest work. They are hardly worth preserving, though two of them now have a kind of historical interest as showing, if not what people actually said and did in the days of the War, at least what a bright, enthusiastic woman imagined they did.

The author of 'Brothers of Pity' (E. & J. B. Young & Co.) has the faculty of combining scenes and incidents from natural history with the forcible teaching of needful lessons, and yet without the least suspicion of a perfunctory moral. Children who read the book will be kinder and gentler for the sake of old "Flaps" or for the example of the "Brother of Pity," a little lonely boy: "It must be much easier to play at things when there are more of you, than when there is only one." Some elders might take heed to "Toots's" master: "I am not fond of killing, myself, though I have a sort of conscience about knowing how it is done. I don't like leaving necessary executions to servants." The gipsy story is fine enough for something more than its whimsical setting, though that is not to disparage the quaintness and humor of the setting itself. It is a surprise to find a book so simple in style, so picturesque, whether it be by a mere hint, as of the robin redbreast lying dead in the moon-lit quarry, and the sexton beetles busy about him, or the fuller drawing of the home of the hedgehogs, chosen "because the fallen leaves were untrodden, the hyacinth and ragged robins ungathered by human feet and hands, . . . because the trees were unmarked by woodmen and over-populated with birds, and the water-rat sat up in the sun with crossed paws and without a thought of danger." The illustrations are of the best, and the design upon the cover is a happy epitome of the contents of the book.

'Snow and Sunshine,' by Mrs. Martha J. Lamb (White & Stokes), is a story something better than the "goody" type, though made up entirely of stock materials—the boy rich and mischievous, another ragged and good, etc.—and more than the usual quota of lost children and narrow escapes. The pictures are not bad, but they are almost at haphazard, and the text has an air of having been written up to them.

Harper & Brothers publish a small 12mo volume, by Mr. Geo. B. Bartlett, containing explanations of about one hundred 'New Games for Parlor and Lawn, with a Few Old Friends in a New Dress.' Many of these games have already been published as contributions by Mr. Bartlett to juvenile magazines. A large portion of them are intended to combine instruction with amusement, by drawing upon such knowledge as the players may have of geography, history, literature, etc., and many are calculated to interest parents as well as children. Even persons who make no practical use of the games will find the book pleasant reading.

The late Mr. W. H. G. Kingston's 'James Braithwaite, the Supercargo' (A. C. Armstrong & Son) is prefaced with a portrait of the author and a short biographical sketch. Mr. Kingston, to judge by his portrait, was a person evidently of a most kindly disposition, and one whose sympathetic character would attract and retain the affection of youth. In his books for boys he has always given a thoroughly religious tone to his narratives. From a farewell letter addressed to his juvenile readers while suffering from a mortal disease, one can readily see that he was a man of sincere convictions, and wrote from a full belief in the truths of revealed religion. When this has been said of a portion of the contents of the present volume, there is but little to add. 'James Braithwaite' is the story of an exemplary young man, who goes as supercargo on a trading voyage during the first years of the present century. The usual varied adventures befall him. He is engaged in sea-fights with the French, and his vessel is burned, wrecked, and disabled in action. From all this he emerges the exemplary young person and the chosen of fortune. The usual low-comedy element is introduced in the person of the conventional Irishman, who, in moments of the deepest depression to his companions, overflows with boundless spirits and sallies of wit.

The motive of Mr. J. T. Trowbridge's 'The Jolly Rover' is to show the evil influence of the dime-novel literature. Arthur Wing, a boy of fourteen, runs away from home with another lad, in search of adventures like those related in "*The Boys' Own*, a weekly paper, filled with stories of astonishing boy-heroes." In the course of a fortnight, he manages to be fleeced by a sharper, run down in a steamer, picked up at sea, and wrecked on the coast of Maine, and to rescue a man from drowning, besides other incidents of less moment. From this it will be seen that the story, in its way, is almost as sensational and improbable as those whose bad influence over boys the author deprecates. There is, in addition, a low tone about the first part of the story which seriously detracts, in our opinion, from its possible value in teaching boys true heroism. Still, it should be said that the tone improves when the bad companion disappears from the scene, and that Arthur's courage in caring for the fever-stricken fisherman is well brought out. On the other hand, the parents are represented as not making the slightest efforts to find their son, and, before two weeks are over, "his absence, though never out of their minds, had almost ceased to be spoken of in the little household." When he writes to them, they go for him and bring him home. Some of the illustrations are exceedingly poor.

Mr. C. H. Hanson's 'Stories of the Days of King Arthur' (T. Nelson & Sons) is a capital book for boys. The author asserts that it is "the most complete epitome of the Arthurian legends that has yet been prepared for the use of young readers"—no doubt with truth, for Mr. Lanier's 'Boy's King Arthur' consists entirely of extracts from Sir Thomas Malory, while the present compilation embraces many legends of which Malory took no account. It is a question whether the fulness of narration in Mr. Lanier's stories will not make up for the greater completeness of this selection; it favors uniformity of style, at any rate, for it is entirely in Malory's words, while here we have passages in the editor's modern style side by side with others in which "the quaint style of Malory" is preserved. The book is so good, however, that this slight blemish (if it be one) is hardly noticed. The illustrations, by Doré, are interesting, but deficient in clearness.

Six Months in Persia. By Edward Stack. Two vols. G. P. Putnam's Sons. 1882. With seven maps. 8vo.

THE impression received from this account of a journey through Persia last year is an unusually favorable one. This is doubtless in some degree owing to the fact that the author came to the country, not from England, but from India after an eight years' residence. Still, it is also true that Persia is prospering under the rule of the Shah. Telegraph lines have been established; some progress has been made in road building, though carts are still unknown except in one or two cities; brigandage has been put down with a strong hand, so that "for the European traveller in Persia the roads are almost invariably safe." There are some enlightened governors who show an interest in the welfare of their subjects by remitting taxes in time of want, and by removing oppressive burdens upon commerce. The country, generally, is at peace and free from crime, the Vice-Governor of Yezd, one of the largest and most prosperous cities, telling Mr. Stack "that he had hardly any work to do, scarcely a dispute to settle; and I saw for myself the emptiness of his court-yard—strange contrast to the environs of an Indian cutcherry." The price of arable land is high, and considerable sums are being spent by private owners on irrigation works. When it is added that Persia has no public debt, it will be seen what a vast contrast there is between her condition and that of the neighboring countries under Turkish rule. Even as compared with India, much can be said in favor of Persia. "The average level of the Persian peasant is higher than that of the Indian ryot." The villages are better built, and though parts of the land were still suffering from a two years' famine, our author "saw neither man, woman, nor child in a state of weakness from insufficient food." The manly and independent bearing of the Persian is also in strong contrast

to the obsequiousness of the Indian. He is courteous, hospitable, and singularly free from prejudice and caste exclusiveness. Nothwithstanding many evidences of misgovernment which Mr. Stack makes no pretence of covering or palliating, he concludes that "it is a nice question, what degree of misgovernment by one's own countrymen is worse than government by foreigners." The chapter in which he treats this subject might be read with profit by those who are interested in watching the proposed establishment by England of self-government in Egypt.

Persia can hardly be regarded as a land for enjoyable travelling. The greater part of the country is either salt desert or treeless tableland, with here and there patches of scant vegetation, skirted by ranges of bare rock whose only redeeming feature is their extraordinarily brilliant coloring. A scene like the following is a typical one:

"Before and below us, from left to right, stretched a plain five miles wide, backed by black mountains seamed with glittering veins of salt, and breaking at their bases into little hillocks and runlets of pure salt, sparkling in the sun. A broad white stream of salt ran down into the middle of the plain, and toward the right hand it expanded into a lake, the intense whiteness of which was heightened by contrast with the black rocks beyond."

In these regions the villages are few in number, and small, and even the great trade routes are comparatively deserted. There are other places, however, as the plain bordering upon the Caspian, where the vegetation is more luxuriant than that of India. Some of the mountain villages, also, where water is plenty, have a wonderful charm. Mahallat, a village lying to the north of Ispahan,

"is watered by a spring that wells up from the foot of the cliff, and sends fifty little channels down the streets and lanes and through the houses, here turning a mill, there watering a garden, now disappearing under a wall to course through a series of rooms whose half-opened doors show the sparkle of water in the gloom, and then appearing again, dashing across the road or lining the wayside with laughing waterfalls. The lanes are bordered and often quite overshadowed by trees, giving the prettiest vistas, while the open spaces have tanks of water under magnificent plane-trees. The richness and beauty of the foliage make one pause and look, and try to disentangle the many-leaved labyrinth overhead, where vines hang from the poplar-stems, and apple and walnut, pomegranate, mulberry, plane and willow, plum-trees and cherry-trees, fig and apricot, mingle their boughs and offer their fruits indiscriminately."

In such spots as these the traveller is wakened "in the night by the rapturous singing of nightingales, whose wild music burdened every bough."

Mr. Stack's route was from Bushire on the Persian Gulf to Shiraz and Persepolis, and from thence through the unexplored region to the south to Lar. Turning here to the northeast, he passed through Kirman, Yezd, Ispahan, and Teheran to the Caspian, thus traversing nearly the whole length of the country. He had the great advantages of a knowledge of the Persian language and literature, and of being accompanied by a Persian gentleman who made all the necessary arrangements at each stopping-place. Many opportunities were therefore offered him—all of which he improved—to see and talk with the chief men of the villages and towns through which he passed. The general intelligence which many even in the villages showed surprised him. Questions in regard to England's relations with Turkey and Russia were frequent, as were comments on the campaigns in Afghanistan. Once, at least, he was asked about Ireland. In the region bordering upon the Gulf, especially, the desire was sometimes openly expressed that England "would come up from the sea like a flood and take the country. We should all be content." His attention was particularly directed in every place to the land-revenue system, and the results of his inquiries are given in a valuable chapter at the end of the work. The land belongs either to the state or to private owners, and is divided also into wet land—that which is watered by rivers, springs, and wells—and dry land, or that which is dependent upon the rain. "In the winter, when seed-time approaches, all the lands are divided among the number of ploughs which the village can muster. Each sahra [tract] is parcelled out into longitudinal strips, and to every plough is assigned a strip or strips in each sahra, so as to make the apportionment fair. This is a matter settled by the elders of the village in conference with the plough-holders." The dry land, however, is generally the property of the state, and can be cultivated by "anybody who will take the trouble and risk of breaking it up and throwing seed into it on the chance of timely rain," on the payment of one-fifth of the produce. Naturally, the use of water by the various villages and farmers in each village has to be carefully regulated, and in some places the system is exceedingly elaborate. All the water of a spring or stream is divided first into taqs.

"The water of a village has so many taqs, each taq being twelve hours, measured approximately from sunrise to sunset, and again from sunset to sunrise. If there are eighteen taqs, the meaning is that the water-supply is sufficient to water the whole village in nine days. Each taq contains a certain number of tashts—suppose a hundred and thirty, which is a favorite number in the Yezd plain (sixty-five by day and sixty-five by night: sixty-five tashts in twelve hours)—each tasht is therefore equivalent to the use of the water-supply for a little more than eleven minutes; and this space of time is measured by floating a copper bowl with a needle-hole in its bottom in a large vessel of water: the duration of the tasht comes to an end as the bowl sinks. . . . The bowl, like everything else, is divided into six dungas by marks inside, so that, in the case supposed above, a man's right to the use of the water could be measured to within less than two minutes. . . . If he has a right to twenty tashts, then (to continue our previous illustration) he will receive water for 3¾ hours of the day or the night, as the case may be, every tenth day, or three times a month."

Mr. Stack is evidently a careful observer, and his book, though at times rather dry, gives a presumably accurate account of the present condition of that part of Persia which he visited. He is lacking somewhat in imaginativeness, as well as in curiosity, and so we miss the little graphic touches by which many records of travel are lightened. Unfortunately, also, to our mind, he has chosen to transcribe his diary apparently with little or no abridgment. As one day's experiences were often very like another's, and the scenery was generally monotonous, the reader is needlessly wearied. Had he condensed his narrative, and put an itinerary of his journey in an appendix, he would have escaped this difficulty. The spelling of Persian words and proper names which he has adopted is different from that of other recent writers, and is not always consistent, either in the text or on the maps. These latter are admirably clear, and in some places add materially to our geographical knowledge of the country.

Campaigns of the Army of the Potomac. A Critical History of Operations in Virginia, Maryland, and Pennsylvania, from the Commencement to the Close of the War, 1861-1865. By William Swinton, author of 'Decisive Battles of the War,' 'Outlines of the World's History,' etc. Revision and Reissue. Charles Scribner's Sons. 1882.

We have here a very old and valued friend in a new and attractive dress. The reputation of Mr. Swinton's 'Army of the Potomac' is so well established, that we need do no more than to say here, once for all, that it is a work well-nigh indispensable to the student of the war. The general correctness of the narrative, the spirit of fairness with which praise and blame are awarded, the perspicuity of the style, have always been admitted. Still, written as the book was, a year only after the war was over, many topics were more or less imperfectly treated, and a revision which should have embodied all that has been since ascertained, would have been a very great boon. This we do not find in the present edition, nor, in fact, does Mr. Swinton pretend to give it to us. All that he has done is to correct some trifling errors in the first issue, and to add twenty pages of notes in an appendix.

These notes are, however, valuable. The extracts from General J. E. Johnston's narrative give us that officer's views as to the impossibility of following up his victory at Bull Run, and as to his theory of defending Richmond in the spring of 1862 by a concentration of all the disposable forces of the Confederacy. Certain corrections are made in regard to the operations at West Point, under General Franklin, and as to the part taken by General Sumner in the battle of Williamsburg. The Fitz-John Porter question is elucidated by an extract from the Report of the Board of Officers convened by order of President Hayes, in which Porter's conduct is sustained, and the verdict of the court-martial shown to be without foundation, as well as by General Grant's letter to President Arthur of last December, in which he begs the President to enter upon an investigation of the case, and states his own belief that Porter had rendered efficient and faithful services. One of the most interesting of the appendices is a letter from General Humphreys about the battle of Fredericksburg, giving the share of his own division, the Third of the Fifth Corps, in that terrible assault.

We are particularly glad to find that Mr. Swinton has taken up the statement made by General Doubleday, in his work on Gettysburg, in Scribner's series of the "Campaigns of the Civil War," that, at the council of war held on the night of the 2d of July, General Meade desired to retreat. In a brief examination of the evidence, Mr. Swinton shows on what insufficient grounds the statement rests. A too brief note is devoted to the interesting question of the intention of General Lee in regard to the grand assault on the Federal position at Gettysburg on the afternoon of the 3d of July, whether the divisions of Hood and McLaws in Longstreet's corps were to participate in the movement or not. The question seems to be considered by Mr. Swinton as incapable of any satisfactory settlement, the evidence being so contradictory. General Humphreys supplies an extremely valuable sketch of the manœuvres in the autumn of 1863, when General Lee attempted against General Meade a flanking operation similar to that which had been crowned with success in the summer of 1862. This time he accomplished nothing of importance, and both on his march to Centreville and on his return to the Rappahannock he suffered a considerable loss.

These, and some other notes, also of interest to the student, constitute all that Mr. Swinton has seen fit to give us in his reissue. For these we are certainly grateful, for his topics are well selected, and every note in the appendix is a contribution to the history of the army. But we wish he had done more in the way of revising some, at any rate, of the statements in the text of his book. There is, for instance, often great reason to doubt the accuracy of his estimates of the numbers of the opposing armies. We do not believe that Grant had 140,000 men at the opening of the Wilderness campaign, and we have

seen good reason to suppose that Lee had considerably more than the 52,626 with which he is credited on page 413. General Meade, we happen to know, supposed that he crossed the Rapidan with only 125,000 men, including the Ninth Corps; and it is very difficult to make the total of the infantry foot up to 100,000 men. Twenty-five thousand more for the cavalry and artillery is a liberal estimate. As for Lee's force, Col. W. H. Taylor, in his 'Four Years with General Lee,' page 125, puts it at 64,000, instead of the 52,626 given us by Mr. Swinton.

Again, the narrative of the operations by which General Grant intended to capture Petersburg, in June, 1864, is at fault on a material point, in respect to which there has been ample time to procure correct information. We refer to the fact that Grant succeeded in getting his army across the James and before Petersburg two days before Lee arrived in the town. Mr. Swinton is certainly in error when he says, on page 506, that "during the night of the 15th, the van of Lee's army reached the town." The only troops in and about Petersburg during the 15th, 16th, and 17th were the troops under Beauregard's command, and it was not till the morning of the 18th that General Lee rode into the town with the leading division of the Army of Northern Virginia. We may regret that so little use was made of our advantage, but we shall all agree that the strategy by which such an advantage was obtained should not be overlooked by the historian.

For all that large class who have grown up since the war was over—since, in fact, Mr. Swinton's 'Army of the Potomac' has been out of print—this new edition will be invaluable. The book is, and always will be, a standard work.

China. By Robert K. Douglas. E. & J. B. Young & Co. 1882.

THIS compilation—the latest in the endless series of books about China—by the Professor of Chinese at King's College, prepared for the Society for the Promotion of Christian Knowledge, is considerably above the average. In England, Dr. James Legge, the Professor of Chinese at Oxford, represents the conservative view of ancient history and chronology, holding to the standards of native scholarship. Professor Douglas, on the contrary, following the drift of modern criticism, is the disciple of Mayers and Terrien de la Couperie; he places the authentic beginnings of Chinese history much later than Legge or Edkins, and sees in the Y-King, or book of sacred diagrams, on which Dr. Legge has consumed years of laborious scholarship, only collections of syllabaries common to Akkad and to the primitive Chinese. In the first chapter of the book now under notice, the author puts in a popular form the result of the researches which bid fair to demonstrate the common origin of the Chinese and the Euphratean nations. This same subject, we may remark in passing, is discussed in the current number of the *Quarterly Review*. The Susian text interpreted by Dr. J. Oppert, the Babylonian studies of Professor A. H. Sayce, and the identifications of La Couperie, the specialist in archaic Chinese epigraphy, furnish the materials which Professor Douglas has here digested in popular form.

To the question, Where did these people (the Chinese) come from? the answer which recent research gives is, From the south of the Caspian Sea. In the chapter on the language, the philological reasons leading to this discovery are set forth at some length. In addition to the migration into the northern bend of the Hoang-Ho, mentioned in the books of the northern Chinese, there is also proof of another settlement at the same time, as far south as Annam, of which the classics make no mention. In all probability, as Professor Douglas thinks, the outbreak in Susiana of possibly some political disturbance, in about the twenty-fourth or twenty-third century B. C., drove the Chinese from the land of their adoption, and they wandered eastward until they finally settled in China and the countries south of it. They brought with them the rudiments of western civilization. The resemblance between the name and attributes of the legendary founder of the Chinese social system, Hwang-Ti, or Nak-kon-ti, and those of Nakhunte, the chief of the Susian gods, is pointed out; and the striking similarities in the Chinese and Babylonian systems of chronology, astrology, astronomy, weights, etc., etc., seem, when thrown in the scale with the arguments from language, to demonstrate that early relationship existed between the people of Akkad and the Chinese. The Kwei people, whom the immigrants found on the soil of what is now China, and who are mentioned in the classics as having presented their conquerors with books and assisted them in music and astronomy, are conjectured by La Couperie to have been Aryans. Remnants of these aboriginal people still exist in northern Cambodia; while the Fung people, who delighted the ancient Chinese Emperor with their skill in dancing and singing, and made him presents of their books, still live in southwestern China. These proper names, Kwei and Fung, are to be read as phonetics; but as the words mean also "tortoise" and "phœnix" respectively, it has been universally accepted by Chinese writers that the Kwei-shu, or Book of Kwei, was a sacred writing on the back of a tortoise, and that some phœnixes—birds of good omen—visited their ancient Emperor. The origin of the character Ti in Shang-Ti, which Dr. Legge would translate by Jehovah or Theos, and on which many Protestant missionaries propose to build the foundations of Christian theology in Chinese, but which the Roman Catholics are forbidden to use, is not accounted for by the Chinese themselves. Professor Douglas thinks it is in all probability nothing more than the eight-pointed star of the Akkadians, meaning "ruler," which with Shang may be translated "Supreme Ruler," though in both Chinese and Akkadian it is also applied to temporal rulers.

The other eighteen chapters of this book, though containing text much fresher than the illustrations, call for no special notice.

BOOKS OF THE WEEK.

Appletons' Hand-Book of Winter Resorts. D. Appleton & Co. 50 cents.
Belt and Spur: Stories of the Knights of the Middle Ages. Scribner & Welford.
Blackmore, R. D. Lorna Doone. Harper's Franklin Square Library. Two-column edition. 25 cents.
Brown, R. H. Stellar Theology and Masonic Astronomy. D. Appleton & Co. $2.
Calvert, Rev. W. The Wife's Manual; or, Prayers, Thoughts, and Songs. Boston: Roberts Bros. $2 25.
Capsadell, L. The Complete Guide to Silk Culture. W. B. Smith & Co.
Century Magazine. June to October, 1882. The Century Co.
Champney, Lizzie W. Three Vassar Girls Abroad. Boston: Estes & Lauriat.
Clarke, J. E. Chatterbox. 1882. Boston: Estes & Lauriat.
Conway, M. D. Emerson at Home and Abroad. Boston: J. R. Osgood & Co.
Cozzens, S. W. The Young Silver Seekers. Boston: Lee & Shepard. $1.
Dindorf, G. Homeri Ilias. Libri I.-XXIV. Chicago: Townsend MacCoun.
Duncan, Prof. P. M. Heroes of Science: Botanists, Zoölogists, and Geologists. E. & J. B. Young & Co. $1 20.
Flagg, I. Anakreonteia: Anacreontics, Selected and Arranged, with Notes. Boston: Ginn, Heath & Co. 40 cents.
Fromentin, E. The Old Masters of Belgium and Holland. Boston: J. R. Osgood & Co.
Garnett, J. M. Beowulf: An Anglo-Saxon Poem. Boston: Ginn, Heath & Co. $1.
Gautier, T. My Household Pets. Boston: Roberts Bros. $1 25.
Gibbon, C. Of High Degree. Harper's Franklin Square Library. 20 cents.
Greéy, E. The Wonderful City of Tokio. Adventures of the Jewett Family. Boston: Lee & Shepard. $1 75.
Hanson, C. H. Homer's Stories Simply Told. Thomas Nelson & Sons. $1 50.
Happel, J. Das Christentum und die heutige Religionsgeschichte. Leipzig: Otto Schulze.
Harper's Young People. 1882. Harper & Bros.
Henderson, H. Practical Hints on Camping. Chicago: Jansen, McClurg & Co. $1 25.
Howells, W. D. A Foregone Conclusion. Their Wedding Journey. 2 vols. Edinburgh: David Douglas.
Ingersoll, E. Knocking Round the Rockies. Harper & Bros.
Kellogg, E. The Live Oak Boys. Boston: Lee & Shepard. $1 25.
Knox, T. W. The Boy Travellers: Egypt and the Holy Land. Harper & Bros.
L'Estrange, Rev. A. G. The Friendships of Mary Russell Mitford. Harper's Franklin Square Library. 25 cents.
Linton, W. J. Rare Poems of the Sixteenth and Seventeenth Centuries. Boston: Roberts Bros.
McMichael, W. Konneautt Lake: A Story of Early Times in Northwestern Pennsylvania. W. B. Smith & Co. $1.
Millinckrodt, J. F. Novissimum Organon: The Certainties, Guesses, and Observations of John Thinking-machine. St. Louis: Hugh Hildreth Printing Co.
Mueller, L. Q. Horatii Flacci Carmina. Chicago: Townsend MacCoun.
Olssen, W. W. Personality: Human and Divine. Thos. Whittaker. 75 cents.
Otis, J. Mr. Stubbs's Brother. Harper & Bros.
Parsons, S. B. A Treatise on the Propagation, Culture, and History of the Rose. New ed. Orange Judd Co. $1 50.
Perry, T. S. The Life and Letters of Francis Lieber. Boston: J. R. Osgood & Co.
Prentiss, Elizabeth. Life and Letters. A. D. F. Randolph & Co. $2 25.
Reiss, W., and Stübel, A. Necropolis of Ancon in Peru. Part 8. Dodd, Mead & Co. $7 50.
Rolfe, W. J. Shakspere's Henry VI. Parts 1, 2, 3. Harper & Bros.
St. John, C. Natural History and Sport in Moray. Edinburgh: David Douglas.
Schmid, R. The Theories of Darwin. Chicago: Jansen, McClurg & Co. $2.
Sir Roger de Coverley. Illustrated by C. O. Murray. D. Appleton & Co. $2 25.
Spofford, Harriet P. Hester Stanley at St. Mark's. Boston: Roberts Bros. $1 25.
Symonds, J. A. Renaissance in Italy. Italian Literature. In 2 vols. Henry Holt & Co. $7.
Tennyson, A. "Ring Out, Wild Bells." Boston: Lee & Shepard. $1 50.
Vincent-Hurlbut. Lesson Commentary on the International Sunday-School Lessons for 1883. Phillips & Hunt. $1 25.
Von Glümer, C. A Noble Name: or, Dönninghausen. Philadelphia: J. B. Lippincott & Co. $1 50.
Whitney, Prof. J. D. The Climatic Changes of Later Geological Times. 3 Parts. Cambridge, Mass.: Museum of Comparative Zoölogy.
Williams, F. H. Theodora: a Christmas Pastoral. Philadelphia: J. B. Lippincott & Co. $1.
Zola, E. A Mad Love. Philadelphia: T. B. Peterson & Bros. 75 cents.

HENRY HOLT & CO.
HAVE READY:
THOMAS HARDY'S
NEW NOVEL,
Two on a Tower.
16mo (Leisure-Hour Series), $1.

Heine's Romantic School.
Translated by S. L. Fleishman. 12mo, $1 50.

Italian Literature.
By J. A. Symonds. 2 vols. 8vo, with portrait of the author, $7.
These volumes complete Mr. Symonds's great work on the *Renaissance in Italy.*

New Arabian Nights.
By R. L. Stevenson. 16mo (Leisure-Hour Series), $1.

Fanny Kemble's Records of Later Life.
Large 12mo (uniform with 'Records of a Girlhood'), $2 50.

HENRY HOLT & CO., Publishers,
NEW YORK.

ASTRONOMY CORRECTED. Old Theories of the Motions and Creations of the Solar System shown to be error. The Better Theory. Price 50 cts.
By H. B. PHILBROOK, 13 and 15 Park Row, N. Y.

The Nation.

NEW YORK, THURSDAY, NOVEMBER 23, 1882.

The Week.

FROM time to time we are told that the organizations formed by workingmen have been largely extended and perfected; that they command so-and-so many hundred thousands of votes in the country; that they will soon run candidates of their own for State and national offices; and that they are going to revolutionize our politics from top to bottom. Such statements seem to make but little impression upon the general public, but they are undoubtedly to a very large extent believed by the workingmen themselves. If there is a State in which workingmen's organizations should be able to acquire political strength, it is Pennsylvania. Some three or four months ago, indeed, the leaders of the "workingmen's party" in that State proclaimed that they had the controlling power of the future in their hands, and that they should not be in the least surprised if they carried the State election this year. They pretended to have 75,000 voters enrolled in their organizations as a nucleus round which all outside sympathizers with their cause would rally. They nominated Thomas A. Armstrong, of Pittsburgh, as their candidate for the Governorship, who had already been nominated by the Greenback party, so as to concentrate the efforts of all those elements whose objects were in any way akin to each other. Inasmuch as the Greenback party of Pennsylvania had polled about 20,000 votes in the election of 1880, their alliance seemed to be a desirable one. Mr. Armstrong thus became the candidate of the "Greenback-Labor party." When the votes were counted it was found that he had received about 22,500 of them, only 2,500 more than the Greenbackers had polled in 1880, and 52,500 less than the Workingmen's party pretended to have enrolled in their organization.

There is much perturbation in Massachusetts over the choice of Senator Hoar's successor. It seems to be taken for granted that he is not to have another term, though no definite reason is given. His capacity, and integrity, and fidelity are not denied by anybody, but, as well as we can make out, the fault found with him is that he is zealous about things on which he ought to be lukewarm, and lukewarm about things on which he ought to be zealous, and is, accordingly, not in sympathy with what seem to be the dominating tendencies of the party at this moment. For instance, he is all aglow about the tariff just as it is, while his attitude toward civil-service reform is one of great calm, to say the least. Then, those who most fully concede his honesty, feel as if the honesty of a man who could approve of the River and Harbor Bill is, like a loaded gun, a dangerous thing to have in the house. In addition to this, too, the triumph of Butler is looked upon as in some mysterious way a popular condemnation of "the Hoars," and an intimation that there ought to be a change in the Senatorial delegation. Governor Long is more talked of than anybody else, and seems to be the one generally recognized "rising man" in Massachusetts politics at this moment; but he is young, and can wait, and probably would be disposed to subordinate his claims to Mr. Hoar's if the friends of the latter were in a better humor and showed more reserve in vindicating him.

Mr. C. F. Adams, jr., has, in the Springfield *Republican*, suggested the name of Gen. Francis A. Walker for the benefit of those who at crises like the present are on the lookout for "the ideal thing." There is no question whatever that in these days General Walker is exactly the kind of man Massachusetts ought to have in the Senate, and there is just as little that he is the kind of man she must have, if she is determined to retain, or some would say regain, the influence she possessed in the national forum during the long conflict with slavery. The times are changed, and both States and men need to change with the times if they wish to be "heroes in the strife." But unfortunately General Walker has "gone back" on Mr. Adams by declaring for Mr. Hoar—a fresh illustration of the uncertainties of politics.

The appointment of Mr. Trescot and General Grant as a commission to negotiate a commercial treaty with Mexico leaves, as the French say, much to be desired. It is no impeachment of the perspicacity or sagacity of these gentlemen to say that the negotiation of a commercial treaty by a lawyer and a soldier is a decided and not very useful novelty in statecraft. Neither of them can possibly know enough of trade or commerce, past, present, or future, to negotiate a treaty of this sort properly. It ought to be done by experienced business men, with the aid, perhaps, of a lawyer. We ought at the same time to point out to our protectionist friends that a commercial treaty will promote that accursed thing, a freer interchange of commodities. The Mexicans will not enter into a treaty binding them to buy more of our goods than they are now doing for gold, yet this is the only kind of treaty which, on the protectionist theory, could do us any good. An arrangement for more barter will draw after it the ruin from which the tariff has so long saved us. A true commercial treaty on the American plan ought to bind the Mexicans to send a certain amount of gold in a bag for the purchase of goods into this country every year, or else to move into this country and consume our manufactures on the spot.

The Chicago Board of Trade, after some years of experimentation, has decided to rescind the rule which prohibits "corners in grain." This rule did not assume to prevent persons from buying up all the grain in the market, but if they did so, and then bought options for still more grain which the sellers could not deliver, the Board would not recognize such option contracts, and would not enforce them by expelling the defaulting members, but would, in case of appeal, fix a price at which contracts should be settled. A few years' experience has shown, as might have been anticipated, that short sellers, instead of relying wholly on their own wits and exercising prudence to keep out of the hands of the cornerers, have relied largely upon the Arbitration Committee of the Board to help them out of scrapes. In other words, they have taken more risks than they would have taken if the anti-corner rule had not been in force. Things have gone on from bad to worse till a contract on the Board of Trade has ceased to have any binding force, except in the sense of honor of individual traders. Arbitrations have multiplied, and lawsuits have followed on the heels of arbitrations, and demoralization has become so marked that the trade of the city has been perceptibly lessened. Under these circumstances, the Board has decided, wisely, to repeal the anti-corner rule, and let bulls and bears look out for themselves.

The recent decision in the telegraph-consolidation case seems to have had a remarkable effect upon Mr. Jay Gould's views of the proper management of stock companies. An application has been made in his behalf to the Attorney-General for leave to begin a suit in the name of the people to vacate the charter of the Mutual Union Telegraph Company. If the case ever comes to trial there is likely to be a great deal of "laughter in the court." Mr. Gould says in his affidavit that, although the stock of the company is limited to 12,000 shares and $1,200,000, it has issued in excess of that limit to the amount of 80,000 shares and $8,000,000. It is further complained that no adequate consideration has been paid for this stock. There will be laughter at this, because, in such a state of facts, it would be expected that Mr. Gould would appear as a defendant rather than a plaintiff. People will remember the abortive proceeding of another Attorney-General to dissolve the Manhattan Elevated Railway because it had abused its franchise and issued many millions of stock for which there was nothing to show. They will recall the manipulation of the shares of the Western Union Telegraph Company, and other watering processes, with which the name of Jay Gould is not wholly unconnected. The facility with which he turns against his opponents the weapons of accusations of illegal and unscrupulous methods so often directed against himself, will afford much amusement. If his course implies a real change of heart, if he has resolved henceforth to countenance none but regular and honest methods in the transactions of stock companies, very few will doubt that a period of reform has set in with great violence.

Mr. F. B. Thurber's monograph on postal telegraphy, which comes before the public in the form of a report to the Board of Trade and Transportation, favors the purchase by the Government of the existing telegraph

lines in the country, to be operated hereafter as a branch of the Post-office Department. Mr. Thurber estimates that the actual cost of the Western Union lines has not exceeded $16,000,000, yet he favors their purchase at their present market value—*i. e.*, $80,000,000 at 82, or $65,600,000 plus the outstanding bonds of the company. The other companies—the Mutual Union, the Baltimore and Ohio, the American Rapid, and sundry small companies scattered here and there—would be entitled to the same treatment, which would bring the total cost, including their bonded indebtedness, up to $100,000,000 or more. All this for property which, by the hypothesis, could be duplicated for, say, $25,000,000. The proposition strikes us as sufficiently generous, and one which the Western Union Company would readily accept, considering the vulnerable nature of a property exposed to such incessant competition. We doubt whether Congress could be induced to pay such a bonus for the plant, but, on the other hand, it would be unfair for the Government to employ the revenues derived from the whole people to destroy the property of a portion. If the Western Union can make head against its competitors, present and prospective, well and good. The Government ought not to interfere either to confiscate its property or to save it from apprehended loss. The time has not come, in our judgment, for embarking in this enterprise. Mr. Thurber makes light of the objection that the civil service of the United States is not adapted to the assumption of new duties of enormous magnitude like that of operating the telegraph system of the country. He says that the argument would be equally valid to justify the abandonment of the Post-office Department to private enterprise. This is like saying that a family which is already afflicted with measles might as well have the smallpox also. The Government has the Post-office now, and a pretty mess has been made of it, as shown by the Star-route trials. The Post-office is a much less complicated machine than the telegraph, and the chances of corruption and botch-work would be far greater in the latter than in the former.

The greater complexity of the telegraph system than the postal consists mainly in two things: first, in the fact that all messages transmitted pass under the eyes of the transmitters, and the contents become known to them (except in the few cases where cipher is used), whereby the whole system becomes in its nature confidential; second, in the fact that the means of carriage have to be provided by the carrier of telegraphic messages, whereas the means of carrying letters are not provided by the Post-office, but only the arrangements for delivery at the end of the route. We are far from saying that these difficulties are insurmountable by the Government, but we do say that they ought not to be assumed until the public service is organized on a business basis. What would be the effect upon business of putting the chief offices of the telegraph service up as rewards to the Mikes, Barneys, and Johnnys of the Republican party, and then turning them all out at the end of four years in favor of the Mikes, Barneys, and Johnnys of the Democratic party? It may be thought that the abuses revealed by the Star-route trials are merely analogous to the defalcations which are going on more or less in banks and mercantile houses. We cannot agree to this view. These are analogous to defalcations of postmasters, and robberies of letters by carriers and clerks, which are not infrequent. If it had been shown that the Superintendent of the Western Union Telegraph had been appointed for political reasons, in the first place, because he was "strong in Indiana," and had then been systematically robbing the company of millions of dollars for years and years, such a case would be analogous to what has been shown in the Star-route trials.

The Star-route proceedings seem to resolve themselves into an inquiry into the causes of the failure of the first trial. This investigation is interesting, and may be important, but it is much more to the purpose to push on to a second trial and secure a conviction of the thieves. That the whole policy of the defendants has been not to show their own innocence directly, but to discredit the prosecution indirectly, is sufficiently clear. One attempt in this direction is described by Mr. J. A. Walsh in a letter to Attorney-General Brewster. He repeats the story of his appearance before the Grand Jury of the District of Columbia in June, 1882, when Brady and Price were indicted on his testimony, which, he says, was equally adequate to the indictment of Senator William P. Kellogg; of his reappearance before another Grand Jury in the following month, when an indictment was refused on his testimony, and of the introduction by somebody to the jurors of a copy of the contested Senatorial election case of Spofford and Kellogg. Mr. Walsh argues that the improper use of this document and the course of the jury in the matter were intended to save Kellogg, and to throw doubt upon the testimony of Walsh in the Star-route trial, for which he had been subpœnaed as a witness. Nobody will be inclined to argue on the other side of this proposition. His account of the behavior of the members of the Grand Jury throws some light on the composition of juries in the District: "Such of them as did not tilt their chairs listlessly against the walls, resolved themselves into cross-examiners in the interest of the persons against whom I was testifying, with the apparent motive of trying to exhaust the case of the Government in the Grand Jury room." The best use to which the Attorney-General can put this report is in redoubling the efforts of the prosecution to get a respectable jury on the next trial. Mr. Walsh urges him to inquire who furnished the Grand Jury with a copy of the Spofford-Kellogg case. However important such an inquiry may be, it can safely be postponed to the more pressing business of convicting Dorsey and Brady and the rest.

The slackening in railroad construction has diminished the demand for steel rails, so that the price has fallen off from about fifty dollars to forty-two dollars within three months. Two of the Chicago companies, the Joliet and the North Chicago, are accordingly going to close their rolling mills, the reason being, of course, the very sufficient one that they cannot make rails at forty-two dollars at a profit. But Mr. O. B. Potter, the President of the North Chicago Company, in explaining the matter to a reporter, was not content with this. Nothing short of "three causes" would satisfy him. Besides the decline in prices, he gives high wages, which is of course included in the decline in prices, and the "probability that Congress will reduce the tariff to $14 per ton from $20, as at present." But it is $28 at present, and what is talked of is a reduction to $20. The allusion to the tariff, in fact, looks as if there was going to be some "closing-down of works" and "dismissal of large bodies of skilled laborers" this winter to prevent Congressional interference with the tariff. It would, in fact, apparently be impossible to provide a tariff that would meet the wants of our iron and steel friends. When they have a high tariff, they ascribe their good times to its beneficent operation. When, under its stimulus, they make more iron than they can dispose of, they ascribe their bad times to the fear that it will be reduced. The truth is, that their perfect tariff would provide for the purchase of their surplus production by the Government, whenever the home demand fell off or the market was overstocked. No matter how high the tariff is made, they are sure to work up to it and over it, and then have no purchasers to turn to when the home consumption fails them.

The negro voters in Beaufort County, South Carolina, where they number 5,415 to 336 white, have been playing sadly into the hands of their enemies at the last election. They have elected one of the most notorious thieves of the Moses period, named Gantt, to the Legislature. He was at that time also a member of the Legislature, and was convicted of taking bribes freely, and swore himself that Treasurer Parker gave him $100 to vote for one bill. In fact, his terms were so low as to make him a discredit to his own class. He has now been restored to public life. The worst revival is, however, that of Whipper, whom some of our readers will doubtless remember as one of the pattern colored rascals of 1875 or thereabouts. In that year his brother rascals actually elected him as Circuit Judge, along with Moses, the ex-Governor. He had been a member of the carpet-bag Legislature, where he stole very profusely. He furnished his rooms handsomely at the public expense, and he took bribes right and left, and defaulted to the tune of $12,000 when Commissioner of the Sinking Fund. He ought undoubtedly to be in the penitentiary, but the colored voters apparently like that kind of man for Probate Judge. It must be acknowledged, however, that the example the whites set them is not what it ought to be. It is not difficult in many parts of the North for a man convicted of corruption to get back to Congress or the Legislature, if he has a brazen front and does not flinch. There are cases of this kind in nearly every State. The remedy, too, seems to lie rather in the hands of the knaves themselves than in those of the people. Charges are now so common, and are reëchoed in so many newspapers, that

the moral ear of the public has grown a little dull, while its forgetfulness is proverbial. So that if the accused does not run away or resign, and boldly declares that he is innocent as a lamb, he stands a good chance of regaining or retaining his place; but, to be completely rehabilitated, he has generally to give up his old tricks. It is generally owing to his unwillingness or inability to do so that his final overthrow is effected.

Mr. Henry George delivered a lecture on Monday evening, apparently in support of the thesis that, "when God sends mouths he sends meat"; that is to say, he demolished Malthus over again, using the arguments to that end which are found in his work on 'Progress and Poverty.' De Laveleye, the Belgian professor, who has mixed so much fine sentiment in his own works on political economy that it is hard to separate his facts from his moral theories and religious musings, reviews Mr. George's 'Progress and Poverty' in the current number of the *Contemporary Review*. He shows that Mr. George's work has no scientific basis worth mentioning, but follows him in a flight through the empyrean of lofty hopes and fervid diction. The value of this class of writing would be much heightened if the writers would serve their facts and their fancies in different courses, so that the public could choose the course which they prefer. The majority would undoubtedly prefer the latter, because fine feeling is almost universally distributed—a fortunate circumstance for the human race—while the craving for facts is confined to a few, of whom Darwin and Malthus are melancholy examples.

There has been trouble at Opelika, Ala., the citizens having had a little riot, in which three of their number were shot. At Forest City, N. C., there has also been trouble among "the most prominent citizens in the place." First, Barnes King shot William Suttle, and then Suttle shot him. Then Gaither Front, not being fully satisfied with King's condition, shot him again twice. Whereupon John Harrell coming up, also in a critical and discontented frame of mind, fired two shots into Suttle. We believe, but are not quite sure, that both King and Suttle are dead. It now remains for Gaither Front and John Harrell to dispose of each other, and quiet will reign once more among the prominent citizens. These occurrences, we need hardly say, will be much regretted all over the South, and as Suttle and King regret them also, and Front and Harrell are going to regret them, it would be discourteous to make any further allusions to them. The three citizens who were killed at Opelika are probably sorry also.

The war between Austria and Russia, for which extensive preparations were made in this city on Saturday by some of our contemporaries, came to an end, as we anticipated, on Monday. The members of the Hungarian Delegation who raised the alarm are, it is announced, unofficial persons of no account, who are allowed to wring the neck of the Russian eagle without causing any anxiety.

The complete collapse of the opposition to the new rules of procedure introduced by Mr. Gladstone in the House of Commons seems to indicate beyond question some kind of understanding with the Irish members, who are refraining from all serious opposition. The Tories believe this, and are very indignant over it, as if it were an act of peculiar baseness, and are trying to get at the "true inwardness" of it by a committee of inquiry into what they call the "Treaty of Kilmainham," meaning thereby an alleged arrangement under which Mr. Parnell was liberated from jail. Mr. Gladstone, however, totally denies any such arrangement, and challenges the inquiry. The true reason of Parnell's liberation undoubtedly was that there was found to be no use in keeping him shut up any longer, and a letter of his opened up the prospect that he would behave differently in the House when he got back. Mr. John Morley says, in a late article in the *Nineteenth Century*, on the "Irish Revolution," that it is a point of honor with many English members not to accept any Irish measure proposed by an Irishman, which is quite true. But this fuss over "the Treaty of Kilmainham" shows that there are many also who think that a private arrangement with Irish members, such as is made by the Ministry with English or Scotch members at nearly all important crises, to make special concessions in return for support or for abstinence from opposition, has something peculiarly dreadful about it. If Mr. Gladstone has disarmed Irish opposition, however, by promises of legislation, he has opened up the true road to Irish pacification.

The most formidable piece of evidence yet produced against Arabi Pasha is that of Suleiman Daud, who says he received orders from him to burn Alexandria and murder the Khedive. This is important, because it is admitted on all hands that if Arabi had a hand in the destruction of the city nothing can save him. Arabi's only answer to this is that Suleiman wanted to burn the city himself, and that he (Arabi) tried to prevent him, but could not do so. This defence, however, cuts both ways, because it weakens the plea that Arabi was the Commander-in-Chief of the National forces, and therefore, as a prisoner of war, not responsible to anybody for the manner in which he met the invaders. If his story about Suleiman be true, it makes himself simply one of a party of mutineers, each of whom did whatever seemed good in his own eyes. If, as is expected, Nuri Bey, who commanded at Ramleh, should corroborate Suleiman, it would undoubtedly go hard with Arabi. Anyhow, the precise position of England in the proceedings grows more and more puzzling. The theory of it now seems to be that England interfered for the complete restoration of the Khedive's authority on every matter except the punishment of Arabi. When one asks why this exception is made, the answer is that the British public does not believe the Khedive would treat Arabi fairly; but it is hard to see why if he cannot be trusted with Arabi he can be trusted with the other five millions of Egyptians.

The fuller details received of the dispute between England and Spain, over the Cuban refugees, make it plain that it has a tolerably serious side. The refugees are General Maceo and two others, who figured prominently in the Cuban insurrection, and have since their surrender been confined at Ceuta, a Spanish convict station on the African coast. They recently made their escape to Gibraltar by way of Tangiers, and as soon as they disappeared the Spanish Minister gave notice to the British authorities at Gibraltar that "three convicts" had escaped, and asked that if they turned up at Gibraltar they should be detained. Orders to that effect were accordingly given to the English police, without a suspicion that the runaways were really political prisoners. When they landed at Gibraltar they were arrested and carried before a police magistrate, who, apparently, had misunderstood his instructions, for he forthwith, without any inquiry, sent them across the lines and delivered them to the Spanish gendarmerie. Now, it appears that there is an extradition treaty between England and Spain, very recently concluded, but it of course does not provide for the surrender of political criminals, or for the surrender of any criminals except after inquiry before a magistrate to establish the fugitive's identity, and to show that the offences with which he is charged are within the purview of the treaty. No such formality, or indeed any formality, was observed in the present case. The magistrate failed in his duty, and the Spanish Government got the men, if not under false pretences, by concealing a material fact. Under these circumstances the British Government have naturally asked for their return, and the Spanish Government, after full deliberation, have refused it. In other words, they have announced their intention to take advantage of the mistake.

It is, however, not at all likely that they will be allowed to keep them in peace. However unwilling Mr. Gladstone might be in the present state of European politics to put pressure on a Power as weak as Spain, he can hardly avoid doing it in a case like the present which touches the British right of asylum, a point on which the Liberal party has always been extremely sensitive. He would probably have in coercing Spain what he has not had in putting Arabi down—the united support of his party. There are some subjects on which all Englishmen are Jingoes, and the security of political refugees on British soil is one of them. The Spanish defence is, we believe, that they found these men on Spanish soil, and that if they came there by a blunder of the British police, it is no affair of theirs. But then the blunder was undoubtedly due in the first instance to the piece of deception practised by them in giving notice of the escape of the "three convicts." This was well calculated to throw the British off their guard, because they, of course, could hardly suppose that the Spaniards would ask them to be on the lookout for criminals whom, under the treaty, they could not surrender. In fact, the plea is one which, if adopted as it is said to have been by the Cabinet, would do little credit to Spanish notions of honor.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 15, to TUESDAY, November 21, 1882, inclusive.]

DOMESTIC.

A CABINET meeting was held in Washington on Friday. All the members except the Attorney-General were present. The principal questions before the several executive departments were discussed, with a view to their consideration in the President's annual message to Congress.

Chaplain Mullens, who has charge of education in the Army, in his annual report to the Secretary of War says that considerable progress has been made in the work of organizing and establishing post-schools and reading-rooms, and that there is a growing interest in these institutions among both officers and enlisted men. The average number of pupils who attended the day and night-schools during the year at all military posts and camps was as follows: Enlisted men, 1,586; children of enlisted men, 987; children of officers, 970; children of civilians, 412.

The Chief of the Secret Service Division of the Treasury Department has submitted his report. It shows that the total number of arrests made by Secret Service agents and by local authorities for which a reward was paid from the funds of the Division was 335, the majority of which were for possessing, dealing in, and manufacturing and passing counterfeit money. The total amount of counterfeit money captured during the year was $8,830,-124 51.

The Chief of the Bureau of Statistics reports that during the month of October there arrived in the customs districts of Baltimore, Boston, Detroit, Huron, Minnesota, New Orleans, New York, Passamaquoddy, Philadelphia, and San Francisco 45,965 immigrants. The number of immigrants arrived in the month of October, 1881, was 67,929.

Secretary Folger has decided to allow holders of three per cent. bonds of large denominations to exchange them in corresponding amounts for bonds of smaller denominations, provided such holders are willing to waive any rights they may have, founded on priority of numbers, and consent to take newly numbered bonds.

All the heads of divisions in the Post-office Department at Washington deny positively that there is any intention of making extensive removals of employees in their divisions. Assistant Postmaster-General Hatton indignantly denied the report that a number of clerks in his department, who had failed to respond freely to the assessment circular, were to be removed. He said he did not know whether his subordinates had paid their assessments or not, and that it was untrue that he had a list of those who had failed to contribute.

The Post-office Inspectors who recently examined the free-delivery system of the city of New York, have submitted their report to the Department. They found the service, so far as deliveries and collections are concerned, conducted with more liberality than is really demanded by the patrons of the office.

It is said that at the coming session of Congress the friends of cheap letter-postage will renew the efforts to secure a reduction of the letter rate from three to two cents, and that in view of the flourishing condition of the postal revenues they have strong hopes of success.

The President has directed that all the Executive departments at Washington be closed at noon on Saturday next in honor of the opening ceremonies of the Garfield Monument Fair at the Capitol. The President and the members of the Cabinet will participate in the ceremonies. Justice Stanley Matthews was to have delivered the oration, but he refused to serve unless the Committee could secure a suitable hall, and this they failed to do.

The Congressional Committee appointed to investigate the condition of the Mississippi River, examined three river pilots at Helena, Arkansas, on Sunday, who agreed in testifying that, in their opinion, the river had not been improved by the Government work on it during the last twenty years, beyond the taking out of snags and the putting up of lights. They did not believe it to be possible to confine the river within prescribed limits. The Committee have declined a reception tendered them by the various commercial bodies of New Orleans.

Mr. Hayes, President of the Tariff Commission, in an interview said that the report of the Commission will be made to Congress when it reassembles, and that it will be found to be an intelligent survey of the tariff and measures of reform. Mr. Hayes says that the Commission has been unfairly treated by the politicians, but that the public will see, when the report is presented, that it has done its work faithfully and properly.

The Canvassing Board appointed by the Edmunds Utah Commission, and consisting of three Gentiles and two Mormons, canvassed the vote for Delegate from Utah, and found 23,039 votes for Cain (Mormon) to 4,880 for Van Zile (Gentile). Van Zile protested against the vote for Cain being counted, on the ground that he is a polygamist, but the Commission overruled the protest, on the ground that it was not specifically charged and proved that Cain is actually a polygamist.

Governor-elect Pattison of Pennsylvania has declined the militia escort tendered him for the day of his inauguration, on the ground that it involves useless and unnecessary expense to the taxpayers.

The official returns of the Pennsylvania election give the total vote for Governor as 743,803, and Pattison's plurality 40,202. Stewart, the Independent candidate, polled 43,743 votes.

The message of Governor Cobb, of Alabama, which was sent to the State Legislature on Wednesday, shows the financial condition of the State to be excellent. The bonded debt is $9,407,800, and the amount of cash in the treasury on October 1, the end of the fiscal year, was $421,000. There has been an increase of nearly 25 per cent. in the assessed value of the property in the State during the last three years. The message recommends a reduction of taxation, as the State expenses have been greatly reduced in the last few years, and after paying all claims there has been a surplus in the treasury at the end of each year.

The official count of the vote for Governor in Alabama was made on Saturday in the presence of both Houses of the Legislature. It gives O'Neal, Democrat, 100,591; and Sheffield, Ind., 46,386.

On Wednesday, Governor Alfred H. Colquitt, of Georgia, was elected United States Senator by the State Legislature for the full term of six years, and Pope Barrow was elected to fill the unexpired term of the late Senator Hill.

Senator David Davis, of Illinois, is reported to have said that he is not a candidate for re-election to the Senate, and has not made any canvass therefor, and that he expects to spend the remainder of his days in Bloomington after the expiration of his term of office in March next.

The city government of New Orleans is in a bad way. The Chief of Police has resigned, and the incoming Mayor has offered the position to a number of persons, but has found no one who will accept it. Meanwhile the entire police force of the city only numbers about fifty men, the others having quit their beats with a knowledge that they can never be paid for their services.

The Independents of New Orleans have been investigating the alleged election frauds in that city, and the results have been of a startling character. In one ward frauds have been discovered at every poll, the result of the election having been completely reversed by the Democratic election officers. In the Third Ward alone 1,500 fraudulent votes have already been detected.

The freight agents of the Joint Executive Committee of the trunk-line railroads and their Western connections agreed on Thursday to advance east-bound freight-rates on a basis of five cents per 100 pounds between Chicago and New York. The advance is to take place on December 1. The rates on the two principal classes of business—grain and provisions—will be thirty and thirty five cents per 100 pounds respectively. The Committee has decided that hereafter no rate on business between terminal and intermediate points shall be made at a less figure than the proportionate through-rate from one terminal point to another.

A despatch from Chicago says that the Joliet Iron and Steel Company has determined to close its works on or before the 1st of December, and other Western companies making Bessemer steel expect to follow suit speedily, thus throwing out of employment at least 20,000 skilled and unskilled workmen. The reasons assigned for this action are that a majority of Congress hostile to the maintenance of the present tariff has been elected, and that the price of steel rails has declined; and the companies propose to restrict their operations while there is time and the season is slack. The workmen are much depressed at the prospect.

The Supreme Court of Pennsylvania has rendered a decision in favor of the Standard Oil Company of Ohio in the dispute between the commonwealth and the company concerning taxes and penalties claimed to be due the State by the latter. This decision ends a long litigation.

An electric storm of extraordinary intensity swept over the continent eastward from Ogden on Friday, and seriously interfered with the working of the telegraph wires.

The yellow-fever epidemic in Florida has subsided. Only one death and no new cases were reported at Pensacola on Monday. The Pensacola and Atlantic Railroad has resumed the running of passenger-trains between Pensacola and Eastern points.

The report from the Investigating Committee of the subscribers to the Irish Skirmishing Fund was presented on Sunday. The report says that John J. Breslin and John Devoy perverted the money from the purpose for which it was subscribed to their personal use, and were guilty "of infernal and despicable rascality as trustees of the fund." The Committee estimate that about $100,000 were contributed to the fund. The two rams which were built at a cost of about $4,000 and $32,000 respectively, are useless except as old iron. James O'Kelly spent nearly $10,000 of the fund in securing his election to Parliament.

Mr. W. W. Corcoran, of Washington, is endeavoring to have the body of John Howard Payne, the author of "Home, Sweet Home," removed from Tunis to the United States. If it is found impossible to have the body brought here on a Government vessel, Mr. Corcoran will have the removal made at his own expense.

FOREIGN.

In the House of Commons on Wednesday the second rule of procedure was adopted. On Thursday the third, fourth, and fifth rules were adopted. On Friday an amendment to the eighth rule, by Mr. Gladstone, exempting committee stages from the operation of the rule, was agreed to, and on Monday Mr. Gladstone accepted an amendment providing that the rule shall not apply in nominating select committees. The rule, as amended, was then carried.

In the House of Commons, on Thursday, Thomas Dickson, Liberal, asked whether, considering the difficulties which have arisen in

the working of the Arrears of Rent Act, the Government would not introduce a bill extending for three months the time for the payment of arrears due November 1, 1881. Mr. Gladstone replied that it would be difficult to amend the act this session, but the Government would do its best to prevent the benevolent intentions of Parliament from being defeated.

In the House of Commons on Monday Mr. Trevelyan informed Mr. Parnell that the unions in the western part of Ireland had been ordered to relieve the distressed people, and that the Local Government Board had instructed the inspectors to see that the arrangements were sufficient and that the relief measures were not interfered with for the want of funds. Mr. Trevelyan also said that up to the 15th inst. the applications under the Arrears of Rent Act had reached 14,167, and that the Land Commissioners hoped to settle before the 30th inst. all cases lodged prior to November 25. Mr. Courtney informed Mr. Parnell that up to the present time the applications under the Land Act by tenants for loans to improve their holdings numbered 625, of which 310 had been granted, 210 were inadmissible, and the remainder were being investigated.

In the House of Commons on Monday Mr. Gladstone moved the adjournment of the debate on the procedure rules, in redemption of his promise to give Mr. Yorke an opportunity to move the appointment of a select committee to inquire into the so-called Kilmainham treaty. Mr. Labouchere, opposing the motion for adjournment, talked till the close of the session of the House, and on Tuesday Mr. Gladstone refused to allow Mr. Yorke further opportunity for discussing the subject.

On Tuesday the eighth procedure rule relative to the suspension of members was taken up. Mr. Gladstone offered an amendment, which was agreed to, that the term of suspension for a second offence be reduced from a month to a fortnight, and that for a third offence the suspension be for a month instead of for the remainder of the session.

Sir Stafford Northcote will go to the Mediterranean shortly for his health. During his absence the Right Hon. Sir Richard Assheton Cross will act as leader of the Opposition.

Tennyson's new play, "Promise of May," has met with a complete failure in England. The critics agree in condemning it, saying that it is crude in conception, clumsy in structure, weak and often puerile in dialogue, and totally devoid of dramatic quality.

Ten thousand persons attended a meeting of the Irish National League at Tulsk, Ireland, on Monday. Among the speakers were Messrs. Sullivan and O'Kelly, members of Parliament. The latter referred to what he called the efforts of Mr. Davitt to split the Irish party, and said they were tantamount to stabbing Ireland in in the back. He threatened to resign his seat if the country wavered in its allegiance to Mr. Parnell, and advised the farmers to take advantage of the Arrears of Rent Act. Votes of confidence in the speakers were carried.

Patrick Joyce and Patrick Casey, who have been on trial for the murder of the Joyce family in Ireland, have been found guilty and sentenced to be hanged on the 15th of December. The jury deliberated only eight minutes. Joyce heard the verdict calmly, and protested that he was not guilty.

Queen Victoria reviewed the troops which have returned from Egypt in London on Saturday. There were about 5,000 troops in line, but the spectators are said to have exceeded a million. The appearance and demeanor of the troops were excellent. The streets were decorated, and the enthusiasm great. General Wolseley, the Guards, the Indian troops, the Naval Brigade, the Seaforth Highlanders, and the Royal Irish Fusileers were received with the greatest enthusiasm. The Queen presented war medals to two representatives of each regiment.

The health of the troops composing the British Army of Occupation in Egypt is improving, and the average mortality among the 600 sick men is now only one daily, against six last week.

The British Government has declined to entertain the renewed proposal of the Porte for the despatch of Servir Pasha to Egypt as Ottoman Commissioner.

Suleiman Daud was examined before the Prosecution Committee in Cairo on Wednesday. He admitted that he gave the order to fire Alexandria, but alleged that he had received peremptory orders to do so from Arabi, who, when a general conflagration was at first apparent, sent instructions several times to Suleiman to fire more points at a time. Suleiman further alleged that when the Ramleh Palace was surrounded by troops on July 12, Arabi ordered him to murder the Khedive. It is said that Nuri Bey, who commanded the troops surrounding Ramleh, has given evidence corroborating that of Suleiman Daud. According to a despatch from Cairo on Saturday, however, the latter's testimony was generally discredited.

A long affidavit by M. Ninet, formerly Arabi's adviser, has been published. It declares that Arabi endeavored to prevent incendiarism, and protected Christians.

Messrs. Broadley and Napier, Arabi Pasha's counsel, have written to the London *Times* in regard to the trial. They say that the prisoners will prove that the Porte approved their action from first to last; that the Khedive for some time wavered between the retrograde party and the Nationalists, but that he acquiesced in the early phases of the resistance. They also say that they will prove the recent war to have been the most humanely conducted of any in the history of the nation, and that the efforts of the leaders were uniformly directed to secure the safety of person and property.

The Egyptian troops ordered to Sudan have been deserting in such large numbers that, as a measure of precaution, the arms and ammunition required for the expedition are being forwarded separately.

At the opening of the Landtag on Tuesday, the 14th instant, the Emperor William in his speech laid special stress on the necessity for abolishing the four lower grades of class-taxes, which he said pressed harshly upon the lower classes, and for putting a speedy end to the oppressive distraints connected with the levying of this impost. A sacrifice of 7,000,000 marks of revenue would be involved by the adoption of this plan.

The Prussian Minister of Finance made his budget statement in the Diet on Saturday. The deficit, which will be met by a loan, is 31,100,000 marks. The decrease in the revenue caused by the abolition of the lowest grades of class-taxes is to be met by a license tax on the sale of liquor and tobacco.

In the French Chamber of Deputies on Saturday a bill ratifying M. de Brazza's Congo treaty was read and received with applause. Urgency was declared for it. M. Roche brought forward his interpellation accusing M. de Freycinet, late President of the Council, of having when in office illegally allotted 50,000 francs to the Archbishop of Algiers, after a motion to grant that amount had been rejected by the Chamber. Minister Fallières explained that the allotment was in repayment of advances made by the Archbishop, who had patriotically promoted French influence in Tunis at a great personal sacrifice. On Tuesday the Congo treaty was ratified.

On Monday, the estimates for the Foreign Office were discussed. M. Duclerc, Minister of Foreign Affairs, opposed the amendment offered by a Radical member for the abolition of the Embassy at the Vatican. The amendment was rejected by a vote of 339 to 171. A proposition was then made that the Ambassador be replaced by a chargé d'affaires. M. Duclerc said that if this motion were carried he should resign. It was rejected by a vote of 339 to 147.

Twenty-five persons, three of whom were foreigners, were arrested in Lyons on Sunday on the charge of being members of an association formed for the purpose of fomenting strikes among workmen, obtaining a general division of property, and destroying sentiments of patriotism among the people.

The French imports during the past ten months, compared with the same period of 1881, show an increase of 75,000,000 francs, and the exports an increase of 175,000,000 francs.

The recommendations of the Conference on Submarine Cables, recently held in Paris, have been published. The principal of them are that wilful damage to cables shall be punishable, and damages recovered by civil action; that fishing-boats and other vessels shall be bound to keep a mile distant from ships laying cables, and that fishing-boats losing gear in endeavoring to avoid cables shall be able to recover against the companies.

A despatch from St. Petersburg says that the students of the University of Kazan, in consequence of the severity of the police regulations, created disorders, and that the University has been closed. In consequence, also, of aggravating orders issued by the Curator of the University of St. Petersburg, an active demonstration of dissatisfaction by the students is anticipated.

A despatch to the London *Daily News* from Berlin says that great importance is attached to the visit of M. de Giers, the Russian Foreign Minister, to Prince Bismarck. It is considered as a fresh proof that Russia is making friendly advances to Germany.

The Secretary of the Russian Embassy at Constantinople has been sent to Rumelia to investigate the causes of disagreement between the Russian Consul-General and the Governor-General of the Province. The latter recently objected to the high-handed demeanor of the Consul-General, and demanded his recall.

The Spanish Ministerial papers say that, while the Ministry are conscious of the importance of the adhesion of the Republican party to the throne, they cannot admit the principle of a reform of the Constitution. The union of Señor Martos and his followers is much discussed by the press. The Ministerial papers affect to doubt the sincerity of the conversion. A semi-official journal states that at a recent Cabinet council the Minister of Finance declared that, despite the exceptional condition of affairs in some provinces, owing to bad crops, the revenue had considerably increased. He said that the financial measures he had introduced had produced very satisfactory results.

A royal decree has been issued, summoning the Spanish Cortes to meet on December 4.

The infant Princess of Spain was baptized in Madrid on Saturday in the presence of the members of the Court, the Spanish Ministers, the representatives of foreign Powers, and deputations from the Senate and Chamber of Deputies. The Empress of Austria was represented by the Queen's mother, as sponsor for the child.

Two imperial decrees have been published in China on the subject of the banishment of the ex-Regent of Corea to Pao-Ting. The first announces the necessity of carrying out the sentence, notwithstanding an appeal for clemency from the King of Corea; and the second acknowledges the receipt of further petitions for mercy from the same source, and recognizes the filial feeling of the King of Corea, but forbids him to renew the topic, while giving permission that a messenger from Corea may visit the ex-Regent once a year to inquire after his health. The Japanese War Department estimates the cost of the preparatory demonstration in the Corean affair at $350,000.

THE GAME OF POLITICS.

THE Boston *Herald* has some very just observations on the badinage exchanged between Governor Long, of Massachusetts, and his successor, General Butler, at a dinner given to them last week, by Mr. Ames, the new Lieutenant-Governor. Governor Long was full of compliments and complimentary jests, which Butler received with a kind of surly humor, that had, we are bound to say, under the circumstances, a good deal of dignity in it. The general effect of the Governor's jokes was, as the *Herald* points out, to make it appear that "the recent hot political campaign was only a game." That is undoubtedly what it was to Butler, but if the people who opposed Butler's election and heaped abuse on him during the canvass should now confess, either directly or indirectly, that they too thought "it was only a game," it would go far to prove that Butler was as good a Governor as Massachusetts deserves—as good as even the minority which voted against him deserves. Butler's plan of campaign is to say whatever comes into his head by way of damaging his opponents. He invents nearly all his facts and figures, and bases on these inventions the most villanous slanders against his rivals and enemies. He has, for instance, accused the State administration of which Governor Long is the head, of the grossest corruption. The Boston Republican papers, too, were filled during the late campaign with stories of Butler's corruption, falsehood, and general baseness, to most of which we believe he has no answer whatever, and which have stood unshaken and indeed unimpeached through twenty years of active service.

Now, we submit respectfully that Massachusetts Republicans, although it is the part of wisdom to accept with a good grace the results of the popular vote, and even to extract wholesome lessons from their defeat, cannot afford to treat their opposition to the victorious candidate as simply a bit of laborious humor. They cannot afford, after conducting a campaign on moral issues, to confess the whole thing to be a grand joke, and chuckle over it with their enemy, and poke him in the ribs. Their seriousness and their morality constitute almost the whole claim of the Republican party on the confidence of the people of the State. They propose nothing in the way of legislation which is better than what the Butlerites offer. If they are not more conscientious, truthful, clean-handed, and public-spirited than Butler and his following, there was no good reason for opposing him.

We hear a good deal nowadays, and we cannot hear too much, of the effect on the rising generation of the spectacle offered by the doings of their elders in politics and in the administration of justice. There is a great cry from the decent people of Missouri about the effect on the boys of the fêting of Frank James, the murderer and robber, which is now going on there, and of the production in the local theatres of a dramatization of the career of Jesse James, his deceased brother. There is no doubt it is all very horrible, and that the boys of that region must be very peculiar if it does not sow the seeds of crime in many of them. But may we not also safely predict that many a Massachusetts boy will suffer irretrievable moral damage, will become a worse citizen and a worse man, from finding that his father's denunciations of the Claimant, as a liar, and falsifier, and bribe-taker, and converter to his own use, either were all campaign gammon, or, if seriously meant, constitute no obstacle to jovial relations with the new Governor, and even furnish material for an interchange of jokes with him? There is an enormous amount of silent education in every canvass. Boys are not corrupted politically by the badness of the Mikes and Barneys and Bens as long as they see their fathers fighting it valiantly. In fact, the spectacle is a lesson in patriotism, and a promoter of high aims. But if, when the struggle is over, they see their fathers hobnobbing with Mike and Barney and Ben, and laughing over their respective lies and charges, does it not give them a little glimpse of the bottomless pit? There is much balderdash talked by politicians about the pernicious influence of the political "cynic" in our day, but could the great Cynic himself desire anything better than such a scene as an aid in destroying reverence for all things human?

THE DEMOCRATS AND THE FINANCES.

THE rock upon which the Democratic party has foundered after every temporary triumph that it has gained in recent years, has been the public finances. It has repeatedly dashed its own fair prospects by proclaiming its intention to pay off the bonds with greenbacks, and to abolish the national banks. It has also held an attitude of "hostility to capital" in general sufficiently pronounced to excite the fears of the well-to-do classes, and to cause them to put forth unwonted exertions in every Presidential election to prevent the party from seizing the Executive power and reaching a position where it might do great mischief.

The Democratic party will control the next House of Representatives. The Senate will stand Republicans 38, Democrats 36, Readjusters 2. The Executive being in the hands of the Republicans, the opportunity to work positive harm will be small, but on the other hand there will be measures of importance requiring affirmative legislation during the next two years upon which a Democratic majority in one branch of Congress can, if so disposed, do a great deal of harm. Before the end of 1883 the Government will, in all probability, have paid off all the three and one-half per cent. bonds, including some $30,000,000 held by the Treasury as security for national-bank circulation. When these are out of the way the three per cents will begin to be drawn in. Nearly $200,000,000 of these are held as security for bank notes. In short, the question of dealing with one of the gravest problems of finance will be forced upon the attention of the next Congress, and its solution one way or the other cannot be avoided, for if it is not met by some legislative action, it will resolve itself. The banks will begin to lose their circulating notes by the withdrawal of their security bonds before the end of next year, and after that time will lose them rapidly. This will be contraction of the currency of an artificial, and therefore disturbing, character. It may be said that the banks can avoid this extremity by buying and depositing four per cent. bonds as the threes are paid off. This will be practically impossible, for the reason that the fours cannot be bought in the open market in sufficient amounts without carrying the premium to a point at which the issuing of bank notes upon them would be unprofitable.

If the Democrats remain true to their recent, though not to their older, traditions, they will embrace this opportunity to destroy the national banks, or allow them to be destroyed, so far as their note issues are concerned, by the progress of events, and to substitute greenbacks in place of them. The Republican party will oppose the latter step upon grounds of impracticability and unconstitutionality; and if both parties stand firm, there will be a deadlock, resulting in contraction. It has been suggested that means may be taken to reduce taxes to a point at which there will be no surplus revenue to redeem the bonds with. This policy would imply a permanent national debt—a policy which the people would not and ought not to tolerate. It is plain to any observer of the current of public opinion that the nearer we come to seeing the end of the debt, the more determined are the people to see the end of it. No party, in our judgment, could safely put itself on the platform of an everlasting national debt. The Democratic party, with all its proneness to blunder, is not likely to make that particular blunder.

To devise a plan by which national-bank notes shall be made secure, even after the bonds are paid off, is not by any means an impossibility, but it is likely to prove a grand puzzle to a Democratic Congress. To them it will seem the shortest way of dealing with the question to double the present issue of greenbacks. But the Government will have no use for these greenbacks except to pay its own debts, and it will have no debts to pay till 1891, when the 4½ per cent. bonds mature. Even if we should allow that the plan were constitutional, it would be pernicious in the last degree.

Another plan, short and mischievous, but not so bad as the greenback plan, would be to repeal the tax on State-bank notes. We need not recount the evils that would follow the reintroduction of that system, since all persons whose recollection goes back to the ante-war period can easily recall them. Nevertheless, the old system is still popular in the South, and a movement to revive it would probably receive the bulk of the votes of that region. But the Northern Democrats and all the Republicans may be counted on to oppose and prevent it.

It behooves the leaders of the Democratic party (for there are some among them who understand these questions, and have already discerned the responsibilities imposed upon them by the late elections) to make the best use of their time from now until the meeting of the next Congress. They have a perplexing problem to deal with, and a hard road to travel, when we consider the character of their following. Something they must do. A misstep, leading to monetary pressure before the Presidential election, would bring upon them overwhelming defeat. Failure to take any

step would equally lead to disturbance of business, and equally bring the party to disaster.

SKIRMISHING FUNDS.

THE Investigating Committee of the subscribers to the Irish Skirmishing Fund have made a very depressing report to their constituents, which we cordially commend to the attention of the subscribers to Hubbell's Skirmishing Fund. They have discovered, it seems, that the two rams now lying unfinished at Jersey City, which were supposed to be intended for the destruction of the British fleet, were really intended "as a blind to deceive the subscribers into the belief that something was being done to carry out the skirmishing idea." This one item cost the Skirmishers $36,390. But the Trustees did not confine themselves to rams as "blinds." They also used funerals for this purpose, and spent $2,030 on that of the late John O'Mahoney, Esq., which they tried to convert into a "national demonstration." Of course, the only way to spend money on a funeral is to give it to the mourners. The days are long past when people put money or goods into the coffins of deceased heroes to comfort them in the spirit-land. It is to be presumed, therefore, that O'Mahoney's mourners had their sorrow to some extent assuaged by the skirmishing idea. We regret to discover, also, that $2,000 of the fund was used to "purchase or subsidize the *Scottish Highlander*." The Scotch press has hitherto been considered exceptionally pure, and ever since the escape of the Pretender, in 1745, the Scotch Highlanders have been considered proof against pecuniary temptation. If Mr. John Murdoch, therefore, allowed the *Scottish Highlander* to be subsidized by the Irish branch of the Gael family, he has done a great wrong. That O'Donovan Rossa should have got $1,331 for salary as secretary will cause no surprise. In fact, we think his "scoop" has been exceedingly moderate for a person of his expensive tastes.

The most enjoyable part of the report is that relating to the expenditures of one of the Trustees, Mr. John Devoy. This gentleman appears to have secretly abandoned the "skirmishing idea," and to have resolved on what the report calls a "Parliamentary programme," which seems to have had only one feature—viz., the election of James O'Kelly, Esq., to the House of Commons. To bring this about, Mr Devoy started for Ireland himself, at a cost to the fund of $6,000, and gave James O'Kelly, Esq., $10,000 for the expenses of his election, and gave "J. O—— — " $1,000 for making a "favorable report" on his (Devoy's) own doings, and laid out $5,000 in "trying to get control of the *Irishman*" newspaper in Dublin. The sole result of these very costly operations was that James O'Kelly, Esq., was elected, and is now James O'Kelly, Esq., M. P., and yet the House of Commons exists, and sits, and Ireland is not free.

We pass over without notice a very painful passage in the report about the conversion of registered into coupon bonds, with a view to sale, by two of the unscrupulous Trustees, through the negligence of the other five. Suffice it to say that $53,000 of the fund has, according to the report, been squandered, without any result whatever beyond the presence of James O'Kelly, Esq., aforesaid, in the British Parliament. What interests us most is the fact that this unhappy state of things has in no way shaken the faith of the Committee in "the skirmishing plan as the simplest and most efficient mode of warfare the Irish people can adopt in their fight against England." "If carried out in good faith," they say, "there can be no doubt that it will result in freeing Ireland from English rule." History is full of the attempts of oppressed peoples to get rid of a foreign yoke or overthrow domestic tyranny by force of arms. In all books on military science these attempts are fully discussed, and all the schemes that have occurred to the acutest minds to enable down-trodden peoples to overcome the difficulties created by the want of an organized government and army have been fully set forth. In none of them, however, is any mention made of the "skirmishing plan," so that it must be original with the Trustees of this fund, and must be a weapon of extraordinary power, and very cheap. The Committee, of course, do not reveal what it is; but whatever it be, it is plainly a new political force, which, if successful, will soon change the face of the modern world. If Ireland can be skirmished out of the clutches of England by an outlay of $100,000 or $200,000, of course skirmishing will soon begin all over the globe. The Turks will be skirmished out of Europe, the Austrians out of Bosnia, the British out of Egypt and India, and the Russians out of Central Asia.

The accounts of the Irish skirmishers having been laid bare, it would seem as if those of the officers of the American skirmishers, headed by Jay Hubbell and John F. Smyth, ought now to undergo some sort of audit or examination. If these worthies had carried the election (or, as the Irish would say, had succeeded in "freeing Ireland from British rule"), of course there would be no troublesome inquiries as to what they had done with the half million or thereabouts which they got from the Government clerks. But as matters stand there are loud calls from every quarter for an accounting. People want to know where Hubbell's rams are, and how much Smyth spent on the election of *his* James O'Kelly, Esq., and on the funeral of his John O'Mahoney, Esq., and the corruption of his John Murdoch. But there is as yet no sign of any revelations on the subject. The *Tribune* sent a reporter on Saturday to several members of the State Committee, but failed to get any information on the subject. The active members, Smyth, Sharpe, Wheeler, and Johnson, appear to have left town immediately after the defeat, and have not reappeared. Hubbell is buried in the forests of Michigan. One member of the Committee, who has been trying to find out something, says that in this State "more than half the counties were given neither money nor advice." Several thousand dollars were spent on lithographic pictures of candidates, not including those of Mr. Howard Carroll, which were not circulated, thus leaving the voters in ignorance of his majestic countenance. The Skirmishers' own hotel bill was $2,000, which, however, is much less than Devoy's travelling expenses, and no report is made, or to be made, to the Committee. "The checks and books are destroyed, and that is all there is of it. The party has to trust to the honesty of Smyth & Co." Hubbell's operations are buried in equal mystery. Most of his money is said to have gone to the South to skirmish the Bourbons. In short, there is much reason to fear that if an account were rendered, it would in many respects outdo the Irish report as a revelation of rascality; and it would, considering the kind of constituency on which Hubbell and Smyth levy, be a far more painful one. Americans have not the same excuse as Irishmen for allowing themselves to be made the victims of imposture.

THE POLITICAL ROMANCE OF 1848.

DR. GOTTFRIED KINKEL, who died on the 15th inst. at Zurich, in Switzerland, was one of the truest and most conspicuous representatives of the romantic tendency which characterized the revolutionary outbreak in Germany in 1848. The Germans, previous to that period, were not at all a political people. With the exception of one or two of the smaller principalities, which had representative assemblies and something like freedom of debate in them, the affairs of government were managed exclusively by the kings and princes and their ministers, and the bureaucracy acting under their orders. The people, standing outside of the charmed circle, had to be satisfied with what public criticism a vigilant press censorship permitted; but they were entirely debarred from that experience which is acquired only by practical participation in the management of public concerns. There was a strong yearning for political freedom and national unity pervading the educated classes, and an indefinite feeling that in the course of time great events were sure to happen. There was also an abundance of bitterness and wrath against the stolid intolerance of the pressure from above accumulating in many hearts, and now and then some local attempts at revolutionary organization and action; but these were easily suppressed. The movement, if it may so be called, remained essentially a literary one. Students occupied their minds with the history of governments, and formed their theories of what ought to be; poets sang the glories of the past and the praises of liberty, and some also, who had their verses published outside of Germany, hurled their bolts of anger or satire at the crowned heads and their minions. But while this kind of literature exercised a growing influence in sharpening popular discontent with the existing state of things, and inflamed the desire for a change, it cannot be said to have given the German people a political education of a practical nature.

At last the revolutionary spirit which broke out in France in February, 1848, dethroning Louis Philippe and putting a republican government in his place, swept like a hurricane over the whole European continent. A sudden impulse brought forth popular uprisings everywhere, and the absolute governments, ut-

terly taken by surprise, yielded to the wave of revolution after a short struggle. The spirit of the movement in Germany was not a vindictive, it was an essentially enthusiastic, one. It stopped short of the thrones; it effected the removal of the principal feudal burdens which rested upon the people, and good-naturedly applauded the fair promises, as to political liberty and the introduction of free institutions, made by the princes, and then put the work of the political organization of Germany into the hands of a National Parliament at Frankfort, an assembly of unusual learning and ability, in which the professors and other eloquent men occupied about a year in ventilating their theories of constitutional government. The princes in the meantime took breath again, made sure of their organized strength, recovered their old ground step by step, dispersed the National Parliament, repudiated the constitution it had made, and sought to restore as much as possible of the old order of things. Then in 1849 new uprisings took place against the reaction, which were also beaten down, not without bloodshed. But, though it miscarried, the revolutionary movement of 1848 in Germany was by no means in vain. It was the beginning of that political schooling of which the German people stood so much in need ; it strengthened the bonds of national cohesion; it quickened political aspirations, and it prepared the popular mind, as well as the Governments', for those great events which have made Germany once more a powerful empire.

The revolution of 1848 itself was animated with so essentially an idealistic spirit just because the soberness of experience was wanting. It naturally carried away with it the educated youth of the country. The universities were burning with patriotic fire and an enthusiasm of the most unselfish and devoted kind. Thousands upon thousands of young men threw themselves into the revolutionary current without a moment's thought of what might become of them if the great ideal cause succeeded or if it failed, and so they poured out their blood and laid down their lives. It was this spirit which seized upon Kinkel, who was then a professor extraordinary at the University of Bonn, lecturing on the history of art and literature. He was a poet of note ; of an artistic nature, also, ardent and impatient of restraint. He was an orator of wonderful fertility of imagination and power of expression. His lectures were sought by many for the musical beauty of his utterances. His popular harangues attracted large and admiring audiences wherever his voice was heard. Being, in addition to all this, a man of stalwart stature and commanding mien, he was the very picture of a popular leader. He preached advanced democratic ideas, and his political programme fairly represented the romantic indefiniteness of the whole revolutionary movement. When the reaction came, he left his professorship, his wife and children, and, gun in hand, fought as a private soldier in the insurrectionary army of Baden. In one of the engagements he was wounded and taken, and then sentenced to imprisonment for life, put into a penitentiary, clothed in a convict's garb, and forced to spin wool—the mere thought of which touched every heart in Germany. Then he was brought from the penitentiary to be tried at Cologne for an attempt upon an arsenal, in which he had taken part—an offence not covered by the sentence already passed on him. The court was thronged with spectators and with soldiers. He defended himself. Before he had closed his speech, which was like a poem, the judges, the jury, the spectators, the soldiers, the very gendarmes by his side, were melting in tears. His wife stood outside the bar, forbidden to approach him; but when in the agony of grief he called out to her to come to him, the soldiers involuntarily stepped aside to let her rush into his arms. It was as if all Germany had looked on and wept with those who were in the court-room. Then he was taken back to the penitentiary and set to wool-spinning again, until in November, 1850, some friends aided him in escaping. Again the popular heart was stirred in its poetic sympathies. His whole public career was like the most romantic episode of a romantic time—a fair representative of the spirit of those days, their heroic devotion to an ideal, and their indefiniteness of aim. And it may be regarded as an equally significant feature of the time, that after he had escaped from prison and for some time taken part in political schemes which never led to acts, such as are characteristic of the first years of the exile's life, he resumed his academic activity as his only occupation, and refrained from all participation in the political movements of Germany when things began to take a definite and practical turn not in accord with his ideals.

THE TEMPER OF THE CHURCH OF ENGLAND.

LONDON, November 5, 1882.

ECCLESIASTICAL affairs have, during the last few years, come less than usual into the sphere of political conflict. People have been too much absorbed, first, by questions of foreign policy, then by the disorders of Ireland, to give attention to domestic affairs. The Nonconformists have by the reform of the Burial Laws obtained a redress of their most pressing grievance with regard to the churchyards; and they have not yet opened, although they are now preparing to do so, their campaign against the existence of a State Church. There has been, altogether, a cessation of Parliamentary hostilities on questions concerning the Anglican Establishment, though no doubt it is merely a truce, and by no means a peace likely to continue. But the course of ecclesiastical history has not, meanwhile, stopped. If not the most externally prominent, it is one of the most interesting sides of our national annals, and deserves to be occasionally described to those who are interested in the social, and intellectual, and moral life of the English people.

Three recent events have been significant, as indicating the changes passing on the temper of the Church of England. The first of these is the death of Dr. Pusey, famous as the man who for a time seemed to lead, and even gave his name to, that remarkable movement toward Roman Catholic doctrine and ritual which so profoundly affected the religious thought of the Anglican Church. People now ask how it happened that the adherents of that movement should ever have been called Puseyites, a title which is now disused and replaced by that of Tractarians or Ritualists. He was not an original thinker ; had nothing very profound or penetrating about his mind ; was not known as the proclaimer of any new truths in the sphere of religion. Neither was he an eloquent or impassioned advocate, able to set forth old truths in a way that brought them home to men's hearts and consciences. Neither, again, was he one of those who dominate others by mere force of character, a lofty and vivid soul, whose convictions burnt themselves into the memory of the men who gathered around him. As a thinker, a writer, and a preacher, he stood immeasurably below Dr. Newman; he contributed far less to the diffusion of his own views than did John Keble; and he was probably inferior to many others whose names are hardly remembered by the younger generation of churchmen. Yet it was he and not Dr. Newman, much less Keble, whom the outer world fixed upon as the head of the new school; and he continued down till his death in extreme old age a few weeks ago to be regarded with deep veneration by the more advanced section of the High Church party.

The explanation is to be sought partly in the accidents of his position, but partly also in certain really remarkable qualities of character. When the Tractarian movement began, Pusey was already a Canon of Christ Church and Professor of Hebrew in the University of Oxford. He occupied a conspicuous and honorable position, which gave a definite weight to his utterances. He was also a man of birth and social position, belonging to one of the oldest families in Berkshire—a family which possesses an ancient horn alleged to have been given to their ancestors by King Alfred. England was far less democratic fifty years ago than she is now; and it made some difference whether opinions were associated with the name of one who held a dignified and lucrative post in a great university, and himself belonged to the best county society, or came from one who had nothing but eloquence to recommend him. Thus Dr. Pusey took a place in the early days of Tractarianism which his merely personal gifts would hardly have won for him. He could not, however, have retained it without some considerable gifts. His was an eminently English mind, a mind rather practical than imaginative, political than speculative. But in its way it was a strong mind. He had enough learning and judgment to be able to speak with sufficient knowledge, and debate with sufficient force, about theological questions, as well as upon those questions of Biblical interpretation which immediately belonged to his professorial chair. Without being a great Hebrew scholar of the modern type, he was a very fair and sound scholar of the older type. His theology was not profoundly philosophical, but it was definite and consistent. He knew what he meant and thought; and, having once made up his mind, he never afterward wavered. While others of his school drifted on into the Church of Rome, or fell away back into scepticism, he maintained throughout a long life the same position which he had taken up comparatively early, holding most of the doctrines of the Church of Rome, but refusing certain developments, and declining to recognize what he thought the extreme pretensions of the Pope.

The same tenacity showed itself in practical matters. He was a keen and active ecclesiastical politician, not only in the affairs of the Church at large, but also in those of his University and his college ; and for a long time was the leading influence in both. That influence was secured partly by his skill as a tactician, but still more by his firm and constant will, and by the unwearied industry which he bestowed on every detail. Nothing was too small for him; no personal consideration deterred him from fighting every point which he thought im-

portant and bringing all the resources of his knowledge and his ingenuity to bear upon it. These powers were guided by a very high and conscientious spirit. Earnest on behalf of what he thought the cause of faith, he never sought anything for himself, and owed much of his weight to his obvious unselfishness. If he was not unworldly in his choice of means, he was so in the ends he sought. His own time and strength—a very remarkable physical strength—were consecrated to the service of religion, and his own life entirely absorbed in religious study and work. The "note" of his sermons, and that which made them impressive in spite of a somewhat heavy style and a monotonous delivery, was the intensity of conviction and the earnest religious fervor which breathed through them, and this quality was no doubt a principal cause of the personal influence he exercised. It made him for many years a sort of oracle of his party, to whom men came and wrote, seeking counsel in their speculative or practical difficulties. He was not a conspicuously genial man, nor had he a specially acute and flexible judgment, such as confessors ought to have. But he had fixed and definite principles, of whose truth he was perfectly satisfied, a great store of ecclesiastical learning, and, above all, the deep religious spirit which could care for and strive to help the religious efforts of others.

For a long time Dr. Pusey was regarded by a large part of England with the utmost horror, as a man doing the Pope's work and bringing confusion and dissension into the English Church. Even in his own university he was once forbidden for a time to preach. Of late years he had withdrawn more and more into seclusion, leaving the guidance of the High Church party to younger men. Age softens animosities; and of course no one expected that when he passed away his career would be criticised as sharply as if he had died at fifty, when the movement was still a new thing. The remarkable thing is—and I mention it as an indication of the altered temper of English ecclesiastics—that from every quarter, except the organ of a small and extreme section of the Low Church party, there was a chorus of praise and sympathy. No man in the Church of England had been so much associated with the Romeward movement, or incurred more unpopularity on that account; yet all this seemed to be forgotten, and we heard only of his learning and his piety. There could be no better proof of the extent to which the Ritualist party has made good its position in the Church of England, and the greater tolerance with which divergences of theological opinion are now regarded. The first alarm that Dr. Pusey and his friends were going to send a large part of the nation to Rome has passed away, and people are ashamed of having ever entertained it. Conversions do still occasionally occur, and, as they occur mostly in the ranks of the aristocracy, they attract some notice, and excite some slight regret. But it is clear that no large defection is to be looked for; the extremest High Churchmen find themselves quite happy in the Church of England, where they enjoy a freedom of criticising and even disregarding their ecclesiastical superiors which would be denied them in the Church of Rome.

Everybody now acknowledges heartily and gratefully how much good the High Church movement has in some directions wrought: how much more decorous are the services of the Episcopal Church, how much better the music, how much handsomer the edifices; how many zealous clergymen of this school are laboring among the poor in our great cities, spending themselves with a self-sacrifice undreamed of fifty years ago. The English have, more than most nations, a disposition to acquiesce in accomplished facts, and to believe that when any doctrine or school has established itself it must have had a solid *raison d'être*, and ought not to be interfered with. Hence the change of tone toward the Ritualists, the disposition to tolerate even the disobedience to constituted authority which some of them practise. It would be impossible now to pass the Public Worship Regulation Act which was passed in 1874; and the sympathy felt for Mr. Green, the clergyman who has been committed to prison for refusing to obey the court which directed him to discontinue certain practices in public worship to which he was conscientiously attached, is by no means confined to those extreme Ritualists who share his opinions. Thus it has happened that Dr. Pusey, from being the suspected and hated leader of a new party, has become accepted as an ornament of the whole Church of England, whose piety may be celebrated without any expression of sympathy for his doctrines.

Since his death we have had another indication of the same tendency to tolerant views and a pacific policy. Some twenty years ago an annual gathering of members of the Established Church was created under the title of the Church Congress. The ancient constitutional assemblies of the Anglican Church are, of course, the two Convocations of the provinces of Canterbury and York, bodies which do meet, and have of late years regained something of their old prominence, although their powers are extremely limited and their proceedings watched with much jealousy. But these bodies are no longer really representative. They consist of clergymen only, the laity being quite unrepresented, and the ordinary clergy are in them unfairly subordinated to the higher dignitaries. Consequently some more popular outlet for the zeal and activity of members of the Church of England was needed, and this was found in the holding of this annual gathering, at which everybody who likes may appear and join in discussing questions of current interest. It is a good instance of the tendency of human society to develop institutions which suit its needs. The old Convocations, with their dignified historical associations and their recognized legal position, are now practically less important than this new assembly, which is nothing more than a large public meeting continued over several days, but in which the actual opinion and sentiment of a large ecclesiastical body finds a voice. Well, this Church Congress has been hitherto distinguished not only by the zeal but by the violence of those who frequent it. Bitter invectives of the High Churchmen against their Low Church persecutors and against the jurisdiction of lay judges in ecclesiastical matters, angry collisions not only between Low Churchmen and High Churchmen, but between both and the Broad Church or heterodox clergy, who occasionally joined in the mêlée—were frequent during its earlier years. The High Church party, as being that which has the keenest interest in all ecclesiastical affairs, generally came off victorious, and gave a High Church character to the Congress as a whole. But in the last few years there has been a visible change. Broad Churchmen and Evangelicals recognize the value of the Congress, and use it more than they formerly did. The High Churchmen are more temperate and conciliatory. And now, at the meeting of this last October, there was, together with some warm discussion, a general convergence of sentiment, a feeling of friendliness between the three great parties, a sense of unity underlying their divergences, which strikingly contrasts with the tone of earlier years. It is not that the old controversies have disappeared or are on their way to disappearing; it is rather that each section of the Church has learnt by experience that it cannot extinguish the other, either by the aid of the law or by mere clamor and denunciation. The Ritualists have made good their position in one direction, the Latitudinarians in another; and there is no use in treating them with the same impatience which was felt while they were still new and ungauged forces. And the Ritualists themselves, just because they feel themselves stronger in numbers and influence, are less disposed to intemperance of language, or, at any rate, are better able to control it when they meet those who belong to different schools.

So far I have spoken only of parties within the Church of England. But we witnessed, about a fortnight ago, an incident which showed that the moderation or tolerance of sentiment extends even beyond its limits. The Congregationalist Union, the annual gathering of that great Nonconformist body which calls itself Congregationalist or Independent, met this year in the ancient city of Bristol. It was there welcomed by the Dean of that city and a large number of the Anglican clergy, who sent to their "nonconforming brethren" an address full of friendly sentiments, to which the Congregationalists responded in an equally genial strain. This may seem the most natural thing in the world to Americans accustomed to a system of religious as well as political equality. But it caused some sensation here, and not without reason, for it would not have happened twenty, or even ten, years ago. It is a testimony not only to the growth of democratic feeling, but also to a changed view of the position of Christianity and the duties of the Christian Church as a whole. It is now felt that in the presence of an aggressive scepticism which denies the foundations even of theism, minor differences as to doctrine have become insignificant, and that those who agree in holding the existence of a deity and a future life and the mission of Christ, whatever varieties of opinion they may have as to the nature of that mission and the organization by which its work was to be subsequently maintained, may properly regard themselves as being all allied against common opponents. This feeling found decided expression even at the Church Congress; and there is also a growing sense of the duty of all Christian churches to grapple with the physical as well as the moral evils of society. The crusade against intemperance has united Christians of all denominations in a way never seen before. The Church of England clergy have gone almost beyond the limits of sound judgment in their anxiety to sympathize with and adopt whatever can be thought practically useful in the methods of the Salvation Army. Much more, therefore, do the wiser among them feel the necessity of cultivating greater friendliness with the old nonconforming bodies. The matter is one of so much interest that I hope to return to it in a subsequent letter. Y.

BISMARCK AT FRANKFORT.

BERLIN, October 31, 1882.

THE third and last volume of the work, 'Prussia in the Federal Diet,' is just about to be published. The Cologne *Gazette*, and after it a great many other papers, devote dozens of columns to extracts from the book. It contains 200 more official despatches and confidential notes than the first two volumes. All the documents collected here were written by Bismarck during the last three years of his residence in Frankfort—viz., from May, 1856, to May, 1859, or until his promotion to the St. Petersburg embassy. In personal interest and political gossip, and in the discussion of important state questions, this volume is of even greater value than

its predecessors, and especially surpasses them in details of diplomatic life and contemporary history. The most interesting document which it contains is the so-called "Little Book" of March 14, 1858, under which title it has for years been known in the initiated circles of German diplomacy. Written for the purpose of giving some practical hints to his successor, Count Usedom, Bismarck specifies here his ideas on the German Confederation, and the tasks of Prussian policy in regard to Austrian presumption and arrogance, and sums up his views as to how the then chaos of German political complications should be turned to good for Prussia and for all Germany. It is hardly possible to give you more than these outlines of the memorial. Its terse language, its sharp points, and keen analysis can scarcely be reproduced in a translation, wherefore the book, if possible, should be read in the original. Never have I seen so bitter and at the same time so just a criticism on Austria and its traditional policy toward Prussia and the smaller German States. I can, however, not refrain from translating at least the introductory pages of the "Little Book," which will summarily explain to you the origin of the Prussian-Austrian antagonism and of the subsequent war.

"Up to the year 1848," Bismarck begins, "the German Confederation, whatever the theoretical claims that may have been made for it, was in reality only treated as a protective union of the German governments against war and revolution. Austria at that time generally granted Prussian policy in Germany full freedom, and in return demanded Prussia's help in European matters. In Germany the Vienna Cabinet only sought to restrict Prussia's scope as far as possible. For this purpose the sphere of the business of the Confederacy was limited to few and relatively unimportant affairs, but the veto right and the independence of the several governments were carefully fostered, and matters on which Austria and Prussia differed were never discussed *in pleno*. A difference of opinion of the two Powers will hardly ever be found in the minutes, and an open quarrel between the two representatives during the sessions was unheard of, and was avoided on every account as being pernicious to the existence of the Confederacy. And rather, also, than force the smaller governments of the Confederacy by a majority vote, treaties were carried on with them for years if the small governments were not suspected of favoring liberal endeavors. The idea of bringing important differences of opinion to a decision by a majority vote was so little thought of, that the Vienna Cabinet left the representation of its interests to the Prussian Ambassador, watching him through the Saxon Ambassador, and only sent its own delegate to Frankfort at long intervals. The management of the Presidency by Prussia, and the long undisturbed union of both Cabinets respecting the affairs of the Confederacy, greatly helped to establish the superiority of the Presidency in the Confederacy after its reinstatement.

"In the year 1851 the negotiations of the Diet show a totally different aspect. Prince Schwarzenberg took up the plan of gaining for Austria, by the means which the existing constitution of the Confederacy offered, the hegemony of Germany, which Prussia had not succeeded in attaining by the constituent assemblies and its attempts at unification. The plan was natural, since the inner organization of Austria had taken a direction which could only continue successful by keeping company with Germany and strengthening the relatively few German elements of the Empire. The carrying out of the plan was possible if Austria could win over the majority of the Confederacy, and could enlarge its competency and the majority votes, and if Prussia was not strong and energetic enough to offer a successful resistance. The circumstances greatly favored such a conception. Austria, with her intimate relations with Russia, could count on the latter's help in her German policy, and had formed such connections with the new Emperor of France as, toward the end of Prince Schwarzenberg's life, gave cause to apprehend a close alliance of the three Emperors in opposition to Prussia and England.

"The great majority of German governments, terrified by the Revolution and the dangers arising from it, were afraid of losing a part of their sovereignty to Prussia, and therefore willingly sided with Austria. The latter was authorized to appoint the delegates of the different governments, without an exception, for the Diet of 1850, who are nearly all still serving; and took care to select such men as were closely connected with Austria's interests by their past and their personal relations. Austria could feel sure of the majority of the Diet for a long time. The recollection of the events from 1848-1850 had awakened a fear of Prussia's supremacy, founded on the geographical situation of the Confederate States with reference to Prussia. And the jealousy with which the other petty sovereigns watch the two centuries' growth of the Prussian dynasty works in the same way as the fear of Prussian aggrandizement at their expense. Austria possessed means, which were solely at her command, to cherish and stimulate such feelings.

"In the first line stand the personal relations of nearly all the prominent and influential men of Southern and Northern Germany. Old custom draws the nobility of the Southern and Middle States into the Austrian service. At home the opportunities for a career are too small and narrow, while in Austria the conditions are easier to fulfil than in any other of the Confederate States. Austria readily favors these dispositions. As soon as the relatives of a public functionary, be he minister or ambassador, are old enough to choose a profession, they find themselves surrounded by Austrian enlisters, offering them brilliant promises; and it happens that young men of sixteen years, who have never seen a regiment, receive an officer's commission without ever having asked for it. When once established in Austria they serve as a pledge for the devotion of their fathers, and, besides, for keeping up Austria's connections with the courts where their relatives are employed. Among the ambassadors of the Confederacy those of Saxony, Darmstadt, Nassau, Brunswick, and of those petty princes who together have sixteen votes, are more closely connected with Austria by family relations than with their own governments, and serve Austria in every way in all their official actions, particularly by partial reports.

"Where such relations do not exist, Austria tries every means to create them. She rewards her friends with the same energy with which she tries to destroy and push aside her enemies. It suffices for an ambassador boldly to carry out the instructions of his Government, without due consideration for Austria, to call down persecution upon him. He is treated impolitely; he is irritated; everything is sought for that can be brought forward against him to undermine his position with his own Government. A few years ago the Ambassador of Nassau was made subservient by the bad treatment of his sons, serving in the Austrian army; later, the delegate of Würtemberg was so tantalized by repeated attacks and complaints at Stuttgart that he did not again dare to encounter Austria's displeasure. Lazy and timid people do not easily forget all the trouble it cost them to refute the charges brought against them to their Government. At the present moment the Hanoverian Deputy is the object of similar persecution; and although Herr von Heimbruch only executes the orders of his Government, and as yet is protected by it, because it feels the injustice of the Austrian proceeding, it is nevertheless easy to foresee that he will be sacrificed to the susceptibility of Austria, and the other ambassadors will again see how perilous it is to work as an instrument of the home Government against Austria. If such an ambassador cannot be put aside because he is protected by his Minister, the Vienna Cabinet attacks the Minister himself, and tries to hinder him from acting independently and from serving his own King. Austria sides with whatever opposition there is in the country: with every rival. She supports all malcontents, even the Minister's subordinates, and the well-known secrecy of Austrian intrigues enables many to participate in alliances which come very near to treason. If Austria puts all the persons devoted to her into action, she can easily circulate calumnies against a Minister at his own court, and she even tries to employ the private correspondence of the princely families for this purpose. Moreover, in all German States the Vienna Cabinet has at its disposal the expedients of the different political leaders of the Catholic Church.

"By her industry and her high rate of interest Austria more than balances the uncertainty of her State debts in relation to those of Prussia. Hereby she attains two advantages. In the first place, the want of home means is made good by foreign capital, and then, above all, every possessor of Austrian State securities becomes a political adherent of Austria in the same measure as his fortune depends on her success and the credit ensuing to her therefrom. The administrators of the Frankfort money establishments intrusted with the payment of the Austrian interest can amply testify as to how far this basis of Austrian sympathies goes, since the trustees, on account of this high rate of interest, invest many a private princely fortune in Métalliques or Government loans."

When Bismarck wrote these characteristic sketches he occupied a relatively subordinate position, and it required great moral courage to send them not only to his superior, but also to a great admirer of the Austrian policy. Gradually, however, Von Manteuffel yielded to his ambassador's cool judgment and clear discernment, and was even grateful to him for his sagacious councils; but the vacillating Cabinet of the weak Frederick William IV., and afterward the so-called "Ministry of the New Era," under the Prince Regent, did not dare to act accordingly. They were subaltern characters, and when, as in 1859, it came to the point, they hesitated to follow the directions of a superior mind, and lost a golden opportunity. It was thus left to Bismarck himself to carry out his own ideas with "blood and iron," while he laughed at the impotent idea of his predecessors in office, of attempting so-called "moral conquests" in Germany. They in their turn never fully trusted him. What, however, twenty or twenty-five years ago, was considered by a great many people the vague dream of a political adventurer, has ever since 1864 been, and still is, the settled policy of Germany.

How Bismarck grew with his higher aims and ends, how, shortly after Frankfort, he made his influence felt in St. Petersburg and Paris, can of course not be printed for the present, as such a publication would not be in accordance with diplomatic customs and etiquette; but, whatever may be published hereafter, the outlines of the character and importance of this "serious man" are perfectly drawn in the present work, and allow an exhaustive judgment on the extraordinary services which from the beginning of his official career he has rendered to Prussia and to the accomplishment of German unity. Bismarck proved himself to be much more than a merely able and lucky statesman. He not only knew how to realize the gains of three wars, but he will also stand in history as the real author and instigator of them—as the pathfinder of a policy which was settled in his mind long before the smallest sign of hostility had shown itself, and which long before was developed by him in official documents with a clearness and moderation that made any aberration from the right way impossible. As every man of genius distinguishes himself from mere talent by the fact that he finds hosts of men eager to assist him, and circumstances propitious to his aims, so Bismarck found everything waiting for him to commence and triumphantly carry out his ideas. Other German patriots had the same impulses and tendencies, and were prepared to risk and sacrifice everything for their realization, but their views were less definite, their plans somewhat nebulous, and their means rather scanty. Bismarck alone calculated with realities, created them when he wanted them, and himself paved the road to his success. It is the great merit of the present work that it proves these facts by new, rich, and irrefutable documentary history. + + +

Correspondence.

THE AMERICAN HEIR ABROAD.

TO THE EDITOR OF THE NATION:

SIR: While fully sympathizing with the "American heir abroad" on the difficulty of obtaining what he and his namesakes believe to be their own, I cannot help commenting on the

strange ideas of the writer who has taken up the cause which they seem to have themselves abandoned.

To an Englishman, there is something almost as ludicrous in the suggestion that the clew to the Hedges difficulty is the political corruption of the Lord Chancellors in successive governments, as the remark of this evening's paper that "the English have been for years supplying the Democrats with money, in order to break the back of Protection." But, to an American who has formed his ideas of political morality from what he naïvely calls "the entire publicity of his own simple system," it may seem natural to transfer the familiar picture to England. For this reason, and because of the high position held by the *Nation*, I think it necessary to answer an article which is merely the betrayal of a pardonable ignorance.

To begin with, the writer is not aware that the Bank of England, though founded by the State, is now, as much as any other bank, independent of Government control, and has not the slightest need for the smiles of any political party.

Again, the idea that under any circumstances whatever, the deposited money of private owners, known or unknown, could be utilized for political jobbery, is preposterous. Even if within the bounds of legality, the crushing power of a public opinion, which unfortunately has no parallel here, and still more the argus-eyed intelligence of the Opposition, would damn the career of any minister who hinted at such dishonesty.

What little money is expended for political purposes, such as elections, is provided by the candidates themselves, or by the Liberal and Conservative private clubs; and whenever this use of perhaps a few thousand dollars comes to light, it usually ends, as in the case after the last elections, at Oxford and other towns, in the disfranchisement of the borough and a general outcry against the wire-pullers. So far from it being possible for any public money to be expended in party purposes, every member of Parliament is compelled to post the personal expenses of his election within a month of his return. The "extraordinary secrecy which surrounds the use of money in English politics," is not surprising when there is no secret to keep and only a few thousands pounds expended!

But while giving the lie to such naïve suspicions against the character of men like Lords Selborne and Cairns, and of Liberal and Conservative Governments, I fully admit the idiocy and vexation of the proceedings of the Court of Chancery. Perhaps, as a descendant of the famous claimant who figures as Jarndyce in 'Bleak House,' I shall not be accused of partiality for the court. The most antiquated and cumbrous forms cling like barnacles around that rotten hulk, and the best explanation of the Hedges case is perhaps the proverb about those who get their heads in a certain undignified position. Another case, within my own experience, may also throw some light upon this. My own grandfather was the undoubted heir to a very large London property, but feeling sure that to try and make good his claim would only be throwing good money after bad, he wisely tore up his documents and washed his hands of the whole business. The lawyers, who saw that they had lost the chance of a constant source of income, begged the American branch of my family to take the question up. They, too, wisely refused. The inference is that the Hedges family were the victims of these professional men, who live by hunting out heirs for the millions of unclaimed property lying in the Bank of England, and trying to make good claims which they know will cost enormous sums to maintain.

The writer of the article admits that nothing has been heard of the matter since the heirs (note the *plural*) sent over to possess themselves of the property it was "said" the Chancellor had pronounced to be theirs. Surely, if the Hedges had so nearly secured these many millions, they would not so silently have let go their grasp.

The writer in the *Nation* cares more for a chance of an unkind cut at the British Lion than the Hedges family for $5,000,000,000!

I remain yours respectfully,

HAMLET STANLEY PHILPOT, M.A.,
Trin. Coll. Oxon.

[Our correspondent must convince the Heirs of all these things, and they are a very incredulous body. We fear his account of the high character of the Lord Chancellor and the independence of the Bank of England will not weigh with them against the fact that they never get a cent of their money. As for ourselves, we are so much concerned by the facility with which he has fallen a victim to what we supposed was a very broad joke, that we are willing to atone by believing everything he says. We admit that the Lord Chancellor has no access to the deposits in the Bank of England, and concede that the Bank is honestly managed, and that Mr. Gladstone is not permitted to use the balances for stock speculation or electioneering, and that the Governors send over no money to the Democrats in this country. We will now confess, too, that we have some acquaintance with the history of the Bank, and the Acts of Parliament which regulate its working.—ED. NATION.]

RESPECT FOR LIFE AT THE SOUTH.

TO THE EDITOR OF THE NATION:

SIR: Though to the manner born and bred, I must acknowledge the truth of your reply to W. J. M.'s criticism, in your issue of the 9th, upon your article "The Influence of Homicide on Southern Progress," October 26th. In mentioning, however, the Harrall case at Selma, Ala., are you not in error in saying, "Yet this cowardly savage was an ex-officer of the Confederate Navy"? The Jones who was killed in this horrible affair—a highly cultivated, peaceable, and modest gentleman—was Catesby Ap R. Jones, ex-officer of the United States Navy, Executive Officer of the *Merrimac*, and in command during her engagement with the *Monitor*, March 9th, 1882. I was not aware of the fact that the "cowardly savage," Harrall, was also an ex-officer of the Confederate Navy. EX.

RICHMOND, VA., November 13, 1882.

[Our correspondent is right.—ED. NATION.]

TO THE EDITOR OF THE NATION:

SIR: Respect for your high-toned journal induces me to appeal to your sense of justice. Recognizing the elevated motives that seem to inspire your columns on most subjects, we in this region are amazed at the charges they so frequently contain against our moral principles and sentiments. We concur in your abhorrence of the bloody scenes so often enacted in our Southern communities, and, if you were more cautious in your statements, we would gladly second your praiseworthy efforts to abate the evil. But you have so far transcended the limits of truth, under a misapprehension of the condition of society in these States, that a respectful protest becomes a solemn duty to ourselves. It is unnecessary to quote your language, which lies before us, because you are too candid to deny its purport. You have several times of late insisted that indifference to human life is a characteristic of our society; you represent our people as growing up and living under the constant expectation of being involved in murder, and in the general habit of carrying arms for the purpose of committing it. According to your hideous misrepresentation, manslaughter is familiar to our observation, and the crime is admired by many and lightly excused by the rest of our people. I do not pretend to use your words, but am sure that I have not overstated your meaning.

Now, in the name of truth and justice, I must insist that, in such charges of a general disregard of the sixth commandment, you have unintentionally trespassed against another commandment: "Thou shalt not bear false witness against thy neighbor." Let me remind you that this country contains a large percentage of professed Christians and an immense number of outsiders under Christian influence. Among these manslaughter is as rare as in any Christian community on earth. A portion of our people—much smaller than you imagine—is decidedly irreligious. A small fraction of this class worship a false conception of *honor* as their highest aim; and a few hundreds of this class make no scruple in slaying one another in open combat. The small class professing to be men of *honor* carry deadly weapons, and some few others, who fear collision with them, do the same in self-defence. You have no conception of the contempt that is generally felt toward these men of *honor*. They are the habitués of drinking-saloons, the vulgar and blustering demagogues at our court-houses, the lewd youth, the reckless gamblers of the towns, the scoffers at all law, human and divine. You are quite right in condemning us as a people for *tolerating* such characters as much as we do. Our best citizens refuse to hold office in these times, and hence you will find many desperadoes in our Legislatures and in our halls of justice. This is the cause of the impunity enjoyed by so many criminals, whose friends and money rescue them too often from merited punishment.

But how do these admitted facts justify your charges against our people at large? From the circumstance that a few homicides here and there escape justice, you jump to the conclusion, which all charity forbids, that our population generally adopts the false sentiment of *honor* to which I have referred, and is disposed to excuse the murderer, because the most of us are prepared to commit murder ourselves. You ought to reflect that when good men generally refuse to hold political office, the administration of justice must often fall into unreliable hands. We are in fault, but the fault does not consist in a heartless disregard for human life. It is rather because a general disgust leaves our politics and government too frequently in the hands of the worst class of our society. Desperadoes are the Southern men you hear of through the press, but they are not representative of our character as a people.

I am sorry to charge you with exaggeration, but your imagination has led you sorely astray. The outrages to which you refer are few and far between. You might as well represent the yellow fever as a constant endemic disease in these States as to fasten the charge of lawlessness upon the Southern people. Millions of them never saw a bloody affray in their lives. Death by such means is a thing unheard of in almost all our rural communities, and the same may be said of hundreds of our towns and villages. I solemnly believe that, except in a few localities, life is nowhere safer than in most of these

States. When you state that "all the best portion of the male population goes armed" in a Southern community, and fail to specify the community to which you refer, leaving the impression that it is general, you recklessly, but I doubt not ignorantly, inflict upon us an injury which can never be repaired. I have lived here all my life, and never yet knew or heard of any community where this state of things existed, except perhaps in Texas in former times. I know of none now where the "best" portion of the male inhabitants go armed. There are a few places where the "worst" men do so, but they are too remote to be known.

You evidently abhor wrong, and this has been my warrant for addressing you. It will be creditable, and consistent with your general tone, if you will modify your language concerning us. This is not an *unsafe* country. Your people coming into our midst *unarmed* would be as free from danger as at home. Nothing is regarded here by all classes as more disgraceful than shedding the blood of the defenceless. An unprotected man can traverse the country freely without the slightest apprehension of insult or assault. Secret assassination, as you well know, is as uncommon here as it is in your own best communities. SOUTH.

TO THE EDITOR OF THE NATION:

SIR: I have been a diligent reader of the *Nation* for almost a decade, and, apart from the sound and sensible views of government advocated, each number is to me a source of true enjoyment, inasmuch as in "the struggle for existence" in this Western country it is about all I read that connects the busy, active life of the present with the student life of the past. A Southerner born and bred, I can stand without flinching your criticisms of the Southern people and Southern civilization, even when they take the form of ridicule, provided always they are based on facts; but your statement in a late number that it is the custom of the best people at the South to carry arms, shows such an unjustifiable ignorance of the subject that I think it right to call your attention to it. Of the thirty-two years of my life, thirty have been spent in different Southern communities, from the Atlantic seaboard to the Rio Grande, and I can assert most positively that it is not the custom for any class of people distinctively Southern to carry arms.

Readily acknowledging that the Southern people do not stand "in the foremost ranks of time," I believe intelligent foreign criticism—as yours is, to all intents and purposes—is wholesome for us; and I wish the *Nation* was more generally read at the South, especially by the young men. If our idols must be broken, be it by moral rather than by physical force; less rude will be the shock, far less tragic the transformation. Yet I cannot see what good such statements as the above can accomplish. A picture thus overdrawn is clearly somewhat akin to the *terra incognita* myths of centuries ago.

Very respectfully, W. L. WHITAKER.

CHIHUAHUA, MEXICO, Nov. 13, 1882.

[Our correspondent, "South," who, it is no indiscretion to mention, is a clergyman, and whose remonstrances we desire to treat with the utmost respect, seems to have read our articles on this subject with the haste due perhaps to a sense of wrong. We have not said that life was unsafe at the South from secret assassins or from robbers. On the contrary, we admit freely that a stranger may travel all over that section unarmed with as great security as in any country in the world. We have ourselves tried the experiment in worse times than these. Nor have we said or insinuated that there is not at the South a large body of quiet, religious, upright people, to whom bloodshed is as repulsive as to anybody at the North. What we have said, and we now repeat, is, what our correspondent substantially admits, that homicide goes unpunished; and we maintain that, as the result of this impunity, there has been infused into the great mass of the population a readiness to think of killing as a mode of settling a dispute, which makes life everywhere insecure. We have not designated any portion of the South as specially insecure, because we find that these business or social homicides occur everywhere—in Virginia, in South Carolina, in Georgia and Mississippi, as well as in Texas. Every mail brings us the news of one or more, and we never hear of one being punished. In fact, the biographical sketches of the slain which one finds in the Southern papers almost always reveal the fact that either he or the slayer had already killed a man or two before engaging in their last fray. We deny emphatically that only "a few homicides here and there escape justice." Redfield's 'Homicide Contrasted, North and South,' published in 1878, the statistics of which were carefully collected, and have never, to our knowledge, been assailed, revealed the awful fact that there were in the States of Texas, Kentucky, and South Carolina, in 1878, 734 homicides, besides 522 persons wounded with shots or stabs, and the author estimates that there have been 40,000 homicides at the South since the war. There were more homicides in Kentucky in that year than in the eight States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, Pennsylvania, and Minnesota, with an aggregate population of ten millions. In the same year there were more in South Carolina than in eight Northern States with a population of six millions. In fact, the case as stated in that volume, as the result of careful investigation, is one of the most appalling stories of modern civilization.

Nor are these homicides the work of low desperadoes, the haunters of bar-rooms and gambling-houses. The cases which we have ourselves been collecting for some time past, and which reach us every week, not only occur in all parts of the South, but they occur in the more peaceable and respectable circles of society, as the result of ordinary business or social quarrels. People are killed in the street, in the court-room, on the high road, about an account, or a contract, or a lawsuit, or a love affair, about chickens, or a horse—about things, in short, which enter into every man's life, and which no settler at the South can keep clear of. Of punishment we never hear. If our correspondent can forward reports of any cases in which a manslayer has been hanged for a business or social murder we shall gladly publish them. In Pennsylvania, a few years ago, the Molly Maguires began to commit this kind of murders, but the police were put on their track and hunted them down till twenty were hanged in two years. The truth is—and we say it with deep regret—that the unconsciousness of men like "South" of the spectacle which Southern society presents to the civilized world to-day under the head of homicide, is one of the very bad symptoms of the time. Several Southern newspapers have acknowledged the justice and truth of our remarks. But confession and lamentation are not enough. There must be a rising against the manslayer on the part of what is best in Southern society. The young must be taught to abhor bloodshed, to reverence human life, to put away the revolver and shotgun, and to appeal to the law for protection against violence; and juries must be taught to see in the murderer, not a vindicator of his "honor," or a poor fellow in trouble, but a wild animal, an enemy of the human race, to be hunted down, and strung up after a fair but short trial. Southern society covers one of the fairest regions on earth. Nobody can deny the great capacity of its people. Everything that is good in the modern world is within their reach, if they will only get rid of this awful stain and misfortune, this "primal eldest curse," which puts them in the category of semi-barbarous states.—ED. NATION.]

Notes.

OUR surmise that the designs for the beautiful folio edition of Longfellow's 'Evangeline,' published by Houghton, Mifflin & Co., were enlarged from those which Mr. Darley had made for the modest edition of 1866, was unfounded, as a note from the publishers assures us. They are wholly new. We spoke under correction.

Late this month A. C. Armstrong & Son will publish Mr. Charles Loring Brace's 'Gesta Christi,' already announced in these columns.

Fords, Howard & Hulbert publish immediately 'The House that Jill Built (after Jack's had Proved a Failure),' by E. C. Gardner, with illustrations by the author; 'The Still-Hunter,' by Theodore S. Van Dyke; and 'The Problem of the Poor,' by Helen Campbell.

Under the title, 'Charles Darwin,' Macmillan & Co. have reprinted from *Nature* the brief but striking memorial notices which followed, in that journal, the great naturalist's death. Prof. Huxley furnishes the introduction, and is followed by G. J. Romanes—"Life and Character"; Archibald Geikie—"Work in Geology"; W. T. Thiselton Dyer—"Work in Botany"; G. J. Romanes—"Work in Zoölogy" and "Work in Psychology." Jeens's perhaps unrivalled engraving of Darwin is revived as a frontispiece for this little volume.

The "Scientific Worthies" series, by the way, to which the above portrait belongs, is continued in *Nature* of Oct. 26 with one of James Prescott Joule, the demonstrator of the mechanical equivalent of heat. An interesting biographical sketch of Joule accompanies the likeness.

An urgent appeal is made by Prof. C. E. Norton, President of the Archæological Institute of America, for help in raising the sum of $2,500 to continue the explorations at Assos. Their suspension is imminent.

The original and altogether admirable 'Handbook in Outline of the Political History of England,' by Mr. A. H. Dyke Acland and Prof. Cyril Ransome (London: Rivingtons; New York: T. Whittaker), has been condensed by its author into a sort of primer, called 'A Skeleton Outline of the History of England.' The parallel "Foreign and Colonial" column, as such, is suppressed, but occasional insertions are made from it in the English column. As this

epitome has all the merits of proportion and accuracy which distinguish the larger work, it may be confidently adopted by teachers of our intermediate schools as a most useful help in instruction.

Clubs formed for the purpose of study during the winter months would do well to examine Miss Kate Sanborn's "Round-Table Series" of Literature Lessons (Osgood). These are twenty-five in number, covering the whole field of English literature, from "Pre-Chaucerian literature" to the "Laureates," each card having one central figure about which are grouped the other names of the same series. There is an abundance of suggestive questions and of references —the last, we think, too numerous for common classes: they seem to aim at being exhaustive, and yet the first card omits two such important works as Skene's 'Celtic Scotland' and Grant Allen's 'Anglo-Saxon Britain.'

In deference to the growth of culinary æstheticism, Susan Anna Brown's 'Book of Forty Puddings' (Scribner) puts on a holiday garb; but both Bridget and her mistress would have been better off with an index than with the ten sauces thrown in.

'Sketches from *Texas Siftings*' one might profitably consult, it would appear, for the natural history of that remote source of continental humor. There are chapters or sections, illustrated with pen-drawings, on the razor-back hog, the Texas cow, the red ant, the pelon dog, the cayote, the horned frog, the Texas mustang, the tumble-bug, the chaparral cock, etc.; while others treat of human nature partly peculiar to Texas, but mostly of a too common variety, like the drummer, the conductor, the hotel-clerk, the reckless local reporter, etc., whom we have always with us. The designs are hardly up to the level of those in 'Hood's Own.' The humor is *sui generis*.

Parts 11-13 of 'American Etchings' (*Art Interchange* Publishing Co.) give the customary single specimen of three exceptionally good artists—Mr. Stephen Parrish's "Sunset—Gloucester Harbor," looking landward, and therefore sunward, upon a crowd of sails; Mr. J. Henry Hill's "Roadway near Nyack Turnpike"; and Mr. Thomas Moran's "Three-Mile Harbor, L. I."

President Gilman's seventh annual report of the progress of the Johns Hopkins University embraces in its review the past six years, and is full of interesting particulars concerning the several departments. The chemical laboratory is being enlarged, and a new building, to be entirely devoted to the study of biology, has been begun; there is pressing need of an adequate physical laboratory. Dr. Brooks, of the marine laboratory, whose investigation of the reproduction of the oyster has qualified him to seek for the causes of the ravages in the Chesapeake oyster-beds, has been accordingly placed on the State Oyster Commission. Important results are anticipated from Dr. Martin's method of keeping alive the heart of a warm-blooded animal after the death of the rest of the organism. The German citizens of Baltimore are about to present the Library with Bluntschli's library.

The third annual report of the Treasurer and Secretary of the "Society for the Collegiate Instruction of Women" (by professors and other instructors of Harvard College) indicates, by its title, that the movement behind the "Annex" has at last got a State charter, with power to hold land and buildings, and "to transfer the whole or any part of its funds or property" to the College whenever the union may fittingly take place. It is now hoped an endowment fund will soon become a reality. From the report we learn that out of fifty-five courses offered during the past year, only twenty-eight were given, as being demanded. The cost of tuition for a full course is two hundred dollars—nearly twice that of the highest at similar institutions. While the health of the students has been good, too few of them were disposed to improve the opportunity of systematic exercise under the director of the Gymnasium. Applications for teachers who have been instructed at the Annex have begun to come in to the Secretary.

We have received from the University of California its *Library Bulletin* No. 3, "Catalogue of the Library presented by Henry D. Bacon," and No. 4, "Catalogue of the Bacon Art Gallery," a double record of public spirit worthily manifested.

The Boston Public Library's *Bulletin* No. 63 begins a list of Franklin's works (*a*) as owned by the Library, (*b*) as not owned and desired. One remarks translations, in whole or in part, into French, German, Dutch, Swedish, Spanish, Italian, and Greek. The next *Bulletin* will deal similarly with Frankliniana, and a subsequent number with books and other publications printed or published by Franklin. The Library's Franklin collection has now taken a fine start, thanks to the generosity of the Mayor of Boston. Mr. Wendell Phillips, too, has made a significant addition to the anti-slavery collection.

A trial bibliography of English translations of La Rochefoucauld is printed by Mr. A. Granger Hutt in the November number of the *Bibliographer* (J. W. Bouton). The earliest-named bears date of 1685. Under the head of "Correspondence," an auctioneer's catalogue is quoted for a delicious error whose occurrence had been predicted in a previous issue: "Lot 282, Sir Noel Paton's Illustrations, Shelley's *Prometheus*, unbound, 12 plates. N.D."

Two pamphlets have been prepared by Serg. John P. Finley, of the U. S. Signal Corps, one being a clear and scientific description of tornadoes, preceded by a number of valuable definitions, and the other a long list of questions to be voluntarily answered by persons who may witness or live near a tornado.

We have also received, from Fowler & Wells, a pamphlet with the rather pronounced title, "How to be Weather-Wise; or, a New View of our Weather System," by Mr. Isaac P. Noyes. Why the author claims newness for his view is not made evident. What he does is to describe in a rather interesting way the freaks of movement of areas of low pressure. He perhaps thinks that a few minutes devoted to the U. S. weather-maps will make a person more weather-wise than years of unaided personal observation. His article is very unscientific—in fact, crude—and contains nothing which is not already well known to those who read the "probabilities."

The current *Bollettino* of the Italian African Society of Naples discusses, or rather presents, the Congo Question as now debated by France, Belgium, and Portugal, and more particularly by Stanley and M. de Brazza. While Stanley has been working away at the main stream, and building roads around the cataracts, De Brazza has entered at the back door, so to speak. Ascending the Ogoway from Gaboon, he finds a comparatively low carry between the headwaters of that stream and the Alima and Licona, two navigable rivers heretofore conjectured and now determined by M. de Brazza to be affluents of the Congo, giving access to its middle and upper course. Of the intervening region he acquires eminent domain for France by "treaty" with King Makoko (Sept. 10, 1880), and then scuds home, with Stanley after him as in pursuit of a trespasser. Meantime, Portugal puts in a prior claim. In the same number of the *Bollettino*, G. Buonomo describes with appropriate fervor the vast career open in Africa to the *insolatore* Pifre—a contrivance for utilizing the sun's rays in distilling water, making ice, boiling an egg, and roasting a joint. There are, it seems, portable *insolatori di carovane*.

A new convenience has been added to life in Paris—an office to which subscribers who do not care to receive their letters at home, to be scrutinized by a *concierge*, a *bonne*, or a husband, can have their letters addressed. Boxes are at the moderate price of 4 francs a month, 10 francs a quarter, 30 francs a year. This is not dear, for a prodigal son or an unfaithful wife. But suppose that husband and wife should both hire boxes at the same office, and some time should meet there. Here is a *motif* of which we make a free gift to Gaboriau or Fortuné.

Later than ever this year comes the 'Almanach des Spectacles,' one of the most beautifully printed little books sent forth even by M. Jouaust (New York: F. W. Christern). It is the eighth of the new annual series, and contains the statistics of the Parisian play-houses during last year, with lists of the plays acted and of the members of each company. As usual, there is an obituary record and a bibliographic list—unfortunately incomplete. The frontispiece is, as before, a portrait of the latest associate of the Comédie-Française—a striking full-length figure of Mlle. Lloyd, etched by M. Lalauze.

The latest American additions to the "Tauchnitz Series" are Mr. Bret Harte's 'Flip, and Other Stories,' Mark Twain's 'Stolen White Elephant,' and the anonymous novel, 'Democracy,' which has afforded our British friends much amusement of late. This selection goes to show that the editor of the "Tauchnitz Series" is still governed in his choice of American books by the taste of readers in Great Britain. The American contingent is less than ten per cent. of the whole series, although the percentage has rapidly increased in a few years.

Koolman's 'Wörterbuch der Ostfriesischen Sprache' (Norden: Braams) reaches, in the sixteenth part, the word *püt-water*. Numerous words have a special interest for English readers, like *pit* (kernel), *planter*, *plank*(*e*), *plâster*, etc. A familiar English simile is repeated in the phrase "so plat as 'n pankôk"; and the old wail of the husbandman who plants for posterity has the homely form: "Is de-bôm grôt, is de planter dôd."

Last week occurred the phenomenon which the Signal Service once called the November Atmospheric Wave—an era which instantly substitutes icy winter for the Indian summer. The change reached the Plains on Monday morning (Nov. 13), the Mississippi Valley on Monday night, and the Atlantic Coast on Tuesday.

—The average civilian, not to speak of the critic or caviller, who decries the standing army, will find unexpected information in 'A Record of Engagements with Hostile Indians,' lately compiled at General Sheridan's headquarters. Sheridan's military division embraces more than a million square miles of territory, stretching from the British to the Mexican line, and inhabited by about 175,000 Indians. During the last fifteen years, more than 1,000 officers and enlisted men have been killed or wounded in the 400 and odd armed collisions of which this Record is, in great part, a mere chronological list. It takes no account of the Division of the Pacific, whose eastern boundary is about 115° west longitude, and whose tale would run in much the same fashion. A few of these actions attracted public notice when they occurred, as, Custer's victory on the Washita and his defeat on the Little Big Horn, the Nez-Percé surrender on the Upper Missouri, and Thornburgh's fight in Colorado; but the most of the work has been done without observation and without special

comment. There is little holiday time on the Plains for the United States soldier in time of presumed peace; and whoever may be responsible for the occasion, men of all degree are exposed to frequent privation and peril endured by no other army except in the extremity of declared war. Passages like these show one form of hardship: "The mercurial thermometer failed to register the intensity of the cold"; "after a march of nearly 200 miles through deep snow, with the thermometer ranging from 10° to 35° below zero"; "a march of about 600 miles in the coldest weather known for years in the always severe climate of that region [Montana]"; "although the weather was bitter cold, the thermometer 18° below zero, with blinding snow-storms raging, the column pressed on." There is very little romance and much rugged reality in the work of the American trooper, and it is not surprising if some recruits develop a distaste for it that overcomes their fidelity.

—The Governing Committee of the American School of Classical Studies at Athens held its semi-annual meeting on November 17, in this city. The following members were present: Professors J. W. White, of Harvard (chairman); L. R. Packard, of Yale; B. L. Gildersleeve, of Johns Hopkins; A. Harkness, of Brown; H. Drisler, of Columbia; W. M. Sloane, of Princeton, and Messrs. F. J. de Peyster and T. W. Ludlow, of New York. The committee increased its membership to fourteen by the addition of Professors Tyler, of Amherst, and Van Benschoten, of Wesleyan, and invited Professor Packard to accept the Directorship of the School for the second year, to succeed Professor Goodwin. Letters were read from Professor Goodwin announcing his arrival in Athens toward the end of September, and the immediate beginning of the activity of the School, to which much courtesy has been extended by the authorities and by the people of Athens. Mr. Goodwin has hired for the School a convenient house on the Boulevard which skirts the Palace gardens. The position is an excellent one, the ground being so high that the rear windows command a splendid view, over the city, of the Saronic Gulf and Ægina. The building has been furnished at the expense of the School, and ample accommodation is afforded for the meetings and work of its students and for its library. Professor Goodwin selected, this summer, in England and Germany an excellent working library to start with, for which he expended more than $1,000. This will be added to and kept up to date. The School opens with six students in attendance, namely: J. R. Wheeler and F. E. Woodruff, of the University of Vermont; H. Fowler and P. Shorey, of Harvard; J. R. S. Sterrett, of the University of Virginia, and F. H. Taylor, of Wesleyan University. Several of these students have studied after graduation, or have already taken higher degrees, at Harvard, at Johns Hopkins, or various German universities. The prospect of a satisfactory number of applications for membership in ensuing years is good. A subcommittee was appointed to report at the next meeting, which will take place in Boston in May, upon the publication of the Bulletin of the School. This the Committee hopes to begin next year. The income of the School for the present year will amount to $2,500, of which the greater part has been paid in already to the Treasurer. It is expected that the University of Virginia will join at once the nine colleges already pledged to support the scheme, and that Williams, the University of California, Dartmouth, Cornell, and Union will join next year. From other colleges which have been addressed by the Committee no answer has been as yet received. It is, however, safe to estimate the resources of the School, after this year, at at least $3,000 per annum. While it is desirable that the School should own its building in Athens, and that a generous endowment should be obtained in time to place the institution upon a permanent footing, the Committee is in a position to say that the existence of the School under the present arrangement is secured for a number of years to come, and that its promise of usefulness is high. The union of so many of our chief institutions of learning to bring about an object destined to benefit not only themselves, but the classical scholarship of the whole country, is a significant manifestation of the growth of the true university spirit on this side of the Atlantic. It must not be forgotten that the whole credit of devising this project, and of carrying it into execution, belongs to the Archæological Institute of America.

—The scientific world has met with a severe loss by the death on Monday of Prof. Henry Draper, son of the late Prof. John W. Draper, at the early age of forty-five. A mind so keen and vigorous and ingenious, and a hand so cunning, must have had many triumphs in reserve for the interval between middle life and the allotted term of man. From his father he received a thorough training in medicine and in chemistry, and a natural predilection for astronomy. He became a practising physician in connection with Bellevue Hospital, a professor of physiology in the University of the City of New York, a teacher also of chemistry; and at the age of twenty-three, on his return from Europe, he began the construction of a 15½-inch reflecting telescope, which enabled him to take a 50-inch photograph of the moon. To celestial photography, indeed, he devoted himself with remarkable assiduity and success, and among his achievements in this direction were photographs of the nebula of Orion (1880) and of the spectra of more than a hundred stars. His management of the photographic observation of the transit of Venus in 1874 obtained for him a gold medal from Congress. In 1877 he discovered the presence of oxygen in the sun—his greatest distinction. More recently, stimulated by the new interest in electricity as a source of light, he had ardently joined the host of experimenters, for which his admirably equipped private laboratory in his city home furnished him opportunity, as his private observatory at Hastings did for his astronomical researches. Professor Draper's ample means were employed without ostentation in the interest of pure science. Socially, he was a most entertaining and genial companion, and on this account also his departure will be greatly lamented.

—Mr. Ingleby having suggested that the late Mr. Darwin's letter to a Jena student, referring to his religious beliefs, was mispunctuated in the German translation first published in the *Rundschau*, Professor Haeckel replies, in the *Academy* of November 4, that this is not the case. Mr. Darwin's own words were as follows:

"Down, Beckenham, Kent, June 5, 1879.
"To Nicholas Baron Mengden:
"Dear Sir: I am much engaged, an old man and out of health, and I cannot spare time to answer your question fully — provided it can be answered. Science has nothing to do with Christ, except in so far as the habit of scientific research makes a man cautious in admitting evidence. For myself I do not believe that there ever has been any Revelation. As for a future life, every man must judge for himself between conflicting vague probabilities.—Wishing you happiness, I remain, dear sir, yours faithfully,
"Charles Darwin."

This letter Professor Haeckel had forwarded to the London *Nature*, together with his lecture on "Die Naturanschauung von Darwin, Goethe und Lamarck"; but the latter only was printed. This peculiar proceeding reminds one of the first German edition of the 'Origin of Species,' in which the translator suppressed the brief reference to the descent of man. The *Academy* also contains this note:

"In the *National Reformer* for October 29, 1882, is the account of a visit paid to Darwin in the autumn of last year by Dr. Ludwig Büchner and Mr. Aveling. Darwin is there reported as having said: 'I am with you in thought, but I should prefer the word "agnostic" to the word "atheist." . . . . I never gave up Christianity until I was forty years of age'—and in reply to a question why he had given up Christianity: 'It is not supported by evidence.'"

—The *Academy* brings a communication by George Dennis confirmatory of the accuracy of an interesting statement of Herodotus (iii., 60). The Greek historian, speaking of three wonderful works executed by the Samians, places the following foremost: "A tunnel through a mountain 150 fathoms high, cut from the base upward, with openings at both ends. The length of the tunnel is seven stadia, the height and width eight feet each. Through its entire length is dug another channel, twenty cubits deep and three feet wide, in which the water of a copious spring is conveyed through pipes to the city." Some attempts at discovering this aqueduct were made many years ago, but with uncertain success, the identification being far from convincing. But, a few months ago, a Samian priest, by unearthing some stone slabs at the depth of about six feet, disclosed a channel sunk in the rock, half-way up the mountain-side on which the ancient city was built. He followed the course of the channel, by opening pits at short intervals, to the base of the rocky height at the west end of the city. "On clearing away the debris at this spot, it was found that the channel penetrated the hillside in a tunnel, the mouth of which was a narrow passage, just high and wide enough for a man to pass through, paved with slabs, flanked by masonry of small polygons, and roofed overhead by the leaning-to of the upper blocks on each side." Mr. Dennis, in a hurried visit to Samos shortly after, repaired to the spot, and on passing through the opening in the mountain found himself, after a few paces, in a much wider passage, roughly hewn in the rock, and about eight feet high and wide—the dimensions stated by Herodotus. Through the centre of this tunnel was sunk a narrow channel, barely three feet wide, and, as the traveller was told by his guide, ten metres deep, which closely corresponds to the twenty cubits of Herodotus. He was also informed that the tunnel ran thus through the heart of the mountain for 1,270 metres, expanding at the further end into a spacious chamber. This length of 1,270 metres differs from the seven stadia of the historian only by about thirty yards. The height of the mountain pierced by the tunnel is given in the Admiralty Chart No. 1530 at 747 feet, which also agrees tolerably well with the round 900 of Herodotus, whose measurement was undoubtedly based only on sight. "As there is no water in the narrow channel nowadays, and no traces of the spring within the tunnel, it probably communicated with open channels in the mountain slope through which water from the heights to the north or east was conveyed through the tunnel to the city on the south of the range."

—At the thirty-sixth meeting of the philologians of Germany, which was held in the prosaic town of Karlsruhe, Sept. 27 to 30, the learned body was saluted after the approved German fashion by a *Festschrift* prepared for the occasion by the philological professors of Heidelberg, one of the two universities of Baden. The studies thus presented are mostly of interest beyond the narrower philological circle for which they were intended. So any one who has kept Greek

enough to read easy apophthegms may spend a pleasant half-hour in looking through the collection which Prof. Curt Wachsmuth has published here after a Vienna MS., in maintenance of his thesis that there once existed a vast alphabetical *corpus apophthegmatum*. To be sure, the chief amusement in examining such a collection is the recognition of every-day friends under Greek names, the jokes of yesterday's newspaper or last night's farce coming up in a Greek garb, often much the worse for wear. So long as men are what they are, they will always feel a certain satisfaction in observing plagiarisms, and even in these few pages some shameless appropriations will be noticed. The mother of the Gracchi, for instance, may be thought to have a prescriptive right to her jewels, but if we turn to these apophthegms we find that Cornelia has been dealing in paste these nineteen hundred years and more. Hundreds and thousands of girls have been christened Cornelia on the strength of the Roman anecdote, and now it turns out that the wife of Phocion made the same remark about her husband ; and Olympias said the same thing of Alexander. Schöll's detailed discussion of Pseudo-Plutarch's Alexandrian Proverbs will interest specialists only; but Uhlig's contributions to the restoration of the oldest compendium of grammar, which goes under the name of Dionysius Thrax, will attract the attention of all who care to follow the curious history of grammatical study. Prof. Zangemeister has given us an account of the *periochæ* of Livy, from which it appears that they were based, as Orosius was based, on the epitome, and not on Livy himself. There is something comforting in this, as when a servant tells us that a plate was broken six months ago : a manuscript said to have been burned up by Omar is not half so great a sorrow as a manuscript that disappears in the Renaissance ; and if Orosius had no Livy, we can console ourselves with what is left of the great historian. In the last article, Von Duhn expresses his fear that archæologists have not yet wholly emancipated themselves from the habit of looking for illustrations of Greek poetry, and nothing but illustrations of Greek poetry, in the numerous vases that have come down to us, and tries to show by a specimen in the Würzburg collection that the legend of Phineus was a popular, not merely a literary, myth, and that the Würzburg representation of it goes back to a period prior to the literary form of the story of the Argonauts. Heidelberg is a delightful *Musensitz* (which is not nearly so affected an expression as "abode of the Muses" would be in English), and those who have kind memories of the place will be glad to see this indication of its new and vigorous philological life.

—The word *stipulatio* (contract by question and answer) is a good example of the superiority of comparative etymology and comparative archæology over the study either of the language or the customs of any nation by itself. The Romans, who were necessarily confined to the latter method, were divided on the derivation. Varro and Festus connect it with *stips*, a piece of money, though money played no part in the act of stipulation, and was not necessarily used in the result. In fact, this suggestion belongs to that style of etymology in which any word can be deduced from any other word provided they contain several letters in common. Justinian, in the Institutes, and Julius Paulus trace it to an adjective *stipulus*, which they assert the ancients used for firm. As there is no other record of this adjective, it is not unlikely that it was invented for the occasion ; and the possible connection with *stipo*, to cram, to compress, far from confirming its existence, seems rather to cast doubt upon it because it may have suggested the invention. Isidorus, however, gives what we believe to have been the true explanation. The early Romans, he says, when they made a solemn promise, broke a *stipula*, straw, cornstalk, and joining the parts together acknowledged the agreement. Now, if there were no nation known but the Romans, this bit of antiquarianism might be supposed to rest on no better basis than Varro's philology, so that judgment would have to be entered "neither party." As late as 1879 we find Professors Lewis and Short's edition of Andrews's Freund giving the preference to the derivation from the apocryphal *stipulus*. But the case is entirely altered if the inquiry is broadened a little. The strong tendency among primitive races to accompany every formal communication with a visible act is a commonplace of sociological archæology: witness the *confarreatio* among the Romans themselves. A sanction of gifts, sales, and pledging exactly similar to the rite recorded by Isidorus is found preserved among the Franks, Bavarians, and Alemanni in the phrases "mit mund und halm," "mit mund, hand, und halm." Where *halm* corresponds to the breaking of the *stipula*, *hand* points to a Frankish "There's my hand upon it," and *mund* corresponds to the *interrogatio et responsio*, "Spondesne? Spondeo," which was all that in Justinian's time was left of the early ceremony of contract. This, which one may find in Grimm's 'Wörterbuch,' is almost conclusive; but the question is put beyond the reach of doubt by the discovery of Dr. Warren, of Dort, that there are traces of a similar custom in India.

—The modern interest in the history of religion has led to the study of the worship paid to natural objects, animate and inanimate. Of this class of works only a quarter of a century ago Bœttticher's 'Baumkultus der Helenen' was almost a solitary example ; but lately Italy has given us De Gubernatis's 'Zoölogical Mythology' and his 'Mythologie des Plantes'; England, Brown's 'Unicorn'; and France, Rolland's 'Faune populaire de la France,' just completed. Somewhat similarly, the increased attention paid to dialects has led to recording popular names of animals and plants, mostly in scattered articles in periodicals. William Turner's curious 'Names of Herbes,' first published in 1548, and reprinted this year by Trübner, is a proof of the interest in this matter; John Smith's 'Dictionary of Popular Names of Plants,' though undertaken with a different purpose, will assist investigations; and Mr. Satchell is engaged on a glossary of fish-names for the Dialect Society. In France, we see, the National Horticultural Society have offered two gold and two silver medals for the best work on the names of plants in the French patois.

—"If I were threatened with seeing all my works burned except one score, I should decide in favor of the 'Messe des Morts,'" wrote Berlioz to a friend in 1867, two years before his death. In a letter dated 1837 he describes the effect of his "Requiem" on a Paris audience. One person wept for a quarter of an hour after the performance, and another, a chorister, was seized with a nervous attack. "Vraiment c'était d'une horrible grandeur." Congratulatory letters were sent to him by Victor Hugo, Rubini, Legouvé, and many artists, sculptors, musicians, and authors. In his autobiography he says: "How often, at the performance of my 'Requiem,' has there not stood by the side of a trembling listener, convulsed to the very depths of his soul, another who opened his ears wide without hearing anything. That man resembled the inquisitive people who go up into the statue of St. Charles Borromeo at Como, and who are greatly surprised on being told that the *room* in which they have just sat down is inside the *head* of the saint." These citations reveal, better than anything else could, the leading aim and characteristic of Berlioz's compositions, which is the vast, colossal, overwhelming, terrible, architectural, in music. No artist probably ever had such an unbounded ambition and imagination as he, and had the source of his ideas been as inexhaustible as his skill in inventing striking devices for expressing himself, he would have been one of the greatest artists of all times. Here, however, was his weak point, and one cannot help wishing he had adopted the method so common among literary men of taking a collaborator who might have supplied him with material to be elaborated and embellished with his rich and varied orchestral combinations. As he failed to do so, we cannot help admitting the correctness of Wagner's remark, that Berlioz is the true saviour of the world of absolute music, because "he has made it possible for a musician to take the most inartistic and inane tone-material and make it wonderfully effective by the unprecedented use of the most varied but purely mechanical expedients."

—Many of the movements of Berlioz's "Messe des Morts," which was produced Thursday evening by the Oratorio Society at the Academy of Music, bear witness to the truth of this criticism. There is very little besides beautiful instrumentation in the "Requiem," "Quid sum Miser," "Lacrymosa," "Offertorium," "Hostias," and "Agnus Dei"—in six numbers out of ten. The other four are interesting in different ways. The "Sanctus" begins with a lovely melody for tenor, taken up subsequently by the female chorus, and is musically by far the most significant number. The solo was admirably sung by Signor Ravelli, except that he was occasionally obliged to force a high note unpleasantly. The "Quærens Me" is an unaccompanied vocal sextet of great beauty. In the "Hostias" the accompaniment consists of flutes and trombones alone—a peculiarly weird and hollow combination. But the most remarkable number is the "Dies Iræ," in which Berlioz employs, besides the chorus and regular orchestra, four additional bands, comprising sixteen trumpets, sixteen trombones, four tubas, twelve horns, sixteen kettle-drums of different pitch, and other instruments of percussion. Dr. Damrosch arranged his additional forces in four proscenium-boxes, and the result was a musical cyclone the like of which has never been heard at the Academy. We can imagine that, as given in Paris, this number has that awful effect which Berlioz calculated, but here the trombones made such a blasting or "blasted" noise that the audience were probably reminded of a Bowery museum more than anything else. It is unjust to Berlioz to reproduce his ideas in such a coarse, jarring manner, which recalls the passage in his memoirs where he says he "almost had a fit while listening to the overture to 'King Lear' in Prague, conducted, nevertheless, by a Kapellmeister of undoubted talent." If good trombones were not to be had in sufficient numbers, the "Requiem" should not have been given. This is indeed the principal criticism to be applied to Dr. Damrosch. He should not attempt such colossal works with his new and inexperienced orchestra. On Thursday it played with a certain correctness, but without more than hinting at the kaleidoscopic beauties of the score. The same thing was noticed in the "Parsifal" prelude which preceded the Mass, and which cannot be adequately reproduced with such a small body of strings. The brass was unsatisfactory here, too. One blunder was so grave that it must be pointed out. When the Grail motive is first taken up by the trumpets and trombones it is marked piano, with a

crescendo to the third bar, which is forte. At Bayreuth this brief passage produced a profound impression, whereas here it passed unnoticed because the brass began mezzo-forte and ended mezzo-forte. The chorus numbered about three hundred voices, and sang remarkably well throughout most of the numbers, except that the manner in which the tenors and sopranos occasionally got off the pitch suggested the necessity of some sifting. The sextet was acceptably sung by Mrs. Ames, Miss Dossert, Signor Ravelli, and Messrs. Woram, Coletti, and Heinrich.

THE FRIENDSHIPS OF MARY RUSSELL MITFORD.

The Friendships of Mary Russell Mitford, as Recorded in Letters from her Literary Correspondents. Edited by the Rev. A. G. L'Estrange. Harper & Bros.

THERE is not much that is in itself very important in this collection of letters. The book will be chiefly interesting to those who, remembering the people and places, are carried back as they read to bygone times. Bygone the times of Miss Mitford and her circle already are; for in the last half-century, and even in the last quarter of a century, a vast change has come over English life. "Our Village" is comparatively unaltered: the rustic and his cow still gaze at the passing train with nearly the same expression of face, and the existence of both remains pretty much what it was, though their common lord and master the squire is now less resident on his estate, more addicted to spending his time in pleasure cities at home or abroad, more civilized, less feudal and paternal. Not so with "Belford Regis." The country town of Miss Mitford's time, with its "little homely coteries," its "sandwich parties," and its whist-tables, is a thing of the past. The members of those coteries were people who spent all their days in the same place, seldom going even to the sea side, knew each other well, were known to the whole town, met evening after evening for their rubbers and negus at each other's houses, and lived at once an extremely quiet and an extremely social life. Each of them was a character, and some of them were highly quaint. Now Belford Regis stands at the confluence of four or five railways. It has trebled in size, and the general tide of bustle, excitement, and progress has overflowed its streets. Fast trains have, in fact, made it almost a suburb of the metropolis. The hand of improvement has been everywhere; even the churches have all been restored by Ritualism; and the man of fifty, revisiting the old place, can hardly recognize the scenes of his boyhood. Most of the people of the wealthier class are immigrants, and many of them are mere sojourners; often they are tradesmen who, in the vast development of commerce, have made fortunes in middle life, and do not know what to do with the remainder of their days, but settle first in one place, then in another, seeking happiness by change of residence, and finding it not, till they die. Characters are all cast in the same metropolitan mould. As in London, a man hardly knows his next-door neighbor, and sociability as well as idiosyncrasy is gone. On the other hand, there are railway-trains without number, telegraphs, telephones, and, instead of one, a dozen post deliveries in the day. Repose and social enjoyment will perhaps come back hereafter in another form.

However, the reader, entering the circle of Miss Mitford's friends, will find himself in intellectual company high, if not the highest. Here are Cobbett, Lord Holland, J. P. Smith of the "Rejected Addresses" (here treated to his second initial), Joanna Baillie, Milman, Talfourd, Mrs. Trollope, Mrs. Hemans, Mrs. Opie, Miss Strickland, Captain Hall, N. P. Willis, W. Howitt and his wife, Miss Martineau, George Ticknor, Mrs. Jameson, "Barry Cornwall," Crabbe Robinson, Douglas Jerrold, Eliot Warburton, Bayard Taylor, Mrs. Barrett Browning, and Ruskin, besides Miss Mitford herself. Living in retirement, but being extremely sociable and sympathetic by nature, Miss Mitford seems to have indemnified herself for her solitude by cultivating correspondence; and her literary position—especially her editorship of a popular annual—brought her into connection with a number of literary men and women. Mr. L'Estrange tells us that she even carried on an affectionate correspondence with many persons whom she had never seen. A better-hearted woman never lived, though she had her weaknesses and her aberrations. That she "brightened the paths" of her friends, and "refreshed their lives of toil," is truly said; and to do this was her delight.

Perhaps the most characteristic things in the volume are the letters of Cobbett:

"My wife is much better, but is not well. . . . Give me some news about dogs. D—n politics! Is Snip with pup yet? a matter of far more importance than whether the Prince of Asturias be hanged or not; or whether his silly father be in a mad-house; or what grenadier is the gallant of his old punk of a mother. We are well set to work, truly, to pester our brains about these rogues! It matters not a straw to us whether Napoleon hang them all or send them a-begging. And as to our fellows at Whitehall and Westminster, we shall be sure to do right if we hate them all. Lefevre, indeed, as far as the spaniels go, is of some importance; and though he has played you foul, I hope he will live till we have got that more valuable part of the creation out of his hands."

The last sentence will be pleasant reading for Lefevre's son, Lord Eversley. It is right to say that this passage, with the still more Cobbettian language which we may suppose to be represented by the asterisks, was addressed not to Miss Mitford, but to her father, Dr. Mitford, the minor Cobbett of a country town, and a loud-voiced political reformer, himself conspicuously in need of reform, though his warmth of nature preserved for him the love of his much-wronged daughter, whose filial affection is the glory of her life. Cobbett is described by Miss Mitford as "a tall, stout man, fair and sunburnt, with a bright smile and an air compounded of the soldier and the farmer, to which his habit of wearing an eternal red waistcoat contributed not a little." Demagogue as he was, it appears that he was also a game-preserver, though he justifies to himself his determination to keep a preserve close, on the ground that if it were thrown open the game would find its way to the "maw" of the "d—d Levite."

We have here a good deal from Mrs. Trollope of doubtful memory. She and Miss Mitford were great friends. Miss Mitford calls her "a lively, brilliant woman of the world, with a warm, blunt, cordial manner and many accomplishments." In her letters she appears bustling, pushing, rather vulgar but kind-hearted, and willing to take trouble in doing her friends a good turn. On want of refinement she ought not to have been severe. Writing from America, she speaks of the people as "so very queer, so very unlike any other thing in heaven above or earth below." In a more sternly critical mood she calls them "savages," though she adds, "yet is the country beautiful and wonderful in its rapid progress toward the wealth and the wisdom, the finery and the folly of the Old World." Her slapdash and superficial descriptions call forth some quiet and sensible, though not unimpeachably grammatical comments from Miss Sedgwick, who writes to Miss Mitford:

"There is undoubtedly a crude state of things among us. Mrs. Trollope (by the way, I am exceedingly obliged to you for your very fine account of her, which has very much raised her in our good opinion) has not much misstated, though she has grossly caricatured us. You may imagine in a country where everybody travels, and where there are no acknowledged distinctions of classes, no barriers obvious to the senses, that in such places as steamboats, canal-boats, and stage-coaches the respect with which any individual is treated must greatly depend upon circumstances. It is not very easy for a person educated in a different condition of society to adapt themselves [*sic*] to the peculiarities of a new aspect of society; but from my own experience, I am sure your father is right in saying that a lady may travel from Georgia to Maine without meeting any impertinence."

We catch sight by the way of "an untoward speculation at Cincinnati," which was not likely to lend a roseate tint to the medium through which Mrs. Trollope viewed men and manners in America.

Perhaps the best letters in the volume, as compositions, are those of Sir William Elford, of whom Miss Mitford says with truth that "there is something of Horace Walpole's mixture of humor and courtliness about his style," and to marry whom she says, when playfully twitted with such a tendency, would be killing the goose that lays the golden eggs. Sir William, though a man of taste and cultivation, hardly entered the literary arena except as an occasional pamphleteer: it was for that very reason, no doubt, that he excelled as a letter-writer. He gave to his letters his freshest mental energies and his best thoughts, the choice wine of his intellect; whereas people who are writing books can only give their letters the lees. Letters may be interesting merely from their authorship, or from the facts which they contain; but as literary compositions, they require effort like literary compositions of other kinds. Who can doubt that those letters of Madame de Sévigné and Horace Walpole, which read as easily as the writings of Rousseau, were written with as much care? Sir William Elford had the advantage not only of leisure, but of eccentricity. Among all these Liberals he is described as a Tory, and he evidently had the root of all Toryism in him in the highest perfection. Apparently he is quite in earnest when he complacently sets down war, plague, and famine as the necessary means, "according to the course and construction of the animal world," of keeping down population, and war as the least unpleasant of the three; so that to deprecate war is to fly in the face of nature.

Miss Mitford's own letters are hardly an exception to the rule just laid down. They always bear the traces of a genial, enthusiastic nature; but otherwise they are for the most part such as pass every day through the mails. Her criticisms are of little value. She hates Thackeray, and is most struck by the "vulgarity" of Bulwer and the "cant" of Dickens. Of Carlyle, she says that his fashion is waning rapidly, and that the idol will soon be knocked down by its worshippers. Over Guizot and De Tocqueville she can only yawn. Of her opinions on men and things, the most notable, perhaps, is the worship which she, Liberal as she is, in common with Mrs. Barrett Browning, a still stronger Liberal, pays to Louis Napoleon. That adventurer had done nothing except commit a gigantic felony: but his success was dazzling, and he was a one-man power. Advocates of female suffrage may take a note of the fact. Miss Mitford is always at her best when she is painting rural scenes and figures, because she does it with all her heart. This passage on Silchester is an example:

"The poem on Silchester first made Mr. Kenyon and me friends, and that friendship was the remote cause of one to me still more precious—

there is one reason for loving Silchester. But the scene is itself so beautiful! Fancy a hundred acres of the highest land in the south of England, the crown of a ridge of hills, mostly covered with the richest woodland, enclosed by a wall some twenty feet high and nearly twenty feet thick, surmounted by huge pollards, high timber-trees, hedgerow shrubs (such, for instance, as fine old thorns, maple-bushes, etc.), with enormous masses of ivy and wild service-trees, and long, pendant shoots of the briar-rose hanging down the old, gray, cliff-like walls. Everywhere the ground at the foot of these walls sinks down into a narrow fosse at the depth of some hundred feet, rising again on the opposite side—some part of this outer ditch being rich meadow land, other portions in the most beautiful coppice—joining again to the other copses—on the most beautiful ascents and declivities. Nothing was ever so exquisitely mantled about. Just at one of the gates of the old city, a huge crag, crowned with ivy and clothed with magnificent timber-trees, stands the pretty country church; adjoining to that, an old, rustic farm-house; and, at a little distance, in a magnificent grove of oak-trees, the amphitheatre, with its five rows of seats still to be traced—huge elms growing on the top and sides, and the large oval space at the bottom perfectly clear, a fine, level arena of smooth and verdant turf. On one side of the amphitheatre is a piece of water, dark as a mirror; another deep pool reflects the hoary walls and some noble oak-trees; and, on the opposite side of the city, the parsonage, a beautiful house, very large for a pastoral mansion, with its pretty grounds, sweeps away into the woodland scenery of the south side of the walls. A short avenue leads to the fine, open, breezy common, golden with furze and broom, and from that commodious upland you look down upon the hundreds—aye, thousands—of acres of the most wild and exquisite sylvan scenery: Pamber Forest is spread beneath your feet; on one side the dark fir plantations of Mortimer Common rise over a clear little lake, with its decoy and its millions of wildfowl: on the other, High Clere; the Beacon Hills stretch away over the wild district of North Hampshire, where Mr. Chute's curious old place, The Vine (*vide* Horace Walpole), and the still more remarkable moated grange of Bear, carry back the eye and the fancy to the days of Clarissa, and of manners and scenery more primitive still. Oh, how I should love to stand with you upon Silchester Common! Its floral beauty I have endeavored to describe to you in my scrawl of last night; but the purity of the air, the fragrance of the budding woods, the enormous fir plantations, the wide expanse of richly-scented, blossomed gorse, the acres of wild hyacinth and of lilies of the valley, defy all description: it must be felt. Oh, that we were there together! I so love Silchester—always loved it!"

This is the language of a genuine delight, which excuses over-measurements and some general exaggeration. It is, perhaps, characteristic that the writer should think so much of the natural beauties and so little of the antiquarian associations, treating the Roman remains chiefly as features in the landscape. Silchester is the British Pompeii, and though its interest is far indeed below that of the Italian Pompeii, it is worth seeing in its minor way. It is easily seen, too, for it is not more than three miles from the Mortimer Station of the branch of the Great Western Railway between Reading and Basingstoke. The walls of the Roman city are almost entire, and excavation has now laid open the complete ground-plan of the streets, houses, and public buildings, with many vestiges of ancient life. On the spot where Miss Mitford stood drinking in the influence of what is undoubtedly a very lovely and thoroughly English view, once, perhaps, stood some gay Roman officer, with no soul for the beauties of nature, and pining in his provincial exile for the pleasures of the capital; then turned away, with an exclamation of disgust, from the dull expanse of unbroken forest stretched out beneath gray skies, to order his Celtic slave to put more fuel into the hypocaust under the triclinium, to console himself for the absence of Roman banquets with a dozen of the Richborough oysters the shells of which still strew the ground, or to try what that little provincial amphitheatre could do as a substitute for the gladiatorial shows of the Colosseum.

RECENT NOVELS.

On the Borderland. By Harriette A. Keyser. G. P. Putnam's Sons.

Doctor Ben. Round Robin Series. Boston: James R. Osgood & Co.

Sylvie's Bethrothed. A Russian Story. By Henry Gréville. Translated by Mary Neal Sherwood. Philadelphia: T. B. Peterson & Brothers.

Faustine. By Rita. Philadelphia: J. B. Lippincott & Co.

Allerton Towers. By Annie Thomas. Harper's Franklin Square Library.

Under Green Apple Boughs. By Helen Campbell. [Our Continent Library.] Fords, Howard & Hulbert.

Those Children and Their Teachers. By Byron A. Brooks. G. P. Putnam's Sons.

Weighed and Wanting. By George Macdonald. Harper's Franklin Square Library.

Nobody. By the author of 'The Wide, Wide World.' Robert Carter & Bros.

The Knights of the Horseshoe. A Traditionary Tale of the Cocked Hat Gentry of the Old Dominion. By Dr. William A. Carruthers. Harper's Franklin Square Library.

Captain Mansana, etc. By Björnstjerne Björnson. Translated from the Norse by Rasmus B. Anderson. Boston: Houghton, Mifflin & Co.

Robin. By Mrs. Parr. [Leisure Hour Series.] Henry Holt & Co.

Kept in the Dark. By Anthony Trollope. Harper's Franklin Square Library.

The Giant Raft. Part 2. The Cryptogram. Jules Verne. Translated by W. J. Gordon. Charles Scribner's Sons. 1882.

'On the Borderland' between sanity and insanity is delicate ground on which to place the scenes of a novel. The author has three theories to set forth and illustrate: one about hereditary tendencies to insanity, another of "villany as moral insanity," and a third—more suitable, it would seem, for a novel—concerning the curative powers of music. This last affords her a proper field for a heroine, who in due time marries the man whose inherited tendency has been duly overcome by the physician who is the good genius of the plot. The author has selected the less repulsive side of the subject, and her attempt to enforce the humane and enlightened view of the treatment of the insane is throughout creditable, but to carry real weight such a book must embody the results of a far larger experience, or the discoveries of that keen imaginative insight into human motives and passion which only genius possesses.

The same may be said of 'Doctor Ben,' the plot of which has, however, one or two curious novelties. We are all well used to the stories of perfectly sane people wickedly shut up in asylums to endure heaven only knows what; but here Ben Hollins, on the eve of his wedding day, receives a terrible blow, from which he presently recovers physically, but with his mental faculties so benumbed that he is no more than a child. Most patiently he is tended by his parents and by her who would have been his wife, till Tom Macrae, an old lover of the lady, through mingled love and jealousy, aided by such opportunities as are only found in novels, carries him off and safely immures him in a private insane asylum. Safely, but in a far different sense from Macrae's understanding of the word, for it is a place where they cure people, and Ben recovers in time to disappoint Macrae of his (Ben's) father's fortune, though Betty Hartley has been always true to him. Stirring as the incidents are, the story drags, for the author loses and finds Ben so many times that it seems like a cat playing with a mouse. But then that fills out the book, and so do the one hundred and fifty pages of description of the life in the asylum. Like 'On the Borderland,' it is meant for the encouragement of the sufferers and their friends, but that does not make a good novel or a vivid picture. French realism has covered, once and for all, the possibilities of the insane asylum, pathetic, grotesque, demoniac, so far as they can serve the purposes of a novelist.

'Sylvie's Betrothed' is not the first book in which Henry Gréville has introduced all the elements of exciting passion that make a book bad, and then just saved it from that category in the eyes of superficial observers by making all come right in the end. Nobody finally *does* any wrong, but such a conclusion cannot redeem the scenes with which the book is filled. Repelling as is the idea that a man of twenty-five should adore a married woman more than ten years his senior, it is not impossible; but if our estimates of the power of right living mean anything, it is beyond probability that fifteen years of ideal happiness in married life should lead only to such an episode as is sketched in this story. Moreover, the return from this pleasant dallying with temptation is no such easy thing as it is made out here. The path of rectitude is not a path from which one can stray to right or left at pleasure, but a straight and narrow way, which, once left, is found again only through pain and grief. The translation is of Mrs. Sherwood's best, but there is nothing of any kind or sort that is Russian in the story.

'Faustine' is of the Ouida type of story, but distinctly without the badness. It is even remarkable for the reserve with which the material is handled. A scheming priest, a beautiful actress, an ardent youth have many times figured in doubtful fiction, but in this book their adventures are wrought into a tale which may safely be commended to the lovers of thrilling incident.

'Allerton Towers' is much more than half a fine book, and the reader is vexed at its failure. Many scenes are prettily and cleverly done, but the lack of a sense of proportion makes the scheming mother a figure quite out of place in the gentle, faintly-colored life of a cathedral town. Mothers may plan and plot even there, but a woman who deliberately sells her daughter for so much cash down, wherewith to pay her own debts, could be found only in a very different world. Moreover, to marry a hero twice over in one novel is at best a delicate task, but to give up one's betrothed, to marry and bury a wife, and return to the first love within twenty pages and within as many months, requires a greater variety of sympathy than most readers have at command.

In 'Under Green Apple Boughs' there lay a rare opportunity if the author had but known it. To paint a faithful picture of the life in one of those old Long Island villages, the survivals of the last century, would be well worth the doing. We get some glimpses of it: "a fossil community with the interest attaching to fossils," where modern influences "make as much real progress as waves against a Holland dyke. The village held its own, looking straight over the heads of these audacious foreigners with their nineteenth-century madness." Hither came a brilliant and erratic professor of chemistry and his keen, clear-headed sister, modern of moderns. Here was enough of that contrast and of that marked individuality which American life is condemned for lacking, to make a fresh and original story, but Mrs. Campbell has preferred to heap up melodramatic incident to a climax the pure deviltry of which outdoes the work of most of the

professional sensationalists. It is the greater pity, because she has a keenness of observation and a grace of style which, bestowed upon a rational plot, would make a novel far above mediocrity.

'Those Children' is a rambling tirade against schools of all sorts, public and private, concluding with a Utopian vision of a school from which fractions "are left out," and the boys are to stay so long as they are "congenial and moral." The incidents seem intended for identification, and it ought to be somebody's business to look after the school trustee who puts in a teacher with a brogue such that the children cannot understand her, and another who was yesterday but a cook, and could scarcely read or write.

It is the lover who is 'Weighed and Wanting' in George Macdonald's book. He is not a worthy person, judged by any standard, but the reader must find him somewhat justified for his dissatisfaction with the heroine. She is the very perversity of goodness. She performs miracles of healing alike with her singing and her ready hands, but what she does is as nothing to what she hopes to be. "She would be more than ever the sister and helper of her own—cling faster than ever to the Lord's garment, that the virtue going out of him might flow through her to them. She would be like Christ, a gulf into which wrong should flow and vanish—a sun radiating an uncompromising love." There is a great deal of such extravagant and irreverent nonsense in the platitudes with which the book is filled, but there is really nothing left of the qualities which made the success of Mr. Macdonald's first books.

'Nobody' is in Miss Warner's usual style both as to plot and execution. It is mentioned here only to notice the singular mistake to which her devotion to one idea, or one form of one idea, has led her. "Nobody" is the simple country girl whom the hero, upon her first visit to the gay city world, falls in love with. He has every grace of mind and manner except what Miss Warner is accustomed to call "the Christian." They part in the spring and meet again the following autumn. "Days and weeks go by," till at Christmas time he offers himself to her, and is met by a positive refusal, because, "You know, O you know, you are not a Christian!" Upon this he tells her that during the summer he has thought and studied—and "then made open profession of his belief." So the way is smooth and that is the end of it. But it is amazing that Miss Warner does not see how she has stultified herself by her representation that this change is a matter of such vital consequence that the girl will break her heart rather than marry the man without it, and yet it is so little a thing that in all the weeks since his return she has never suspected anything of it. Her surprise at his announcement is proof of that. The answer to such a criticism would be, that she *would* have felt the difference, and that therein is Miss Warner's mistake. Either way, it is an instance of the unreality which makes most of the "religious novels" positively dangerous. One kind of mind they disaffect, another they mislead, while it is not easy for a critic to deal with them, from the difficulty of separating their false views of the truth from the truth itself, so that the condemnation of the one shall not seem irreverence to the other.

'The Knights of the Horseshoe' belongs to the "Southern Life and Character" series of the Harpers. Its historical basis is found in the so-called "Tramontane Expedition" under Governor Spotswood, in 1714, to explore the country beyond the Blue Ridge. It needs a well-authenticated tradition to make it credible that, but a few days out, all the horses went dead lame *for want of shoes*, no one having bethought himself of the effect of the rocky gorges upon the feet of horses only accustomed to the soft soil of the bottom lands. But the gentlemen were equal to the emergency: the wagons were deserted, the tires of the wheels taken off, and the shoes made and put on with their own hands. After the return from their successful journey, they formed themselves into an order which held solemn and splendid meetings in the Hall of the House of Burgesses. Their badge was a golden horseshoe with the motto, "Sic juvat transcendere montes." This is but an episode at the close of a long and somewhat heavy story, for which Cooper evidently furnished the model. The book is dedicated to the Hon. John Tyler (with others), and a foot-note adds, "The above was written before Mr. Tyler was even thought of for the Vice-Presidency." The date is, Savannah, June, 1845, and it is an odd proof how far we have left the first half of the century behind us, that, to most people who see the book, the 1714 will hardly seem less familiar than the 1847.

'Captain Mansana' is a vigorous, spirited sketch of an Italian *bersagliere*, the stuff of which revolutionary leaders, if not patriots, are made. A prefatory note explains that it is meant for biography, not romance. "The most novel of its incidents are historic, some of them even to the most minute details." But we are at loss how to interpret the further explanation: "The singular destiny ascribed to him is historically his in all that has a determining influence on his psychological development." Nor is it clear what is meant by the comparison with Lassalle: "The character-phenomenon is the same." The facts, if Mansana's story be fact, are widely different.

'Robin' is so far above all the books which precede it on our list as to belong to quite another world. It is a beautiful story of resistance to temptation, and of the purification and elevation of character in both man and woman by such a struggle for self-conquest. It is essentially dramatic in the sense of action and reaction of the personages of the story upon each other. Robin's second marriage is the only possible conclusion. Christopher's work and Christopher's hope would seem incomplete without it, but we had rather it had not been while the old man lived.

The plot of 'Kept in the Dark' is very simple. The story turns on the concealment, by a woman engaged to be married, from her future husband, of the fact that she has been already engaged to another man. The husband, of course, learns it in the end from the man himself, and is made furious by the discovery, imagines in his jealous rage all sorts of additions to the story, refuses to live with his wife, leaves her, and after an interval of separation is again completely reconciled to her. There is a naturalness about the tale which makes it pleasant reading, though no one can help feeling that the wife is punished rather too severely for a concealment which is owing not to any desire to deceive, but to a combination of perfectly innocent motives. The husband's misinterpretation of the facts when they actually come to his knowledge, is what might have been expected. Whether there is intended to be a moral, to the effect that a woman who has been once engaged must always communicate the fact to the man she subsequently marries, we do not know; but as it is a safe and commonplace moral, we can do Mr. Trollope no great injustice if we assume that this is the lesson taught by his latest contribution to fiction.

The second part of the 'Giant Raft' is more entertaining than the first. There is less geography and natural history, and, besides this, there is the discovery of the cipher-key by which the hero's life is saved, and the highly exciting diving excursion of Benito in search of the corpse of Torres, in the course of which he has an encounter with an electric eel. The cryptogram gives Mr. Verne an opportunity of going once more over ground familiar to readers of Poe and Gaboriau, and he very modestly attempts nothing new. His cipher is a simple number-key, which, once lost, is lost forever, unless, as in this case, it is discovered by a pure accident. There are, we believe, differences of opinion as to the limits of analysis in deciphering cryptograms. That so elaborately described by Gaboriau of a pair of corresponding volumes is really not a cipher, but a purely arbitrary system which must defy discovery unless the book is discovered. It seems, too, as if any alphabetical system in which the actual letter is replaced by a letter which is variable must be undecipherable without the key. This is Jules Verne's French cryptogram. There are in the first nine words of the sentence to be transcribed seven *es*. Assuming Poe's rule, that *e* is the letter in most common use, to be true of French as well as English, we ought to find (if the rule is to help us at all) that wherever an *e* occurs in the sentence a sign of some sort, always the same, should occur in the cipher. But, on the contrary, the first *e* is represented by an *h*, the second by a *j*, the third by an *f*, the fourth by a *g*, the fifth again by an *h*, the sixth by a *j*, and the last by an *i*. How such a cipher can be made out by analysis we cannot conceive. Certainly for practical purposes it would be safe enough; but for ordinary life—for telegraphic communications, for instance—it would be more cumbrous and elaborate than convenience permits.

Geological Sketches at Home and Abroad. By Archibald Geikie. Macmillan & Co. 1882.

UNTIL within a few years popular scientific essays and books were produced almost exclusively by men of small attainments and no reputation. They were dull without being either lucid or trustworthy; their usefulness to the general reader was doubtful; and they were the scorn of specialists. Faraday may be said to have set a new fashion which will not pass until a worse era has begun. No scientific man now feels it beneath his dignity to write for a public larger than that of the specialists in his own department, and the general reader has some of the very best of modern thought presented to him in its simplest form. Popular explanations of their own investigations, written by original thinkers, have a peculiar charm, for every writer is at his best when handling a theme well within the scope of his powers, and when expressing himself under the influence of a fresh inspiration. Mr. Archibald Geikie, Director of the Geological Survey of Great Britain, has contributed a number of papers to *Macmillan's Magazine*, which, with a few generally intelligible addresses on various occasions, are now gathered into a volume. Although of various degrees of general interest, they are well worth preservation in this more permanent form. No reader of ordinary intelligence can fail to be attracted by many of these papers, and yet geologists alone will fully appreciate their suggestiveness.

"My First Geological Excursion" is not only interesting as a sketch of a bright lad beginning his career, but will serve to explain to many who do not comprehend it, how it is that the votaries of science find their work so fascinating. Mere facts taken singly are so uninteresting that it seems to not a few either foolish or heroic to spend a lifetime in ascertaining them. Those who think thus are not aware that a bit of geological history has as much of a plot as an old family story; that a few shells, bones, a ripple-mark and possibly a foot-print in the rock of a quarry enable the observer who combines knowledge with imagination to reconstruct the essen-

tial features of that very spot, untold ages since, much as a past phase of society might be inferred from an old trunk full of silk doublets, periwigs, and other significant trumpery. A cabinet specimen has an artificial or a recondite interest, but a fossil in the place where it was hidden from sight in the distant past, before the soft mud began to harden into rock, is enough to arouse the attention and excite the imagination of the rudest workman.

One of the great merits of geology is that it has opened the eyes of the world to the existence of an immense prehistoric past; but the cases are few in which the lapse of time occupied by geological phenomena can be measured with any approach to accuracy, and any addition to knowledge in this direction is extremely welcome. Mr. Geikie hit upon the excellent idea of studying the weathering of rocks on tombstones exposed to the open air, in those cases where the date remained legible or could in any way be ascertained, the character of the surface and of the incised inscriptions indicating the influence of the atmospheric agencies on the rock. He succeeded in making valuable observations on the amount of weathering, and on the causes leading to it. He showed conclusively, among other things, that marble is not a durable building material, particularly in cities, where it is seriously affected by the sulphuric acid contained in coal-smoke. It must be counted among Mr. Geikie's triumphs that he has thus forced monumental inscriptions to tell the truth.

One of these papers is on the extinct volcanoes of the Auvergne, which have long been classical in the history of geology. Though there is no historical record of volcanic activity in France, the craters and lava-streams of Auvergne are perfectly preserved. It was to this region that Von Buch, Villefosse, and many more were obliged to go to become convinced of the error of Werner's strange doctrine of the sedimentary origin of basalt, and it was there that Scrope studied eruptive phenomena. Looking back to the early years of the century, one wonders how geologists can have been so deaf to evidence and argument as to maintain that basalt was deposited from water; but it is little less difficult to carry conviction against a preconceived opinion now, by descriptions however vivid, by arguments however sound, than it was when the "Plutonists" and the "Neptunists" were at war over the great "Basalt Question."

Baron von Richthofen was the first to offer overwhelming evidence to prove that besides the eruption of streams of lava from central vents, with which the active volcanoes of the present day and the extinct volcanoes of the Auvergne and other regions have made us acquainted, floods of lava have at times issued from fissures, fairly submerging large tracts under lakes or seas of molten rock. No geologist who has visited the extreme west of the United States has failed to become convinced of this, but until lately no British geologist has visited that region. Scrope and his school have greeted the evidence with sneers, and were as little susceptible to arguments, or to the evidence presented in the reports of the numerous geological expeditions sent out by the United States Government, as were the Wernerians to the proofs of the eruptive character of basalt. The most important papers of Mr. Geikie's volume deal with this subject. He visited Wyoming, believing, as he had been taught, that the volcano was the only type of eruptive activity. One afternoon he came upon the Snake River lava-bed, and saw that Richthofen was right. Becoming convinced, however, he did not hesitate to purge himself of error. He confesses that the labors of American geologists have not received due acknowledgment, and announces his opinion that fissure eruptions furnish the true key to the nature of the basaltic plateaux of Ireland and Scotland, and probably also to those of Abyssinia and India.

Mr. Geikie pays a well-merited tribute to "the Scottish school of geology"—that is, to Hutton, Hall, and Playfair, in whose hands the science took essentially the outline it still retains, while the admirable detailed work of Werner has been fitted into his opponents' scheme of general causes. He also supplies a very suggestive essay on the geological influences which have affected the course of British history, in which it is shown how large an influence these have had on the survival and the distribution of the various races which make up the population.

While the presswork of this book seems excellent, the stereotyping has not been successful, and the number of imperfect letters is a serious blemish.

A Grammar of the Modern Spanish Language, as now Written and Spoken in the Capital of Spain. By W. I. Knapp, Professor in Yale College. Boston: Ginn, Heath & Co. 1882.

THE title of this book tells very well the story of its contents: it is a manual of contemporary Spanish, designed chiefly for students who have completed courses in French and German, or in the ancient languages, and who, therefore, do not need to be assailed at every step with definitions of elementary matters. It is a welcome answer to an inquiry lately addressed to us for a really good Spanish grammar. The author describes it in his preface as a systematic presentation of the laws that govern the official Castilian language at the present stage of its development; and it is, indeed, impossible to read far in the book without feeling that here at least is varied contact with a living language; here are evidences of genuine familiarity with Spanish as it is spoken in the streets and social circles of Madrid. Odd as it may seem, this sensation of perfect freshness is very delightful to people accustomed to read so-called "grammars" compiled laboriously out of the works of others, products of the library-corner, or of a thirst for notoriety. We have experienced it more than once in examining Professor Knapp's work, and it has inspired us with confidence as we examined. The section on Castilian "vocalization" is particularly good, and there is a capital table of vulgarisms in pronunciation which must eventually prove a great help toward mastering, or at least understanding, the mysteries of peninsular table-talk. That *crux* of Castilian phonology, *v* versus *b*, is carefully treated in numerous examples, as also the theory and practice of the ligatured consonants (*ll*, *ñ*). Is Professor Knapp aware of the controversy in the London *Academy*, on the subject of the origin of the patronymic *ez*? Dr. Burnell and Prince L. L. Bonaparte would perhaps object to the summary manner in which he disposes of this tormenting little affix (p. 16). Is it beyond doubt, for example, that Fernánd*ez*, Cervánt*es*, etc., are from Latin ablatives in -is: e Ferdinand*is*, e Servand*is*, etc.? Moreover, we must protest against the chapter of complications entitled "Stems and Changes of Verbs," though we cannot see what else can be done with the protean difficulties of the subject. Noticeably good features in the book are the clear statement of the differences between *ser* and *estar*, the remarks on the reflexive verbs, and the treatment of the prepositions. It is a terminology somewhat unusual in current grammars to call spurious, acting, or composite prepositions "complex," though doubtless Professor Knapp has his reasons. Among the "Essentials of Syntax" we would emphasize the treatment of the subjunctive mode as excellent, and we know of no manual that carries one so successfully through the perilous intricacies of Castilian diminutives and augmentatives. At the back of the book there is a very complete set of practical exercises, accompanied by the requisite vocabularies.

We do not know from what sources Professor Knapp has drawn the substructure of his very useful book—we could wish indeed that he had mentioned them more specifically; but that his grammar is a conscientious production as a whole, and well adapted to its purpose, there can be no doubt. Perhaps in a future edition a select bibliography, particularly of the labors of the German school, will be added; and will not somebody meanwhile discover some limbo whither people who neglect their indexes can be temporarily banished?

An Introduction to the Study of English Literature and Literary Criticism. Designed for the Use of Schools, Seminaries, Colleges, and Universities. By Prof. James Baldwin. Vol. I. Poetry. Philadelphia: John E. Potter & Co. 1882.

PROF. BALDWIN has divided English poetry into classes, according to its form or subject-matter: lyrical, historical, etc., ending necessarily with "miscellaneous." Under each head he gives some account of the principal works, a detailed abstract of the most important, and supplements this information with quotations from the leading critics. The plan we cannot think a good one. Not only is the division governed by conflicting principles, so that the classes overlap, but the mode of study proposed is neither the easiest nor the best for the scholar. It is clear from Prof. Baldwin's introduction and his directions for collateral reading, that he feels the importance of a knowledge of English history as the basis for real appreciation of much of English literature; but it is equally plain that under his scheme of literary study no parallel study of history is possible, for the mutual support that each gives the other cannot be fully felt until the two courses are ended: the last lesson in literature will involve in its subject the first lesson in history. The historic groups in English literature are well marked, and easily studied; to neglect them is to lose the sense of continuity, the impression of literature as a growth and as a civilizing agency. Prof. Baldwin's scheme is also open to the objection that it destroys the singleness of impression conveyed by a writer's whole work, and the personal interest in him as an individual. To study Pope successively as a satirical, descriptive, pastoral, and didactic writer, dropping him and taking him up again, is not a direct way of coming at Pope's value.

But if the plan of the volume be accepted, the work will not be found lacking in fidelity and thoroughness (though we notice the careless ascription of some lines of Chaucer to the "House of Fame" instead of "The Knightes Tale"); and if the author is inclined to rely too much on the facile superficiality of Hazlitt, to yield to the picturesqueness of Taine's falsehoods, and, in the case of modern poets, to admit what devotees of the same school say of them, in general his illustrative criticisms are well selected. It is a greater fault that he frequently quotes without naming the original writer, because criticisms meant to be read by those unfamiliar with the works treated of must derive their weight from authority. The volume contains an excellent index, which makes its scattered contents easily accessible.

La Censure sous le Premier Empire, avec documents inédits. Par Henri Welschinger. Paris: Charavay Frères; New York: F. W. Christern. 8vo, pp 400.

MR. WHIPPLE has recently recorded for us

Emerson's quaintly humorous criticism of the Rev. Mr. Abbott's 'Life of Napoleon,' to the effect that it seemed "to teach that the great object of Napoleon in all his wars was to establish in benighted Europe our New England system of Sunday-schools." If any further evidence were now needed to show how little sympathy Napoleon had with any New England ideas, it can be found abundantly in this volume of M. Welschinger's. The author of the 'Théâtre de la Révolution' has again gone to the national archives, and many of the documents cited by him or printed in full are now brought to light for the first time. For the most part, indeed, his narrative is but a fitting together of bits of documentary evidence; and there is no denying that it is at times a little dry. In five chapters he considers the general work of the censorship, characterizes the individual censors, and shows the machine in operation against the newspapers, against literature, and against the theatre. In France after '93 there was no freedom of speech, no free press, no free stage. Before Napoleon's advent the outspoken orator or journalist paid for his freedom with his life. After Napoleon came no one was allowed to speak out. A policy of rigid repression was adopted that concerned itself with the minutest details. At first Napoleon hated the word censorship, and beat about the bush; in the end he accepted it and kept Fouché and the police strictly to the mark. How petty the great man could be, can scarcely be imagined by one who has not read the story of the trivial persecutions and little tyrannies now told by M. Welschinger. Strangely enough, Napoleon awoke to the futility of his efforts at repression. During the Hundred Days the press of France was freer than it has been since, except under the Republics of 1848 and 1870; and the Emperor left on record an assertion that his "son would need to govern with a complete liberty of the press—that is now a necessity" (p. 8).

It is a great pity that Napoleon did not come to this conclusion while he was autocrat, and save the historian from recording that his censors even interfered with the marionettes (p. 246), that they cut out many lines from the "Athalie" of Racine (p. 232–4), and that they actually refused to authorize a French translation of the Psalms of David for fear that a personal application might be made of the poet's cry for deliverance. As it is, we read with pain and pity the story of the vindictive effort to crush Chateaubriand and Madame de Staël. There is something feminine in the jealousy with which Napoleon persecuted the latter, as may now be read here at length and for the first time. M. Welschinger reprints in a special appendix sixty-nine documents concerning Madame de Staël—orders, letters, police reports, etc. (pp. 325–374); and he reminds us that Madame de Genlis was one of Madame de Staël's paid accusers (pp. 67 and 167). Yet while Napoleon was thus doing all he could to crush out the independence which is the sap of strong and healthy literature, he was advertising for a great poet to illuminate his reign, and was ready to pay any price for a masterpiece. M. Welschinger quotes from the Emperor's correspondence a letter in which he expresses, with his usual energy, a succession of striking opinions on the quality and opportunities of modern tragedy. This letter was written in Poland just after a victory over the Russians—a fact which reminds us that it was a decree signed in Moscow which gave the Comédie-Française its present organization, or the basis of it.

It is amusing to observe that the Second Empire copied the First in little things better than in great. It was the Duc de Morny who authorized the performance of the "Dame aux Camélias" in 1852, in the hope that it might give the Parisians something to talk about besides politics. M. Welschinger shows us that similar tactics were adopted twice under the great Napoleon (pp. 125, 246).

Unexplored Baluchistan. A Survey, with Observations Astronomical, Geographical, Botanical, etc., of a Route through Mekran, Bashkurd, Persia, Kurdistan, and Turkey. By Ernest Ayscoghe Floyer. With 12 illustrations and a map. London: Griffith & Farran. 1882. Pp. xvii.-507.

THE country of Baluchistan, to a description of two journeys in which the greater part of this volume is devoted, apparently presents few attractions to the ordinary traveller. A stern and desolate region, one may travel through it for days without meeting a man or seeing an animal. It is parched with a well-nigh unendurable heat in summer, while in winter, at a short distance from the sea, life is made miserable by an icy-cold wind. The only redeeming natural feature seems to be the extraordinary color of the hills. One peak is "a rich blood-red," and in the rocks of the Fanoch pass "the main colors were bright red, soft crimson velvet, snowy white, purpled steel, and all shades of green from dark to emerald." There are no roads; but mere camel-tracks, which often are simply the beds of streams, impassable at high water, connect the most important towns. These are small and few in number, the houses having mud or clay walls with thatched roofs, and being surrounded by manure heaps. In most cases the villages have gardens in which are grown beans, wheat, rice, and barley, together with dates. The irrigation is artificial and sometimes "quite scientific." Of the Baluchis the author, who, as one of the Government Indo-European Telegraph Staff, had lived long among them, gives a very favorable impression. Though not so polished as their neighbors the Persians, they far surpass them in the more manly virtues. They are brave, hardy, strictly honest, faithful to their employers, and intensely proud of their race and nationality. Judging simply from Mr. Floyer's followers, they have also a keen sense of humor, which was continually showing itself even under the most adverse circumstances, making them capital travelling companions. The most interesting part of his book, indeed, is the relation of the adventures and characteristic acts and sayings of his attendants. The property of the people consists chiefly of camels, donkeys, sheep, and date trees. Of these the most important are the camels and the dates, for which Mr. Floyer tells us the Baluchi has a hundred different words to designate the different kinds. "There are more numerous and more widely different breeds of camels than of horses," while "at each village there are almost as many kinds of dates as there are trees, each with a separate name." His estimate of the endurance, the sagacity, and docility of the camel is very high, and the affection of their masters for their beasts is as marked as that of the Bedouin for his horse. The greatest care has to be taken in regard to their food, especially where the oleander grows. "This beautiful bush is fatal to all beasts except donkeys. Camels, goats, and sheep will not, as a rule, eat it of their own accord, but a single leaf getting into the fodder cut for them would kill those who ate it."

The first of Mr. Floyer's two expeditions was from the seacoast some two hundred miles into the interior, but it afforded little that was especially noteworthy or interesting. The second was through the western province, Bashakard (the spelling adopted in the text, though not on the title-page), a region which had never before been traversed by a European, across the Persian frontier, and from thence by way of Kirman and Ispahan to Bagdad. Though the author makes light of the difficulties of this route, they were evidently very great. A large part of the way was through deep snow, and at times the cold was terrible. The people, however, were hospitable, with a single exception, and at no time did he suffer detention or was there ever any attempt to rob him. The uniform courtesy with which he was received was in part owing to his familiarity with their language and customs, and in part to his kind and often successful treatment of their sick. On one occasion, when crossing a desert, he was attacked by a fever, and a man whom he had befriended rode twenty-eight miles for water to bathe his head.

His impressions of Persia are in some respects more favorable than those of recent travellers in that country. Of the caravanserais he says, they "are the one institution of which Persia can fairly boast. I have not yet visited any land where, even on little-frequented roads, you find at intervals of twenty miles warm stabling for any number up to 1,000 mules, and clean, water-tight little rooms for their owners." Some of the towns through which he passed bore evident marks of prosperity. Yezd, for instance, was "a thriving business place, and might, I think, be called the Manchester of Persia. Its chief industry is silk-weaving, and next, perhaps, in importance is opium growing." Ispahan, on the other hand, "left the impression of being a crumbling, rich old town." Kirman was the most interesting place which Mr. Floyer visited. Just before entering it he came across a miniature "greatest show on earth"—a strolling menagerie, "consisting of a newly-caught and very savage lion, and, without exception, the most hideous monkey I ever saw. The lion, a magnificent tawny beast, was held by eight men with ropes, all pulling in different directions." Here there are numerous kashmir-shawl and carpet looms, and a mint. The shawls are made in huts without doors or windows, light being—

"very sparingly admitted through small holes in the roof. . . . There were eighteen looms in the first 'workshop' I entered, and at each one stooped two or three miserable, sallow, half-naked children, their preternaturally thin, hard fingers going nervously, and their noses almost touching their work even while I engaged them in conversation. . . . Some of the children were working by memory, others were nearly perfect, but had to have small, grimy patterns tacked up on the loom in front of them which to my eye were most difficult to understand."

Mr. Floyer reports very unfavorably upon the future prospects of the carpet manufacture. He says:

"The two things that caused Persian carpets to be esteemed were the lasting quality of their dyes and the intricate and unique nature of their patterns. Now cheap European dyes are carried into the remotest villages of the country, and European patterns are being everywhere introduced—witness the coach and four at Kirman. The red and yellow colors of all Persian carpets should nowadays be tested by wetting the handkerchief and rubbing the color hard. The old-fashioned 'runashk' red, the 'zarili' yellow, and the duller yellow made from pomegranate skins, will never leave a trace on the handkerchief, while the European dyes, though more brilliant, come off freely."

The process of stamping the coins was very interesting.

"The anvil itself was a hard steel spike, bearing one face of the die. One man stood by with a pair of tongs, a second with a small hammer, bearing the second face of the die, and a third with a huge hammer. The first man seized a 'dab' of silver from the brazier, and with unerring certainty placed it on the centre of the narrow anvil. Almost at the same instant man number two placed his hammer exactly on it, and thump came number three with a blow which flattened it and imprinted the die on both sides. They struck thirty-three or thirty-eight per minute—I am not sure which, as the second figure has become blurred in my note-book."

Coins from this mint have been discovered at Jerusalem which were struck nearly a thousand years ago. At Ispahan Mr. Floyer went to see the two shaking minarets. "They are two tall brick towers. A man may ascend to the top of one, and on his rocking himself to and fro both pillars rock to and fro with him." Occasionally, both in Baluchistan and in Persia, he saw the "badgir" or wind-tower. These are built of mud, and are square, all the sides of the upper twelve feet being open "so as to allow of the freest access to wind from any quarter. Thin mud-plastered walls are built across diagonally from corner to corner, and the wind, thus confined in a V, goes of necessity down into the room below. This is the most expensive kind of wind-tower. Others are made in the form of a hood, or the orifice of a snail-shell, with the open end facing whence the prevailing summer wind comes." Mr. Floyer writes very pleasantly, and gives many graphic pictures of the life of the strange people among whom he journeyed. He rarely touches upon politics, and reserves his purely scientific information for his appendices. At one village, among his visitors were the Akhoonds or learned men. "They were five intelligent, well-mannered old men, and gave me much information. The American nation will be interested to learn that the discovery of America was just at this time commencing to excite the attention of these worthies. They puzzled me at first by asking questions about some 'yeng-i-dunea,' and it was not until after some cross-questioning I found it to be a corruption of Yeni Dunea, or New World."

The After-School Series. Preparatory Greek Course in English. By William Cleaver Wilkinson. Phillips & Hunt. 1882. 8vo, pp. 294.

Of all the devices for introducing non-classical readers to a knowledge of the ancient classics, we are inclined to think that Mr. Wilkinson's (or Dr. Vincent's, for to him the compiler gives the credit of the idea) is the most effective. It is to proceed on the course the classical student himself follows: to make the reader acquainted first with the land, then with the people, then (but this is, perhaps, a mistake) to give a peep at the language, and follow it up with a few fables, a dialogue of Lucian, and enough of Xenophon and Homer to make him tolerably familiar with them. After an introduction like this—and it really gives one a higher respect for our preparatory course to see how effective it is—the reader will be able to take hold of Sophocles, Plato, and Demosthenes with a much better understanding. The author has his faults: he talks too much—not in the way of explanation, but in his introductions, etc. What sounds very well in the schoolroom is often rather flat when written down. Another defect—and we wonder it did not deter him from the work altogether—is his want of sympathy with the subject. A man who says (p. 18), "You will look in vain for the substance of valuable thought throughout the greater part of Plato's entrancing pages," and who has no more conception of civilization as a growth than to censure Homer for "the savage and savagely low moral standard of the poem" (p. 130), cannot be expected to convey to his readers much of the genuine spirit of antiquity. On the whole, however, he has succeeded in this better than might be expected, and the occasional notes and remarks are for the most part very good and appropriate, and especially to be commended for vivacity. We are surprised that in the 'Odyssey' he has given no extracts from the excellent prose translation by Butcher and Lang.

There are to be four volumes. The second is to do for Roman literature what this has done for Greek. The next two will be devoted, we suppose, to the college authors of the two literatures. We think we may safely predict that the four volumes will present a unique and very satisfactory view of ancient literature for non-classical readers. We hope that the translations will be taken from a very wide range, so as to include, for example, such choice bits as Matthew Arnold's translations from Sophocles and Theocritus in his 'Essays in Criticism.'

Graphic Algebra; or, Geometrical Interpretation of the Theory of Equations. By A. W. Phillips and W. Beebe, Assistant Professors of Mathematics in Yale College. Henry Holt & Co.

This is a work apart from the ordinary run of mathematical text-books. The plan of it is briefly this: a proposition in the theory of equations is laid down; no general demonstration is given, but a particular equation which will illustrate the general principle is selected, and "plotted" according to the Cartesian method of coördinates; the meaning and effect of the general principle are at once made manifest to the eye. We can hardly imagine any mathematical exercise at once so useful and so interesting. Nothing in the book demands more than a very moderate degree of mathematical knowledge, and the work required is often really entertaining even to those who have no special taste for mathematics. But the student should not assume that such work can take the place of those general demonstrations which are entirely independent of any special application of the theory.

The construction of the imaginary roots of equations is very fully treated. As one looks at these simple, easy, and yet complete constructions, he cannot help regretting that the word "imaginary" has become so firmly fixed as an epithet of these quantities. As an introduction to analytical geometry, which is often so repugnant to students, the importance of the work before us can hardly be overestimated. The book is finely printed, and the illustrations, a large portion of them occupying the full size of the page, are abundant and excellent. We notice that the equation of § 20 (p. 23) is misprinted; the 6 of the second term and the 5 of the third should change places with each other.

BOOKS OF THE WEEK.

Abbott, L. Birthday Mottoes, Selected from the Writings of E. P. Roe. Dodd, Mead & Co.
Acland-Ransome. A Skeleton Outline of the History of England. T. Whittaker.
Asbjörnsen, P. C. Folk and Fairy Tales. A. C. Armstrong & Son. $1 75.
Ashton, J. Social Life in the Reign of Queen Anne. 2 vols. Scribner & Welford.
Austin, A. Soliloquies in Song. Macmillan & Co. $2.
Austin, L. L., M.D. Water Analysis. A Handbook for Water-Drinkers. Boston: Lee & Shepard. 50 cents.
Bartlett, T. H. Art-Life of William Rimmer. Boston: J. R. Osgood & Co. $10.
Bascom, J. The Philosophy of Prohibition. National Temperance Publication House.
Benjamin, S. G. W. A Group of Etchers. With Text. Dodd, Mead & Co.
Bent, S. A. Short Sayings of Great Men, with Historical and Explanatory Notes. Boston: J. R. Osgood & Co.
Bloomfield, R. The Horkey: A Ballad. Illustrated by Cruikshank. Macmillan & Co. $1 50.
Bo-Peep: a Treasury for the Little Ones. Cassell, Petter, Galpin & Co. $1 25.
Boys and Girls. Phillips & Hunt. 75 cents.
Brine, Mrs. Mary D. Papa's Little Daughters. Cassell, Petter, Galpin & Co.
Brinton, D. G. American Hero-Myths. Philadelphia: H. C. Watts & Co. $1 75.
Brown, J. Spare Hours. Third series. Lock and Sydenham, and Other Papers. Boston: Houghton, Mifflin & Co. $1 50.
Brownson, H. F. The Works of Orestes A. Brownson. Vol. i. Containing the First Part of his Philosophical Writings. Detroit: Thorndike Nourse. $3.
Campbell-Garnett. The Life of James Clerk-Maxwell, with Selections from his Correspondence and Writings. Macmillan & Co. $6.
Cary, Rev. H. F. Dante's Inferno. Illustrated by Gustave Doré. New edition. With Notes, Life of Dante, and Chronology. Cassell, Petter, Galpin & Co.
Children's Kettledrum. New edition. E. P. Dutton & Co. $1.
Church, Rev. A. J. Stories from the Greek Tragedians. Dodd, Mead & Co.
Clay, C. M. The Modern Hagar: a Drama. In 2 vols. Geo. W. Harlan & Co. $2.
Clemmer, Mary. Poems of Life and Nature. Boston: J. R. Osgood & Co.
Condit, I. M. English and Chinese Dictionary. American Tract Society.
Condit, I. M. English and Chinese Reader. American Tract Society.
Courtney, W. L. Studies in Philosophy, Ancient and Modern. T. Whittaker.
Darwin, Charles. Memorial Notices, Reprinted from *Nature*. Macmillan & Co. 75 cents.
Davies, J. Hindu Philosophy. The Bhagavad Gita; or, Sacred Lay. Boston: Houghton, Mifflin & Co. $3 50.
Dawson, S. E. A Study, with Critical and Explanatory Notes, of Tennyson's 'The Princess.' Montreal: Dawson Brothers.
Dickens, C. Boots at the "Holly-Tree Inn." Cassell, Petter, Galpin & Co.
Dobson, A. Eighteenth Century Essays. D. Appleton & Co.
Eckstein, E. Quintus Claudius: a Romance of Imperial Rome. In 2 vols. Wm. S. Gottsberger. $1 75.
Factors of Civilization, Real and Assumed. Vol. ii. Atlanta, Ga.: J. P. Harrison & Co.
Foster, J. Ellen. Prohibitory Constitutional Amendment Manual. National Temperance Publication House.
Ferguson, R. M. Electricity. Revised and Extended by James Blyth. London: W. & R. Chambers.
Fromentin, E. The Old Masters of Belgium and Holland. Boston: J. R. Osgood & Co. $3.
Gayarré, C. Aubert Dubayet; or, Two Sister Republics. Boston: J. R. Osgood & Co. $2.
Geikie, A. Text-Book of Geology. Macmillan & Co. $4 50.
Hanson, C. H. Stories of the Days of King Arthur. T. Nelson & Sons. $1 50.
Hardy, T. Two on a Tower. Henry Holt & Co. $1.
Havergal, Frances Ridley. Bells Across the Sea. E. P. Dutton & Co. $1 50.
Herman, R. L. Cradle Songs of Many Nations. Dodd, Mead & Co.
Howson-Spence. The Acts of the Apostles Explained. Charles Scribner's Sons. $1 25.
Hughes, W. H. A Shilling's-worth of Sherry, with Three-ha'p'orth of Love Thrown in. Cincinnati: Robert Clarke & Co. 50 cents.
Irving, Fannie Belle. Six Girls: a Home Story. Boston: Estes & Lauriat. $1 50.
Jacob, Edith S. The Vision of the Holy Child. E. & J. B. Young & Co.
Janes, Margaret P. The Artist's Year: Original and Selected Poems of the Months. White & Stokes. $4 50.
Jarrel, W. A. Old Testament Ethics Vindicated. Greenville, Texas: Published by the Author. $1 50.
Jewish and Christian History. Vols. i. and ii. Bible Narrative and Jewish History. Vol. iii. The Gospel Story and Christian History. Boston: J. R. Osgood & Co. $4 50.
Johnson, R. A History of the French War, ending in the Conquest of Canada. Dodd, Mead & Co.
Keary, Annie. A Doubting Heart. Macmillan & Co. $1.
Kennedy, W. S. John Greenleaf Whittier: His Life, Genius, and Writings. Boston: S. E. Cassino. $1 50.
Koehler, S. R. The United States Art Directory and Year-Book. Cassell, Petter, Galpin & Co.
Lenormant, F. The Beginnings of History, according to the Bible and the Traditions of Oriental Peoples. Charles Scribner's Sons. $2 50.
Letters of Lydia Maria Child. Boston: Houghton, Mifflin & Co. $1 50.
Little Folks: A Magazine for the Young. Cassell, Petter, Galpin & Co.
Longfellow, H. W. Evangeline. New ed. Boston: Houghton, Mifflin & Co. $2.

Williams, D. Poems. Phillips & Hunt. $1 50.

THE COMPLETION OF

SYMONDS'S

Renaissance in Italy.

Symonds's Italian Literature

By J. A. Symonds. 2 vols. 8vo, with portrait of the author, $7.

These volumes complete Mr. Symonds's great work on the *Renaissance in Italy*, the previously published volumes being:

THE AGE OF THE DESPOTS. $3 50.

THE REVIVAL OF LEARNING. $3 50.

THE FINE ARTS. 8vo, $3 50.

SYMONDS'S RENAISSANCE in Italy. 5 vols. uniform, in a box, $17 50.

THOMAS HARDY'S NEW NOVEL.

Two on a Tower.

16mo (Leisure-Hour Series), $1.

HENRY HOLT & CO., New York.

EDITIONS DE LUXE,

STRICTLY LIMITED.

Thackeray's Complete Works.

THE DE LUXE EDITION. *Strictly limited to two hundred and fifty numbered copies.* Printed at the University Press, Cambridge, on fine tinted paper. Nearly all of the illustrations are PROOF IMPRESSIONS from the original wood blocks, on India paper. It also contains INDIA PROOF impressions of TWENTY ORIGINAL ETCHINGS, *not found in any other edition*, and INDIA PROOFS of two etched portraits. Sold in complete sets only, and right is reserved to advance the price on unsold copies without notice. 20 vols. crown 8vo, cloth, untrimmed, $45.

The History of Wood Engraving in America.

By W. J. Linton, the celebrated wood engraver. Reprinted from the *American Art Review*, with additional chapters, and illustrations by the best artists and engravers, bringing the work down to the present time. The entire edition of this work is strictly limited to 1,000 numbered and 26 lettered copies, of which 260 copies have been sold to supply the English market. 1 vol. large quarto, about 100 illustrations, and a quantity of blanks and guards for mounting proofs illustrative of the subject; half Roxburgh, gilt top, $7 50.

Sold by all Booksellers and Newsdealers. Sent, postpaid, on receipt of price by

ESTES & LAURIAT, Publishers, Boston.

FRENCH OR GERMAN.

IN TEN WEEKS

You can, at your own home, by

Dr. Richard S. Rosenthal's Meisterschaft System,

Learn to speak fluently either French or German, for the nominal price of $5.

All subscribers—$5 for each language—become actually pupils of Dr. Rosenthal, who corrects all exercises, and corresponds with them in regard to any difficulties which may occur.

Specimen copy, French or German, 25 cents.

Says the *Nation*, New York: "This is without doubt the best system ever devised for learning to speak a foreign language in a short time."

☞ Send $5 for full subscription, with privilege of having all your exercises corrected and questions answered.

ESTES & LAURIAT, Publishers,
299-305 Washington Street, Boston, Mass.

BEAUTIFUL

GIFT-BOOKS,

WITH

GUSTAVE DORÉ'S SUPERB ILLUSTRATIONS.

Dante's Inferno.

Translated by the Rev. Henry Francis Cary, M.A., from the original of Dante Alighieri, and illustrated with portrait and 75 full-page woodcuts, from the original designs by Gustave Doré, with Critical and Explanatory Notes, Life of Dante, and Chronology. In 1 large folio volume, bound in extra cloth, full gilt, price $6; in full morocco, gilt, $10.

"That his drawings (Doré's) are works of art, many of them masterpieces; that every object in each picture is made to contribute to the story in a remarkable degree, are well-known facts, everywhere accepted."—*Christian Intelligencer.*

Milton's Paradise Lost.

With 50 full-page woodcuts, from the original designs by Gustave Doré. In 1 large, elegant folio volume, bound in extra cloth, full gilt, price $6; full morocco, gilt, $10.

"The most splendid book of the season."—*Illustrated London News.*

The Bible Gallery.

Containing a selection of One Hundred of the finest drawings of Gustave Doré, with descriptive letterpress by T. R. Chambers, D.D. In 1 large folio vol., extra cloth, full gilt, price $6; full morocco, gilt, $10.

"Of all attempts to illustrate the narrative of the Scriptures, the great French artist has proved the most acceptable. These powerful engravings make a superb volume, and their usefulness and beauty are enhanced by carefully prepared descriptive matter."—*The Chicago Times.*

Send for complete Catalogue of our elegant Books for Holiday Gifts, ranging in price from $1 to $150. Now ready, and sent free on application.

CASSELL, PETTER, GALPIN & CO.,
739 and 741 Broadway, New York.

Plymouth Pulpit.

WEEKLY PAMPHLET OF

HENRY WARD BEECHER'S SERMONS.

No. 1. "The Golden Net." No. 2. "They Have their Reward." No. 3. "The Personal Influence of God." No. 4. "The Principle of Spiritual Growth." Sold by Booksellers and Newsdealers. *Single Copies, 7 cents.*

For Yearly Subscription, $2; to Clergymen and Theological Students, $1 70; address the Publishers,

FORDS, HOWARD & HULBERT, New York.

Quintus Claudius

A Romance of Imperial Rome.

FROM THE GERMAN OF

ERNST ECKSTEIN.

"*A new Romance of Ancient Times!* The success of Ernst Eckstein's new novel, 'Quintus Claudius,' which recently appeared in Vienna, may fairly be called phenomenal; critics and the public unite in praising the work."—*Grazer Morgenpost.*

"'Quintus Claudius' is a finished work of art, a literary production teeming with instruction and interest, full of plastic forms, and rich in the most dramatic changes of mood."—*Pester Lloyd.*

Two vols., paper, $1; cloth, $1 75.

WILLIAM S. GOTTSBERGER, Publisher,
No. 11 Murray Street, New York.

Sent by mail, post-paid, on receipt of price.

Best Books for Girls.

SIX GIRLS.

A charming book, by Fannie Belle Irving. Beautifully illustrated. Taken altogether, this is one of the best books for girls which has been brought out for years. Price, $1 50.

"Its sweetness, purity, and naturalness should make it imperishable—one of the books which 'will sell and live.'"—*Review.*

THREE VASSAR GIRLS ABROAD.

The Vacation Rambles of three college girls on a European trip. By Lizzie W. Champney. With nearly 150 illustrations. 1 vol. small 4to, illuminated board covers and linings, $1 50; cloth, $2.

YOUNG FOLKS' HISTORY.

THE QUEENS OF ENGLAND. From the Norman Conquest. Founded on Strickland's 'Queens of England.' By Rosalie Kaufman. Fully illustrated. 1 vol. 16mo, cloth, $1 50.

Sold by all Booksellers and Newsdealers.
Sent post-paid on receipt of price, by

The Nation.

NEW YORK, THURSDAY, NOVEMBER 30, 1882.

The Week.

THE removal from office of Marshal Henry, Postmaster Ainger, Mr. Helm, of the Government Printing Office, and George E. Spencer, Government Director of the Union Pacific Railroad, for misbehavior in connection with the Star-route cases, is a late-coming but powerful blow at the culprits. Persons living at a distance can scarcely understand how great an influence the Administration for the time being has upon public opinion in Washington city, or how ready the population is to take its impressions from the local officers of the Government—the Marshal, the Postmaster, the District Attorney, etc. The Marshal and the Postmaster, while the Star-route trials were in progress, took the boldest means to make it known that, in their opinion, "the Government had no case"—*i. e.*, that the defendants, Brady, Dorsey, and others, were persecuted innocents—the inference to be drawn from their sayings being that the Administration, while compelled, for appearance sake, to prosecute the case, had no heart in it, and was performing a merely perfunctory duty. These removals ought to have been made in each case instantly. The punishment should have followed the offence without giving a moment's breathing-time to the offender. The effect of such promptness would have been most wholesome upon the community, and would have saved the Administration from much unfavorable comment. But better late than never. There will no longer be any doubt now that the President and his Cabinet are really in earnest in these prosecutions. The outcry of the defence is sufficient evidence of this. They take the astonishing position that, although the Government is the party defrauded by the Star-routers, and is the prosecutor in its own behalf, it ought to be absolutely neutral, and that the removal of the Marshal and Postmaster is an act of gross interference with the due course of law. This is part and parcel of the audacity they have all along exhibited.

Mr. Wayne MacVeagh has held his peace for a long time, and suffered much obloquy for his peremptory retirement from President Arthur's Cabinet while the Star-route trials were pending. The removal of the Star-route sympathizers has unsealed his lips. He now shows that the reason why he left the Cabinet then instead of waiting for the trial of the Star-routers, was that the people among whom and before whom the trial must take place would be very likely to assume that these prosecutions were a relic of the Garfield Administration, with which the Arthur Administration had no sympathy, the more especially as Brady's newspaper, the leading Republican daily in Washington, was all the time heaping abuse upon the prosecution, and in the same columns bestowing its warm praises upon the new President. The effect of this upon any jury likely to be drawn in the District of Columbia, Mr. MacVeagh believed, would be to render nugatory any efforts which he or others acting under him might make to secure a conviction of the culprits. He believed that this effect might be counteracted by the new Administration assuming the entire responsibility of the cases, but not otherwise; and he so informed the President in writing. Mr. MacVeagh appears to be justified in the course which he took.

We must warn Colonel Robert Ingersoll that his conduct of the defence in the Star-route cases is not helping him as an apostle of Agnosticism. In other words, his practice is hurting his preaching. People will judge creeds by the behavior of those who profess them, because they generally agree, with Matthew Arnold, that conduct is three-fourths of life. A creed, therefore, which not only permits its leading missionary to be an ardent admirer of the life and works of Mr. James G. Blaine, and the passionate and even vituperative defender of the Star-route thieves, but allows him to denounce the recent dismissals of their confederates from public office by the President as "one of the most outrageous official acts he ever knew an Administration to be guilty of," cannot enjoy considerable success in our time. If the Colonel wishes utterly to destroy Christianity, he will, in short, have to mend his own ways. If his theology has no department of political morality in it, it will certainly fail, no matter how amusing his sermons may be. We would advise him, therefore, to look into Dorsey's and Brady's cases more carefully, and see whether they cannot get along with cold professional advocacy simply.

It is reported that Mr. Robeson's canvass, including nomination and campaign, cost $70,000, and the canvass of Mr. Lyman, the civil-service reform candidate in Massachusetts, less than $150. Mr. Robeson was defeated and Mr Lyman elected. Mr. Robeson's defeat was largely owing to the popular belief that, while in office, he had made money enough to be able to spend $70,000 on a reëlection, Mr. Lyman owed his election to the belief that he would endeavor to bring about such a reform of things that an honest man can be elected to office, although he have not a dollar to spend in the canvass. It is an encouraging thing to see proof of the fact that, when the people take things into their own hands, money not only does not count in an election, but is rather apt to defeat the man who employs it.

The extraordinary scenes on the Stock Exchange on the 22d inst., and the unexampled magnitude of the transactions recorded (amounting to nearly one million shares), reflect the existence not so much of opposing interests among speculators as of contrary opinions in the country at large regarding the conditions of trade and industry. There is a large class of persons who believe that business is bad, and is going to be worse, if, indeed, we are not actually approaching a commercial crisis. There is an equally large class who believe that prices have touched bottom, and that there are no conditions visible which warrant the expectation of an early crisis. These two sets of opinions came into violent collision on the 22d instant, although why the conflict should have been more exciting and tumultuous then than on any other day is a mystery akin to those of sun-spots and meteoric showers. The result showed a preponderance of the latter class. It was proved that at any prices essentially lower than those prevailing during the past five or six weeks buyers can be found for almost any stock on the list, and in any quantity offered. The market at first declined rapidly, and then advanced still more rapidly, with enormous transactions, the total being the largest ever recorded in a single day, and the latest quotations were above the closing ones of the previous day. The aggregate of business done is too great to be ascribed to the influence of individuals or cliques, and the suddenness with which it was done proves that it could not have been the result of any preconcert among large operators. The conditions of trade, although in some respects unsatisfactory, are not gloomy. The products of the soil, which underlie and support and vivify all business, and without which it could not exist, are abundant. Some readjustments of industry must take place—notably in the iron trade—and farmers may for a time hold back their crops for higher prices, but the conditions necessary to a fair degree of general prosperity are not wanting.

The death, after a short illness, of Newton Francis Whiting, for many years the financial editor of the *Evening Post*, and for a long time a contributor to the *Nation*, is an occasion of profound sorrow to a great number of business associates and personal friends. Mr. Whiting's position in journalism—one of much delicacy and difficulty—was filled with almost ideal success. To the qualities of quick intelligence and sound judgment, and a habit of scrupulous accuracy, was added a large experience, and integrity which was not only absolute, but was never, even in the least degree, questioned. Dealing daily and often hurriedly with events and subjects affecting various and conflicting interests, in which many men were concerned, sometimes in an intense and passionate way, he convinced everybody of his impartiality and fairness, while at the same time he did his duty exactly to the journal he so faithfully and industriously served, and, which is the same thing, to the public. With this uncommon fitness for his special work, he had a remarkable pride in its successful performance. Mr. Whiting also made valuable contributions to the general discussion of important economic questions. In these relations his loss will be continuously felt and long lamented.

It has at last dawned upon the official-ecclesiastical mind of Cincinnati that perhaps the reputation of the Roman Catholic Church may be in some way affected by the financial eccentricities of Archbishop Purcell. Throughout the discussion of the question of his debts no doubt of his integrity has been anywhere suggested. Had his system of bookkeeping been as perfect as his honesty, and had his ability in the investment and general management of trust funds equalled the purity of his intentions, there probably would have been no trouble. If it be true as a matter of law that the Archbishop is solely and personally responsible for the money which he received on deposit as an individual savings bank and failed to return to the depositors, it is also true as a matter of fact that he never would have been accepted as a depositary by his creditors but for his eminent ecclesiastical position. The Church having given him opportunity and standing as a trustee, the Church may be held morally accountable for the performance of his trust. At all events, the *Catholic Telegraph*, the organ of the Cincinnati Diocese, says that "the honor of the Church is at stake," and can be saved only by a settlement of the claims. Among the plans it suggests for raising the money is a great lottery scheme. There are people, however, who will discover some confusion of moral notions in the proposal to discharge a moral obligation by encouraging on an enormous scale a practice which the Church and the world have long discouraged as decidedly immoral.

It is an excellent sign to find the Society of American Artists passing the following resolution, as they did on the 7th of November:

"Resolved, That the attention of the present Tariff Commission and of Congress should be called to the fact that whereas the United States of America is the only leading nation in the world that has not inherited the works of art of any great epoch of the past, it is at the same time the only nation that puts a penalty, by means of a tariff, upon the importation of works of art, both ancient and modern; and that in the opinion of this Society all works of art should be excepted from the payment of duties, both in the interest of art in general, and of American art in particular."

For many years there was among American artists a strong feeling of hostility to the importation of foreign works of art, at all events modern, and some disliked the importation of all works of art, ancient or modern, on the general ground that it would interfere with the sale of native works of art, and thus discourage native painters and sculptors. If we remember rightly, about fifteen years ago a petition asking for higher duties on foreign pictures received numerous signatures and was presented to Congress. Combined with this feeling was a strong dislike of the picture dealers, who used to be accused freely of combining to prevent the sale of American pictures and promote that of foreign ones; the basis of the charge being that there was, really, a better demand here among picture buyers for the former than the latter. It was, of course, absurd, because men do not engage in the picture-dealing business for the purpose of pushing the claims of any particular school on public encouragement, but for the purpose of making money. If, therefore, they show a greater disposition to purchase foreign than American pictures, it is because they find a readier sale for them. In other words, it is in every country those who buy pictures to keep for their own pleasure who make the market for them, and not those who buy them to sell again. A horse-dealer who picks up all the short-backed horses he can find, is not supposed to be doing so because he himself prefers the short-backed variety, but because he finds that that is what his patrons desire.

This American-artist view of the matter was what may be called the mechanical one. It assumed that Art was a branch of industry, like spinning, weaving, iron-making, or plough-making, in all of which high excellence had been attained by natives under the fostering influence of protection from foreign competition, and that if foreign pictures were only kept out long enough, we should soon have painters equal to the modern ones of France, Germany, or Italy, and far superior to the old masters of any country. It wholly ignored the value of art traditions, and the influence of familiarity with works of art as a means of training, to say nothing of the need of such a thing as an art atmosphere or of a national impulse in the direction of art. In fact, it made the artist an inventor simply. It fell in, too, completely with the humor and knowledge of the bulk of Congressmen of that period, and fully accounted for the commission of the statue of Lincoln to Miss Vinnie Ream. To most Congressmen art was simple imitation of natural objects, and, therefore, any Congressman with a good pair of eyes was as good a judge of a picture or statue as anybody else. We believe the best defence of this theory ever made was made in the Senate by Mr Timothy Howe against Charles Sumner, who held the effete view that to judge a picture you must have seen and studied a great many good pictures, and, more than this, must have an adequate conception of what the painters of the best pictures had in mind in painting them.

The story of Morgan, the secret-revealing Mason, is told again by the *Sun* in the interesting and minutely circumstantial manner of the late Thurlow Weed. It is not substantially different from what was told long ago. Mr. Weed, however, put this statement in the form of an affidavit, of which the jurat is dated as late as the 28th of last September. It is more specific as to persons. The names of the men concerned in the abduction and homicide are given. One of these, John Whitney, fifty-one years ago made a confession of his share in the proceeding to Mr. Weed, in the presence of other persons. Whitney died more than twenty years ago, after requesting Mr. Weed to prepare for him a statement of facts to be published after his death, but Mr. Weed was prevented from doing this. The most remarkable fact about the case is that Whitney should have chosen so violent an Anti-Mason as Mr. Thurlow Weed as the repository of his confidence.

The investigation into the operations of "corners" in produce on Monday, by the Committee of the Legislature, was a very curious affair. Dr. Howard Crosby was called to give evidence as to the moral effect of corners on the community, but had to confess that he knew nothing about corners except what he saw in the newspapers, and was evidently under the impression that the term included all sales for future delivery, of which the great bulk of the commission business in produce is composed. How he could tell, under these conditions, what the moral effect of corners on the community was, did not clearly appear. His theory of legitimate business, as explained by him, would, in fact, largely shut out sagacity, and foresight, and energy from all influence on trade. He likened trade to an attempt to sail across the Atlantic by the aid of the winds and currents, and the speculator in corners to a person who can manipulate the winds and waves for his own interest. But the owner of a steamer does this very thing as against the owner of a sailing vessel, and a good navigator sailing a clipper does it as against a bad navigator sailing an old tub. A number of produce dealers were also examined, who all testified against legislative interference, but the Committee seemed hardly to know enough of the subject to be able to follow their evidence.

Professor Tharpe, of the Somerville (Tenn.) Female College, a quiet, gentlemanly man, we are told, heard last week that his brother-in-law, Captain Burton, was going about the town denouncing and threatening to kill him. Burton's character was such as to leave no doubt on the minds of those who heard his threats that he would attempt to execute them. Professor Tharpe heard of them, and all the family heard of them. No one, however, appears to have thought of having the Captain arrested and prosecuted, or bound over to keep the peace. The Professor accordingly provided for his personal safety by arming himself with a double-barrelled shotgun, and then waited on the Captain at a billiard-saloon, where he was playing a quiet game, and blew the top of his head off, so that he died in a few minutes. We are glad to know from the Memphis *Public Ledger* that "until this unfortunate affair the Professor was never engaged in any difficulty of any kind," and also that "this terrible affair is greatly deplored, and has cast a gloom over the entire community." The Memphis *Avalanche*, however, explains that the community on the whole approves of the Professor's act, because the occasion was one "where the law seems powerless to protect the slayer. It certainly could not protect him unless strictly enforced as well by the officers of the law as by an omnipotent public opinion, and both these conditions were lacking." This is, in fact, the whole case in a nutshell. Southern communities will not enforce their own laws for the protection of human life, and, when murders occur, try to make up for it by "deploring" and "regretting" and feeling "gloomy" over them. The murderers, however, do not seem to care a cent for the lowness of spirits caused by their operations. They murder just the same. We need hardly say that Burton had committed other murders before he threatened

to murder his brother-in-law. In 1867 he killed Frank Erickson, formerly Coroner of Shelby County, and was arrested and tried, but discharged. A few months ago he had a dispute with Mr. R. S. Taylor, "in which he cut that gentleman," we are told, "very severely." It must not be supposed, however, that he "cut" him, in the Northern or English fashion, by refusing to recognize him in the street: he cut him, butcher fashion, with a knife, and for this he was actually tried, found guilty, and subjected to the indignity of a fine. This, says the Memphis *Appeal*, "humiliated him greatly, and he threatened to kill several newspaper men, and also attempted to intimidate the Court on account of it," which served the Court right; for, as appears, it let him off with a fine "out of respect to his family." For poor Mr. Taylor's family the Court apparently had no respect, though they had to nurse him through the Burton "cuts."

The close of the *Appeal's* remarks is a delicious little bit of what we may call homicidal literature:

> "It may be recorded, *en passant*, that Colonel Burton's brother Lewis killed another brother in 1878, and that the whole family conducted a *vendetta* against the Reeves family, which resulted in their extermination. There is, we believe, but one of the Burton family left, a nephew of the man who was yesterday murdered by his brother-in law."

There is nothing racier in humorous writing than this little phrase, "en passant." We are very sorry the Reeveses are all gone, because they could now furnish the newspapers with some thrilling gossip about the Burtons. It is hardly to be supposed that the affair will end here. Burton leaves a wife and four children. If there are boys among them, they will undoubtedly, in the present condition of education in that part of the country, grow up with the feeling that they ought to kill their uncle, the Professor; so that lively times, as well as much "gloom," are still in store for Somerville.

The British Colonial Office is having a dismal experience in Jamaica of the work of governing a "Crown colony" from Downing Street. It wants to make the Jamaicans pay half the damages of a wrongful seizure of a vessel by the local custom-house, and it enforces its order by packing the Governor's Council with a majority of official members. The whole island is, therefore, in a state bordering on revolt. What increases the difficulty is that there does not seem to be any remedy within reach. Local self-government, with representative institutions, has been tried and failed miserably, so that after the so-called negro insurrection in 1865, in which Governor Eyre figured so prominently, it was all swept away, and the despotic authority of the Crown substituted, apparently to everybody's relief. The whites were glad, it seemed, and so were the blacks, as they could not live peaceably together, and the Parliament was a wretched affair, and the island was running down in every way. Now the island is prosperous, but about $20,000 is about to be levied unjustly by the Home Government, and the spirit of Hampden, and Sam Adams, and Benjamin Franklin has begun, it is said, to glow in the breasts of the whole people, white and colored, male and female.

Mr. Trevelyan finds his troubles in Ireland are by no means over, but they have probably been got into more manageable shape. The Land Act has greatly diminished the outrages in the country districts, and it has been helped by the transfer of the trials for capital offences to Dublin, where convictions are readily obtained. The number of outrages occurring during the past month is lower, Mr. Trevelyan says, than it has been for twenty-eight months. The removal of the trials to Dublin is proving so effective as a means of obtaining convictions that the secret-society men have evidently determined to counteract it by intimidating the juries there also. This is the probable meaning of the attack on one of the jurors in the Hynes case, and of the murder of the detective, and other disturbances. There is much reason to fear that it may prove effective, because no protection a government can give to a man engaged in the ordinary business of life will ease his mind, if he believes that he is for any reason exposed to the attacks of assassins as determined as these Dublin conspirators seem to be. The signs from the country districts are, however, very good. The murderers of the Joyce family will, apparently, get their deserts with the hearty approval of their neighbors, and news comes from Tipperary that a party of "moonlighters" were not only successfully resisted by the occupants of a house which they attacked, but pursued and captured.

The difficulties the Tories are having with Gladstone are very amusing. Since Tel-el-Kebir so completely set him on his legs again they do not well know how to get at him. The charge of general wickedness in which they most indulge makes no impression on the public mind, and in truth makes the Liberals laugh. The Irish outrages, too, are falling off in number, so that it is not possible to make him responsible for a sad increase in Irish crime. Then the opposition to the closure rules has completely broken down, owing to the failure of the Irish members to take an active part in it. Under these circumstances, there is nothing to be done but revive the old story of the "Treaty of Kilmainham," which was done by Mr. Yorke on Friday, Mr. Gladstone meeting it all with a flat denial, the end being that Mr. Yorke's motion was negatived without a division. At the bottom of it all is the old English superstition that the Irish are such bad men that it would be disgraceful to negotiate with them, even when they are in jail without indictment or trial; the fact being that negotiation with the Irish to get their votes is as proper as to get those of the Scotch or the Whigs. The Tory Opposition has gone utterly to pieces by the departure of Sir Stafford Northcote for the Mediterranean. His lieutenants have no policy except to cut off Gladstone's head, and no hope except in his death. But he continues amazingly vigorous.

M. Valbert gives, in the *Revue des Deux Mondes*, an entertaining French version of the quarrel between Stanley and Brazza, the two African explorers, who have come to loggerheads, and are now both in France stating their grievances against each other. Stanley, of course, everybody knows. He has lately given up the business of exploring and taken to that of "exploiting," as the French say, or "developing resources," as we have it. He has become the agent of a great commercial company, mainly Belgian, formed to develop the vast basin of the Congo River, and has lately been constructing a road round the falls which make the lower part of it unnavigable, and has been launching boats higher up. The basin of the Congo is certainly worth struggling for, because it contains, as nearly as can be estimated, 80,000,000 of inhabitants, occupying a territory of extraordinary fertility and vast extent, many of them very peaceable and industrious, and having made considerable progress in the arts. When Stanley first explored the region in 1877, he seems, according to his own account, to have made his way in many places by violence rather than diplomacy, and was victorious in several bloody combats, in which the breech-loader did wonders, as General de Failly said, among the natives. The memories this left behind have proved a great misfortune for him, for, while he was pushing further into the interior, or at home organizing his company, Brazza, an enterprising Italian, but a naturalized Frenchman, and an officer of the French Navy, slipped into the region as a French explorer and exploiter on peace principles, fraternized with the chiefs, got them to bury the hatchet, he putting a bundle of cartridges into the same grave, hoisted the tricolor, which the natives regard as a fetish of great power, probably abused Stanley, and in fact annexed an indeterminate amount of territory to the French Republic, and made a treaty with Makoko, a local king of great respectability and influence.

Consequently, when Stanley returned in 1880, he found Brazza had established a town up the country called Brazzaville, had covered the adjacent region with the French flag, and put the whole in charge of a sergeant and one or two men. The result is, that Stanley has gone back to France and Belgium in considerable chagrin to state his grievances, and Brazza has followed him, and they had an amusing rencontre the other day in Paris, at a dinner given to Stanley. The French, as might be expected, are hugely delighted that they should for once have got the better of an Englishman, or an American, in the colony business. It is the more grateful because, as M. Valbert points out, the Congo is now the only great African river which has not been appropriated by some European Power. The English have got hold of the Nile, and they are trying to wrest the Zambesi from the Portuguese, and are exerting a growing influence in the valley of the Lower Niger. Moreover, the banks of the Congo produce coffee, cocoa, sugar, cotton, palm oil, resin, dye woods, *ad libitum*. Decidedly, they say, Brazza is a great man, though, unhappily, like so many great Frenchmen, he is an Italian. In fact, what or where would France be without Italians?

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 22, to TUESDAY, November 28, 1882, inclusive.]

DOMESTIC.

ON Saturday afternoon much excitement was caused in Washington by the announcement that the President, after consultation with the Cabinet, had ordered the removal from office of C. E. Henry, Marshal of the District of Columbia; D. B. Ainger, and M. M. Parker, Postmaster and Assistant-Postmaster, respectively, of the District of Columbia; M. D. Helm, foreman in the Government Printing Office, and in charge of the *Congressional Record;* and ex-Senator Spencer, Government Director of the Union Pacific Railroad, for obstructing in various ways the course of justice in the Star-route trials. Mr. George Bliss addressed on November 11 a letter to the President, detailing the charges against the abovementioned officers, which was referred to the Attorney-General, who recommended the removal of all of them. The correspondence was read at the Cabinet meeting on Saturday, and the Attorney-General's opinion was unanimously approved. Ainger and Parker have written a letter to the President stating the allegations against them to be "false in every particular," and asking him to suspend action until the "matter can be thoroughly investigated by a commission, or any other fair method your wisdom may suggest."

On Monday, President Arthur appointed Colgate Hoyt, of New York, a Government Director of the Union Pacific Railroad, in place of George E. Spencer, dismissed.

A letter from Mr. Wayne McVeagh to President Arthur, dated November 8, 1881, just before his retirement from the Cabinet, was published on Tuesday. The letter was written in reply to one from the President on the subject of the Star-route frauds, and in it Mr. McVeagh explains his reasons for not remaining in the Cabinet to prosecute the Star-route trials. He says that a newspaper published and circulated in the District of Columbia among the residents from among whom the jurors in the trial must be selected, has been constantly filled with abuse of every one connected with the Star-route investigation during General Garfield's term, and that the influence of such a constant outpour upon a community of jurors was sure to be very great. "While these newspapers," he adds, "have been abusing me, they have been as steadily praising you, and to such an extent that they are sometimes foolishly mistaken for and called your organs. Then, too, you will have observed that both before and since I left Washington all kinds of falsehoods concerning our relations have been published, purporting to be semi-official, and if not denied, at least not discouraged." These and other considerations, together with the fact of the relations which exist between Mr. Gorham and some of President Arthur's most influential friends, Mr. MacVeagh goes on to say, are well calculated to produce the impression in the District that his remaining in office to prosecute the offenders would be a notice that President Arthur was not in sympathy with the prosecutions, and that President Garfield's Administration and not his own should be responsible for them; and such a construction of the state of affairs by the residents of the District would have a powerful if not a fatal influence upon the result of the prosecutions. For these reasons the Attorney-General deems it expedient that he should resign his place in the Cabinet, though he should be most willing to do anything in his power as a private citizen and a lawyer to aid the Administration to a successful prosecution.

The Garfield Monument Fair, in the rotunda of the Capitol, was formally opened by President Arthur on Saturday afternoon. The General of the Army, the members of the Cabinet, and Judges of the Supreme Court were present, and every inch of space was densely crowded. The President expressed his regret that the managers of an enterprise so worthy of support had been unable to secure a place in which more appropriately to open the exhibition. Their inability to do so had deprived them of the opportunity of listening to an oration by Judge Matthews. The President said he would confine himself to doing little more than formally declare the exhibition open to the support of a generous public. It was entirely worthy of support, and the object for which it was arranged was admirable, as there was no spot in which a monument to Garfield could better be erected than in the city in which he had spent so much of his life.

A report coming from Washington, said to be founded on excellent authority, in regard to the recommendations to be made in the President's Message on the subject of tax reduction, says that he will express his firm opposition to the abolition of the entire internal-revenue system, but that he will recommend the repeal of all internal-revenue taxes except those on tobacco, distilled spirits, fermented liquors, and on manufacturers of, and dealers in, such articles, and that he will favor a reduction of the tax on tobacco and whiskey so as to bring down the annual product of internal taxes to about $100,000,000. It is further stated that he will urge upon Congress the importance of an immediate revision of the tariff.

On Saturday, Secretary Folger sent a telegram to Assistant Treasurer Acton, at New York, ordering him to accept unmatured bonds in all calls, including the one hundred and nineteenth, without rebate of interest, at the rate of $10,000,000 per week on any day of the week.

Mr. Loring, Commissioner of Agriculture, in his annual report, says that the Entomological Division has pursued investigations into the habits of many insects affecting the principal staples, and that much valuable information has been obtained thereby. Two and a half million packages of seeds have been distributed, and 260,000 copies of special reports printed. The Statistical Division estimates the crop yield for 1882 as follows: Corn, 1,635,000,000 bushels; wheat, 410,000,000; oats, 470,000,000; barley, 45,000,000; rye, 20,000,000; buckwheat, 12,000,000 bushels. The work of the Chemical Division has been largely devoted to the investigation of the sugar-producing qualities of sorghum and other plants.

The report of the General Superintendent of the Life-Saving Service shows that at the close of the fiscal year there were 190 stations—145 being on the Atlantic, 37 on the Lakes, 7 on the Pacific, and 1 at the Falls of the Ohio, Louisville, Ky. The number of disasters to documented vessels within the field of station operations during the year was 287. There were 2,268 persons on board these vessels, of whom 2,256 were saved, and only 12 lost. Excellent work has also been done in saving marine property. The condition of the service is better than ever before. An excellent selection of men has been placed at the command of the service, and this selection, says the Superintendent, has been made solely upon grounds of professional fitness, to the absolute exclusion of political or other considerations.

The Chief of the Revenue Marine Division of the Treasury Department, in his report for the past fiscal year, strongly opposes the transfer of the bureau to the control of the Navy Department.

The official count of the vote of the State of New York at the recent election is as follows: Cleveland's plurality, 193,824; his majority, 155,264; for Lieutenant-Governor: Hill's plurality, 197,135; for Chief Judge of the Court of Appeals: Ruger's plurality, 73,663; for Congressman-at-large: Slocum's plurality, 107,656.

A caucus of the Democratic members of the Alabama Legislature was held on Monday night to nominate a candidate for the United States Senate to succeed Senator Morgan. A letter from ex-Governor Watts, withdrawing from the contest, was read. Senator Morgan was then nominated for reëlection by acclamation.

The investigation of the fraudulent voting at the late municipal election in New Orleans has so far covered ten of the seventeen wards of the city, and discloses the startling fact that less than 50 per cent. of the 21,473 registered voters participated in the election, and that 9,000 votes cast for the Democratic ticket were fraudulent. Only about 8 of the 50 polls so far examined are exempt from irregularities. A fund is being raised in the city to prosecute all the Commissioners who signed the returns of the stuffed boxes. All of the candidates on the Independent ticket have filed notices of contest.

The platform of the Trades Union Congress, which closed its session at Cleveland, Ohio, on Friday, calls for the enforcement of compulsory education laws; for the passage of laws forbidding the employment of children under fourteen years of age in any capacity; the adoption of uniform apprentice laws; the enactment and enforcement of a national eight-hour law; the abolition of the contract convict-labor system; the abolition of what is known as the "order" or "truck" system of payment; the passage of laws securing to workingmen a first lien upon property the product of their labor; the erasure of all acts known as conspiracy laws from the statute books; the establishment of a national bureau of labor statistics; and the passage by Congress of an act to prevent the importation of foreign labor under contract.

The Cincinnati *Catholic Telegraph* of Thursday contained an editorial urging upon the Catholic Church the pressing importance of disposing of the debts of Archbishop Purcell. This is the first outspoken utterance on the subject that has come from this organ of the Church.

A mass-meeting was held in the Academy of Music, New York, on Tuesday, to take steps to raise $250,000 for a pedestal for the Bartholdi statue of "Liberty Enlightening the World," which it is proposed to erect on Bedloe's Island in New York harbor. Mr. W. M. Evarts presided, and at the end of the meeting announced that the committee would begin an active canvass for funds.

Mr. Thurlow Weed, for many years a prominent journalist and politician in New York State, died in New York on Wednesday, at the age of eighty-five.

On Tuesday the New York *Sun* published a sworn affidavit of Mr. Thurlow Weed in regard to the disappearance and death of William Morgan, who was said to have been spirited away by the Free Masons half a century ago, and whose disappearance caused the greatest excitement in the State of New York, resulting in the formation of a national Anti-Masonic party. The affidavit gives a circumstantial account of the crime, which was committed by the Masonic societies, and was communicated by a participator therein to Mr. Weed, to be used by him as a weapon of defence when he was hard pressed in a court of law. The arbitrary ruling of the Judge rendered its use unnecessary, and gratitude to the friend who proffered it made the secret inviolate. The affidavit alleges that Morgan was kidnapped by the Masons, and thrown into the Niagara River, with a weight attached to his body, and drowned.

Frank James, the Missouri bandit, was brought into court at Kansas City on Monday and pleaded not guilty to indictments for murder and bank-robbery. A large crowd gathered at the station to see him arrive by the train. The case will be called for trial on January 22.

FOREIGN.

In the House of Commons on Wednesday, discussion of the ninth procedure resolution

was continued. Mr. Gladstone agreed to an amendment that collective suspension should only be applied in cases of wilful disregard of the authority of the Chair. The rule was then adopted by a vote of 161 to 19. On Friday the tenth rule was adopted. This rule provides that if the Speaker or chairman of a committee of the whole House shall be of the opinion that a motion for the adjournment of a debate, or for the adjournment of the House during any debate, or a motion that the chairman do report progress, or do leave the chair, is made for the purpose of obstruction, he may forthwith put the question thereupon from the chair. On Friday the eleventh and twelfth—the last two procedure rules—were carried.

On Thursday a lively debate on the Arrears of Rent Act took place. Mr. Parnell and the other Irish members attacked the act. Mr. Gladstone denied that it had proved a failure. He said that he desired it to be universally known that the Government did not intend to introduce a bill to extend the period for the payment of the rent of 1881. Mr. Trevelyan made a speech in which he said that the act was the greatest benefit Parliament had ever extended to an unfortunate class of people. In regard to the threatened famine, he said that the Government would not underestimate the distress along the west coast of Ireland, and he would not cease to watch for evidences of suffering until the next harvest was gathered. He had ordered the most minute reports from seven counties. The Government would not advance money for public works, as that would be a most extravagant method of relief and would afford no real alleviation of the distress. The Government, he said, now intended to conduct the system of relief with an efficiency that would give the most positive assurance to the people that they would not starve.

On Friday there was a very lively debate on the "Kilmainham treaty." Mr. Yorke moved the adjournment of the House in order to discuss the affair. He said he did not contend that there was any secret treaty, but that there were communications, understandings, negotiations, and givings and takings by both sides. These really constituted a treaty, although the Government, with a certain amount of verbal accuracy, had persistently denied that any treaty existed. He charged Mr. Gladstone with "putting on a screw" to prevent discussion of the motion, and warned him that no career, however distinguished, would prevent a Premier from incurring the just indignation of the country if he was so relaxed by an atmosphere of adulation as to think that he could depart from arrangements openly entered into before the House and the country. In reply, Mr. Gladstone said the undeserved praise of his friends was counteracted by the continual accusations of Lord Randolph Churchill and Mr. Yorke. He warmly contended that it was the duty of the Government to catch at any pacific indications on the part of the imprisoned members that would enable the Government to release them. He maintained, however, that no communication had passed from the Government to Mr. Parnell on the subject, nor had Mr. Parnell sought or obtained from the Government any information in regard to his coming release, or concerning any measure intended by the Government. In short, there was no negotiation, promise, or agreement. Lord Randolph Churchill said the House was not a whit wiser after Mr. Gladstone's speech. The transaction had been so disgraceful that Earl Cowper and Mr. Forster had resigned on account of it. There was something in regard to it that had never seen the light. Having challenged inquiry, the Government now used every artifice to conceal it. After some further discussion, the Conservatives insisting upon the necessity for an inquiry, Mr. Yorke offered to withdraw his motion, but the Government refused to accept a withdrawal, and the motion was negatived without a division.

On Saturday night a detective named Cox was shot and killed in the streets of Dublin. Another detective named Eastwood shot Cox's assailant, whose name is Dolan and his profession brass-fitting. Two other men were arrested for complicity in the crime. Dolan, it is stated, will recover. On Monday a mob attacked the hospital where Dolan is lying, with the intention, it is supposed, of removing him, but were driven off by the police. On the same day a man named Dennis Field, who was a juror in the case of Hynes, who was hanged for murder of a herdsman, was attacked in Dublin by two men, who stabbed him in six places with a sword. Also, a bailiff who was serving a writ in Dublin was attacked, and received a severe stab-wound in the head. At a meeting of the Dublin Corporation on Monday a resolution was passed, on motion of Mr. E. Dwyer Gray, recording the horror of the Corporation at the outrages.

A meeting of the Privy Council was held in Dublin on Tuesday, and it was resolved to proclaim the city under the operation of the curfew section of the Repression Act, which authorizes the police to arrest all suspicious persons found in the streets between an hour after sunset and an hour before sunrise.

In the House of Commons on Monday, Mr. Trevelyan, replying to Mr. Gibson, asked the House to remember that there is a difference between the general state of Ireland and the crimes and violence in Dublin. He said that a conflict between the Dublin police and organized lawlessness seemed to have begun, but the Government was determined to use all the resources at its disposal to put down these latest developments of disorder. Mr. Trevelyan stated that the number of agrarian crimes in Ireland during the month was under 100, which had not been the case in any month for twenty-eight months. In reply to another question, he said that a recent speech of Mr. Redmond's at Cork, in which he recommended boycotting and revolution, was under the consideration of the Government.

In the House of Commons, on Tuesday, Mr. Trevelyan said the Government was disappointed at the slow progress of the business of the Land Courts, and that it would be obliged to adopt means to grapple with the block of cases. Four lay Commissioners would be attached to each Court instead of two, in order that two could inspect the farms while two were engaged in the Court.

In an address before the Scottish Conservative Club at Edinburgh, on Thursday, the Marquis of Salisbury taunted the Liberal Government with having adopted its predecessor's Egyptian policy. He denounced the action of the Government in regard to Ireland, and condemned the Arrears of Rent Act. Among other things, he said that he did not often envy the United States, but that their institutions possessed one feature which appeared to him a subject for the greatest envy—namely, their magnificent institution of the Supreme Court—for the reason that if Congress passed a measure inconsistent with the Constitution of the country, there exists a Court which will negative it at once, thus giving stability to the institutions of the country, "which under the system of vague and mysterious promises here we look for in vain."

At a recent mass meeting of the inhabitants of the Isle of Skye, one of the speakers said that any tenant paying rent, unless a revaluation was granted, would be a marked man; and it was resolved at the meeting to take every lawful means to prevent any one from taking a farm from which the tenant had been evicted. The authorities of Aberdeenshire have agreed to send a detachment of police to the island to assist in the serving of processes.

Mr. Wilfrid Blunt has written to the London *Times*, appealing to the public for help to defray the cost of the defence of Arabi Pasha, as, he says, the trial has assumed the character of a great state inquiry, and his (Mr. Blunt's) financial back is not strong enough to bear the load.

A recent telegram from the Governor of Sudan announced that the rebels have been defeated with great loss, and unconfirmed reports from Kordofan state that the False Prophet has been defeated and captured.

The Italian Parliament was opened on Wednesday. The speech from the throne was very pacific in tone. It recommended the Chamber to devote itself chiefly to economic, social, and administrative questions. It said the relations of Italy with foreign Powers were friendly. Thirty Radical members absented themselves from the opening, so as to avoid taking the oath to the King and the Constitution.

A pontifical circular has been issued in regard to the recent decision of the Italian Court of Appeals declaring that the jurisdiction of Italian tribunals extends within the walls of the Vatican. The circular declares that the sentence of the Court is in violation of the extra-territorial character of the Vatican, and an insult to the Pope.

A dynamite cartridge, which had been placed at the entrance to the gambling saloons at Monte Carlo, exploded on Sunday evening, causing a great panic and wounding an officer. An Italian has been arrested in connection with the affair.

A despatch from St. Petersburg says that an official announcement, relative to the closing of the University there, states that the agitation had been noticed among the students at the beginning of October. On Tuesday, the 21st inst., the ringleaders went to the length of distributing circulars, summoning a mass-meeting of students, to express sympathy with the students of the Kazan University. The Curator thereupon applied for the assistance of the police, who arrested 100 students. Fourteen of them were suspended.

A despatch from Bucharest says that in the Chamber of Deputies on Friday the question of the succession to the throne was raised, and the President of the Council said that it had been settled, as Prince Leopold, of Hohenzollern, had renounced his rights to the crown in favor of his son, who would shortly take up his residence in Rumania.

Prince Bismarck has rejected the preliminary draft, prepared by the Minister of Finance, of a bill abolishing the four lowest grades of class tax, and has instructed the Minister to recast the preamble. The introduction of the bill will consequently be delayed. It is generally believed, however, that the bill has no chance of a final adoption.

There are tidings of more floods in Europe. The Neckar, Main, and Moselle Rivers are bringing down a great body of water, and at Frankfort, Mayence, Coblentz, and Cologne the cellars in the streets along the water front have been submerged. The Elbe Valley is also flooded.

In the French Chamber of Deputies on Thursday a bill was adopted prolonging the powers of the Commission appointed to settle the compensation to French and American citizens during the civil war in America, and the Franco-Prussian war, respectively.

A popular vote recently taken in Switzerland, in regard to the cantonal schools, has annulled a decision of the Federal Assembly requiring cantons to provide compulsory and adequate primary education, which, as far as the public schools were concerned, was to be under the exclusive control of the State. Orthodox Catholics, Protestants, and Conservatives disliked the proposed State control of the schools and the infringement of the cantonal sovereignty.

The Spanish Cabinet has resolved to reply, to the demands of the United States Government in regard to the losses suffered by Americans during the Cuban insurrection, that they will act in conformity with the principles of strict justice.

TEACHING IN AMERICAN COLLEGES.

Dr. Howard Crosby made some observations on college education in America before the Phi Beta Kappa Association on Friday, which would have been more valuable if they had been less dogmatic and denunciatory, but contained nevertheless many useful hints and suggestions. Some of his criticisms of existing college methods, however, have an odd sound coming from a friend of accurate thinking and observation. He denounced written examination, which is now at least partially in use in most of our colleges, on the ground that "it is a foreign institution adopted from our preposterous regard for everything foreign"—an observation, it seems to us, worthier of John Roach than of the ex-Chancellor of a university. Colleges themselves are a foreign institution. They were not invented in America. Moreover, in the vocabulary of science there is no such word as "foreign." The sole question to be asked about any method, either of acquiring or communicating knowledge, is not, Where did it originate? but, Is it adapted to the wants of human nature? The human mind is the same in America as in Europe, and the modes of getting things into the human mind have to be essentially the same everywhere.

Another of Dr. Crosby's reasons for condemning examination papers is that the "vivâ-voce method helps to quick thinking, and teaches the student how to express his thoughts in speech." This is true, and the use of the vivâ-voce method in the minor examinations may for this reason be desirable; but an examination which is intended to reveal the full extent of a man's knowledge on a given subject ought not to be converted into a means of teaching him rhetoric or elocution. Moreover, the division of examinations between the oral and written methods which is now common is exactly adapted to the wants of human nature as at present known, and pretty well known. That some men are by nature better able to say what they have to say on any subject with the pen than with the tongue, is one of the familiar facts of every-day life. The converse is also true. Consequently, society contains many useful men who write well but cannot speak, and other very useful men who speak well but cannot write. The difference is notoriously not one of training simply, but of nervous structure. It would, therefore, be very absurd for colleges to ignore this distinction in their system of teaching. Dr. Crosby's plan would, in a large number of cases, give the highest marks to mere natural glibness. At the same time we do not deny that examinations wholly written may ignore what is a very high form of excellence in a student—the ability to draw promptly on his resources in a clear oral statement.

Dr. Crosby's objection to "the elective system"—or the system by which the student is allowed to choose his own curriculum—on the ground that "a youth of eighteen is not fit to select his studies," will, we think, commend itself to everybody who has observed its working in its extreme form. It does give great and often fatal facilities to the lazy to shirk subjects requiring hard work, and leads too often to the selection of a hodge-podge of unrelated studies, from the pursuit of which together no real mental discipline can be got. But when he tells us that "the well-rounded education is gone," if he means thereby the education which used to be got from driving all students through one curriculum without any regard to aims or natural capacity, he indulges in something very like extravagance. There never was any such "well-rounded education." The old college graduate, turned out by the old classical and mathematical mill, was not a "well-rounded man." He almost always was out of shape in some way, and if he is "gone," the world is well rid of him. Here, again, what the times seem to call for is a mixed system. There ought to be *some* liberty of election, but not complete liberty. The young men's tastes and aims ought to have some play, but it ought to be in the choice of groups of subjects, or courses prepared by the Faculty, and not of single subjects—that is, curricula ought to be provided for certain varieties of minds, and not for individual minds. The assistance of the college in choosing courses is also, perhaps, more necessary in this country than in Europe, because the number of students in our colleges whose fathers are not "college-bred," and are therefore unable to advise or direct their sons' studies, is probably much larger than in those of the Old World.

Dr. Crosby's criticism as to the way in which athletic sports are cultivated in our colleges will meet, we fancy, with pretty general approval from competent observers. The general public is, we believe, under the impression that too much time is given to these things by the bulk of our undergraduates in the great Eastern colleges. There never was a greater mistake. The fact is, there is far too little. The college base-ball, boating, and foot-ball which make so much talk in the newspapers are shared in really by about two or three dozen young men in each college, whose expenses are paid by their fellows. All the "athletic sport" that the great majority of the students get consists in the payment of money to the "college eight," or "college nine," as the case may be, though the introduction of bicycling and the establishment of gymnasiums have of late undoubtedly tended to cause a wider diffusion of physical culture. It is also true that, objectionable as some of the accompaniments of the boat clubs and base-ball clubs may be, their existence and their triumphs and éclat serve a valuable purpose in keeping alive the interest in physical condition without which the "well-rounded man" will, under any system of education, be an impossibility. They have done much to create and foster the admiration for health and vigor without which college men, in our time, cannot exert much influence in the world, no matter how great their culture may be. The days are gone by when mere learning made an idol of the possessor. Culture in our time needs to have a man in good "condition" behind it to command popular respect. The grandeur of the "college consumptives," as Dennis Kearney called them, is gone for ever.

THE APPROACHING TRANSIT OF VENUS.

The passage of the planet Venus across the face of the sun, which will occur on the 6th of December, will be the last phenomenon of this kind that can be observed for more than a century, the next taking place A. D. 2004. The transit of 1874 was well observed by the principal nations of the globe, and adequate preparations have been made by the same governments to obtain all possible data with regard to the coming transit. Whatever may be the final result of the observations, it is of the last importance that we should leave to our successors a complete account of all the phenomena, just as the astronomers of the eighteenth century left to us their records.

The main object of all the elaborate preparations is to obtain such observations as will enable the distance of the sun from the earth to be expressed in *miles*. It is to be remarked that this datum is of no special use to astronomers in their calculations, for the unit of these is not the mile, but the distance of the sun from the earth itself; and this is always employed by them as the fundamental unit and is called unity, irrespective of what its value in kilometres or miles or yards may be. All the dimensions of the solar system can be expressed in terms of this unit with great exactness; it is only when we come to give these same dimensions in popular language that the uncertainty comes in. The whole question of the determination of distances in the solar system is generally misunderstood, and the degree of precision of astronomical deductions is therefore not appreciated. To put the matter in a familiar way, we may say that it is entirely possible, from known astronomical facts, to construct a map of the solar system on any scale you may choose, which shall be entirely accurate. On this map one can lay down the orbits of the various planets and of their satellites with such precision that no error could be detected, even if the map was many yards in extent. In each orbit the planet that occupies it can be plotted in its proper relative size, and the sun can be placed in its proper position and with its appropriate dimensions.

The numbers which form the basis of such a map are those with which the astronomer works; for his purposes it makes no difference whether the distance of the sun is 93,000,000 or 92,000,000 miles. He can express all the dimensions of his map in terms of this distance (whatever it may be), and this can be done with a surprising degree of precision. The uncertainty comes in only when it is required to give the *scale* on which the map is constructed—to say how many inches on the map correspond to how many miles in space. If any one of the dimensions on the map can be so expressed in miles or yards, all become known, from the relative dimensions which are there expressed. It is of just as much use, therefore, to determine the distance of Mars from the sun as to determine the distance of the earth. In fact, one of the ways of determining this latter datum is to fix the distance of Mars, from which all the other distances (in miles) become known.

As long ago as 1716 it was suggested (by

Halley) that the transits of Venus would serve to determine the sun's distance, and the method has been tried three times—at the transits of 1761, 1769, and 1874. The transit of 1761 was observed by 176 observers at 117 stations, and that of 1769 was equally well observed. From the data furnished by these two transits Encke, in 1835, determined the sun's distance to be about 95,000,000 miles. This was acknowledged to be the best determination possible from the observations. But as time wore on, and as astronomers tried some of the other methods of obtaining the same quantity, it was found to be too large a distance to be reconciled with these latter determinations. The transit of Venus of 1874 was looked forward to as likely to settle all these doubts, many of which were supposed to have their origin in the defects of the telescopes used by the observers of the eighteenth century. The expeditions of 1874 were supplied with the best instruments possible, and, besides this, they had the great advantage of employing photography to register the positions of Venus on the sun's disc. The photographs were not affected by any of the uncertainties to which even the best observers are liable, and the measures of the photographs could be made at home and at leisure, and could be repeated as many times as might be desirable to insure accuracy. It may be said that the results of the eye observations of 1874 showed them to be affected by errors of the same sort and even of the same amount as those of the earlier transits.

The photographic processes employed by the European nations were certainly unsuccessful. Fortunately, the American photographs were taken by another method, and the results from the discussion of these gave a very satisfactory agreement. A conference of European astronomers was held at Paris in 1881 to decide on the methods which should be employed to observe the next transit. The results from the American photographs were not known to them, and they decided not to employ photographs at the coming transit. The American Transit of Venus Commission, however, do not share these views, and they are to employ the same photographic methods in 1882 as were used in 1874, and they confidently expect to obtain equally good results.

The parties of the various nations are now at their posts, which are scattered all along the southern parts and the eastern and western coasts of South America, all through the West Indies, in New Zealand, Madagascar, and the south of Africa. Every possible precaution suggested by the experience of the last transit has been taken, and if the weather is generally good, it is not to be doubted that the returns will be most creditable to the science of our generation, and that we shall not be ashamed to transmit our observations to our successors. Nearly the whole of the United States is favorably situated for observing this transit, and there are enough astronomers, professional and amateur, to insure a full observation, provided only that the winter sky is clear. "Instructions for Observing the Transit of Venus" will be sent to any one on his application to the Naval Observatory, Washington.

THE DEBATES ON PARLIAMENTARY PROCEDURE.

LONDON, November 11, 1882.

AFTER a discussion, begun in February, which has occupied the House of Commons for nineteen days, a final and decisive division has at last been taken on the first of Mr. Gladstone's Procedure Resolutions—that which provides for the closing of debates. Hitherto, as your readers are no doubt aware, there has been no limit to the duration of a debate, no means of bringing it to an end so long as any speaker desired to be heard. Practically, of course, when discussion had gone on for a long time, the impatience of the House and the pressure of the leaders on each side had compelled those who still desired to speak to submit to silence. But last year the systematic resistance of the Parnellite party to the Irish Coercion Bill was so obstinate and protracted, that the Speaker overcame it by assuming the right of putting the question in spite of their protests; and immediately afterward certain temporary rules were adopted giving him a species of dictatorship whenever the House should have affirmed that the state of public business was "urgent." After the experience of determined obstruction which that year supplied, it was generally felt that the creation of some new rules could be no longer delayed, and the result was the code of procedure which the Government proposed last February and which the House of Commons is now debating.

The first resolution enables the majority of the House to insist on having the main question put; but it does so under several important restrictions. In the first place, the Speaker must declare, of his own independent motion, that he conceives that the subject has been adequately debated, and that the "evident sense of the House" desires the main question to be put. Then a motion to that effect must be made. And finally this motion must be carried either (*a*) by the vote of at least two hundred members, or (*b*), in case that less than forty members oppose it, by a vote of at least one hundred members. It has, therefore, the appearance of being a much less drastic rule than the "previous question" in your House of Representatives, or than the *clôture* of the French Assembly, because our Speaker is understood to be, and has indeed always been, a perfectly impartial chairman, bound to regard the minority as much as the majority, and to keep himself entirely aloof from party feelings.

Opinion is divided as to the probable effect of this new rule. A large section of the Liberals think it will be almost inoperative, and certainly inadequate to grapple with the evil of obstruction. They conceive that the Speaker will only put it in force in the most extreme cases, and fear that it may even increase obstruction, because pugnacious or vexatious members will obstruct with the view of trying how far they can go, and provoking the Chair to wield this unpopular weapon. Mr. Gladstone has himself intimated that he thinks it will be resorted to rarely, and that its chief use will be as a warning. On the other hand, the whole Conservative Opposition, the Irish Parnellite Opposition, a certain small section of the moderate Liberals, and a still smaller section, numbering only five or six, of the Radicals, regard it with terror as well as anger. They declare it to be aimed at the right of free speech; they call it "the gag," "the deathknell of parliamentary institutions," the establishment of a "ministerial despotism." The strength of this aversion may be measured by the exceedingly tenacious resistance which has compelled a special autumnal sitting of the House, and has protracted the debate on a comparatively simple proposition for so long a period. It is worth while to inquire what are the sources of this feeling, and why so much is made of a change which others hold to be so slight as to have been scarcely worth making.

As regards the Conservative Opposition, most Liberal journals think their hostility a factitious and unreal one, due merely to the bitterness of party feeling, which is resolved to resist whatever the Government proposes. Party feeling, no doubt, counts for a great deal at present, especially among the Conservatives. They have not yet recovered from their anger and surprise at the defeat of 1880; and as they ascribe that defeat to the violent invectives of the Liberals, they conceive that similar tactics are their proper retaliation. No doubt they also hold that this question is a good one on which to give battle, because the cry of freedom of speech seems a popular one; because the constituencies have never expressed any opinion on the question of parliamentary procedure—a matter which they cannot be expected to understand; and because there is some disaffection in the Liberal ranks, some misgivings as to the effect of the proposed rule. These reasons have doubtless intensified their resistance by making them more sanguine of its issue. But it is a great mistake to think that they are insincere in their alarm. There is a note of real terror in their speeches, and an irritation beyond that which mere party spirit generates. Two grounds may be assigned for the irritation. One is the long delay in bringing the question to an issue. If the rule had been pressed vigorously through when first brought forward, they would have submitted with a better grace. But the repeated postponements and interruptions due to the state of Ireland inspired them with the hope that it might be dropped altogether, or largely modified; and the vexation at Mr. Gladstone's pertinacity in pushing it through is proportionately great. The other is that in May last Mr. Gladstone offered Sir Stafford Northcote to consent to the substitution of a two-thirds majority for a bare majority as the majority needed to enforce the closing power. He did this in the hope that the rules as a whole might in that case be quickly pushed through, and the session made available for other business. When the Phœnix Park murders and the consequent necessity of devoting what remained of the session to Irish affairs destroyed this hope, he considered his offer, which had never been accepted, to be *ipso facto* withdrawn, and reverted to his original intention of insisting on closure by a simple instead of a two-thirds majority, having even while making the offer intimated that his preference for the former was so strong that nothing but the urgency of the case induced him to waive it. This was a bitter disappointment to the Opposition, who have ever since repeated that the Government cannot really care about the point if they were once willing to forego it, and have even accused them of a breach of faith. (The *Times* newspaper has been specially earnest in this contention, but its influence would seem to have declined, for the Liberal party has become more zealous in support of the Government the longer the question has been before them.)

To explain the alarm of the Opposition is a more difficult matter. They are, to be sure, in a minority in the House of Commons, but their minority is a strong one: they have an overwhelming majority in the House of Lords, and they are extremely powerful in the country, the great majority of the richer classes being with them, as well as large sections of the middle and even of the working classes. Something must probably be ascribed to their fear of Mr. Gladstone. His strenuous will, his unprecedented popularity, and power make him the most formidable opponent they have had to confront during the last two centuries; and they believe that

with this new weapon he may storm those entrenchments of parliamentary obstruction on which they rely as a last line of defence. I do not mean to say that the Conservatives have ever as a party resorted to obstructive tactics: they have had too much good sense and good feeling for such a course; nor would Mr. Disraeli (who never used it himself) have permitted it had he lived, for he knew the ultimate dangers it would involve. But they have been accustomed to extort compromises and minimize sweeping measures by protracting debates and raising a host of objections. They see in the closing power a means of defeating such methods of resistance; they believe that the Liberal party, which is more united and loyal to its leaders than at any time within recent memory, will now be able to carry in its entirety whatever measure its leaders propose, sweeping away their defences by the exercise of the closing power, "rushing through" a bill before they have had time to dissect it in detail. And then, which is perhaps the gravest cause of fear, they apprehend from the Government a series of revolutionary measures, directed against the landed aristocracy and the rights of property in general. The impression made by the Irish Land Act was profound. It laid down principles new in English legislation, and though those principles were advocated only as applicable to Ireland, they expect to see them applied to England also. They feel, therefore, as if they were already engaged in a death struggle for their estates, and for the maintenance of that whole English social system which the upper classes prize. This, if not a complete, is at least the most plausible explanation of their attitude, for although they constantly insist that it is for the right of unlimited free discussion that they are concerned, they were unanimous in putting down Irish obstruction last session by the rules of urgency, and most of them would have been willing to accept closure by a two-thirds majority, since such a closure, while it could have been used to silence a small Irish or Radical minority, would have been powerless against that large minority which the Tories can always count upon having.

The sentiments of the few moderate Liberals who dislike the new rule require no special examination, for they are substantially those which I have been just describing. These moderate Liberals are for many purposes Conservatives, who mostly belong to the landed gentry, and are attached to the Liberal party rather by personal ties than by conviction. They were nearly all willing to accept closure by a two-thirds majority; and although they voted against the Government when such a majority was under discussion, they have almost all in this last and critical division either returned to their allegiance or abstained from voting. It takes a great deal to make an old Whig (the name by which this section likes to be known) vote against his party. As respects the few Radicals who resist the introduction of a closing power, it is enough to say, without speculating on the individual motives of each, that they seem to have been generally possessed by the fear that it would be used to check liberty of speech, and silence the voices of a small minority. Several of them avowed their sympathy with the Irish obstruction of last session, and when pressed with the argument that such obstruction would stop the wheels of Parliament altogether, replied that the true remedy is not summarily to put an end to a debate, but to proceed penally against individual obstructors.

There remains the Irish or Parnellite Opposition. Its attitude was intelligible and consistent. Relying on obstruction as a powerful engine for thwarting the Government, stopping measures distasteful to the Nationalists of Ireland, and extorting concessions to their demands, they objected to any closing power whatever. They therefore voted with the Government against the proposition to substitute a two-thirds for a simple majority, and against the Government on the main question of having any closure whatever. In both cases reproaches were made, first from the Conservative and then from the Liberal side, of an alliance between them and the two English parties; but in neither case with any reason. The interest of the Parnellite section was sufficiently plain to render negotiations unnecessary, and they acted openly upon it.

Although the debates have been tediously protracted and on the whole uninteresting—redeemed only by two brilliant efforts by Mr. Gladstone, who looks unusually well and eminently cheerful—efforts which were all the better for being short and even playful—and by a remarkable speech by Mr. Cowen, the member for Newcastle-on-Tyne—a speech which, though declamatory and in parts artificial, was the most striking as a piece of rhetoric that has been heard of late years from any private member, and the most notable for the effect it produced on the audience—the two principal divisions created a keen interest. It was known that there were some members whose votes were doubtful, so speculation was rife as to the numbers in each case. The result has been to show that the Government retains its full hold on the party. The Opposition are, however, rather irritated than disheartened. An enormous number of amendments have been set down to the remaining fifteen resolutions—amendments sufficient, if pressed by their proposers and argued at length, to occupy the House of Commons till its regular meeting in February. Probably many of them will be dropped, for the Tory squires dislike being kept in London at this time of year more than the Liberal members do, and therefore it may be hard for the most obstinate opponent of the Government to keep enough of his friends to secure respectable minorities. Meantime, the country looks on coolly, not much interested in these details of procedure, but believing that something must be done to prevent the painful scenes to which the habit of obstruction gave rise, and to economize the time of Parliament. Passions are hot at Westminster, but only there. Y.

THE CORRESPONDENCE OF GEORGE SAND.—II.

PARIS, November 28.

THE third volume of the 'Correspondence of Madame George Sand' shows her in the exuberance of her republican and socialistic ardor after the Revolution of 1848. We will take her now in 1850, when her hopes had been already disappointed, and her best friends had again become rebels against the existing order of things. Louis Blanc, whom she admired, was in England; she was sick of politics, refused to write any more for the newspapers, and was beginning her Memoirs. "I have never," she says, "understood how a poet could write verses at the tomb of his mother and his children. I could not make myself eloquent at my country's tomb. I feel unhappy when I touch a pen. Serenity, gayety in the bosom of one's family are easy, but sorrow enters my heart when I think of the public. This cold and cowardly public, which has allowed liberty to be strangled, and has soiled the Eternal City which had again become holy—this egoistic, blind, ungrateful public, which is not moved by the exploits of Hungary, and which is not alarmed at the efforts of Russia and of Austria—could it be roused by a newspaper, a writing of any sort?" She was nervous, and her fits of depression were as extraordinary as her fits of exaltation. She thought that taciturnity was sometimes the only form of sincerity, and that she was doing a better work in keeping silent than "this poor Lamartine, who always talks and makes phrases," and "prostitutes his eloquence." This was written to Mazzini. After the letter to the great Italian conspirator, we find one addressed to Alexandre Dumas, the son; she invites him to come to Nohant. The celebrated dramatist was then almost unknown—he was merely the son of his father. I confess to never having read 'Le Régent Mustel,' a book which he had sent to Madame Sand, and for which she thanks him, calling it a "joli livre." "It is charming to find, again, Charlotte and Paul and Virginia and all the creatures one has liked and for whom one has wept! . . . You have made Goethe speak without offending us. He was not better than you represent him, and you give him as much elevation and wit as he really had. I hear people complain of the audacity of your subject; but, so far, I find nothing which profanes, vulgarizes, or diminishes these admired types." I have already inquired of four booksellers for this 'Régent Mustel'; they are all as ignorant of it as I was myself. So books get lost in our own lifetime.

Armand Barbès, as well as Mazzini, received the confessions of Madame Sand. She hoped nothing more from men; her only real friends were in prison or in exile. Barbès was in the fortress of Doullens, and the correspondence of Madame Sand cannot have much enlivened his solitude, though she addressed him in this flattering style: "And you, always calm, always tender, always patient and sublime: you love us still, do you not? Your friendship is one of the consolations and the purest glory of my life." She had money difficulties, and, as she was married, she could not mortgage her own property; she was, therefore, obliged to make money with her pen. She prepared "François le Champi" for the theatre, as nothing pays better than a successful piece; but she would not give her work to any other director than her republican friend Bocage, and Bocage at that moment had no theatre. She wrote also "Claudie" at that time. Living as she did at Nohant, her mind became thoroughly pastoral; she lived much with the peasants, and she found a new vein in her dear Berry. Her Memoirs were progressing; she had sold them for a good sum of money, and worked honestly, so as to fulfil her engagements.

When she writes to her son Maurice, she is never gloomy. "To-night, we have made up a parcel of *airs berrichons* which we shall send to Bocage. Tell him that I have found a mine of music in Jean Chauvet, a mason making holes in my wall for the furnace. He used to sing without perceiving that I heard him. He sings well in the true *berrichon* style. I took him to the drawing-room and noted three airs, one of which is very pretty; then I gave him a good deal to eat and drink. He went back to his comrades and reported to them: 'I never worked so hard in my life; this lady and this gentleman [Muller, a musician who was then staying at Nohant] made me sit on a chair, and they began to talk and dispute every time I sang; and they said I made *bemol*, and *si*, and *sol*, and the devil knows what.' . . . Upon this, all the workmen began to sing in the passages, to make me understand that they could do as much." The letters to Maurice are very refreshing after the long and dismal phrases to Mazzini and Barbès. Madame Sand was a slave to Nohant. To keep up her establishment, she worked more than she ought to have done. She liked to write, to compose, to make a novel or a drama; but she was very unpractical, and she disliked the drudgery and the vulgarity of the rehearsals. Her friend

Bocage did as much as he could for her, but he could not altogether fill her place. She was essentially a dreamer: she disliked all the banalities and conventionalities of the world. She lived in a fantastic and ideal world, but it must be confessed that her ideal was not better than the reality.

"Claudie" was very successful; it made money—as much and more than "François le Champi"; it was what the French call a *succès de larmes*. Bocage played in it: "On se mouche comme au sermon," says Madame Sand. In one sense, she was the most modest and unselfish creature in the world—she did not like to be lionized; she stayed only ten days in Paris after the great triumph of "Claudie," and returned immediately to Nohant. She was almost ashamed of her great victory. She says, what every literary man must have felt, "Work in progress has attractions which are not understood, but which far surpass those of work finished and given to the public." Paris had, besides, become odious to her; she was only happy, or semi-happy, in the country. She had planned to make a little theatre in the house at Nohant—had demolished walls, made side-scenes and boxes. "Our little theatre is a jewel, and we will rehearse here the plays destined for Paris." "Claudie" made little money, though it was successful; it did not bring Madame Sand as much as 10,000 francs. It helped her, however, to pay small debts; but, the debts paid, she remained without a centime. She made a loan in order to begin the publication of her complete works, in numbers, at four sous the number; she was always robbing Peter to pay Paul.

In 1851 we find for the first time in her correspondence the name of Plauchut, who became one of her best friends in after-life. Plauchut had had a very adventurous life; he had lived some time in the Colonies; he had been at Manila; he was half-naturalist and half a commercial adventurer—just the sort of man in whom Madame Sand could take an interest: what the Italians call an *infelice*. She gave him advice upon the best way of keeping butterflies, and he gave her advice upon financial speculations, which, of course, were always unfortunate. After "Claudie," Madame Sand gave a "Molière," but it had no success; it was only played twelve times, notwithstanding all the efforts of her friend Bocage. It was a *succès d'estime*, and nothing more. The piece was played during the summer, in a very poor theatre, of which the manager was at his wit's end, and, in fact, he became a bankrupt almost immediately afterward. The piece was terribly long, in five acts; it had been curtailed to four acts, but it was nevertheless very heavy. It was very absurd, besides: there is a scene in which, after various personages have drunk to the health of the King, the Queen, and the Princes, *Molière* proposes the "health of the people," an anachronism which did not give satisfaction even to the public of the boulevards. Madame Sand complains of it: "This public of the boulevards, this public which pays ten sous for a seat, and which ought to be the *people*, to whom I have sacrificed the well-paying public of the French Theatre, has not been grateful to me. The people is still either ungrateful or ignorant. It prefers murders and poisonings to a literature which has style and heart. It is still the *boulevard de crime*, and it will be difficult to improve its taste and its morality." The piece was only admired to a certain extent by the hateful bourgeoisie.

The private theatricals of Nohant became the great consolation of Madame Sand. There she had no public, or could do without a public; she merely indulged her fancy. It was an expensive amusement, and she wrote novels in order to pay for her private representations. She had become so disgusted with the men in power and with the bourgeoisie, that the *Coup d'État* of Prince Napoleon found her very resigned and cool; she had lost her faith in the people, and she almost preferred one tyrant to a hundred tyrants. She was in Paris on the 2d of December, and she returned quietly to Nohant with her daughter Solange. She knew Prince Napoleon, the son of Jerome, and on the 3d of January, 1852, she writes to him, thanking him for a visit which he had made to her: "If my poor house and my sorrowful face do not alarm you, both will be consoled and vivified by your good friendship." Prince Napoleon had always courted the men of the Left, but he was quite reconciled with his cousin; he was receiving a large civil list, and had been made a General of Division. Madame Sand, as well as Renan, Sainte-Beuve, and a few others, always kept on good terms with him and with his amiable sister, the Princess Mathilde. They were not reconciled absolutely to the Empire, but they were not open enemies; they were, so to speak, in a state of expectancy. To do Madame Sand justice, she never used the influence of Prince Napoleon for herself, but only in favor of some unfortunate political offenders, who were more or less worthy of her sympathy. She did not hesitate even to write to Prince Louis Napoleon himself. The letter is dated June 27, 1852. "Sir," she says, "you told Prince Napoleon, who implored you on my behalf for the transported Republicans of the Indre, that you would do whatever I asked you to do. I place before your eyes the list of the reprieves which you have condescended to promise to me, and which I expect as a new proof of your kindness to me."

Such was the end of the great agitation of 1848; this is the postscript of the famous "Bulletins of the Republic"; this follows after the fiery letters to Mazzini and to Barbès—an humble letter to the man of the 2d of December, who had seized France by force, and who was to carry her from Sebastopol to Solferino, from Solferino to Mexico, from Mexico to Sedan. I can hardly imagine anything more melancholy than this total abdication of a generous and highly-gifted woman; nor can anything show better how little she was made for political strife. Imagination was her domain, and when she tried to play the part of a statesman she failed miserably. She did not even preserve her dignity; she placed herself on the low level of those Jacobins who sent Louis XVI. to the scaffold, and who concealed themselves afterward, in silence, in the court of Napoleon, behind the marshals and generals of the new Alexander. I do not advise the champions of woman's rights to place Madame Sand in the calendar of their saints; as a political woman she was a total failure.

Correspondence.

THE ORDERS TO THE *MONITOR*.

To the Editor of The Nation:

Sir: My attention has recently been drawn to a communication in the *Nation*, in relation to the fight between the *Monitor* and *Merrimac*, and, although I gave to the public in *Harper's Weekly* (dated January 25, 1879) an account of that event, yet I feel myself called upon, even at this late day, to send you a few remarks on the subject, especially as the article above alluded to is in some respects at fault.

In my communication to *Harper's Weekly*, when speaking of the period a short time before the *Merrimac* came down from Norfolk, I said:

"At this time I was in command at Hampton Roads. Some few days before the *Merrimac* came down from Norfolk, I received from the Navy Department several telegrams ordering me to 'send the *Monitor* to Washington immediately on her arrival.' On the night of the 8th of March—the day on which the *Merrimac* came down and sunk the *Cumberland*, and the *Congress* was burnt—at about 9 o'clock the *Monitor* arrived. Captain Worden immediately came on board the *Roanoke* and reported his arrival to me. I inquired into his condition, which was not a very favorable one: his men were all green, as they knew nothing about that peculiar armament then on board the *Monitor*. A few moments' reflection, however, determined me as to the course I should pursue. I informed Captain Worden that my orders were very positive to send the *Monitor* to Washington, but that I was going to disobey those orders, at the risk of my commission, and send him up to Newport News to look out for the *Merrimac*. In this Captain Worden cheerfully acquiesced, and on the following day the result was known to an astonished and an admiring world."

And yet, in the face of this, the writer in the *Nation* says that "Lieutenant Worden acted on his own responsibility in going up to attack the *Merrimac*, for it does not appear that he received any orders, either from Washington or from his superior at Hampton Roads."

Thus it appears that my orders from the Navy Department were to send the *Monitor* to Washington immediately on her arrival at Hampton Roads, and that I disobeyed those orders, and ordered her up to Newport News to look out for the *Merrimac*. It is true that the orders sending the *Monitor* to Newport News were *verbal* orders, but as far as myself or Captain Worden was concerned, they were as binding as if I had *written* a volume, and Captain Worden by obeying those orders showed that he looked on them as such.

The writer in the *Nation* has a very imperfect idea of the discipline of the Navy if he supposes that a junior, in the *presence of his superior*, and that officer his commanding officer, would leave the squadron in which he was serving without orders from that superior. It therefore follows, as a matter of course, that Captain Worden must have received his orders to proceed to Newport News *from me*.

Trusting that the foregoing will remove any impression made by the article in the *Nation* that the responsibility of attacking the *Merrimac* emanated from Captain Worden and not from myself, I submit it to you, with the request that you will give it an insertion in the *Nation*.

I cannot close this communication without awarding to Captain, now Admiral, Worden, the meed of praise for the great gallantry and good judgment which he displayed when repelling the attack of the *Merrimac*, and compelling her to take refuge at Norfolk.

I remain, very respectfully yours,
John Marston,
Rear Admiral, U. S. N.

No. 3447 Walnut Street,
Philadelphia, November 20, 1882.

THE NAVAL OBSERVATORY.

To the Editor of The Nation:

Sir: I notice in the *Nation* of November 9 a short paragraph relative to certain changes made in the *personnel* at the Naval Observatory, Washington. One need not go far to find the reason for this change, which, briefly stated, is because there are no persons other than line officers in the Navy to take charge of the instruments.

Prof. Asaph Hall still has charge of the twenty-six-inch equatorial; Prof. J. R. Eastman will continue to use the large transit instrument. Besides these two gentlemen there are no others among the regular professors of mathematics to do the work at the Observatory. Prof. Simon

Newcomb is now in charge of the publication of the Nautical Almanac. Prof. Frisbee is a new man, with a good reputation as a mathematician, but with comparatively little experience as an observer. Prof. E. S. Holden resigned his position at the Observatory to find a broader field for his energy and talents. He is now at Madison, Wisconsin. Besides these, the other names which appear as professors of mathematics belong to persons who have never done any instrumental work at the Observatory. Prof. Wm. Harkness is there, to be sure, but no one seems to know why, or to be able to tell what he does. Four others of the professors are teachers at the Naval Academy at Annapolis—teaching, respectively, mathematics, English literature, French, and drawing. One other is not considered competent to teach anything.

If, therefore, the line officers in the Navy are detailed for prominent positions at the Observatory, are not the professors themselves responsible for the existing state of things? They have pursued a narrow, selfish policy in turning away young men from the Observatory after they had had the training which fitted them to remain and to succeed their instructors. But the older men could not bear to think of these their pupils stepping into a rank which would have made them their equals. So we find Todd leaving the Government service to go to Amherst; Pritchett is in St. Louis, Paul has gone to Japan, and Upton finds more congenial quarters with the Signal Service.

A few years ago an appointment was made to a professorship of mathematics which was notoriously unfit and unwise. A movement was then started which resulted in an act of Congress being passed in 1881 specifying that hereafter no one should be appointed as one of the twelve professors of this grade until he had passed an examination before a board of the existing professors, and been recommended by them for the appointment. There were then two vacancies to be filled. Secretary Hunt ordered a board of examiners, and a dozen or fifteen men presented themselves as candidates. The examination lasted for five days, and was so conducted as to "freeze out" all of the men who had had any training in the practical work of an observatory. The tests applied by the board were almost wholly in pure mathematics, and the two men who passed this ordeal were Messrs. George W. Hill and Wm. W. Johnson. The Observatory professors then came to the conclusion that they did not want these eminent mathematicians appointed to their own fraternity. The Board of Examiners either did not make any report to Secretary Hunt, or, if they did, they persuaded him not to do anything about it. Certainly, the names of Messrs. Hill and Johnson were never sent in for confirmation.

The two vacancies were still unfilled. On the last day of the session a bill was put through Congress authorizing the Secretary of the Navy to appoint two professors of mathematics, subject to an examination, wholly ignoring the fact that a board of examiners was already in existence. The Secretary issued an order that these two men *should not be examined in mathematics*, but in French and drawing. Consequently, the drawing-master at the Annapolis Academy and the French teacher there are now rated as professors of mathematics in the U. S. Navy.

If the Observatory professors don't like the influx of young naval officers into their sacred domain, they have only themselves to blame.

T. N.

[The question which has been raised is not, as "T. N." supposes, what the Observatory professors, or any other small class of men like or do not like; but it is, To what scientific uses are the instruments and the endowment of the National Observatory to be devoted? The country at large, as well as its scientific men in particular, has a lively interest in *this* question.

It is *à priori* reasonable to suppose that professional astronomers are alone capable of directing the astronomical activity of an observatory. The past history of this particular observatory is a striking proof of the truth of this supposition.

Whatever may be the shortcomings of the individual members of the present staff, to whom praise and blame are meted out so freely by "T. N.," we feel sure that the question will finally be settled on the grounds of public policy. The Naval Observatory is a public institution supported for the purpose of doing certain specific things. To do these things well requires a native aptitude, which must be educated by an arduous training. It is clear that in general this training is wanting to the young naval officer. Hence it follows that the work will finally be done by men who are fit to do it, and not by young men "detailed" to be practical astronomers. —Ed. Nation.]

IF GARFIELD HAD LIVED.

To the Editor of The Nation:

Sir: In the *Nation* for November 16 I notice a repetition of the suggestion that, had Garfield lived, the Republican party would not have met with its recent reverses. I should like to ask, through your columns, Mr. Bowker, or some other person of similar view, his reason for this opinion. To attribute the party's defeat solely or chiefly to the action of the Executive seems to me erroneous. The extra session, with its nauseating dose of Mahoneism tainted with repudiation; the utter failure of the Republican Congress to deal with important questions; the River and Harbor steal, and the Hubbell assessment business, were far more potent and widespread causes of defeat.

Now, the question I should like answered is, What was there in the career of General Garfield, especially subsequent to his nomination for the Presidency, from which the conclusion is authorized that he would have saved his party from these errors? Certainly, as between a Half-Breed and a Stalwart Machine—"Bill" Woodin and John F. Smyth, "Lo" Sessions and "Steve" French—the independent voters care nothing. It would only have been by a courageous reform policy that President Garfield could have saved the party from its blunders, or in spite of its blunders. The writer supported Garfield heartily for the Presidency. He has a full appreciation of his great services, especially in the struggle for honest finance. But this does not help him to an answer to his question. We were already, before the assassination, involved with Mahone, and neither in this nor in any of the other abuses above mentioned can the Garfield element of the party claim superiority to the Stalwarts. As to the course which General Garfield himself would have taken, is there anything to offset the distrust occasioned by the distinct bid for the support of the spoilsmen contained in his letter of acceptance; the constitution of his Cabinet, containing as it did only one conspicuously fit appointment, while at its head was a man who has probably in his own State pushed the assessment wrong as harshly as has ever been done anywhere, to say nothing of his more dubious transactions, with which Garfield *must have been familiar;* the nomination of Mr. Chandler to be Solicitor-General; of Mr. Mathews to be Justice of the Supreme Court; the removal of Merritt in the middle of his term to reward a factional, if not personal, service, and his letters concerning the Star-route and department contributions?

Because I ask this question, I am not therefore a Stalwart "ghoul." I was pledged to oppose Grant had he received the Chicago nomination. I would have scratched Mr. Arthur had it been possible. I have just bolted the Saratoga State ticket. I should have done the same thing had Mr. Cornell been the nominee, in which I should have been more consistent than most of my Half-Breed friends.

In conclusion, allow me heartily to endorse the principal suggestions at the close of Mr. Bowker's letter. I would only add one plank—the repeal of the Legal-Tender Act and the retirement of the greenbacks. I hope the Supreme Court will help in this. I should be especially glad to identify myself with a party pledged to immediate revenue reform and ultimate free trade. I am no less anxious as to civil-service reform, but doubt if that can ever be a party question, as no party will ever be found to openly oppose it.

Ernest Hitchcock.

Newark, N. Y., November 21.

MR. PENDLETON'S RESOLUTION.

To the Editor of The Nation:

Sir: Washington correspondence reports that Mr. Pendleton will again introduce his resolution into the Senate for giving the Cabinet officers seats in both Houses of the Legislature. It will, however, fall just as flat as last year (although then a committee of eight Senators from both sides of the House reported unanimously in favor of it), and mainly for two reasons: first, because Mr. Pendleton confines himself to a somewhat perfunctory argument of its legality and propriety as shown from the experience of other countries, in place of a vigorous demonstration of its absolute necessity to prevent the Government from coming to a deadlock; and secondly, because the reasons which make the measure desirable for the country are precisely those which make it an object of horror to Congressmen. The political use of offices, river-and-harbor bills, Star-route jobs, the putting off of depreciated silver at par upon the Treasury—in short, all those things which result from giving to the Legislature, and through it to the lobby, complete control not only of its own but of the Executive branch of the Government, would receive a death-blow. If Mr. Pendleton, or somebody equal in position, but less affluent in circumstances or more aggressive in temper, would leave Congress, according to the very vulgar but expressive phrase which is now in vogue in England, "to stew in its own juice," and take the stump to inform the people where their necessities really lie, he would come nearer not only to this but to some other ends which it may be assumed he really desires.

One of the perennial illustrations of the situation appears in your recent article upon "The Democrats and the Finances." The whole country knows what a mess the Republicans have made, but though it will doubtless ere long also know how much worse a one the Democrats will make, it does not yet know at all that the difficulty is wholly outside of parties, and that the remedy is not to be found in alternating from one party to the other, or even in the formation of a new party. So long as the Dr. side of the national account is managed by one set of men, and the Cr. side by another set, both sets work-

ing separately and in secret, without any public responsibility, and without intervention on the part of the executive official who is nominally responsible; so long as these sets, being composed largely of new men every two years, give no attention to business except when Congress is in session, and thus spend in preparing plans the whole time which ought to be spent in public discussion of plans already matured, so that an immense budget is rushed through without discussion in a week or ten days—just so long the finances will go from bad to worse, no matter by what name you call the party in power. No other nation on earth attempts such a thing, or could attempt it without soon coming to grief, our salvation thus far consisting in an enormous income, with practically no drain for military expenditure.

The British national financial management is beyond comparison the first in the world, and it is so because the whole matter is placed in the hands of the Chancellor of the Exchequer, Parliament only pronouncing, after full discussion, aye or no in gross—in other words, applying the veto. It is a notable illustration of how with us the veto power is placed at the wrong end of the line.

The threatening state of the French finances, almost worse than under the Second Empire, is owing to the encroachments of the Chambers on the Executive in the handling of the budget—a course which, if not checked in this as well as other directions, must almost certainly end in the reëstablishment of despotism.

The expression for us of the difference between these two systems, of the change from an evil to a sound method, is the admission of the Secretary of the Treasury to a seat in Congress, with the right of defending a policy of unity, system, publicity, and responsibility against secret intrigue, an irresponsible lobby, and chaos. This is the proposition which needs to be forced upon the attention and understanding of the people; and the sooner we give up building our hopes upon any change of parties or of men under the existing system, the sooner we shall get upon the road to some practical result. G. B.

CAMBRIDGE, MASS., November 27, 1882.

COL. HENDERSON'S CHANGE OF HEART.

TO THE EDITOR OF THE NATION:

SIR: An incident of the recent political campaign has come to my notice which, I think, may be of interest to reformers, and also to anti-reformers, though presumably from somewhat different reasons.

Col. D. B. Henderson, Secretary of the late Congressional Assessment Committee, was the Republican nominee for Congress in the Third District of Iowa. Shortly before election, Mr. Henderson addressed a circular letter, with stamp enclosed, to all the ministers in the district, requesting answers, and urging them to attend personally to getting out voters on election day, etc. One clergyman, of whom I have knowledge, replied immediately, stating his position very frankly. Mr. Henderson was assured that, personally, the clergyman would be happy to vote for him, but that on account of his connection with the notorious assessment business the vote would be withheld. The desire was also expressed that Mr. H. might be elected by a majority of two or three votes.

To this communication Mr. Henderson replied by a *telegram* of about two hundred words, thanking the writer for his "manly letter," and attempting to vindicate himself as best he could. Unfortunately, I am uninformed as to the line of defence adopted.

Comment upon the above is scarcely necessary. Whether Mr. Henderson, Secretary of the Hubbell Committee, wrote the above telegram from the standpoint of a sudden convert to reform, or from that of one seeking to shield himself from a coming storm, matters little. Elected to the next Congress by a majority much less than a popular Republican nominee might reasonably expect, he will have abundant opportunities for defining his position.

Yours, W. C.

DENVER, COL., Nov. 20, 1882.

[Mr. Henderson's telegram was doubtless paid for out of his portion of the assessment fund, so that, whatever may be thought of his conversion, one should not wonder at his prodigality.—ED. NATION.]

CUSTOM-HOUSE BROKERAGE.

TO THE EDITOR OF THE NATION:

SIR: Some days since, I received for my herbarium, in exchange, a lot of European plants from Prof. Toepffer, Brandenburg, Prussia, through the house of Davies & Co., 15 Broadway, New York. Accompanying was the following bill of charges:

Freight and charges to New York	$2 91
Duty on dried plants (*free*)	—
Custom-house fees	60
Cartages	50
Postage, etc.	15
Public storage	35
General-order storage	50
Custom-house brokerage	3 00
Expressage to Dayton from New York	90
Total	$8 91

You see, it cost me much more to have my small case handled by those commission merchants than to bring it from Brandenburg, Prussia, to Dayton, O. (no duties having to be paid). This seems to me an imposition, as I have heretofore received packages from my European correspondents through New York houses, but never paid such excessive bills. On notification from the above firm, I had written them that the package had no commercial value, but was of use to me only as a matter of scientific study, and that I could not state its worth in dollars; yet, after all the petty charges, they asked for $3 *Custom-house brokerage.*

Of course, in itself, it is but a little thing, but I consider it proper (if only to offset Mr. Herbert Spencer's opinion of Americans as being nongrumblers) to let my fellow-readers of the *Nation* know how I have been treated by the firm in question.—Very respectfully,

WILLIAM WERTHNER.

CENTRAL HIGH SCHOOL, DAYTON, O., November 23, 1882.

CHANGES IN NORMAL-SCHOOL MANAGEMENT.

TO THE EDITOR OF THE NATION:

SIR: Those of your readers who have been interested in some recent communications to your columns concerning normal schools will be pleased to hear of an appointment just made by the State Board of Education of Michigan. This board has appointed Congressman Edwin Willits to the Principalship of the State Normal School in Ypsilanti, his duties to commence at the close of the present school year.

Mr. Willits, although known mainly by his political career, is by no means a novice in the field of education. He has had large experience as a teacher and as a member of the State Board of Education, on which he served for three successive terms of four years; in 1868 he was chairman of the Committee on Education of the Michigan Constitutional Convention. Having a university education (Mr. W. is a graduate of Michigan University) and a long general experience in educational affairs to start with, and eight or nine months before him during which to make himself acquainted more fully with the details of normal-school management, Mr. Willits is justly considered as unusually well qualified for the work he is going to undertake. He is considered so especially by those who, like some of your correspondents, feel convinced that teachers' training-schools should be managed in a somewhat more liberal spirit than most of them at present are; that normal schools are in need of men of broader views than the average teacher (whose field of labor and experience of life are necessarily limited) is likely to be.

Does not this appointment of Mr. Willits, so soon after that of Col. Parker to the Principalship of the Cook County Normal School in Illinois, seem to point toward a new departure in the management of normal schools? L.

MICHIGAN, Nov. 15, 1882.

Notes.

R. WORTHINGTON will publish at once 'Picturesque Journeys in America,' for youthful readers.

'Bible Myths, and their Parallels in Other Religions,' with numerous illustrations, will be published next week by J. W. Bouton.

The Colgrove Book Company, Chicago, have in press, for immediate publication, 'The Unending Genesis,' by H. M. Simmons, being an attempt to tell the story of creation, in a reverent spirit, by the light of science.

Mr. S. R. Koehler's 'United States Art Directory and Year-Book' (Cassell & Co.) is a very praiseworthy and successful beginning of, we hope, a long series of annuals. Its supplementary title is, "A Guide for Artists, Art Students, Travellers," etc. The larger half is occupied with a statistical and historical list, alphabetical by towns, of national and local academies, art schools, collections, exhibitions, decorative-art societies, art clubs, etc., which parents will find extremely useful in determining the advantages of many a college and university, and art students indispensable. While no attempt, of course, is made to catalogue all the pictures, statues, or antiquities of the various institutions or societies enumerated, useful hints are given of their chief attractions. One may see, also, as in the case of Faneuil Hall, Boston, how much the custodians of public collections neglect to label and identify the works of art intrusted to them. The Artists' Directory is derived from the names of members and exhibitors of twenty-five societies in Boston, New York, Philadelphia, and Chicago; and similarly an Art Teachers' Directory has been made up. Then comes a Necrology, taken up at the point where it was dropped by the *American Art Review;* a table of exhibitions held from January, 1881, to October, 1882; a list of coming exhibitions; a list of books on art and of art periodicals; and finally, the law of copyright. All this seems done with as great accuracy and thoroughness as was possible under the circumstances.

The library of the late Dr. E. B. O'Callaghan is to be sold at auction by Bangs & Co. on December 4 and succeeding days. It comprises nearly 2,500 numbers, of remarkable average excellence, with not a few rarities. It is essentially a collection of Americana, and is rich in Jesuit Relations and other works pertaining to the early settlement of this continent.

"Birthday books" increase in number, as witness the 'Roe Birthday Book' (Dodd, Mead & Co.). The same firm also send us their reprint of Canon Rawlinson's 'Seventh Great Oriental Monarchy' (Persia), in two volumes. This now completes the series of seven handsome volumes. Like the others, it is freely illustrated, and has a

map of the Sassanian Empire, and a chromolithographic plate of the Palace of Chosroes I. at Ctesiphon.

Geo. Routledge & Sons publish Knight's 'Shakspere' in three volumes, at a moderate price. The illustrations are Sir John Gilbert's. A pretty shade of light green has been chosen for the cloth covers.

After the lapse of a quarter of a century from its first collected appearance, Houghton, Mifflin & Co. put out a new edition of the 'Autocrat of the Breakfast Table' in a form worthy of it and of their reputation for fine workmanship. Dr. Holmes has wisely abstained from retouching the product of a period not only "before the war," but before the development of inventions by which our daily life has meantime been so strongly affected. He has, however, added a number of foot-notes, partly in explanation of obsolete terms or now obscure personal and other allusions, partly by way of further gossip; and these add much, as good foot-notes always do, to the charm of the large-letter discourse. One of these is worth remarking. In his merry verses on "Latter-Day Warnings," Dr. Holmes had allowed as one of the signs of the millennium—

> "When the first locomotive's wheel
> Rolls through the Hoosac tunnel's bore."

By so much, he now confesses, the preparation of ascension robes has been made urgent.

An unpretentious book of reminiscences, called 'New England Bygones,' appeared, two years ago, as if written by "E. H. Arr." This was soon discovered to be a pseudonym for the wife of Mr. E. H. Rollins, former Commissioner of Internal Revenue. Mrs. Rollins has since died, and the 'Bygones' has been republished with a care and costliness and ornamentation which have a distinct memorial significance (J. B. Lippincott & Co.). Gail Hamilton supplies an interesting and seemingly frank and intimate account of the author, whose portrait is given. The illustrations are of even grade and good quality; but they have not an unmistakable New England stamp, and apparently (except in a few cases) are pure efforts of artistic imagination.

The same publishers offer a new revised edition of 'The Poetical Works of T. Buchanan Read,' with heightened decoration. The voluminousness of this collection is as surprising as anything about it, in spite of the place which a few pieces have secured the author in our American anthologies.

The friends of the higher education of women, especially in this city, will welcome the aid of President Barnard's paper—"Should American Colleges be Open to Women as well as to Men?"—read in July at the annual convocation of the University of the City of New York, and now reprinted from the Proceedings. Dr. Barnard's closing sentence gives the key to his position: "The time is not far distant when it shall be as much among the curiosities of history that one sex should ever have been debarred from the educational privileges accorded to the other, as it will be that the curse of slavery should have continued to darken the escutcheon of our Republic for a century after its foundation."

The *Athenæum* announces that Mr. Leslie Stephen will withdraw from the editorial conduct of the *Cornhill Magazine* in order to edit a 'Dictionary of National Biography,' undertaken by Smith, Elder & Co.

No. 8 of the *Bibliographical Contributions* of the Library of Harvard University consists of the Calendar of the Arthur Lee Manuscripts in that library, which has been printed from time to time in the Harvard *Bulletin*.

Latine is the name of a monthly periodical, edited by Prof. E. S. Shumway, of the State Normal School, Potsdam, N. Y., devoted to aiding in teaching Latin by the conversational method. Whatever may be our opinion as to this method for beginners, there can be no question of its efficacy as an accompaniment to advanced instruction; and we should judge the contents of this little sheet well adapted to the end in view. It is, by the way, the organ of an association of Latin teachers, called *Catena Latina*, having "links" in all parts of the Union, members of which pay a fee of two dollars a year, and are entitled to receive this periodical.

Le Livre for November might almost, following a cisatlantic fashion, call itself a Voltaire number. M. Louis D. Petit, supplementing an interesting article by M. Eugène Muller in the October number, treats of Voltaire's correspondence with Neaulme, after the latter's unauthorized and very embarrassing publication at the Hague of the 'Abrégé de l'histoire universelle.' Like M. Muller, too, he prints some inedited letters of Voltaire's, and corrects others already published. Later on, extracted from *Figaro*, is a list of Voltaire's "pseudonymes de combat"—nigh one hundred and fifty, in which the scoffer masquerades as le docteur Akakia, le rabbin Akib, le curé Meslier, feu l'abbé Bazin, l'humble évêque d'Aletopolis, l'archevêque de Cantorbery, un bénédictin, plusieurs aumôniers, le corps des pasteurs du Gévaudan, ancien avocat, M. le Comte de Tournay, un académicien de Lyon, un chrétien, un quaker, une belle dame, le docteur Wellwisher good Natured (*sic*), etc., etc. Finally, among the reviews, great praise is awarded M. Georges Bengesco's Bibliography of the works of Voltaire, which, among other details, goes pretty fully into the iconography of them, so far as to enable editions to be recognized by their plates, vignettes, etc. We must also signalize M. Jules Adeline's paper on the hand-painting of the backs of books, which proposes a new industry (for France: A. Williams & Co., Boston, "anticipating the Christmas demand that has arisen for books having covers that can be decorated or painted upon, have prepared for the purpose a specially bound edition of 'Poems and Sonnets of Owen Innsly'"); and an advance chapter on Benvenuto Cellini as an author, from M. Eugène Plon's forthcoming biography of this artist.

'Contes Grotesques d'Edgar Poë, traduction Émile Hennequin' (Paul Ollendorf), and 'Mes Années d'Esclavage et de Liberté, par Frédéric Douglas, Marshal de Colombie' (Plon), are two recent Paris announcements.

Our explorations at Assos have proved how much yet remains for the archæological explorer in Asia Minor. M. Lenormant has shown the same thing in Italy. He has visited twenty-four towns and cities of the Basilicata and Calabria, in more than half of which no archæologist had preceded him. He has collected more than 200 Latin and thirty Greek inscriptions that have never been published. He has observed a remarkable resemblance between the geometric decorations of the Apulian and of the Cypriote pottery, and also has found relics of a primitive Italic black pottery once made all over the south of the peninsula.

A statue of Harriet Martineau has been made by Miss Anne Whitney out of a fund raised for that purpose, and promises to be a work of high merit. Subscriptions are still desired to meet the final expenses, and may be sent by the admirers of that remarkable woman, who loved and did much for our Western republic, to Houghton, Mifflin & Co., 4 Park Street, Boston.

Two mortuary masks of Romans have been found in France; one in 1874, at Trion, in the tomb of Claudia Victoria, who died at the age of ten years, one month, eleven days. This mask, which is of plaster, is supposed by a local antiquary to be hers, but the *Bulletin Critique* pronounces the features, as represented in the *Revue Épigraphique du Midi de la Gaule*, to be too mature for a child. There was no such doubt possible in the case of the mask found a few years ago in the Rue Nicole at Paris, for there the mortar used in sealing the tomb had flowed over the face of the buried child in such a way as to make an accidental mask whose truth to life could not be for a moment questioned.

—In *Harper's Christmas*, American wood-engraving surpasses all its previous efforts, not in fineness or delicacy or sureness of execution, but in scale. The full-page cuts of this sumptuous folio take the field against those which have hitherto distinguished the London illustrated weeklies. We are much mistaken if our British cousins do not cheerfully admit their equal excellence, while Mr. Vedder's "Samson," engraved by Cole, can hardly fail to be regarded as a *tour de force* which has no match on either side of the Atlantic. This remarkable woodcut is given a supplement to itself, as the size of the block alone is equal to that of the folio—say 18 x 15½ inches. The design is in Mr. Vedder's best vein—simply the head and neck of Samson, with his hair freely flowing to right and left, the mouth perhaps not strong enough for so mighty an owner, but the general expression that of a good-natured giant in the exuberance of sheer physical delight. The cartouche which frames it is masterly in its symbolic decorativeness—another quality which Mr. Vedder possesses in a high degree. The rendering of all this with the graver confirms Mr. Cole's preëminence for breadth of treatment, here most difficult on account of the large surface. The print deserves to be framed, and will be framed, and this thought consoles us for the transient character of the publication, in its paper covers, when at least boards should have protected it, and might yet do so in a special edition. Mr. Cole has one other example of his technique, smaller, but still of unusually large size, involving the interpretation of textures—namely, Mr. F. Dielman's "A Girl I Know," a charming subject. We cannot specify the meritorious work of other engravers in figure-pieces justifying their best efforts, but Mr. Juengling's treatment of pure landscape after Mr. Quartley's design—"In the hush of the autumn night, I hear the voice of the sea"—is poetic in its effectiveness. And yet we are sure that it suffers more than any other cut in the presswork.

—This new venture and its literary contents are introduced by Mr. Geo. William Curtis, who rightly treats *Harper's Christmas* as the flower of *Harper's Monthly* in the day of small things. The bare mention of some of the other contributors will show that there is abundance of first-rate entertainment in this holiday publication. Mr. Howells has an irresistible little farce, "The Sleeping-Car," in which he once more lets the inconsequential nature of the female sex betray itself in talk and action. Mr. Joel Chandler Harris proves in his "Mingo: a Sketch of Life in Middle Georgia," that he is equal to longer flights than his 'Uncle Remus.' Here the poor-white female character is as much of a study as that of the faithful freedman. The other humorists are Mark Twain and Mr. G. T. Lanigan, the author of the *World's* Fables, who now in rhyme satirizes "The Christmas Reformer." More serious verse is furnished by Mr. E. C. Stedman and Mr. T. B. Aldrich, and we should also mention the names of Thomas Hardy, Harriet Prescott Spofford, Rose Terry Cooke, and F. D. Millet, Mr. Millet being represented also by several Eastern designs.

—The *Century* for December opens with an illustrated article on the Supreme Court, by Mr. E. V. Smalley, who gives a good deal of infor-

mation about the working and present condition of that tribunal of a kind which laymen will find more novel than lawyers. The principal thing, in fact, which will be likely to strike the professional reader in looking it over is the profound popular ignorance as to the history of the Court which it implies and assumes; but the same reflection would occur to most specialists with regard to most magazine articles dealing with their own topics; and law, of all matters of human knowledge, is to the general reader most full of mystery. Professor T. R. Lounsbury contributes an article on spelling reform, which states in a very clear way the position of those who consider the present system of spelling radically bad. He admits that it seems hopeless to expect that any large body of grown-up men who have once learned a particular method of spelling, however wretched, will ever give it up and adopt a new one, however excellent, and that a reformed orthography can only be introduced through the schools. This, however, requires a change of opinion among adults, because the schools are managed by adults, and it is impossible to imagine a sceptical generation permitting the seed to be sown among the young without extensive conversions within its own limits. The absurdities of English spelling are so glaring and grotesque that it is easy to sympathize with Professor Lounsbury's scorn of the conservative attitude of mind with regard to it; at the same time the extraordinarily small headway the reformers in this field have made in the last hundred years enables the conservative, who can bring forward no better reason against a change than that he does not "like the look" of phonetic spelling, to feel a comfortable certainty that the deluge will not come till after his time.

—Mr. James's "Point of View" is a bit of international satire which recalls his "Bundle of Letters." It consists of a number of letters, written by different varieties of Americans, and by an English and a French "observer" travelling in the United States. As Mr. James does not appear in person, the picture of this country presented is chiefly of value as showing the "point of view" of the personages introduced. Of these, the best, on the whole, to our mind, is the English member of Parliament, whose careful discrimination of what he knows about the United States from what he does not know is beyond all praise. It would probably be somewhat difficult to explain to Mr. Antrobus himself in what the humor of his study of our institutions consists; but no American who has had the pleasure of meeting any of the Antrobuses will fail to enjoy his cautious suggestion, made on learning that ladies may travel all over the Union, without loss of social consideration, in a sleeping-car, that this is probably confined to ladies occupying a lower berth, and would not apply to ladies taking upper berths. This suggestion reveals one fundamental difficulty in a great deal of English observation of the United States—the absence of fixed social rules and regulations governing "social considerations." The Antrobi can understand easily enough a set of rules governing society, however different from or opposed to those to which they have been accustomed; but what they generally fail to reach a comprehension of is the wide range within which it never enters into the head of an American to apply rules of any kind. Volumes, for instance, have been written about the American girl, to show what she may and what she may not do without loss of "social consideration"; but the problem has never been solved, and probably never will be. It is all, as one of Mr. James's characters says, very "vague"; and we can certainly forgive foreigners if they can with difficulty understand how such things can be left in a vague state in a civilized country, and insist on assuming that there must be just as many hard and fast rules with regard to social consideration as in their own country, if they can only find them out. M. de Bacourt, for example, notes in one of his amusing letters the astounding fact that, on taking the air one morning in Washington, about six o'clock, in the warm season, he met on the street a society belle. "*Mœurs faciles!*"

—The *Atlantic* has as its chief literary attraction this month some "Outlines of an English Romance," by Hawthorne, the manuscript having been furnished, with some explanatory notes, by Mr. G. P. Lathrop. "The Ancestral Footstep" is the very characteristic title which Mr. Lathrop gives the fragment, and as a study in Hawthorne it possesses a good deal of interest. It is more ghostly and fragmentary even than the 'Dolliver Romance,' and reads less like the first sketch or outline of a story than the fossil remains of one, exhumed and reconstructed after the lapse of a geological period, for some literary museum. Part of its fascination to many lovers of Hawthorne will lie in the musty, antique flavor which it has, rather than in the "freshness and spontaneity" which Mr. Lathrop discovers in it. Mr. O. B. Frothingham writes on "Art and Wealth," and does not succeed in solving the problem whether the accumulation of wealth now going on in this country is likely to lead to a national development of art. This is a question which never has been solved, and never will be, except by time. All that can be shown is that some of the conditions under which art has sprung up in other countries exist in the United States; but, as no one knows what all the conditions are, and they have never been exactly the same in any two countries, any speculation about it is at best guesswork. Mr. Frothingham is very cautious and tentative, and perhaps it is unfair to say that he does not succeed in solving the problem, because he would not be willing to admit that the problem is exactly what we have stated it to be—a fact which saves him from error at the expense of definiteness.

—*Harper's* has several good illustrated articles, of which one called "Cameos of Colonial Carolina," by P. D. Hay, contains a good deal of out-of-the-way information as to some of the early Carolinian worthies, if such an un-Carolinian epithet may be applied to them. Mr. John Fiske has an article on New England in the Colonial period, which is valuable as making clear some minor historical points with reference to the persecution of the Quakers by the Puritans: for example, first, that only a small portion of the Puritans were religious refugees; second, that they had no idea of establishing liberty of conscience, but, on the contrary, a theocratic state, in which conformity was required of the individual in all matters affecting conduct; and, third, that the Quakers made themselves obnoxious to the Puritans, both doctrinally and otherwise. But we cannot say that he helps to dispel the unscholarly confusion of the persecution for state reasons—*i. e.*, on account of doctrine—with the penalties for indecent exposure and other occasional lunacies. Here chronology is of the first importance.

—Colonel Holabird, in the December *United Service*, completes his consideration of military desertion, taking up, rather diffusely, more points than we can here condense. One of his suggestions the War Department has adopted with unwonted alacrity, and has already made obligatory—viz., official investigation, and report upon the probable cause, of every desertion at the time of its occurrence. Heretofore, the deserter has been merely dropped from the muster-roll, and speculations upon his motives or the real reasons for his conduct have had no place in the record. There is urgent need of a philosophical and practical discussion of the Army organization on its lowest plane—that of the rank and file. Our officers who are educated can hold their own with honor: it is the men, especially as units, who require care and who should be better understood.

—Education within the Army is briefly treated by Colonel Vincent of the staff of General Augur, commanding the Department of Texas, in the latter's annual report. He advises for the soldiers' schools already authorized pecuniary support by Congress (now, their money comes from savings of the ration—the stomach feeds the head); compulsory attendance; suitable teachers; and the non-enlistment in white regiments of illiterate men. The first three seem self-evident necessities for a decent system. If men who can neither read nor write are enlisted, the intellectual tone must be, and the moral tone probably will be, very low. The Adjutant-General has adopted this suggestion of Colonel Vincent's, and in his report to the Secretary of War recommends reading and writing to be among the qualifications of recruits. Our Army is always handicapped in the matter of education by the amount of manual labor it must perform in addition to its strictly martial duty—which, as we have before noted, is no child's play, even in peace. A difficulty underlying the whole matter seems to be the spreading of a small force so thinly over a very large territory. If two men have three men's work on their hands, some details will suffer.

—Mr. Freeman was surprised at the resemblance between England and America, whereupon some of the English journals remarked that English ideas had been slowly spreading in the United States, at least in New England, and others said that, on the contrary, England was becoming Americanized—or, to use a synonymous term, going to the dogs. We have noticed one similarity of late that seems to favor the latter view. When, on the evening of the late State election in Massachusetts, large crowds were assembled in Boston in front of the screens on which the latest returns were cast by the lime-light lanterns, as each successive bulletin gave a larger majority for Butler, among the other cries, we are told, there were shouts of "Bad for Harvard!" Compare this with the comment of the *Spectator* on Lord Carnarvon's statement that "three-fourths of the literary power of the country and four-fifths of the intellectual ability" were on the Conservative side, and the answer by a writer in the *Times* giving a long list of eminent Liberals. The *Spectator* says, "Neither assertion nor rejoinder matters a straw. The transfer of power, under our modern system, is not left to professors, but to those whom they scarcely influence at all."

—"Northern Transcontinental Survey" is the large title of a small pamphlet report of Prof. Raphael Pumpelly to Mr. Henry Villard, President of the Northern Pacific Railroad Company, dated September, 1882. "The territory," it begins, "which is exclusively tributary to the lines of the Northern Pacific and associated roads, covers about one-fifth of the area of the United States. A large part of this region is almost unexplored, geographically, and is still less known as regards those resources which are to contribute to the business of this corporation." To dispel this ignorance, the Directory instituted the survey of which Professor Pumpelly is the competent head. His assistants are formed into a chemical department, a department of mineral resources, and divisions of climate and rivers, of

soils, of forests, of economic botany, of topography, the efficiency of which is assured by the names of Professors E. S. Holden, E. W. Hilgard, C. S. Sargent, and Mr. A. D. Wilson—to mention only the most familiar. To these must be added Dr. H. A. Hagen, the distinguished entomologist of Harvard. In fact, a Government survey could not be more strongly equipped, yet it is a simple business provision "to obtain the data necessary to guide the companies in regard to building feeders, in regard to matters of policy in encouraging the starting of proper industries, and in directing immigration to the proper points." Maps are to be constructed showing the topography by contour lines; the practicability of irrigation and under-drainage; the rainfall and temperature; the distribution of plants and the other available conditions for grazing; the mineral resources, etc. Already important tests of the soil and discoveries of coal and timber have been made. Professor Sargent reports the forests along Clark's Fork and its tributaries "the most important and valuable body of timber in all the interior of the continent," and recommends the region being withdrawn from sale for conservation by the Company, which will undoubtedly be done. Dr. Hagen discovered that the larvæ of a certain butterfly had "injured, more or less seriously, in immense numbers the yellow pine between Spokane and Colville," and the result is that steps will be taken to utilize these trees before they are rendered worthless. Such are some of the first fruits of a singularly far-sighted and liberal scheme to furnish a scientific basis for railroad development. In the nature of the case it is without a precedent, and it will be watched with increasing interest as it supplies from year to year the deficiencies in our national surveys.

—Not the least interesting feature in the literary history of the present age is the "survival" of the Index librorum prohibitorum and Index expurgatorius. One wonders how much is effected by the condemnation, and whether the faithful, before reading a book, carefully examine the lists published by the Congregation of the Index to see whether it is allowed. We remember, not long since, looking over the library of a Catholic priest which came to auction, and finding several works with the manuscript note "Opus prohibitum." Evidently the *fruit défendu* had been found to be too sweet to be given up. Of course, in the present prolific state of the press, the Congregation cannot pass judgment upon all the issues of the press, and its condemnation of any particular work affords a presumption that the work shows some ability. Among the books lately so honored are Renan's 'Ecclesiastes' and Marino's Italian version of Gregorovius's picturesque 'Athenaïs, Geschichte einer byzantinischen Kaiserin.' But not only has the Index librorum prohibitorum survived, as we began by saying: it has emigrated to this country. The Archbishop of Montreal has prohibited our neighbor the *Courrier des États-Unis*, and, when he found that it was still read in his diocese, ordered that a second prohibition should be read from all the pulpits.

—A recent number of the Παρνασσός gives, regarding the Samian aqueduct, details supplementary to those which we reprinted last week from the *Academy*. The water-channel of the great tunnel, which was found choked with silt, has already been in great part cleared out, that it may be put again to its ancient function of supplying the city with the water of the same copious spring mentioned by Herodotus—now known as the fountain of Hagiades. The tunnel is lighted and ventilated by shafts at a distance from each other of about twenty metres. About 300 metres below the fountain the tunnel divides into two branches. This explains, doubtless, Herodotus's description of it as ἀμφίστομον ὄρυγμα. The excavations have brought to light in the tunnel, beside a flight of four steps, a slab bearing the following inscription:

Διονυσόδωρος
ὁ θεοφόρος
μητρὶ Ἐπικρατείᾳ
ἀφ' ὧν ἐργάζεται.

—We have received the seventh number of Behm and Wagner's 'Die Bevölkerung der Erde' (Gotha: Justus Perthes, 1882). This valuable statistical publication was begun in 1872 as a universal year-book of areas and populations, supplementary to Petermann's *Geographische Mittheilungen*, but only seven numbers have been issued in ten years. The last, which appears after an interval of two years, is the largest published, containing 148 densely printed quarto pages, against the 123 of the sixth, and the 90 of the first. Among its varied information are the main results, as far as published, of the numerous official censuses taken in 1880 and 1881, including those of Denmark (February 1, 1880), the United States (June 1, 1880), Germany and Switzerland (December 1, 1880), Austria-Hungary and Belgium (December 31, 1880), Great Britain and her colonies (beginning of April, 1881), France (December, 1881), and Italy (December 31, 1881). Among the less important or less trustworthy enumerations lately carried out are those of Luxemburg, Cyprus, the Orange Free State, Venezuela, and Uruguay. Half-emancipated Bulgaria boasts already an official census, and the Grand Duchy of Finland has a new one, while most of the city populations of the bulk of the Russian Empire are known only from uncertain and partly antiquated estimates. Thus two different St. Petersburg statistical calendars for the years 1878 and 1882 give the following town populations respectively: Yelizavetgrad, 35,000, 63,000; Tiraspol, 16,700, 30,000; Alexandrovsk, 4,500, 14,000; Nizhni-Novgorod, 44,000, 12,400; Tzaritzyn, 11,800, 25,600; Dünaburg, 29,600, 52,000; Kherson, 46,000, 128,000. The late territorial or administrative changes in Asiatic Russia embrace the incorporation of the district of the Tekke Turcomans, a modification of the Russo-Persian boundary, the abolition of the Lieutenancy of the Caucasus and the Governor-Generalship of Orenburg, and a rearrangement of the Siberian divisions. The greatest recent territorial change in Europe is that arising from the cession by Turkey to Greece of parts of Thessaly and Epirus. The estimates of areas of various countries are changed in accordance with new measurements, of which the planimetric ones executed by General Strelbitzki, and published in his 'La Superficie de l'Europe' (St. Petersburg, 1882), are spoken of with great admiration. The total inhabited area of the globe is now estimated at 1,360,000 square myriametres, and the total number of mankind at 1,433,000,000. The corresponding estimates in the first number of this publication were 1,337,000 square myriametres, and 1,370,000,000 souls. It is hardly necessary to add that the great difference in the figures of population is owing mainly to a difference of views, and but secondarily to natural increase.

—London and New York had the privilege, on Saturday, of listening to Gilbert and Sullivan's latest operetta nominally at the same hour, although, owing to the difference in time, the performance in London was over two hours before it began at the Standard Theatre. The full title of the work is "Iolanthe; or, the Peer and the Peri, a new and original comic opera." It is a mistake to call this a comic opera. Properly speaking, a comic opera is a real comedy set to music ("Figaro," "Barber"), whereas "Iolanthe" is an operetta—that is, a farcical comedy, verging on burlesque, united to music of the simplest character, for which the adjective operettic is much more appropriate than operatic. Nor is it "new and original," in the full sense of those words. Some of the situations are new, as are the costumes and the scenery; but the music is not original and the dialogue and plot are not always new. With all this, "Iolanthe" is much above the average work of its kind, and although it will probably not equal its precursors in popularity, it bids fair to hold the stage for some time. Mr. Gilbert's natural proclivity is clearly toward the musical rather than the dramatic stage. Music is required to cover up the conspicuous absence of plot interest and complication, while the delineation of his characters and the fanciful nature of his subjects adapt them eminently for musical treatment. He and his collaborator understand each other so well that the result is almost as harmonious as if the libretto and the music had been written by the same person. In "Iolanthe" we are as usual confronted by some of his ingenious contradictions and paradoxes. *Iolanthe* is a fairy condemned to dwell at the bottom of a stream as punishment for having married a mortal. The offspring of their union, *Strephon*, is a fairy to the waist, but from the waist downward he is "a gibbering idiot." "My body," he says, "can creep through a key-hole, but what's the good of that when my legs are left kicking behind?" He loves and is loved by *Phyllis*, a ward in chancery, but the *Lord Chancellor* himself is a suitor for her hand, though the fact that he has to ask his own permission to marry her involves him in delicate perplexity. Meanwhile he forbids the "Arcadian shepherd," *Strephon*, to look upon her as his; but she informs him and his peers, who have marched in dignified procession on the stage, that she cannot accept their addresses. When they have left, *Strephon* has a meeting with his mother, whose assistance he implores. Being a fairy, *Iolanthe* is endowed with eternal youth; and *Strephon*, being seen with her, is therefore accused of infidelity. In vain he explains that this "maid of seventeen," as the peers call her, is his mother, and has been ever since his birth. *Phyllis* herself becomes jealous, and declares she will now marry one of the peers. *Strephon* calls upon the winged fairies to prove his ancestry. They trip upon the stage with their *Queen*, who is as massive as *Lady Jane* in "Patience," but talks about curling herself inside a buttercup, swinging upon a cobweb, and diving into a dewdrop. She has the misfortune to be taken for the proprietor of a young ladies' seminary, and in revenge predicts that *Strephon* shall sit in the next Parliament, that earldoms and peerages shall be sold for three a penny, and "a duke's exalted station be attainable by competitive examination." In the second act, which is placed in the Palace yard, with a gorgeous view of the Houses of Parliament in the background, *Phyllis* and *Strephon* get reconciled, but the *Lord Chancellor* still refuses his consent until *Iolanthe* interposes and explains that she is his wife and *Strephon* their son. She was to have suffered capital punishment for loving a mortal, but had been pardoned on condition of never revealing who her husband was. Now that she has done so to save her son, she is again condemned to die. But the fairies declare that in that case they all must die, for they have all fallen in love with the peers. The *Queen* relents because she "can't slaughter the whole company." The rule is changed into "every fairy shall die who *don't* marry a mortal," and the *Queen*, to save herself, proposes to *Private Willis*, the sentry, who consents, as he "don't think much of the British

soldier who wouldn't ill-convenience himself to save a female in distress."

—Of the music which Mr. Sullivan has added to this play it may be briefly said that it is well written and nicely instrumented, but lacks originality. Several of his numbers will always be encored, as they were on Saturday, but they will not add to his reputation as a writer of catching songs. A brass band is introduced on the stage in the first act, as in the "Merry War," but the march they play is commonplace compared with that played in Strauss's operetta, or in the works of Suppé. The scenery is superb, and the costumes likewise, displaying a noble disregard for expense, and a regard for correctness in material and style. The ensemble was smooth enough for a first night, and in a few days will be as satisfactory as usual at this theatre.

CORY'S GUIDE TO MODERN ENGLISH HISTORY.

A Guide to Modern English History. By William Cory. Part 1, 1815–1830. Part 2, 1830–1835. London: Kegan Paul, Trench & Co.; New York: Henry Holt & Co. 1882.

MR. CORY is a writer who thinks for himself. This statement may appear to be as high praise as a reviewer can bestow upon an author; but it is not so. A man may "think for himself," and be full of crotchets; he may think for himself, and be wanting in judgment; he may think for himself, and be deficient in knowledge of facts and in precision of thought; he may, in short, think for himself, and yet, from one cause or another, think wrong. Nay, to speak the truth, the independent thinker not only may display all the faults we have mentioned, but is specially liable to do so. The beaten track is as often as not the right track, and the man who makes his path for himself constantly blunders into quagmires which would have been avoided by the crowd who keep to the dull but safe high-road. Mr. Cory has, with many of the merits, all the faults of the man who thinks for himself. To judge him by his eccentricities or errors were absurdly unjust, but it is a dereliction of all critical duty to conceal or pass over the mistakes or conceits of an ingenious writer.

"Suppose there was a land in which paper reckonings of claims were unknown, in which all wealth was tangible, it would be possible for all households to lay up stores of clothing enough for many years, but not stores of food. In the most prudent community the sick and the old would, like the infants, partake of recently procured food, not of old garnered food. They would eat things brought to them by the strong and the lucky. Suppose, on the other hand, a country in which there are intangible properties, consisting of claims, expressed on paper. In such a country it seems impossible for any one to invest savings."

Whoever will reflect for a few minutes on the astounding doctrine contained in this paragraph will understand the feeling of the Frenchman who asserted, that the whole science of political economy had been hopelessly confused by the existence of *ce maudit argent*. Here is Mr. Cory, a man of a good deal more than ordinary knowledge and of considerable acuteness, who absolutely believes that the existence of bank notes is fatal to economy. Pay Hodges in kind, and Hodges, says Mr. Cory, may be a saving man; pay him in £5 notes, and it becomes impossible for Hodges to save or invest.

Any one, however, may grow confused on questions of currency, a topic on which it seems impossible to draw the line clearly between sanity and insanity. Let us hear Mr. Cory, then, upon a matter of hard definite law:

"It was not then, as it has been since, established by evidence, that he [George IV.] had, without the King's consent, married a Roman Catholic lady; that his public marriage with his cousin Caroline was a bigamous, therefore a void, transaction. Of course the Ministers thought the secret marriage a sham, and the Catholic lady only a concubine. In her time George was a Whig; both parties were entangled in his intrigues: an heir apparent to the Crown is as troublesome as a King to the men who rule England."

In this paragraph Mr. Cory either directly or by necessary implication asserts, that George IV. was, while Prince of Wales, legally married to a Roman Catholic lady—namely, Mrs. Fitzherbert; that his subsequent marriage with Caroline was a bigamous, and therefore a void, transaction, and that the King's daughter, the Princess Charlotte, was illegitimate and not entitled to succeed to the throne of which she was through life considered as the presumptive heiress. Now, each one of these assertions is demonstrably and notoriously untrue, though no doubt made by Mr. Cory in perfect good faith. It is really worth while in this case to state with precision the different errors which his perversion of law and history involves. They may be easily summed up: (1.) It is extremely doubtful whether the so-called marriage between the Prince of Wales and Mrs. Fitzherbert was believed by either of the parties to it to be a legally binding ceremony; the most that can be said for the lady is that she held it a marriage valid in the eye of the Roman Catholic Church, and therefore of heaven. (2.) It is absolutely certain that the marriage was, by the law of England, no marriage at all. This is the result of the Royal Marriage Act (12 Geo. III., cap. 11), and, if confirmation were needed, is conclusively settled by the Sussex Peerage case. (3.) Since George was never legally married, or, to put the thing plainly, was never married at all, to Mrs. Fitzherbert, his marriage with Caroline was not bigamous, and was not a void transaction; and hence (4) his child by Queen Caroline was legitimate, and was, as she has always been held to be, heiress to the Crown of England. What increases the oddity of Mr. Cory's mistakes is that he does not see the real danger in which the Prince was involved, not by marrying, but by attempting to marry, a Roman Catholic. There was a real risk lest he should invalidate his claim to the Crown under the Act of Settlement. The marriage might be void, but the penalty, as Lord John Russell puts it in his 'Life of Fox,' might be incurred.

What is the explanation of all this unconscionable amount of blundering on Mr. Cory's part? He was under no necessity to write a word about George's marriage. As he has written about it, it is almost an impertinence to suggest that he had never read the Royal Marriage Act, or glanced over the pages of Stanhope's 'Life of Pitt,' or Russell's 'Life of Fox'; yet had he done so it is all but impossible to imagine that he could have penned the passage on which we have commented. All that we can even hint at by way of explanation is, that men as able and as acute as Mr. Cory have fallen into quagmires as deep as that in which he flounders when they have mistaken the jack o'lantern of a paradox for the light of a newly discovered truth. Such men, however, are hardly safe guides through the paths of English history.

A dangerous guide may be a clever and instructive companion. This is exactly the case with Mr. Cory. Any one who knows something about the modern history of England may gain a great deal from his lively and paradoxical comments. If you want solid, systematic information, you had better go to the dull pages of Mr. Walpole; but if you wish to have old things put in a new and suggestive light, Mr. Cory is the man you want. His very errors are suggestive, and it would be most unfair to lead our readers to conclude that errors of any kind made up the mass of his work. His book might best be described as the comments of a sharp-witted, lively, and crotchety English gentleman on the history of the last sixty years. Even where you do not agree with him, it is often worth while thinking whether you ought not to agree with him, and what is the ground of your disagreement. Thus, he is of opinion that the fears of disturbance and revolution which haunted English ministers during the thirty years which followed the close of the great war were, in the main, groundless. He points to the weakness and inefficiency of the Radicals or Revolutionists, such as Hunt, Brandreth, Bamford, Watson, and the like, whose intrigues were supposed to menace the security of the country. He also calls attention to the fact that, even at the crisis of the Reform Bill, the amount of popular violence displayed was trifling. There is a good deal to be said in favor of Mr. Cory's view, and it must never be forgotten that statesmen who had witnessed or knew by immediate report the horrors of the French Revolution naturally felt an alarm at popular violence unknown both to their fathers and to their children. Still, when the whole evidence before us is carefully weighed, we are forced to the conclusion that, as regards the imminence of dangers to the State, the statesmen of the Regency were far nearer the truth than Mr. Cory. The danger lay not in the strength of conspirators like Brandreth, or of ruffians who planned the Cato Street plot, but in the kind of half sympathy felt with conspirators by men who did not themselves conspire. A sense of injustice and of misgovernment irritated the middle classes. The spread of pauperism, the growth of large manufacturing towns, all the pressure and misery which sudden social changes almost always involve, fostered discontent among the poor. A lucifer match is an innocent thing enough in itself, but few persons would care to see a lucifer match lighted in a powder magazine; and the simple truth is that between 1815 and 1845 there were in England materials for an explosion which might result from kindling a very small flame.

It is to be regretted that Mr. Cory does not see this, for his optimistic estimate of the condition of the country before 1832 somewhat detracts from the effect of his very excellent account of the movement of which the great Reform Bill was at once the sign and the cause. But, though Mr. Cory, under the influence of inveterate optimism and of a childlike faith in the political sagacity of "English gentlemen," may have a good deal underestimated the perils of the crisis through which England passed in 1832, we have hardly ever met with a writer who on the whole showed a keener insight into the characteristics of the period of reform. He is far more alive than are most historians to the influence exerted during Lord Grey's Ministry by the individual characters of the statesmen who made up the Whig Cabinet. He hits off with singular clearness the leading traits of Grey's own character; he shows that Lord Althorp, in spite of obvious deficiencies, possessed a good deal more ability than he is generally credited with at the present day.

Mr. Cory further suggests a partial explanation of the singular contrast between the administrative incapacity which, in the course of a very few years, ruined the prestige of the Whigs, and the statesmanlike largeness of several of their measures, and notably of their scheme for the amendment of the poor-laws. The fact seems to be that the appearance of incapacity arose in great part from mere want of official training, and in part also from the diffi-

culty of carrying out reforms through the agency of permanent officials appointed by Tories and brought up under all the traditions of Toryism. The statesmanlike grasp, on the other hand, and the bold initiative which mark certain portions of the policy of the Whig Cabinet, is due to the fact that its members were so earnest in their desire to improve the institutions of the country that they were willing to call in, by means of commissions and committees, theorists and experts such as Drummond, Sturges Bourne, and Senior. The philosophical radicals, and the thinkers whom Croker derided in the *Quarterly* as Benthamite coxcombs, supplied all that was soundest in the speculative statesmanship of the era of reform. Whoever wishes to see what this statesmanship was at its best should read and reread Mr. Cory's admirable account of the vices of the old poor-law, and of the mode in which they were corrected. Mr. Cory shows that the attempt to amend the distribution of relief to the poor involved something like the institution of parochial corporations. He also points out the characteristically English mode in which new bodies were created without actually destroying old offices and institutions that had practically become obsolete. To have shown with truth that this mode of gradual, bit by-bit reform, which aims at effecting essential changes without altering existing forms or names, is preëminently English, is, we rather suspect, in Mr. Cory's opinion the same thing as showing that this tortuous mode of procedure is inherently wise and good. There are not a few of his readers who may decline to admit that the system of looking one way and going another does not involve serious disadvantages. If the Whigs had avowedly turned parishes into corporations, it would now be far easier than it is for England to meet some of the most difficult problems of the day. However this may be, Mr. Cory is, when at his best, as suggestive by exciting disagreement as by convincing us that he is right. He is, as we have said, not the safest of guides; but he has with the defects the virtues of a man who will not repeat mere formulas, but who, even when he is in error, thinks for himself.

CHILDREN'S BOOKS.—III.

One of the best boys' books of the season is 'Belt and Spur' (Scribner & Welford), a collection of stories of chivalry from the chroniclers of the Middle Ages. It begins with Wace's account of "how Duke William and his knights landed in England," and ends with "the act of arms between the Lord Scales and the Bastard of Burgundy" in 1467. The stories are seventeen in number, of great variety, both in character and in style of narration, being taken from a great number of chroniclers. Most of them are genuine history, the least historical being a most entertaining account of the exploits of the outlaw Fulk Fitzwarine, in the reign of King John. Of especial interest is the account of "the last deeds of Sir Harry Hotspur"—giving many details which the reader of Shakspere recognizes. Our only quarrel with the book is that the name of the compiler is concealed under the initials E. L. S., and that the authority for each story and illustration is not specifically given. Boys care nothing for this, to be sure, but then this book is as good for men as for boys. The illustrations (the book, by the way, is English, with an American title-page) "are mainly adapted from illuminated manuscripts in the British Museum."

Mr. Sidney Lanier's posthumous 'The Boy's Percy' (Scribner) will be likely to find its way beside his 'Boy's Froissart' and 'Boy's King Arthur.' It contains thirty-five of the best-known ballads in Bishop Percy's collection, with the spelling modernized, and with what is unclean left out—so that, for example, "The Nut-Brown Maid" becomes admissible. It would be easy to suggest favorites that one would like to see here, but books have their limits, and Mr. Lanier's poetic sense could be trusted to choose only what is intrinsically good, from a literary point of view. It is remarkable that his prose style could not accommodate itself to young minds; at least we cannot imagine how differently he would have composed his Introduction, had he been addressing adult readers. Still, his parting words to his boy audience are sound and wholesome, and he gives all that is needful of the strange history of the 'Reliques.'

H. W. Mabie's 'Norse Stories Retold from the Eddas' (Boston: Roberts Bros.) are fascinating reading for young or old, though the style is not specially adapted for children. They tell of the making of the world, Odin's search for wisdom, the apples of Idun, Thor's wonderful journey, the twilight of the gods, the new earth, and many other Northern legends. The reader will be impressed by the weird and gloomy features of these Scandinavian myths, by which they are distinguished from the serene beauty of the Greek legends; and also by a peculiar vastness of conception, owing to their atmospheric or astronomical background. The gods are in constant conflict with the powers of darkness and with various zoölogical monsters—for example, a colossal snake, which grew until he coiled around the whole earth; the giant Thjasse, with eagle plumage, who carried off Loki and made him promise to steal the apples of Idun to which the gods owed their eternal youth and beauty; the giant Fenris wolf, whose hungry jaws stretched so far apart that they reached from heaven to earth, and who pursued the sun as he was sinking, and devoured it, whereupon awful darkness came over all—the darkness of the Fimbul winter. The chapter headed "The Twilight of the Gods," in which this Fimbul winter is described, would have been fit inspiration for Byron's lugubrious poem, "Darkness."

Mr. James Otis's sequel to his 'Toby Tyler, or Ten Weeks with a Circus,' published last year, bears the title of 'Mr. Stubbs's Brother,' and most of the old characters reappear in it. The new story has not quite the freshness of the old, but it is as amusing, as natural, and as wholesome. Mr. Stubbs, it may be remembered, was the intelligent and most mischievous monkey given to Toby while he was with the circus. Mr. Stubbs's brother is another monkey, of even more vicious propensities, given to Toby when the circus visits his old home. There is much knowledge of American boy-nature shown in the account of the efforts of Toby's young friends to make use of his acquaintance with a real circus in the getting up of an amateur circus. The cover of the present volume is a great improvement on the gaudier one of 'Toby Tyler,' and we must praise also the open page and large type, and the graphic illustrations of Mr. Rogers (Harper & Brothers).

'The Wonderful City of Tokio,' by Mr. Edward Greey (Boston: Lee & Shepard), is the trophy of the second of the three visits made by the author to Japan—the first with Commodore Perry's expedition in 1853, and the last two since 1880. Being a good artist as well as penman, Mr. Greey has designed for his book a wonderful cover of plum-blooms and gold, with the snow-clad Fuji Yama in the centre, and the jolly god Yebis turning the great earthquake-catfish into a Pegasus, and whipping him up the sky over Fuji, while Furu-roku-jin, the long-headed god, sits frightened on his tail. This picture of a night-*fish*—instead of a night-mare—is a sure proof that Japanese as well as our own youngsters overload their digestive organs with pastry and sweets at New Year's time. Inside the covers we find in Mr. Greey's lively book of wonders no less than 169 woodcuts, some of which are of the familiar Frenchy sort, though most of them are outline designs by native artists, engraved in Japan. Besides the odd phases of life in the big city when it was Yedo, the last new thing on the streets of the national capital and the Tokio of 1882 is hit off by these half-caricatures. The Jewett family not only go out to see the sights, but study the details of lacquer, porcelain, fan-making, ink and dry-goods, so that much really valuable information is conveyed to the reader in a pleasing way. The book opens a window into the mysteries of Japanese art-production, and to have read it is for the American boy or girl an introduction to a fascinating study. To each chapter is prefixed an appropriate stanza from a Japanese poet, which, though of a certain Walt-Whitmanish flavor, is more informing than a catalogue and pleasanter in style. The following is one of the best:

> "The potter moulds the clay upon the wheel, and behold a jar valued at a few sen (cents).
> "The artist takes his brush, and decorates the ware, and lo, the piece is worth the ransom of a great warrior."

Every page of the book betrays the author's thorough familiarity with the Japanese character, both human and typographic, and he gives us a picture of New Japan, showing how at every turn the old and the new civilization jostle each other. The old quaint and pleasing superstitions are being hustled away before the meaner superstitions of trade and Mammon. The book is both fascinating and instructive, despite the monotonous gestures and behavior of Sally and Fritz.

Gautier's 'My Household of Pets' (Roberts Bros.) is full of amusing characters and incidents, and embraces a great variety of pets, from cats to horses and lizards. But the translator should have felt at liberty to prune away the allusiveness of the original. How many children can understand, and how many parents explain, what "the elegy of Millevoye" is? Even in the opening sentence—"Caricatures are in existence which represent us clothed in Turkish fashion"—the journalistic *us* should have been changed to *me*, in order to be quickly intelligible.

A pleasant fancy, a good English style, and good taste characterize five fairy stories, called 'Little Folk in Green,' written by Henrietta Christian Wright, and published by White & Stokes. Miss Lydia Emmet furnishes a colored design for each story.

When we come to the illustrated books *par excellence*, where shall we begin if not with the old and tried? Such is Asbjörnsen's 'Folk and Fairy Tales,' translated by H. L. Brækstad (Armstrong), for it is the same book—identically, the clever Norwegian pictures and all—which we noticed last April under the title borne by the English edition, 'Around the Yule-Log'; and the source is one from which Sir G. W. Dasent helped himself, in his 'Tales from the North,' some thirty years ago, without excess of acknowledgment. We repeat that it is a capital book to have in the house. Then, there is Lucy Crane's fresh translation of a certain number of Grimm's 'Märchen'—'Household Stories,' she calls it. In this case Macmillan & Co. are the publishers, and Walter Crane furnishes graceful designs—head and tail-pieces, initial letters, and full-page drawings once in a while. The print and binding are in corresponding good taste, and the version delightfully idiomatic.

We may fitly follow these with Kate Greenaway's 'Almanack for 1883,' and Mr. R. Caldecott's newest picture-books (Routledge). The 'Almanack' is a dainty thing indeed, executed with that unerring felicity which Miss Greena-

way shows in her slightest work, and with characteristic refinement. Her active little people are sometimes mere dots of things, yet are as inimitable as Bewick's tail-pieces. Of the full-page figures, charming are those of the New Year and of the Spring. True to her sex, Miss Greenaway makes the Old and New Year women as well as the Seasons. As for Mr. Caldecott, in 'Hey, Diddle Diddle and Baby Bunting,' and 'The Milkmaid,' he shows again his perennial gift for extracting material for illustration from the most unpromising verse. Think of inventing five situations for "Nobody asked you, Sir! she said." With all his other admirable qualities, we find our greatest enjoyment in the largeness of this artist's perspectives.

Lieutenant-Colonel Seccombe has taken in hand 'The Good Old Story of Cinderella,' and retold it in rhyme, with some pictorial embellishments of his own invention, both in black and white and in color (A. C. Armstrong & Son). His drollery is kept well in hand—it is so easy to vulgarize—his verse is correctly measured off, and his illustrations rather clever, though not remarkable. The colored plates, after their kind, are not to be preferred to the woodcuts.

Dickens's 'Boots at the Holly Tree Inn' (Cassell) is not fit reading for children, and on that account it is just as well that Mr. J. C. Beard's designs for it are crude in color and drawing, and dreadfully common in sentiment.

There are pretty and refined studies of English child and nursery life in Ida Waugh's 'Wee Babies' (E. P. Dutton & Co.), though mothers must judge of the safety of presenting such examples to their babies as "The Battle" and "The Little Barber"—this last a scene of juvenile hair-cutting ruinous to front locks. The coloring is mostly in flat washes. Miss Blanchard's descriptive verse is of ordinary quality, and is throughout disfigured by the use of the ill-bred substitutes, "poppa" and "momma" (as they must be read), for papa' and mamma'.

Mr. Walter Satterlee's three-fish ornament is the best of his contributions to 'Elfinland' (George W. Harlan & Co.), and some few of his colored plates are happily conceived and executed. Miss Josephine Pollard, on her part, occasionally comes near to making a good Mother Goose melody, but the most of her rhymes are rather pointless. The joint product is accordingly of uneven and questionable merit.

There is a great diversity of talent among the five artists employed upon Mrs. Mary D. Brine's 'Christmas Rhymes and New Year's Chimes' (George W. Harlan & Co.). At the top stands Mrs. Jessie Curtis Shephard, whose graceful delineations of children have long been familiar to the magazine-reading public. She has here been too sparingly called upon, but every picture of hers tells amid the inferior draughtsmanship of her colleagues—women like herself, with one exception. "The Small Burglar" of the poem bearing that name is capitally studied, and has been very successfully interpreted on the wood by a woman's hand. Mrs. Brine's muse is liberal as to quantity.

Gertrude Clement's 'Pussy Willow and Other Child Songs' (White & Stokes) contains within illustrated covers thirty-two poems by Henriette Cushing, set to music by S. E. Farrar, each song being accompanied by an appropriate illustration. The music is of that simple kind, devoid of ideas, of which so much is found in our Sunday-school books. Why not take German or Italian folk-songs, which are as simple and as easy as these, but at the same time possess a great melodic or rhythmic charm? The illustrations are better in conception than in execution, and the color printing is rather blotchy.

A certain woodenness pervades 'Around the House' (R. Worthington). Mr. Edward Willett's rhymes are respectable, and so are Mr. Charles Kendrick's colored illustrations. A higher level they never reach.

The 'Landseer Series of Picture Books' (T. Nelson & Sons) will make their way at once, and deservedly. They are adorned, within and without, with colored copies of Landseer's most familiar animal pieces, with more or less faithful suggestions of the color of the originals. The text, by Mrs. Surr, is simple and easily intelligible, and is printed in bold type. The covers are of paper.

Robert Bloomfield's provincial ballad, 'The Horkey' (Macmillan), has been admirably fitted for childish enjoyment by Mr. George Cruikshank, whose colored decorations and illustrations do no discredit to his name. There is much art in the picture of the moonlight walk home through the damp air:

> "For, when we laugh'd, it laugh'd again,
> And to our own doors follow'd!
> 'Yo, ho!' we cried; 'Yo, ho!' so plain
> The misty meadow halloo'd."

And what Mr. F. C. Burnand, in his punning prefatory address, calls the "horkeytectural" part of these character-sketches—the interiors, the mantel-pieces, the old-fashioned chairs, the clocks, the set tables—is throughout delightful. Mr. Burnand makes obscurely plain that "the horkey" is the harvest-home festival in Suffolk, England. Mr. Bloomfield purposely weaves into his verses, descriptive of the "Suffolk fun," the "lingo of their own," italicizing it lest it may escape notice, as some of the words would in this country. Both pictorially and in a literary point of view this production has a quaintness and humor which are certain to amuse both young and old.

RECENT POETRY.

It is said to be the test of a gentleman that he should look well in a dress-coat, and an illustrated edition is the dress-coat of poetry. All the vast sum spent by Rogers in securing Turner to illustrate his 'Italy' and his 'Poems' only revealed the discrepancy between that smooth, shallow versification and Turner's work. It is Mr. Aldrich who has tempted this perilous test in one of the most beautiful books ever issued in America—'The Poems of Thomas Bailey Aldrich, Illustrated by the Paint and Clay Club' (Boston: Houghton, Mifflin & Co.). The mechanical execution leaves nothing to be desired, and the landscape illustrations are sometimes of exquisite beauty. As is too common in American books, the representations of the human figure are far less good; the "Fisher's Daughter" (p. 111) seems like an uncouth wood-carving, and in the illustrations to "Baby Bell" there is an almost grotesque contrast between the extreme youthfulness of the theme and the decidedly mature personage depicted in the tail-piece. But, in truth, this inequality between the human interest and the natural scenery belongs well enough to the poetry itself: there are charming descriptions of nature, but the verse sounds no depth; there is finish, but it is the finish of Barry Cornwall, not of Tennyson. Sometimes there is a flavor of imitation so marked that it would seem almost intentional: the "Dolores" (p. 49) has caught precisely the jingle of Thackeray, and the "Lamia" (p. 106) is a rewriting of Keats's "La Belle Dame sans Merci." The *motif* is in this last case almost precisely the same with that of the earlier poem, and so is the measure. In Keats we read:

> "I met a lady in the meads,
> Full beautiful—a faery's child;
> Her hair was long, her foot was light,
> And her eyes were wild."

Mr. Aldrich gives us:

> "I met a woman in the glade:
> Her hair was soft and brown,
> And long, bent silken lashes weighed
> Her ivory eyelids down."

Had Bayard Taylor, or anybody with a knack at imitation, printed either of these poems by Mr. Aldrich to represent the style of Keats or of Thackeray, we should all have said, "Well done!" and it is this which makes the misfortune of the verses when they appear without any such explanation.

Mr. Aldrich deserves credit for his high standard of literary workmanship. His taste is fastidious and his ear nice; he never leaves anything in slovenly or wilfully neglected condition. This makes it the more inexplicable that he should sometimes be betrayed into incorrect or inadequate rhymes—as, "vain" and "again" (p. 22), "talons" and "balance" (p. 51), "pansies" and "fancies" (p. 59), "stood" and "mood" (p. 68). His poems cannot be ranked as classics, but they often have the form of classics; they present such graceful thoughts, clothed in words so delicate, that criticism is almost disarmed. In presence of anything so pretty as the verses about the white-rose lover, for instance (p. 73), we are compelled to admit that nothing of the kind could be better; it is in its way delicious, but, after all, it is the deliciousness of fresh confectionery after dinner. There is the same difference between Mr. Aldrich's verse and great poetry that there is between Edwin Booth's acting and great tragedy.

If this limitation attaches to the work of an experienced littérateur like Mr. Aldrich, what can be said of the younger men who are treading in his path, who are where he was twenty years ago, or at the period when the very juvenile portrait prefixed to his volume was painted? Mr. Aldrich has, at least, entire simplicity of purpose, and there is no evidence that he overrates himself. But Mr. Rennell Rodd comes before us severely handicapped by the fact that his poems are edited by his friend Mr. Oscar Wilde. They appear under the name of 'Rose-Leaf and Apple-Leaf' (Philadelphia: Stoddart & Co.), the little verses being daintily printed on tissue-paper of the appropriate shades, and decorated with preposterous little Japanese vignettes. There is no harm in the poems; they have none of the pruriency shown in those of Mr. Rodd's "heart's brother," as he calls him in the dedication; they are such as many sentimental youths write in college; but, after all, they suggest the advice of Voltaire to a young friend, that he should proclaim himself ruler of the vast empire of the inane: "Le néant est un grand empire; regnez-y!" The really remarkable thing is, that Mr. Wilde, long since crowned in that domain, should consent to bear a brother near his throne.

'The Praise and Blame of Love, with Other Verse' (Glasgow: Wilson & McCormick) bears such a look of the current affectation in its title, that one opens it expecting to find only the accustomed beverage of Rossetti-and-water. Is it because the author is a Scotchman that he gives us, nevertheless, poetry with some fibre in it, and cannot be namby-pamby even where, as in the "Patch of Loch," he comes dangerously near it? Such a sonnet as the following makes a positive addition to the literature of the sea, and ranks with some of the fine lines of Alexander Smith, or with one or two of Sydney Dobell's ballads—these being Edinboro' men, and the present poet from Glasgow:

"THE SEA.

> "In sunlight and in storm, the giant sea
> Breathes with the equal breath of yearlong sleep;
> From breath to breath it is a day, so deep,
> So utter deep his rest. The winds in glee
> May pass like faery dreams across his face
> Or winds in wrath may stir the spumy hair
> That hoary was ere toiling peoples were,
> Or flowers, or grass, or any pleasant place;
> But still he sleeps, with breath on equal breath,
> And still he sleeps, till now we scarcely fear;
> Yet once he rose and swept the green earth clear,
> And laughed alone the surging heavens beneath.
> Dream'st thou again to tumble thrones and creeds
> Deep down together 'mid the tangled weeds?"

(P. 135.)

We can see nothing of promise in Mr. Theodore Tilton's 'Swabian Stories' (New York: Worthington), because, though the research and the effort are meritorious, the verse is flat and tame, and the ballads long-winded. Mr. Boyesen's 'Idyls of Norway' (New York: Scribner) are far more pleasing, and indeed the author's poetry, like his prose, flows with only too great facility, and shows too little concentration. The few sonnets at the end of the book reveal more of thought and vigor than has been visible in most of the work done by this writer. 'Holiday Idlesse, and Other Poems,' by James H. West (Boston: A. Williams & Co.) is a reprint of an earlier volume, with many additions; and it is accompanied, for the convenience of reviewers—who are known to be a timid and self-distrustful race—by a list of passages deemed meritorious, with an occasional asterisk designating the very best. There are some extracts also given, so that an ordinary pair of scissors will soon construct the review. The drawback is that, to avoid monotony, even the most indolent reviewer must select something not thus prescribed, and we prefer to print the following, which we must respectfully decline to mark (*):

"Calm on the candent evening air
The Medford bells are ringing;
Mild is the musical chime they bear,
Gladly their sibilant song I share,
Peace to my sad heart bringing.

"Ah! of what matter browning fields!
What matter flowers that wither!
Brighter-far blossoms Wisdom yields,
Stronger-far sceptre Virtue wields;
Come! let us wander thither" (p. 65).

Lays simpler than this, and to our taste more pleasing, are to be found in 'Songs of Lake Geneva, and Other Poems,' by John Brayshaw Kaye (New York: Putnam). The best of these are, as usual, those which have the most of local coloring, and which contribute something toward that web of romance and tradition which will one day prove our lakes and hills to be as good classic ground as any other. In this respect we receive but what we give; were it not for the poetic nature of the Scottish people, the hills of their country would to-day be as bare to the imagination as to the eye. The true tradition is in the poet's mind; the guides in Scotland exhibit to you the scenes of imaginary battles in "The Lady of the Lake" with as much patriotic zeal as if they were pointing out Bannockburn.

'Sheaves,' by Harriet Converse (New York: Putnam), have here and there a glimpse of local coloring, as in "Regal October," but not very much of it. Mr. John McGovern's 'A Pastoral Poem, and Other Pieces' (Chicago: Union Publishing House), has something of it in "Irkoutsk to San Francisco," though the doggerel rhymes at the end of the volume rather disfigure the whole. The same local interest attaches to the scenes on the Chagrin or Shagreen River in Illinois, as described in 'The Hunter of the Shagreen: a Descriptive Poem' (Cleveland: Williams); although, apart from this, the work is not remarkable. On the other hand, we cannot find anything that is distinctively American, or much that is positively interesting, in long poems constructed out of the inner consciousness, like Mr. Leonard Wheeler's 'Erothanatos,' published nominally, and most appropriately, by the "Melancholy Club" (New York: Miller). 'Lethe, and Other Poems,' by David Morgan Jones (Philadelphia: Lippincott), has a most soporific title, but contains some good patriotic verse, on themes of the war, showing that the author did not go to sleep over his own poem, as did La Fontaine at the performance of his own opera. 'The Inevitable,' by Edward McIntyre (New York: Vaux & Roper), is also one of the rather abstruse effusions, but has a real purpose in dealing with the question of Socialism. More extraordinary than any of these larger poems is 'The Modern Job,' by Henry Peterson (Philadelphia: Lippincott), included in a second series of his verses. Job is a modern man, whose trials and temptations are of the period; the villain of the piece, or one of the villains, being a certain dwarf, who thus describes the hero:

"Ha! what's this?
By hokey-pokey, it's as good as a play:
First one, and then another—in one day, too.
I wonder if there is a comet about?
As sure as Thee and Thou, and Yea and Nay,
It is that Job. I know his measure, too—
One-fourth, say, Quaker, one-fourth Rationalist,
One-fourth good Orthodox, and one-fourth Fool.
Only one-fourth a fool! Why, he is a sample" (p. 125).

It is worth noticing that among the shorter and less eccentric poems of Mr. Peterson is one in defence of Helen of Troy, in which he takes the ground that she was not a culpable person, and was only beguiled by the goddess into mistaking Paris for her husband (p. 47). It seems that it is now Helen's turn for vindication, since Mr. A. Lang, previously well known as a translator, has written a much more elaborate plea for her ('Helen of Troy': New York: Scribner), in which he goes a step further and makes her not merely mistake her lover for Menelaus, but forget her lord and master altogether, under the influence of the goddess, so that she passes into a total oblivion of the past. It is a sort of legal plea of somnambulism, in fact. With this explanation, Mr. Lang completely disarms all criticism on the moral side, and bears us to a really delightful Greek world, where all is grace and poetry, and no one ever does anything wrong. There is just enough flavor of William Morris about it all to make it attractive, and the inferiority of the workmanship is not felt until we reach "The Death of Paris," and compare the treatment with the depth and emotional power of Morris's poem under that title, which is, we take it, his greatest work.

There is another poem on a classic theme by an American lady residing in Europe, Miss Virginia Vaughan. Her subject is 'Ulysses and the Sirens,' and she treats it with some originality of thought and feeling, and with smoothness of expression, but without marked poetic power. Her work is dedicated to James Russell Lowell. Poetry of more marked quality, also by an American woman, is to be found in 'Songs of a Semite: the Dance to Death; and Other Poems,' by Emma Lazarus (New York: Office of the *American Hebrew*). Miss Lazarus has long since proved her credentials as a poet by works both original and translated, and in each case of high excellence. She is true to her race, yet not enslaved to its traditions; and has more than feminine boldness and freedom of touch, yet without a trace of coarseness. Perhaps the most striking poem in this volume is where she ventures on a thought of Heine's and works it out; first translating his "Donna Clara," in which a high-born damsel finds herself unwittingly betrayed into an intrigue with what she most despises, a Jew; and then carrying out the story—perfectly in keeping with the original thought, and also with the probabilities of the period—into the birth of a son who is brought up ignorant of his parentage, hates the Jews, and at last, as abbot of a monastery, condemns his own father to death. This finale is so striking that one wishes the two parts added by Miss Lazarus could be rendered into German, to see how they would seem beside the original poem. Her talent as a translator also appears in this volume by some notable versions from the Spanish-Hebraic mediæval poets; and the leading tragedy, "The Dance to Death," is full of power, though shown in a very painful form, the plot turning on Jewish persecutions in the fourteenth century. The whole book is remarkable, and it is a pity that when so much commonplace verse comes to us in luxurious type and paper, this thin pamphlet should appear in almost the dinginess of a newspaper-extra issue.

Another poem deeply tinged with religious interest, though of a very modern and free-thinking description, is 'The Trinity: a Nineteenth-Century Passion-Play' (Cambridge, England: Johnson). The very title predicts that inevitable jarring upon the pious sensibilities which the word "passion-play" now describes; and, indeed, it makes little difference whether the attempt to reproduce the old form takes place in Cambridge or in San Francisco. The author boldly intensifies this natural shrinking on the reader's part by giving him plenty of details that are rather repellent, such as the delineation of Mary Magdalene in the light of an almost successful temptress, ere she becomes a penitent. Yet this is the portion of the performance which is best executed; the higher parts are not so successful, and the lower parts are flat; while there is, nevertheless, a certain freshness of spirit throughout the book, carrying promise with it, and making the poem something quite out of the ordinary, both as to form and theme.

It would seem almost inappropriate to pass without due interval from these minor poets to the announcement of a new volume by Browning, 'Agamemnon, La Saisiaz, and Dramatic Idyls' (Boston: Houghton, Mifflin & Co.), were it not that it is largely a reprint of older volumes, and therefore demands a consideration less ample at the present time. It contains his powerful and rather craggy translation of the 'Agamemnon' of Æschylus; a reprint of the English volume that held, among other pieces, "The Two Poets of Croisic" and "Iván Ivánovitch"; together with a second series of "Dramatic Lyrics." These last will come with the greatest novelty to his American readers, but every poem in the volume bears proof that Browning's extraordinary powers are as great now, when he writes in England, as when he once wrote from Italy, and that he still goes on working out his own poetic theories and creating the taste by which he is enjoyed. The volume of 'Studies from Browning,' by our countryman Mr. Holland, lately published in London, with an introduction by Mrs. Sutherland Orr, must soon aid in popularizing the fame of this the strongest of the modern English poets; and one might apply to Browning himself the poem in this volume which he possibly meant to apply to Carlyle—the fine poem of "Echetlos," founded on a Greek tale of the clown who won the chief laurels of the fight at Marathon, though wielding for a weapon only his own ploughshare:

"But one man kept no rank, and his sole arm plied no spear,
As a flashing came and went, and a form i' the van, the rear,
Brightened the battle up, for he blazed now there, now here.

"Nor helmed nor shielded he! but a goat-skin all his wear,
Like a tiller of the soil, with a clown's limbs broad and bare,
Went he ploughing on and on: he pushed with a ploughman's share."

Dictionary of Music and Musicians. By George Grove, D. C. L. Parts XV.-XVI. Schoberlechner to Sketches. Macmillan. 1882.

A YEAR has elapsed since the appearance of the last number of Grove's 'Dictionary,' but the new number atones for this delay by its size (271 pp.) and the quality of its contents. The best articles are that on Schubert by the editor, which we like better still than his Beethoven, and that on Schumann by Professor Spitta, the famous biographer of Bach. Dr. Grove has

long been known as one of the best authorities on Schubert, his theory of the existence of a tenth symphony having brought him prominently before the public. His whole article is pervaded by an enthusiasm which gives a peculiar zest to both the biographic and critical portions, leaving on the reader's mind an emotional impression similar to that which would be produced by the works under discussion—which is the highest praise that could be bestowed on criticism. He still adheres to his belief in regard to an additional symphony, written about two and a half years before the great one in C, No. 9; but the evidence is not advanced any further than it was a year ago, when he summed it up in the *Athenæum* of November 19.

Eleven pages are devoted to a carefully-prepared alphabetical list of Schubert's songs, and a catalogue of all his works in the order of their composition, as far as now ascertainable. There are no less than 1,131 compositions—not an insignificant number for a composer who died in his thirty-first year. But Schubert began very early, and he was of all musicians the most spontaneous and fluent. He seems to have generally written as fast as his pen could travel, and his productivity was only limited by the number of poems he could find, or, in his early days, by the amount of music-paper he could procure through the generosity of his friends. At an age when Beethoven had written but one symphony, he had written nine or ten. His famous "Erlking" was written when he was eighteen. His favorite poets seem to have been Goethe and Schiller, sixty-seven and fifty-four of whose poems, respectively, he availed himself of. About 100 poets in all were laid under contribution, and the total result was 605 songs. "His music," says Dr. Grove, "changes with the words as a landscape does when sun and cloud pass over it. And in this Schubert has anticipated Wagner, since the words to which he writes are as much the absolute basis of his songs as Wagner's librettos are of his operas." The originality and frequency of his modulations—"that great engine of emotion"—are another feature in which he resembles Wagner, although in character his modulations are quite different from Wagner's chromatic and enharmonic changes of key. Of his spontaneity Dr. Grove says: "With Beethoven, spontaneity was the result of labor, and the more he polished the more natural were his tunes. But Schubert read the poem, and the appropriate tune, married to immortal verse, rushed into his head and to the end of his pen." His passion for rhythm, his splendid basses, his characteristic and descriptive accompaniments, and his hesitation between major and minor (the present tendency being more and more to a decision in favor of minor) are also adequately described. Dr. Grove does not believe that Schubert's early death was the result of exhaustive mental labor:

"It was his privations, his absolute poverty, and the distress which he naturally felt at finding that no exertions could improve his circumstances or raise him in the scale of existence, that in the end dragged him down. His poverty is shocking to think of. Nearly the first distinct glimpse we catch of him is in the winter of 1812, supplicating his brother for a roll, some apples, or a few half-pence to keep off the hunger of the long fast in the freezing rooms of the *Convict*. Within a year of his death we catch sight of him again, putting up with coffee and biscuits because he has not 8½d. to buy his dinner with; selling his great trio for 17s. 6d, and his songs at 10d. each, and dying the possessor of effects which were valued at little more than £2. Beside this, the poverty of Mozart—the first of the two great musicians whom Vienna allowed to starve—was wealth."

For those who are unable to buy the whole of Dr. Grove's Dictionary it would be a great boon if the articles on Schubert, Schumann, Beethoven, and a few others were reprinted in pamphlet or book form. The Schubert is certainly the most interesting and complete treatise on the subject in existence.

"Scottish Music," "Score," "Sketches," and "Singing" are some of the other longer articles; and they are alike readable and instructive. In the article on singing the leading characteristics of prominent vocalists are briefly described. After mentioning Patti, Albani, Nilsson, Trebelli, and Lucca, the writer asks significantly, "Where is the decadence in the art of singing of which you complain?" The truth is, no period was ever so well provided with singers who appeal to the soul and not to the ears alone. Formerly most of the singers were of the lyric type, while at present we have, besides these, a class of vocalists—Materna, Reicher-Kindermann, Vogel, Schelper, Gura, Scaria—who, besides first-rate technical accomplishments, possess a dramatic power probably undreamed of half a century ago. Those who are in the habit of reproaching Beethoven, Wagner, and other modern composers with treating the voice as an instrument, will probably change their minds on looking over the examples given on p. 505 of vocal music of the period of "great singers," concerning which we read that "the passages in much of the music of that date, especially that of Porpora, are really instrumental passages, strongly resembling the vocalizzi of the period, and possessing but little interest beyond the surprise that their exact performance would create." The manner in which the music of each nation is dependent on and conditioned by its language is made clear, and (the test being the amount of agreement between the language as spoken and sung) the languages are ranked in their order of musical value as follows: Italian, Latin, German, French, and English, although in some respects French precedes German. On the English the writer is severe enough: "No nation in the civilized world speak its language so abominably as the English. The Scotch, Irish, and Welsh, in the matter of articulation, speak much better than we do. Familiar conversation is carried on in articulate smudges of sounds which are allowed to pass current for something, as worn-out shillings are accepted as representatives of twelve-pence, . . . and when English people begin to study singing they are astonished to find that they have never learned to speak." We do these things much better on this side of the Atlantic.

It would be pleasant to stop this notice here, after finding so much to praise; but Part XV. contains an article of no less than fifty-five pages which is a disgrace in every way to the 'Dictionary.' One wonders, indeed, how Dr. Grove could have been induced to accept such incoherent, irrelevant, and incorrect trash, unless, as we suspect, from personal considerations. The article is on "Schools of Composition," and goes over the whole ground of the 'Dictionary' again in a chaotic, aimless fashion, an attempt being made to class all music under thirty-five "schools." The very idea of such a thing is absurd, a "school" being merely a rhetorical device to facilitate literary work. If it was intended to give an account of the different phases of the history of music, it should have been done under that heading, because no one in consulting a dictionary would think of finding two columns on Raff's symphonies, or as much on Mendelssohn, under "Schools of Composition." Throughout the rest of the 'Dictionary' Dr. Grove has followed the excellent plan of assigning each composer to one who is in sympathy with and understands him. This notice, however, is little but a string of dogmatic views from a very narrow standpoint; and it need not be said that such a thing is foreign to the sphere of a dictionary. We are told, for example, that the "school" of Bach has languished for lack of disciples, whereas everybody knows that Schumann, Wagner, and other modern composers have been strongly influenced by Bach, whose polyphonic style is destined to flourish as much in the future as it ever has in the past. We are informed of a "decline in instrumental compositions of the highest order," in face of the symphonies of Rubinstein, Brahms, and Raff, the symphonic poems of Saint-Saëns and Liszt, and the symphonic dramas of Wagner. The reference to "the manifest inferiority of the German part-song to the English glee" may be pardonable in an English writer, although it is wide of the mark. German part-songs are sung all the world over, English glees only by the English. The most extraordinary statements, however, will be found in the columns devoted to Wagner. The assertion that he "will be lovingly remembered by *Senta's* ballad, 'Traft ihr das Schiff,' ages after his operas have ceased to be performed in their entirety," is destined to become an oft-quoted, unintentional *bon-mot*. The same writer said, in the article on "Opera," that Wagner had nothing to tell us that Gluck had not already said. Surely Dr. Grove was incautious in choosing a collaborator who does not know the difference between the theories of Gluck and Wagner. Gluck's theory was that the music should be to the libretto what color is to a drawing. Instead of being merely a peg on which a singer could hang his fancy work, he insisted that the melodies should closely follow and illustrate the text. He retained, however, the old operatic forms—the aria, recitative, finales, and dance movements. These Wagner abolished, substituting for them a continuous symphonic accompaniment by the orchestra, and melodious declamation by the singer. Nor did Gluck use Wagner's system of leading motives, by which a drama is made one organic whole, while the means of characterization and the definite expression of emotion are so widely extended and improved. Unless Dr. Grove can get some scholar to correct Mr. Rockstro's numerous blunders, his articles will remain a lasting blemish on his 'Dictionary.'

Travels in South Kensington, with Notes on Decorative Art and Architecture in England. By Moncure D. Conway. Harper & Bros. 1882.

THIS book consists of three essays: on "The South Kensington Museum and its Schools," on "Decorative Art and Architecture in England," and on "Bedford Park," respectively. A considerable part, if not all of it, has appeared before in *Harper's Magazine*. We cannot concur with Mr. Conway's unqualified praise of the decorative art now so common in England, and we differ from him especially as regards the character and usefulness of the South Kensington schools of art. These schools have always appeared to us both shortsighted and misleading in their principal aims and tendencies, owing, in great measure, to the misconception, in accordance with which they were established, of supposing that decorative art may be cultivated independently of the higher arts, and in the interest primarily of industrial or commercial ends. The decorative arts are not essentially distinct from other branches of fine art, and they may be rightly cultivated only in connection with that general training of the feelings and tastes out of which all good art springs. The effort to improve what is called art applied to industry, without a foundation of comprehensive culture of the perceptive and graphic faculties, is altogether futile. The limitation of aim upon which the Kensington schools are con-

ducted is a false one; and, with this limitation, it is natural that the principles of instruction should be inadequate, and the methods employed largely mechanical. It is impossible that the products of such a system should be otherwise than formal and lifeless.

Take, for instance, the illustrations given by Mr. Conway on page 109, an example of work done in the department of ornamental design derived from plant-forms. This consists of a drawing of "Nettle in its Natural State" and "Nettle in its Geometric Proportions." The first drawing is given to show the materials from which the so-called designs are made, the second being these designs. Now, these formal figures are no more designs than the drawing of the plant in its natural state is a design. They are only misrepresentations of the approximately geometric plans of certain parts of the plant. Work of this kind is as far removed from anything deserving the name of design as it is from truth to nature. It is simply blinding to the perceptions and deadening to the sense of what is beautiful. One of the very first principles of nature which a designer should be taught to feel is the inequality and changefulness which even the most formal natural things exhibit, and which give them a living character. In good art, of whatever kind and of whatever age or country, this living principle of nature is always expressed. In the floral and foliate ornamentation of Italian and French Gothic it is preëminently so, but it is also constant in the most formal and abstract work of the Greeks, who, in subordinate ornamentation, came as near to formality as good designers could. In the Kensington schools, as a rule, examples of the best things in design are not kept before the pupils as they ought to be, and their important characteristics illustrated. Instead of this, mechanical outlines—which grossly misrepresent good things—are used as models. It is true that a vast number of original designs and reproductions, of excellent and instructive character, are contained in the Museum; but they have, and can be expected to have, no practical effect on the students while the instruction in the schools not only does nothing to assist the proper understanding of them, but places obstacles in the way of such understanding by providing bad examples for practice, and encouraging original work like this illustration in Mr. Conway's book—respecting which he remarks, page 110, that it "will perhaps enable the reader to understand the kind of work by which this school has relieved England of its former dependence on Paris and Lyons."

Regarding the second and third essays we have not much to remark. We think that little of true worth is to be looked for in the costly vagaries which go to make up the embellishments of the rich men's houses described by Mr. Conway, or in the fanciful æsthetic affectations which, in our judgment, spoil what is good in Bedford Park. It is earnestly to be hoped that ere long both England and America may awake to a recognition of the fact that, in order to improve taste in any department of the fine arts, it is necessary to aim primarily at careful training of the perceptions and feelings, and of the eye and hand, without regard to immediate production of decorative or other art.

Parisian Art and Artists. By Henry Bacon. Illustrated. Boston: James R. Osgood & Co. 1883.

WITH good paper, clear, large print, and numerous illustrations, there is on the author's part a rather fragmentary disposition of his subject-matter. First we hear a little about Bastien-Lepage, then a little about Jacquet, but not quite enough about either, and in particular not enough to be able to estimate them. How high or low does each stand in relation to the whole body? what is his distinctive originality? what the group to which he belongs? Questions like these are not sufficiently answered. The author might have performed a greater service, in the same space, by districting the field and generalizing somewhat more, instead of dealing so exclusively with particulars. The reader is disposed to go in search of other treatises to complete what is here begun.

Mr. Bacon is himself an artist of no mean skill, and has been a student at the Paris schools. His information, such as it is, therefore, comes from the inside; but he writes rather for those who know a great deal about his personages already than for those who know nothing. He is patriotic toward Paris, and finds in it the inspiration of all the European schools, not excepting that of Munich, now its principal rival. The truth is, that with the universal dissemination of models and methods at present, there hardly exist any longer schools that can be geographically located. Examples of all the prevailing methods of workmanship are found everywhere. At Paris, however, these examples are most numerous and the activity is on the largest scale. It appears from Mr. Bacon's pages that an intense vigor of realization, and the "modernism" characteristic of these late years, are at least not on the decline. Realism of a harsh and brutal sort, allied to that of Zola in literature, is preferred in many quarters. The reproach of unidealism cannot, however, be applied to the best of the "modernists," such as De Nittis and Duez, who seek the grace and charm to be found in contemporary life. Mr. Bacon shows us some of their devices for catching the apparently elusive scenes of street and market-place, of which they are fond. Jean Beraud, for instance, uses a cab as a studio, and De Nittis an omnibus, specially contrived with a glass roof. Others (the American painter, Knight, among them) have studios made entirely of glass, like hothouses, for the purpose of completing their out-of-door studies in the diffused light natural to them. The Russian painter, Verschagin, adds to the glass studio the improvement of making it revolve with the sun, in order to keep the rays upon a model always in the same direction.

The illustrations in this volume are to a considerable extent "process" reproductions of slight sketches contributed by the artists treated of.

Joshua R. Giddings. A Sketch. By Walter Buell. Cleveland: W. W. Williams. 12mo, pp. 213.

WHETHER one whose political career was confined wholly to the House of Representatives is eligible to a place in the series of "American Statesmen," we do not know. If not, this unpretending but skilfully-composed and interesting volume may fitly be placed on the same shelf, and might well have been given a corresponding form. It has a special title to stand beside the life of John Quincy Adams, for between that statesman and Giddings a peculiarly warm feeling—of regard on the one hand, of veneration on the other—quickly arose when, in 1838, the younger champion of Northern manliness came to the support of the elder. It is this quality, indeed, which attracts one most strongly to Giddings—his erect bearing among bullies and doughfaces; his refusal to cringe or to be intimidated, or, above all, to be silent when both sections of the Union in Congress had conspired to suppress debate on the subject of slavery. One of his very earliest votes was against the passage of the Atherton gag resolutions, which nullified the right of petition. His latest political act was to withdraw from the Chicago Republican Convention of 1860 until it mustered courage to put an anti-slavery plank in its platform—his own plank at last.

Besides the collection of his speeches published in 1853, it appears that this modest and great-hearted man left scanty materials for his biographer. The originality of Mr. Buell's sketch consists in hitherto unpublished extracts from journals kept by Mr. Giddings in 1838–39, and again in 1848–49. Here likewise the available portions are rather meagre, though sufficiently indicative of the writer's character. It is curious that Mr. Buell does not mention Giddings's work on the Seminole war, called 'The Exiles of Florida,' and says (p. 208) of his 'History of the Rebellion' that it "was never published"—an entire mistake. The following extract from the diary for January, 1839, is perhaps best worth quoting. Mr. Adams had just made (on the 21st) a formal exposition of his views on the subject of slavery:

"His speech," wrote Mr. Giddings, "created a great sensation. . . . Mr. Slade, of Vermont, who is the greatest Abolitionist in the House, seemed to be very apprehensive that the speech would have a bad influence on the subject of abolition. . . . I am, however, fully of the opinion, from the language used by Mr. Adams, and the cautious manner in which he expressed himself, that his want of readiness to abolish slavery in the District of Columbia is not owing to any doubt as to the power of Congress to do so; nor to any other reason other than a question as to the policy of such action. The difficulty that has often presented itself to my mind is, that if Congress should pass a law to abolish slavery in the District, before it could take effect the slaves would all be taken out of the District, and the law would find none here to take effect upon. But if Congress should first pass a law prohibiting the taking of any slave out of the District, that would keep them here, and, when a law to abolish slavery should pass, it would have the effect to liberate from nine to ten thousand slaves. Of Mr. Adams's views beyond what he has publicly expressed, I know nothing" (p. 88).

A truthful, and therefore pleasing, portrait of Mr. Giddings, on steel, accompanies this little volume.

The Land of the Arabian Nights: Being Travels through Egypt, Arabia, and Persia to Bagdad. By Wm. Perry Fogg, A.M. With an Introduction by Bayard Taylor. Charles Scribner's Sons. 1882.

THIS is a reprint, under a somewhat different name, of a book which has been before the reading public since 1875. 'Arabistan; or, The Land of the Arabian Nights,' was the title of the first (English) edition. The author says in the preface: "The revised edition now offered is in response to a demand which has hitherto been supplied from abroad. But very slight revision was necessary, for life in the East is the same now as a generation ago." In truth, almost the only revision made, so far as a quite careful comparison can detect, is what has just been noticed in the title-page.

The reappearance of the book, however, is opportune at a time when all eyes are turned toward the East; and many a reader, noticing that the first part of it—and, in fact, nearly half of its pages—are devoted to "Travels through Egypt," will be tempted to purchase it, to see if it contains anything that will throw light upon the "Egyptian question." Following Mr. Fogg in his travels through the country, we shall pick up here and there a bit of important information. We are told, for example, that Alexandria was a city of most heterogeneous population, largely made up of the offscourings of society from all the nations of the West and all the tribes of the East. This accounts in part for the terrible massacres antecedent and subsequent to the British bombardment. We notice that Mr.

Fogg found the soldiers apparently lazy, listless, and ill disciplined. From a train of cars at a station near Zagazig, he saw them *thrashed* by their officers, and says: "No one seems to take offence, and they run like a flock of sheep. To submit thus to blows shows a want of manliness and spirit characteristic of modern Egyptians" (p. 74). This helps us to understand the sudden collapse of Arabi's "National movement" as soon as it had to be upheld by a resort to arms. We gather also from pen-pictures of the people, and the frequent introduction of the cry of "backsheesh," that the Egyptians are a slavish, beggarly, ignorant, badly-abused, and degraded people, and therefore unfit for self-government.

But this is no news, and the rest of what Mr. Fogg gives us is the simple story of the tourist, told in an easy, chatty style, that makes it pleasant enough reading. We journey with the author at regular railway speed through Egypt and the Suez Canal; make a flying visit to Joppa and Jerusalem; then hurry down the Gulf of Suez, pass under the shadow of Mount Sinai, and through the sweltering heat of the Red Sea. We stop a day or so at Aden, the hottest place on earth, to get a foretaste of "the hereafter" and take a sup of "brandy and soda" with the English officers. Then we are off again, and make, in a few brief paragraphs, a journey of nearly two thousand miles to Muscat. But we cannot accompany Mr. Fogg through all his wanderings, nor notice all of the points at which he touched. He is evidently an experienced traveller, and keeps his eyes open. He sees, too, with a quick and appreciative glance whatever is in plain sight around him; but he sees only the surface of things. Even the chapters devoted to special subjects, as that upon the Suez Canal, and the one on the spread of Mohammedanism and the rule of the Caliphs, are cursory and superficial.

The printing and binding, illustrations and ornamentation of the book, are unexceptionable, and are in the usual style of the house from which it issues.

The Yâtrâs; or, The Popular Dramas of Bengal. By Nisikânta Chattopâdhyâya [*sic*]. London: Trübner & Co. 1882.

THIS pamphlet is of little value save as an indication of the zeal with which a native of Bengal has glanced at general literature. Its author dedicates his essay from Zürich; and, from his numerous references—many of which, by the by, seem to be rather pointless—he appears to be acquainted with German and French. That he is a Sanskritist there is no evidence; and his "Jâjnavalkya" and "Shara-darçanas," with perpetual like misspellings of Sanskrit words, are blemishes which he should have taken measures to avoid. As to his English, if it were not at once ambitious and occasionally ludicrous, he would be a very exceptional Bengali indeed. To "incense" an audience, instead of "propitiate" it, "repeating all *ensemble*," and "the entire *personale* of the actors and actresses," are specimens of his elegancies; and why he should have thought it necessary to explain the words "dialect" and "puns" by *Mundart* and *Wortspiele*, passes our divination. His professed subject it cannot be said that he has contrived to invest with the slightest possible interest. With the conditional promise of a second venture in print, he has confined himself to that dreary and vapid section of the Bengali drama which turns on the amours of Krishna—a thing simply repulsive to all but those who can draw spiritual nourishment from what is, next to Tantrism, one of the foulest among Hindu superstitions. The playwright to whose effusions he introduces us, and whom he describes as the "ecclesiastical guide of several respectable communities," hazily analogizes to "a deacon," and entitles "reverend," is unmistakably one of the sons of the feeble. In the opinion of the essayist, "we"—that is to say, Bengalis—"may yet hope to have our Calderon and Shakspere, Racine and Goethe." May their patriotic hopes be realized! If he should choose to offer us close translations of some half-dozen of the satirical farces of Lower Bengal, those faithful mirrors of the popular indigenous estimate of British rule and rulers in India, he would produce what could not fail of attracting attention. The information which he has incidentally brought forward regarding the recent scholars among his countrymen would have been more acceptable if it had been less meagre. But how is it that one finds nothing about Bâbû Râjendralâl Mitra? It is true that he has confounded the Decalogue with the Twelve Tables; but then, if we are to trust Professor Max Müller, he has displayed, in his speculations, "the spirit of Niebuhr," and "our Sanskrit scholars in Europe will have to pull hard, if . . . they are not to be distanced in the race of scholarship," while he wields an oar.

A Short History of French Literature. By Geo. Saintsbury. Oxford: Clarendon Press; New York: Macmillan. 1882.

MR. SAINTSBURY'S 'Primer of French Literature' is the best résumé of the subject that has appeared in either French, English, or German. He has now produced a much larger work—not a mere compilation from other literary histories, but an account based on an examination of the literature itself. The author lays some stress upon this in his preface, and the claim is justified by the character of the whole work. Mr. Saintsbury is evidently interested in his subject himself, but he does not succeed in interesting his readers in it. He is overwhelmed by the abundance of his materials. While there are in the 'Primer' pages of vivid and interesting description, nothing like this is to be found in the larger work, which is generally as dry and uninteresting as a catalogue. Instead of selecting only the salient points for illustration, and making a general history of French literature, he has made in many cases a mere catalogue of writers and books, good for purposes of reference, because so accurate, but too often wholly devoid of interest. Thus, in the chapters on the Middle Ages, he gives the impression of a very profuse literature, but no idea of its value or its influence, and still less of its peculiar beauty and charm.

The notices of contemporary writers are sometimes unsatisfactory, notably those of Balzac, George Sand, About, Taine. Cherbuliez and Alexandre Dumas *fils* are just mentioned; Henri Martin is not even named. Sometimes, however, Mr. Saintsbury has a very felicitous way of characterizing a writer, as when he speaks of Brunetière as "the chief of the advocates of a return to the Malherbe-Boileau dungeon." He has a good page on the Naturalists, Zola and his school, in which he says: "The ambition of the Naturalist . . . is to mention the unmentionable with as much fulness of detail as possible."

Upon the whole, it would be almost as hopeless to give an idea of the nature of this book as to give an idea of a dictionary. It would require minute criticism, and Mr. Saintsbury's work would in general endure this test. It is scarcely extended enough for a work of reference, but would make an excellent text-book in the hands of an instructor able to fill in the outlines with copious extracts and comments.

BOOKS OF THE WEEK.

Austin, Jane G. Nantucket Scraps. Boston: J. R. Osgood & Co.
Clay, Bertha M. A Struggle for a Ring: a Novel. G. W. Carleton & Co.

ABBOTT'S HARLIE STORIES. Harlie Stories. By Jacob Abbott, author of the "Rollo Books." New edition. 6 vols. in box. Square 18mo, cloth, gilt, $3.

R. WORTHINGTON, 770 Broadway, New York.

The Nation.

NEW YORK, THURSDAY, DECEMBER 7, 1882.

The Week.

As some of the members of Congress listened to the reading of the President's message on Monday, there must have occurred to them the melancholy reflection that, if they had given heed to its views of the River and Harbor Bill when they were first advanced by its author, the present might not be their last session at Washington. The President is enabled to return to the subject now with the approval by an enormous popular majority of his effort to save the Treasury from this gigantic scheme of plunder. It would scarcely have been worth while for him to resume the discussion merely to show that he was wiser than some of the members of his party in Congress. He recalls the question in order to mention a new and serious objection to such legislation, and for the very practical purpose of preventing it during the present session. He gives official authority for the report, already informally published, that there is a very large unexpended balance ($17,734,944) of appropriations for internal improvements. There can, therefore, be no excuse for the re-introduction of the job now, even by the most reckless members of that school of statesmen who agree with Mr. Young, of Ohio, that the whole duty of a Representative to his constituents consists in apportioning patronage and securing the largest possible appropriation. It is probable, however, that in any event we should be safe on this score for a few months. With the President and his Treasury officers calling for a reduction of expenditures and taxes, and some of the oldest and most pachydermatous politicians suddenly betraying the liveliest anxiety for reform of all kinds, it would require a great deal of hardihood for Congress to repeat just now its raid upon the Treasury by way of the sandy creeks and mountain rivulets of the interior.

The views of the question of revenue reform taken by the President and the Secretary of the Treasury are independent, and in some respects conflicting. The most remarkable difference relates to internal taxation. Of taxes of this kind, the President recommends the repeal of all except those levied on distilled spirits. Last year he excepted also tobacco and fermented liquors. In supporting this change of opinion, he says that "the system of excise duties has never commended itself to the favor of the American people." This argument, so far as it has weight, applies with equal force to all excise duties. It is the ground upon which such Democrats as Mr. Randall and such Republicans as Mr. Kelley demand the total abrogation of the Internal Revenue establishment. If this repugnance of the American people exists in regard to ale and cigars, it exists also in regard to whiskey. So far as the President's change of opinion is founded upon views of the financial situation of the Government, these are not shared by the Secretary of the Treasury. Mr. Folger, who favors the continuance of the taxes on spirits, fermented liquors, and tobacco, says that the retention of these "will still leave a large sum to be raised from other sources, so that there is not a pressing need of a reduction here." The Secretary evidently does not believe that the revenue requirements of the Government will permit of the exemption of ale and tobacco, if the modifications of the tariff which he and the President favor are to be effected. Both of them urge a reduction of duties on sugar and molasses, wool and woollen manufactures, iron and steel, and cotton and silk manufactures. Another point of difference between them is that the Secretary in a qualified way favors the continuance of the tax on bank circulation, as a franchise and a privilege.

The report of the Tariff Commission, so far as its contents have been disclosed, is a much more impressive document than was generally looked for. The Commission being composed for the most part of representatives of highly protected trades, it was commonly supposed that the report would recommend that the tariff remain substantially as it now is. If it be true that they have recommended a reduction equal to twenty or twenty-five per cent. all around, with greater reductions in particular cases, such as the duties on blankets and steel rails, we shall not withhold from them the approbation which so wholesome a reform merits. Such a reduction of duties, if enacted by Congress, will increase rather than lessen the revenues of the Government.

The most important part of Mr. Folger's report relates to means for insuring a more regular and certain disbursement of the Treasury surplus. The plan of depositing it in banks against a counter-deposit of Government bonds is already used to some extent. The Secretary does not favor an extension of the system, because the banks might fail, and thus cause embarrassment to the Treasury. This objection does not seem very forcible. These deposits are virtually call loans secured by Government bonds. If the loans are not paid on demand, the Treasury has the right to sell the securities. It is difficult to imagine a case in which the securities would not bring the money. And since it is only the surplus, the excess of receipts over ordinary disbursements, that is concerned, the danger of embarrassment to the Government would seem to be slight. We think that there is room here for the Secretary to revise his opinion. The subject is one of very great importance, and is likely to become more instead of less important as the debt-paying process goes on. Reduction of taxation is the remedy proposed by the Secretary for the inconvenient surplus, "so that no more will be taken from the people than enough to carry on the Government with economy, to meet all its obligations that must be met from year to year, to pay off with reasonable celerity the part of the debt which it may pay at pleasure, and to provide through the Sinking Fund for the payment of that which will become payable by and by." This is a very indefinite statement, but perhaps existing conditions do not permit a more definite one. To pay the debt "with reasonable celerity" may mean anything from $166,000,000 a year down to the legal requirement of the sinking fund—viz., one per cent. per annum of the principal. It all depends upon the view which the individual may take of "reasonable celerity." This is now one of the burning questions of the hour, and we shall not be surprised to find parties sharply divided upon it, one side holding that the debt ought to be paid off as speedily as possible, and the other that it ought to be paid as slowly as possible.

Among the curious signs of the times are some letters published by the Boston *Advertiser* on Monday from well-known Senators and Representatives, containing their views as to the proper policy for the Congress which has just met. There is evidently a growing conviction among Republicans that something ought to be done. Senator Harrison says that there should be a reduction in "internal and customs revenue," both of which "should be dealt with this winter." He regards the creation of the Tariff Commission as "a confession that the tariff needs revision"—although a great many other people have regarded it as a scheme to avoid or postpone revision. Mr. Harrison is in favor of sitting during the holidays, and in other ways overcoming "the threatened Democratic opposition" to the movement. He evidently suspects that the Democrats will try to defeat reform until the meeting of the next Congress, when they will get the whole credit for it—a dangerous course for them to pursue. Mr. Dawes is in favor of abolishing all internal-revenue taxes, except those on liquors, tobacco, and bank circulation, and further of a reduction of the tariff to the lowest possible point which will enable it, together with the internal revenue, to "furnish the requirements of the Sinking Fund and the strictest economy of current expenditure." He seems to think "the tariff could be reduced $100,000,000 by a proper adjustment between free raw material and dutiable manufactures, so that American industries would be stronger for the revision." Senator Frye says that internal taxes, except those on spirits and tobacco, should be repealed, and that "the necessity of tariff revision is imperative." Representative Kasson favors the enlargement of the reductions provided for by the pending Internal Revenue Bill—not, however, so as to include distilled spirits. Senator Sherman proposes the repeal of internal taxes, excepting those on spirits, tobacco, and beer. He says nothing specific about the tariff, although he is in favor of applying "reduction to such taxes, both internal and external, as are now felt to be most burdensome by the people." Representative W. D. Kelley heroically stands fast in the faith that the tariff will not be revised. Senator Hoar is "clearly of the opinion that it is

wise to proceed with the matter without delay," though he doubts "the disposition of the Democrats." It might be supposed from some of these letters that the Republicans all along have been eager for revenue reform, and that the Democrats have been as determinedly opposing it. Evidently light has spread widely and rapidly in a few months.

Mr. Beck, we are glad to see, has moved resolutions in the Senate looking to a full inquiry into Hubbell's operations and accounts as a collector of assessments on Government employees. As Hubbell is himself a member of Congress, and acted as the agent of a committee of Congressmen, his activity last summer constituted a scandal of the first magnitude, which neither Republicans nor Democrats can afford to pass over unnoticed, now that the constituencies have spoken so plainly about it. The objections to the collection of money from Government clerks for political purposes, under any circumstances, are obvious. Collecting it through intimidation, which the President in his message condemns, is still worse. Congress now owes it to itself to find out what Hubbell did with the money. This is not a mere party matter. It is one which touches the integrity of every member of Congress, and the purity of popular elections. If any portion of Hubbell's fund has been applied to enable Congressmen to retain their seats, or to assist their friends to get into public life, it is about the worst electioneering abuse ever brought to light.

A Mr. Lorin Blodgett, formerly in the employment of the Census Bureau during the late census, has turned on his chief, General Walker, and accused him of displaying his free-trade malignity toward Philadelphia by "falsifying the returns of the industries of Philadelphia for the purpose of discrediting and disranking the industries of the city." The charge is so very serious as to be quite comic, and General Walker has answered it by expressing his contempt for Mr. Blodgett, whom he in his turn accuses of having swelled the returns of the Philadelphia industries to the highest extent a prejudiced judgment would permit, the result being "a grossly inflated report," which he had to have corrected by Mr. Awott, a more competent person. Mr. Blodgett is also charged with bad faith by the Smithsonian Institution, in whose employ he once was, and in fact seems to be surrounded with troubles, but determined to find friends if he can among the Philadelphia manufacturers, and probably things more substantial than friendship. He ought, however, to have given his charge against General Walker more range and sweep. It would do the free-trade cause little good, even if General Walker were more of a free-trader than he is, to cut down the Philadelphia industries alone. Blodgett ought to have made him attack all American industries in his career of falsification—those of New York and Massachusetts, as well as of Pennsylvania. We are surprised there is no mention of British gold in Mr. Blodgett's charge, although he must be very sanguine or simple if he expects people to believe that General Walker would falsify in the free-trade interest without getting some gold from Great Britain.

The suit over the title to the Arlington estate of the late General Lee, now a vast Union burying-ground, has been decided by the Supreme Court in favor of the Lee heirs. The estate was sold by the Government during the war for non-payment of taxes. Although the amount of the tax was tendered, the Tax Commissioners took the ground that they would not receive the amount from any one but the owner in person; and as the owner was in command of the Rebel army, he could not or would not appear. The Court now holds that the Commissioners had no right to impose any such condition, that they were bound to accept payment of the taxes by whomsoever tendered, and that the sale of the property under these circumstances was a taking without compensation, from which the Constitution protects everybody not convicted of crime. Four of the Judges—Waite, Gray, Bradley, and Wood — dissent, but their opinions have not yet been published. Of course the Lee heirs will not now obtain possession of the estate, and do not seek it, but they will have to get its value from Congress. One of the interesting features in the case was the overruling of Attorney-General Devens's demurrer to the jurisdiction of the court, that the Government's consent was necessary to its being sued in its own courts, which in this case had not been given.

The Cincinnati *Catholic Telegraph*, which recently proposed a grand lottery to pay Archbishop Purcell's debts, continues to speak very plainly on the necessity of doing something to discharge the obligation. On Thursday it referred to "the ruined lives, the blasted hopes, the desolate homes, the tears of the widows and orphans," and even the "deaths of some who, it is feared, have died the second death," all of which distressing consequences have flowed from the Archbishop's original method of book-keeping and imperfect acquaintance with investments. The *Telegraph* does not stop with vague generalities of this sort, but attacks the "repudiating priests" of the Cincinnati Diocese, and asserts that efforts already made to raise money to pay the debt failed through the opposition or indifference of the clergy of that diocese. It mentions, without naming him, an Archbishop who said that if the Pope had sent him to Cincinnati he would have paid the debt, and if the priests had refused to coöperate to that end, there would have been "some vacant parishes within forty-eight hours." Perhaps it is not too late to put this vigorous prelate where he would do the most good. The energetic revival of the subject by the Roman Catholic organ, under its new management, is likely to cause some excitement, but it will be a wholesome one if it convinces those who are responsible in the premises, that a great church cannot afford to rest under the reproach of this unpaid debt of honor. If such mismanagement of a secular trust had occurred, there would have been no end of attachments, receiverships, and orders of arrest. The plea that the trustee had acted in good faith would have been no defence to a suit to recover the money. It ought to be none in the court of morals in which alone, it seems, the Archbishop's unfortunate depositors have a standing. There is this encouragement to make an effort to satisfy their claims, that all the money collected will go to that object. In a secular proceeding the entire assets might be exhausted by receivers' and counsel fees.

Unless Congress is prepared to see the purpose of the Yellowstone National Park defeated, it will give heed to what General Sheridan says about it in his report to the War Department. It seems that the Park is "rented out to private parties." Of course, they are using it "for money-making purposes"; and not only, as General Sheridan says, is it probable that "claims and conditions will arise that may be hard for the Government and the courts to shake off," but such a present disposition of the place will impair, if it does not wholly destroy, its character in the future as a unique popular possession. For example, one of its features should be that of a great game preserve. It appears that since its discovery as many as 4,000 elk have been "killed by skin-hunters" in the Park, and that during last winter alone as many as 2,000 were slaughtered, besides mountain-sheep, deer, and other animals. At this rate how long will there be any game left to preserve? General Sheridan recommends that the Park be extended in an easterly direction about forty miles, so as to add 3,344 square miles to its area, and "make a preserve for the large game of the West now so rapidly decreasing." This recommendation is a good one, as well as the further suggestions that "the improvements in the Park should be national" and controlled by the Government, and that "small appropriations be made and expended each year on roads and trails," etc. He says that a small body of troops will "keep out the skin-hunters and all other hunters," and make the Park a safe resort for the game now drifting toward it. This is manifestly the easiest way to police the Park.

That the police in Cincinnati, or in any city, should permit such an exhibition as that in which the actress, Miss Von Behren, lost her life last week, is very extraordinary. Frank Frayne, the manager of the company, in the play "Si Slocum," had to shoot an apple on Miss Von Behren's head by "a backward shot," aimed with the aid of a mirror. He had done the feat many times before, in fact had been doing it for years successfully, with only one mishap, in which his ball, after having passed through the apple, and through a piece of wood intended to stop it, lodged in the foot of a "supe." Since then Mr. Frayne is said to have improved his apparatus, and was certain either to hit the apple or miss the woman, unless something went wrong. But something did go wrong. His rifle was a breech-loader, and the catch which holds the barrel in the groove after loading broke or failed when the shot was fired, allowing the breech to fly up, and thus depress the muzzle and lodge the ball in Miss Von Behren's brain.

She dropped dying on the stage, leaving the unfortunate Frayne, to whom, it appears, she was engaged, half crazed with horror and grief. Such a performance seeks to gratify the same craving for excitement as that of crossing Niagara on a tight rope, putting one's head in the lion's mouth, jumping from high bridges into the water, and fighting angry bulls in the arena. They all owe a large part of their attractiveness to the fact that they put the life of a human being in a greater or less degree of danger. As simple feats of dexterity or agility they would not "draw" nearly so well. No performance on the tight-rope, for instance, is thoroughly taking unless the man is sure to be killed if he falls. The delight of seeing a man's head in a lion's mouth lies mainly in the probability or possibility that the lion will bite it off and stick his claws into his legs. And what makes bull-fighting so fascinating to the Spaniards is not simply the address and skill with which the bull is killed, but the chance that he may kill the man, or give him a good goring.

In all these cases, however, the chief actor runs all the risk. He takes only his own life in his hands, and it is difficult to find a perfectly conclusive argument against a man's being allowed to earn his living by taking risks for the amusement of his fellows, considering how many risks almost equally great we allow him to take in order to supply them with luxuries. But there is a broad line of distinction between this kind of entertainment and that in which the performer is allowed to furnish entertainment by putting another person's life in peril, in case he fails. Granting everything that can be said in favor of his taking risks for himself, it does not cover his inflicting risks on others in which he does not share, as in this Cincinnati tragedy. This is more than any audience is entitled to for its money, and more than any police ought to permit. It is a grave question, too, whether any exhibition should be allowed which amuses people by the sight of a human being in great peril. The passion for it is still strong, we know. It is, as we see it, but a survival after all of that which kept the Roman amphitheatre going for four centuries after Christ. It is the old passion which made mediæval Christians enjoy judicial tortures and heretic-burning so much, and made hangings at Tyburn and public whippings and prize-fights so delightful to the English mob. In short, it is a brutal passion, a relic of the old animal from which we sprang, which the advance of civilization has much diminished, but which we ought, as far as law can do it, to put out of sight altogether.

Lord Dufferin broke up the elaborate programme for Arabi's trial as soon as he came to see the evidence, which undoubtedly involved the Khedive and Sultan both, and probably most of the high officers now surrounding the Khedive, in the guilt, whatever it be, of Arabi's rebellion. Arabi's assertion that the Khedive encouraged him up to a certain point in his war with England, is probably provable as well as true; that the Sultan egged him on all along, even while he was negotiating with England for the issue of a proclamation denouncing him as a rebel, has been believed from the beginning, and has never been denied by anybody. So that the trial of Arabi for rebellion, if he had chosen to resist, would probably have been a huge farce, and would have made it almost impossible for England to maintain the Khedive's authority while allowing Arabi to be prosecuted and punished. We presume there is little doubt that he permitted if he did not order the burning of Alexandria, but there appears to be no writing to convict him of it, and the habits of all Egyptian officials are so mendacious that it would hardly do to convict him on oral testimony. Everybody concerned in the late rebellion is now telling as many lies as may be necessary to get himself out of his scrape or remove inconvenient enemies or rivals. Consequently Lord Dufferin concluded that the best way out of the mess was to drop the proceedings on condition that Arabi would plead guilty to rebellion and take a sentence of perpetual exile. This he has done, and will go abroad for life. What effect all this will have on the Egyptian mind remains to be seen. It is said that the natives have all along believed that no one would dare to punish Arabi, and if so, this will perhaps confirm the belief.

Mr. Gladstone having carried all his rules of procedure through with many amendments, Parliament was prorogued on Saturday. The indifference shown by the bulk of the Tory members, in their absence from the House during most of the debates, furnished a somewhat comic contrast to the dreadfulness of the prophecies uttered by those who did remain as to the consequences of the success of the Ministerial programme. The adoption of the rules, they said, would put an end to free speech and the independence of Parliament, but the prospect was not sufficiently alarming to make many give up their shooting. The Grand Old Man, in fact, comes out of the session, not only having had his own way, but leaving his opponents in a somewhat ridiculous attitude. He is altogether probably the most provoking phenomenon ever witnessed in English politics. He has got rid of all obstruction except what forty members acting together can offer, but there is no doubt that this may be formidable some day. Parnell cannot muster as many now, but in the next Parliament he certainly will.

The Irish Home-Rule politicians are at last forcing Mr. Trevelyan to abandon the policy of not interfering with political meetings or speeches. He has prohibited a meeting at Limerick, and has begun a prosecution against Healy and Davitt for violent language. What is expected to be gained by these prosecutions, beyond making Healy and Davitt more popular than ever, it would be hard to say. It is, in fact, impossible not to regard the step as a sort of confession that the Repression Act, though apparently working well as a specific for murder, is no remedy for political discontent. The Dublin Grand Jury has proved sufficiently brave to find bills against several more murderers, but there are signs that the special jurors for the trial of the cases are somewhat frightened. Eighty-three out of a panel of two hundred have failed to appear, and the fine of $100 will hardly overcome their timidity, which is probably intensified by that of their wives.

Dublin has been put under the curfew clause of the Repression Act, which authorizes the police to arrest all persons found out of doors after dark under suspicious circumstances, and carry them before a magistrate to give an account of themselves. This, we fear, will prove a source of great irritation to perfectly innocent people, and no help in catching criminals. There are so many people of all sorts and conditions abroad in a city of 300,000 inhabitants after nightfall that hundreds, if not thousands, must have a suspicious air to watchful and not very discriminating constables, and many causeless and stupid arrests will doubtless be made. The really suspicious characters, too, if known, can be arrested just as readily, if found in the streets at night, without the curfew proclamation as with it. If not known, the curfew will afford no assistance in recognizing them. Doubtless it has been resorted to rather in the hope of producing some effect on the imagination of the criminal population. What to do is, doubtless, hard to know. There seems to be collected in Dublin a body of assassins of a peculiarly desperate or Nihilist type, who have undertaken to intimidate the courts and juries, and with the juries will undoubtedly succeed, and may drive the Government back on the power given by the Act to try by the court alone. But the judges, who condemn sitting alone, will, unless the conspirators can be daunted in some manner as yet undiscovered, have as uneasy a life as the Russian officials in St. Petersburg.

Herr von Benningsen's remark in the German Reichstag that Germany will have to fight again for the possession of Alsace and Lorraine, owing to the "increasing ferment" in France, resembles very much the assertion that a war between Austria and Russia was imminent, which assertion was reported by cable as having been made by a member of the Hungarian Delegation during the discussion of the military budget of the Austrian Empire. There was, of course, much high talk about revenge in France after the war of 1870–71, but there is much less of it now than there has been heretofore, and at no time was there much more of it than there had been of "revenge for Waterloo" between 1815 and 1830. France, although much richer and stronger, is in some of the most essential respects not much better prepared to take that revenge now than she was then. Not only is her debt enormous, and her finances, owing to slovenly management, in a very disordered condition, but her Army, in spite of the large sums that have been spent upon it, is in a very unsatisfactory state as to discipline, organization, and general efficiency. The cry of revenge is used occasionally by politicians because it has an heroic sound, and is apt to draw some cheap applause from popular meetings in the capital. But how little warlike spirit there is at present in the French people has been abundantly demonstrated by the action of the Government, the debates in the Chambers, and the attitude of the public during the recent Egyptian complications.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, November 29, to TUESDAY, December 5, 1882, inclusive.]

DOMESTIC.

THE Forty-seventh Congress assembled for its final session on Monday, but little business was transacted beyond the reading of the President's message, and both houses adjourned early in honor of members who have died since the close of the last session.

The President's message, which was sent to Congress on Monday, announces that our relations with foreign governments are entirely friendly. The claim of the United States to the supervision and control of any inter-oceanic canal across the Isthmus of Panama has continued to be the subject of conference. The agreements reached at the International Convention held at Paris in 1880, in regard to the protection of trade-marks, patented articles, and the rights of manufacturing firms and corporations are being formulated into treaties. The differences between Spain and the United States in regard to the effect of a judgment and certificate of naturalization are in process of adjustment. The immigration of paupers and criminals from certain of the Swiss Cantons has substantially ceased, and is no longer sanctioned by the authorities. Other mooted questions between the United States and foreign Powers, with the exception of the onerous fines which Spain and her colonies have placed upon vessels of the United States for trivial technical offences against local regulations, the large fees demanded by Spanish Consuls in the American ports, and the question of the jurisdictional rights of the United States in Turkey, have either been satisfactorily settled, or else are in process of settlement. Diplomatic relations have been established with the new kingdom of Servia; a mission to Siam has been created, and the mission to Greece restored. The reorganization of the diplomatic and consular service on a salaried basis, leaving fees to inure to the benefit of the Treasury, is recommended. In regard to domestic affairs, the President recommends the reduction of the large surplus in the Treasury by the abrogation of internal taxes, save those on distilled spirits, which abrogation could be accompanied by a simplification of the machinery of collection which would save $2,500,000 in salaries, and retire from 1,500 to 2,000 officials from service. In order to defeat the practice of grouping in a single bill appropriations for a great number and variety of objects, all of which must stand or fall together, the adoption of a constitutional amendment such as now exists in several of the States, providing that the Executive may veto any item or items of an appropriation bill without disapproving the bill as a whole, is suggested. The President favors a revision of the tariff, so as to equalize the burdens among all classes and occupations. The strengthening of our sea-coast defences and armament is recommended, and the adoption by Congress of some measure for reviving American shipping and restoring the American flag in the ocean carrying-trade is strongly advised. The President withholds his concurrence from the Postmaster-General's argument in favor of a postal-telegraph system, but recommends the reduction of domestic letter postage from three to two cents. In regard to Indian affairs the President reaffirms his recommendations of last year. The message closes with a strong appeal to Congress to take some decided measures for a reform in the method of appointment to office in the civil service. The President approves of the bill at present pending before the Senate, and promises his assent to this or any other bill embodying like provisions. He also declares his approval of such legislation as may be found necessary for supplementing the existing provisions of the law in relation to political assessments, and says that a bill which will effectually suppress such assessments will meet with his cordial approval. In short, in regard to all matters connected with civil-service reform the President's message is most earnest and explicit. It has been been received with almost unanimous expressions of approval.

The annual report of the Secretary of the Treasury for the fiscal year ending June 30, 1882, shows that the total ordinary receipts amounted to $403,525,250 28, while the total expenditures were $257,981,439 57, leaving a surplus revenue of $145,543,810 71 applicable to the payment of the debt. The total revenues for the current fiscal year and the year following are estimated at $415,000,000 each, and the expenditures at $295,000,000 each, leaving a surplus of $120,000,000 for each year. The Secretary recommends the repeal of the provision requiring the coinage of a fixed amount of silver dollars each month, and the repeal of the law authorizing the issue of silver certificates, and advises that the silver certificates in circulation be withdrawn as speedily as possible, else the accumulation of silver will soon exceed the capacity of the Department for storing it. In regard to the large surplus annual revenue and the rapid extinguishment of the public debt, the Secretary favors legislation authorizing the Department to apply its surplus to buying in the long bonds rather than to paying off the short bonds, and he suggests that the fifty million dollars held as a fund for the redemption of the national-bank notes be treated as public moneys and deposited in the banks which are public depositories. In these ways he thinks that the enormous accumulation of money in the Treasury, and the great resulting embarrassment of trade, may be prevented. The Secretary recommends a careful revision of the tariff with a view to substantial reductions, particularly upon sugar, wool, iron, steel, silk goods, coarse cottons, and raw materials generally.

The Secretary of the Navy, in his report, says that the available cruising vessels of the Navy are sufficient for giving practice to officers and men, and for displaying the flag abroad, but for nothing else, and that they should be replaced by modern iron and steel cruisers. The guns of the Navy also are antiquated, and of little use. There is only one modern high-powered gun among them, and only the eighty-seven converted guns are worth retaining. He recommends the transfer of the administration of the Light-house, Coast Survey, Life-saving, and Revenue Marine services from the Treasury to the Navy Department. The condition of the commercial marine, its connection with the Navy, and their mutual dependence are set forth, and the establishment of a Bureau of Mercantile Marine is urged. To revive American shipping, Secretary Chandler recommends the removal of burdens, such as inordinate fees and charges, and protection from foreign competition by paying a bounty for construction and a subsidy for carrying, in the form of compensation for mail service.

The Secretary of War, in his report, states the expenditures of the Department for the fiscal year to have been $45,349,319, while the estimated expenses for the next fiscal year will amount to about $6,500,000 less than this amount. The report says that the General of the Army urges strongly that the limit of the enlisted strength of the Army be fixed at 30,000 instead of 25,000 men, and the Secretary concurs in the recommendation. Three thousand seven hundred and twenty-one soldiers deserted during the year, which is more than half the number of enlistments. Some remedy, the report says, must be found for this trouble, as it is not only very expensive, but also very hurtful to the *morale* of the Army. The General believes that a partial remedy may be found by increasing the pay to what it was in 1865.

The report of the Postmaster-General shows an excess of income over expenditure for the past year of $1,394,388 82, and an estimated excess for next year of $3,929,345 02.

The Tariff Commission submitted its report to Congress on Monday. The report recommends changes in the tariff laws which, if made, will cause a substantial reduction in rates averaging from 20 to 25 per cent. The elimination of compound duties, except in the schedule of woollens, is advised. The report is signed by all the Commissioners now living, with certain reservations on the part of some of the members

The Republican members of the Senate held a caucus immediately after the adjournment of the Senate on Monday, and decided to continue the committees as at present constituted. The Caucus Committee was instructed to confer with the Democratic caucus for the purpose of filling the committee vacancies caused by the death of Senator Hill, and also to decide upon a permanent chairman for the Committee on Pensions made vacant by the withdrawal of Secretary Teller from the Senate.

The Ways and Means Committee on Tuesday reported to the House a bill for the abolition of taxes on tobacco in all its forms. The receipts from the taxes which this bill proposes to abolish were, for the last fiscal year, nearly one-third of the receipts from all internal taxes.

The public debt statement for the month of November shows the net reduction of the debt for the month to have been $5,534,142, which is a little more than one-third of the average monthly reduction for the first four months of the fiscal year.

A decision was rendered by the United States Supreme Court, on Monday, in the tax-sale case of the United States against George W. P. C. Lee, which involves the title to a tract of land in Alexandria County, Virginia, known as the Arlington estate. The judgment of the court below in favor of the Lee heirs was confirmed. It is stated that the United States will now endeavor to acquire a valid title to the Arlington estate, either by direct purchase from the Lee heirs or by instituting condemnation proceedings.

Ex-Senator Dorsey on Saturday furnished a statement in his own behalf in regard to the Star-route frauds. The statement is long, and contains much abuse of the persons who have been engaged in the prosecution of the frauds, but its substance is as follows: Dorsey says that in a letter to General Garfield in December, 1880, he told him all about his connection with the Star-route contracts; that in March, 1881, he requested President Garfield to appoint a commission of Democrats to investigate the charges that had been made against him, and the President referred him to Postmaster-General James, who for some time avoided meeting him, but finally did meet him in company with Attorney-General MacVeagh, who declined to allow any investigation, saying that there was no evidence on record of any wrongdoing on the part of Dorsey, and that there was, therefore, nothing to investigate; that finally, under promise that it was to be used and regarded as confidential, he (Dorsey) wrote out a full history of his connection with the Star-route contracts, but that in spite of their promises Messrs. James and MacVeagh did make use of this confidential statement, and within twenty-four hours had detectives employed working up the facts contained therein. For this alleged "treachery" Dorsey roundly abuses Messrs. MacVeagh and James. He then goes on to state at length his version of his connection with the Star-route contracts, from which it appears that he is a perfectly innocent and much maligned man. In regard to the removal of Marshal Henry and Postmasters Ainger and Parker, Dorsey says that it was a trick to enable the Government to get Marshal Henry out of the way, and thus to secure the selection of a packed jury for the forthcoming trials.

Mr. Clayton McMichael, editor of the Philadelphia *North American*, has been appointed to, and has accepted, the post of Marshal of

the District of Columbia, made vacant by the removal of Charles E. Henry.

The Garfield Monument Fair at Washington was closed on Saturday night, after eight days, which were moderately successful. It is estimated that there will be a net profit of a few thousand dollars. The fund before the Fair amounted to $16,192.

On Thursday the Grand Jury at New Orleans presented two indictments for forgery against thirteen of the Democratic election officers said to be guilty of the election frauds.

FOREIGN.

In the House of Commons on Thursday, Mr. Gladstone refused to grant Mr. Parnell's request for facilities to discuss the administration of the Land Act. Mr. Trevelyan stated that the recent inflammatory speeches of Messrs. Davitt, Healy, and Redmond had been considered by the Government, and that if such speeches were continued, the meetings of the National League would be prohibited. Mr. Redmond's speech came within the provisions of the Prevention of Crimes Act, and prosecution would forthwith be instituted in his case. The speeches of Messrs. Davitt and Healy did not come within the act, although those made by Mr. Healy were indictable, but he advised that he be not prosecuted. If Messrs. Davitt and Healy persisted in making inflammatory speeches, application would be made to have them bound over to be of good behavior or to have them committed to prison. At the conclusion of Mr. Trevelyan's speech Mr. Healy rose, and in a defiant manner said he begged to inform the Government that he would return to Dublin on the following day. On Friday Mr. Johnston informed Mr. Parnell that he was considering under which of two statutes to prosecute Mr. Healy.

On Saturday Parliament was prorogued until February 15. The Queen, in her speech, said she continued to hold relations of amity with all foreign Powers; that notwithstanding the failure of the commercial negotiations with France to result in a treaty, yet, owing to the enlightened policy pursued by the French Government and Legislature, there has not been any general decline in the dealings between the two countries; that she took this opportunity of placing on record her gratitude to the able officers and victorious forces in Egypt; that notwithstanding a succession of unfavorable seasons, the crops have been most abundant; that the growth of the revenue has been retarded by a cause which is to be contemplated with satisfaction —namely, the diminution of the receipts of the Exchequer from duties on intoxicating liquors; that in some parts of Ireland she is compelled to anticipate distress during the coming winter; and that though she records with deep pain that "horrible crime and assassination has been rife in Dublin," still, in the social condition of the country at large there has been a marked improvement.

Messrs. Davitt and Healy have been served with summonses to appear before the Court of Queen's Bench and enter into recognizances for good behavior.

A proclamation signed by Earl Spencer, Lord Lieutenant of Ireland, was issued on Saturday, prohibiting a meeting on behalf of the Irish National League, which was to have been held at Limerick on Sunday, and at which it was announced that Mr. Davitt would speak.

At the opening of the Special Commission Court at Dublin on Monday, Justice O'Brien, in his address to the Grand Jury, referring to the decrease in the number of crimes committed in Ireland, pointed out that the decrease was mainly in the matter of the sending of threatening letters. There was no decrease in the number of undetected crimes, as evidenced by the attacks upon Judge Lawson, Detective Cox, and Dennis Field. Owing to the increase in such offences, the trade of Dublin, he said, was gradually decaying, and those persons who were able to do so were giving up their business and flying from the city as if it were infected with the plague.

The Queen opened the new Courts of Justice in the Strand on Monday. Thousands of persons assembled along the route of the procession from the Paddington Railway station to the Courts. All the Judges had previously proceeded in state from Westminster to await with the Prince and Princess of Wales the arrival of the Queen. The proceedings at the Courts consisted of the delivery of the key to the Queen by the First Commissioner of Works, and by her to the Lord Chancellor. After prayer by the Archbishop of York and the formal announcement of the opening of the Courts, the Attorney-General obtained royal leave to enter the proceedings upon the records of the court. All the diplomats, Cabinet Ministers, and other officials were present. Lord High Chancellor Selborne has been created an Earl in honor of the event.

On Wednesday Lord Granville, in introducing the Dean of Westminster to a deputation from the Longfellow Memorial Committee, said they asked the Dean's consent to allow a bust of Longfellow to be placed in Westminster Abbey as a testimonial to a graceful and tender poet. He pointed to the number and eminence of the members of the committee as scarcely paralleled for distinction in all the departments of intellectual activity. The Dean unhesitatingly consented, and, after paying a graceful tribute to Longfellow, referred touchingly to Washington Irving and to the relations between England and the United States, whose ties, he said, were as strong as links of iron.

Earl Kimberley, Secretary of State for the Colonial Department, has telegraphed to Lord Napier, Governor of Gibraltar, that the Government has decided, after careful consideration of the report in regard to the surrender of the Cuban refugees to the Spanish authorities, that the Colonial Secretary and Chief Inspector of Police at Gibraltar cannot be permitted to retain their offices. In regard to the case of the acting police magistrate who ordered the expulsion of the refugees from the British lines, Lord Kimberley says that, although he must be severely censured for his conduct in the affair, the Government does not feel compelled to remove him from the office of Captain of the Port.

On Sunday it was announced at Cairo that the Prosecution Committee had decided to abandon all the charges against Arabi Pasha except that of armed rebellion. At 9 o'clock, Arabi was arraigned, Rauf Pasha, ex-Governor of Sudan, presiding. Sir Charles Wilson watched the case on behalf of Great Britain, but no counsel were present for the Egyptian Government. The President read the charges and asked the prisoner whether he would plead guilty. Mr. Broadley thereupon rose and stated that the prisoner had voluntarily, and in accordance with the advice of his counsel, pleaded guilty. The proceedings only occupied five minutes. On the reassembling of the court in the afternoon, the President sentenced Arabi to death. The Khedive subsequently commuted the sentence to exile for life, and the decree says that if he reënters Egypt or its dependencies, he will be amenable to the sentence of death. The counsel for the defence stipulated that the other chief prisoners should participate in the compromise effected in the case of Arabi. It is believed that Arabi will retire to some part of the British dominions. His demeanor before the court is reported to have been dignified.

Nubar Pasha, who was appointed Commander-in-Chief of the Egyptian Army, arrived in Cairo on Friday, and was officially informed that England declines to recognize or sanction his appointment as Commander-in-Chief of the Army. The London *Daily News* said on Friday that it believed the Government would send a British general to Egypt to take command of the forces levied by Baker Pasha, and that as Baker does not hold a commission in the British Army, he is not competent to assume command over British officers. In the House of Commons, on the same day, Sir Charles Dilke stated that the Egyptian Government had applied to England for officers for the Egyptian Army, and that negotiations were proceeding upon the subject.

A despatch from Constantinople says that the Sultan did not attend the Mosque on Friday, and that it has since become known that an attempt to assassinate him was contemplated. The Sultan is said to be completely terror-stricken, and scarcely dares show himself outside of the harem.

The Seine, Rhone, and Garonne Rivers, in France, have risen greatly, and many houses have been deserted for fear of disaster. The country between Châlons-sur-Marne and Épernay has been inundated. A despatch from Vienna says that the River Theiss and its affluents have overflowed their banks, and that the Marmaros district is inundated. In the Prussian Diet on Friday Herr von Puttkamer stated that the damage caused by the overflow of the Rhine could not be repaired without drawing upon the resources of the State. He has asked the Emperor to sanction a grant of 500,000 marks to relieve the distress in the flooded districts, and the Diet will be asked for funds as soon as the amount required has been ascertained.

A despatch from Berlin, on Friday, announced that the Reichstag had rejected, by a vote of 153 to 119, the motion to allow as optional the use of French in the debates in the Provincial Committee of Alsace-Lorraine. During the discussion of the motion, one of the members, in opposing it, said that the use of the French language was unnecessary, as eighty per cent. of the population were Germans, and the other twenty per cent. could speak both languages. Another member said there would be, in any case, another struggle for the possession of Alsace-Lorraine whenever the increasing ferment in France came to a head.

A despatch to the London *Times* from Berlin states that the imperial budget for 1883-1884 estimates the total revenue and expenditure at 530,000,000 marks each, and the budget for 1884-1885 estimates them at 531,500,000 marks each, there being entered in these annual accounts loans of 28,500,000 and 19,400,000 marks respectively for extraordinary expenses.

An ordinance was presented in the Berlin Bundesrath on Thursday forbidding the importation of American pigs, pork, bacon, and sausages of all kinds.

The Spanish Cortes reassembled on Monday. No speech was delivered from the throne. Señor Herrara, the Ministerial candidate, was elected President of the Chamber of Deputies, receiving 223 votes to 82 for the candidate of the Opposition.

A despatch from Rome says that the Italian Government, acting in accordance with the opinion of the Venetian Tribunal and the Council of State, will refuse to surrender to Austria two natives of Trieste whose extradition has been demanded on the charge that they were connected with the manufacture of bombs to be used for treasonable purposes in Austria.

On Tuesday, Dr. Dunajewski, the Austrian Minister of Finance, submitted to the Reichsrath the budget for 1883, showing a deficit of 31,600,000 florins. He said the condition of the treasury was exceedingly favorable, and that the Government would be able to pay off uncovered credits to the amount of 14,200,000 florins. After deducting the outlay for new railways and the Bosnian expenses, there will be no administrative deficit. It is probable that a considerable portion of the deficit for 1883 can be met by the cash in hand from the current year.

THE PRESIDENT'S MESSAGE.

CONSIDERING how very little attention Congress, as a rule, pays to the recommendations of the President's message, the interest with which it is received at the opening of each session must be ascribed to a recognition of the fact that it is a sort of general review of the political situation, produced by an exceptionally well-informed politician. The information which it contains about the Government business, except foreign affairs, is to be found in the department reports; besides this the President has generally nothing to offer except some advice which, as we have said, Congress rarely heeds. But this advice is apt to be the result of more or less careful observation of the drift of public opinion, and really urges things which the people at least are supposed to call for. It is not always easy, however, for the shrewdest observer to say in the first week of December in any given year what the people are calling for. Elections sometimes give a rather uncertain sound; and when they do, the message is apt to take on the form of an essay.

But this year the people have really left the Chief Magistrate in no doubt about their meaning. It is not permissible to a person of even ordinary intelligence to hesitate for one moment in construing the purport of the popular vote in this State, in Pennsylvania, and in Massachusetts, and we must do President Arthur the justice to say that he does not hesitate in the least. He takes the reform bull by the horns in the most manful fashion. Henry the Fourth, of France, did not go to mass more cheerfully in order to get the crown than Mr. Arthur urges civil-service reform just as the reformers ask for it. This time there is no humming or hawing, no ifs or buts, no doubts about this particular measure, or about the English system, or about the possibility of meeting the evils complained of by legislation; no recommendation of the general growth of the community in virtue as the best means of filling the offices with good men. This time he asks to have the Executive relieved by legislation of the burden of appointing the swarm of civil servants which the Government now needs, and he boldly declares that the Pendleton bill now before the Senate is good enough for him. He even asks for a bill to prohibit assessments on officeholders, and acknowledges that, under the present régime, even a Presidential order guaranteeing the officers against evil consequences in case they refuse to contribute, is not sufficient to remove their apprehension. He virtually admits, in fact, that Hubbell's money was collected under duress. This acknowledgment is the more creditable because the facts on which it is based were as patent last July as they are to-day; because Hubbell was allowed during four months to practise intimidation which the President could have stopped in an hour; and because the arbitrary removals made in the departments, on Mahone's demand, were just what Hubbell needed to give to the assurance in his circulars that his collections were not "viewed with disfavor in any official quarter," the terrible significance which most of the unfortunate clerks doubtless attached to it.

There is one portion of the message which is distinctly and even formally apologetic, and which we think the President might have spared himself the trouble of producing—that, namely, in which he shows that, although not a professed civil-service reformer, he made fewer removals in proportion to appointments than Presidents Hayes and Garfield. His figures in support of this theory are not satisfactory, because he is hardly in a position to compare himself with his predecessor, inasmuch as he is not the head of a new Administration, and did not succeed to his office until most of the changes which on any view, civil-service or spoils, are permitted to a new Administration, had been made. Moreover, in its present temper, the public cares very little about the question which politician has broken most of his pledges, or done most to disappoint the popular expectation. What it desires to know of every politician is, whether he means to keep on breaking his pledges, or whether he is going to turn over a new leaf. The only persons who can feel much interest in the comparison which President Arthur makes of himself as a civil-service reformer with President Garfield, are, in fact, a somewhat mysterious body called the "Garfield Republicans," whose main source of dissatisfaction with the present Administration seems to be, as well as we can make out, not that it has not done more for civil-service reform, but that it has kept all the spoils for "one wing of the party."

The other recommendations of the President are all in the line of those he made last year, before his mind had been cleared on the civil-service reform question. On all questions of finance and taxation his views are sound and enlightened. He believes in getting rid of our debauching surpluses by reducing taxation, in clearing away the silver cloud which now hangs over our currency by stopping the silver coinage, and in reducing the letter postage. He is fortunate, too, in the possession of a faculty of clear, forcible, and persuasive statement such as but few of his predecessors could boast; and the present message, like all his state papers, is on every topic he touches unusually easy and even pleasant reading.

THE RATIONALE OF SOUTHERN HOMICIDE.

WE print in another column a letter on Southern homicide from a gentleman who has a conspicuous right to speak for the South, and has held a high position in the public service. He is, therefore, entitled to a hearing, and we wish most sincerely that his reasons for thinking our criticisms have been "too severe" had more force in them. He says the first question to be settled in judging the South on the homicidal matter is, "What is civilization?" but he carefully refrains from settling this question. All the contribution he makes to the settlement of it is the assertion that "a healthy and fruitful civilization has several elements in it besides 'the sacredness of human life.'" This is true. But what healthy or fruitful civilization does he know of in which life is not held sacred against lawless violence? In all the highly civilized countries of to-day, the protection of life against lawless violence is the *first* concern of the community. Other things have to be added to this, to make high civilization; but this is essential. In fact, the sacredness of human life as against assassins is to a nation very much what clothing is to a gentleman. Clothing does not make a gentleman, but a naked gentleman is a contradiction in terms. So also is "a highly civilized community in which people murder each other with impunity when they quarrel."

Our correspondent says that, "leaving out homicides caused by political or race quarrels," "homicide is not much more frequent at the South than at the North, Mr. Redfield to the contrary notwithstanding." But why "to the contrary notwithstanding"? Mr. Redfield has collected the statistics from the County Clerks' offices, and the newspaper reports, collated and analyzed them, and then published them, and his book has for four years been challenging examination. He shows that homicides are eight or ten times more numerous at the South than at the North, and the vast majority are neither race nor political. To oppose to this the simple contradiction of somebody who has never examined the matter at all, but does not like the figures, is really almost childish.

To the question, which is a most important one, "Why is it that at the South homicides are more frequent among supposed-to-be respectable people than at the North?" our correspondent answers that the Southerners are either descended from the Cavaliers, or are influenced by the manners of the Cavaliers, who were "gentlemen of the rapier-and-pistol school," very ready to resent by fighting "the least imputation on personal honor or truthfulness"; while the people of the North are either descended from the Puritans, or are influenced by the Puritan horror of "personal combat and bloodshed." The theory that any but a very small number of Cavaliers ever settled in Virginia is now thoroughly exploded; but we let it pass as a rough explanation of the difference between the Northern and Southern communities in the colonial days, and we will further grant that slavery helped to maintain what we may, without offence, call the greater ferocity of Southern manners. But there is hardly anything in common between the typical Southern business or social homicide and the Cavalier's duel. In street fights, in which the Southern homicide is generally committed, there is no attempt to secure equality of arms or conditions. The quarrel is submitted to nobody's judgment. Each tries to steal the first shot by taking his adversary unawares; if successful, he fires into his body after he falls. In nine cases out of ten the revolting scene is enacted in the public street, at imminent risk to the passers-by.

The number of Cavaliers who settled in the South was exceedingly small; but, granting that it was as large as any Southerner has ever supposed, it will be admitted that the great bulk of the Cavaliers stayed in England, where they and their descendants have until our day enjoyed a social and political influence such as no class has probably ever exercised in any country—influence, we say, not power simply. They have long both ruled the state and set the fashion in manners. How does it happen, then, we inquire, that in England the street

fight with deadly weapons between persons in any decent social position is unknown; that even duelling is extinct; that the English country gentleman is one of the most peaceable, kindly, honorable, law-abiding men in the world; that, far from murdering his neighbors, or threatening his creditors or business rivals with shotguns, he uses the shotgun for sporting purposes only, and is always the first man in the county to hunt down a murderer, and see that he is fairly tried and decently hanged? Who is the English "Cavalier," now at large and received in society, who has killed his man, either in single combat or a street brawl, or helped to shield a criminal from justice?

The answer to these questions is easy. The explanation of the difference for social purposes between Southern cavalierism and English cavalierism—the latter being undoubtedly the more genuine article of the two—is that the Southern variety has lagged behind in civilization, and even degenerated. Instead of becoming more lawful with the advance of material civilization, it has become more lawless, and has lowered its standards so as to clothe the drunken swashbuckler and bully of every small town with "the grand old name of gentleman." Worse than all, defence of Southern homicide, like that of our correspondent, on the plea of cavalierism, is, in our opinion, so debauching to Southern youth that we really think that, without meaning to be disrespectful to "Y.," it deserves to be put in the category of "pernicious literature." The Southern boy who, when he begins to ponder the ethical problems of his daily life, hears from his elders that it is cavalierish to be fierce-tempered, and quick with his weapons, and ready to wash out slights and insults and settle quarrels in blood, cannot but be prepared to shed blood in a way unknown in highly civilized countries. Two clerks in a hardware store at Charlottesville, Va., were skylarking the other day, and one lost his temper, and demanded "satisfaction" of the other, and they actually fought with butcher-knives procured from the stock in the store until one was ripped open. There can hardly be a doubt that this poor wretch would never have dreamed that he needed to stab or rip up somebody by way of "satisfaction" if he had not been listening from his childhood to all this wonderful stuff about the cavalierish origin of Southern shooting and cutting.

We grant our correspondent that "life is a means, an opportunity to an end," and that that end is "the happiness of our neighbors . . . as well as that of the owner of a particular life." What we object to is allowing every man to decide that somebody else's life is necessary to his happiness, and to take it accordingly. We accept the doctrine, but demand that the carrying of it into practice be left to judges and juries. Under any other system it produces New Mexico, where nearly everybody is trying to make some other man's life a means of promoting his own welfare. We acknowledge, too, that the South did not produce Professor Webster, or the Nathan murderer, or the professional boy-killer, or the daughter-whipper, or the religious fanatic. The North produced them, but what did the North do with them? Where are they? Is Webster going about the streets threatening to kill more creditors? Is the boy-killer looking up more little boys to kill? Is the daughter-whipper a favorite in society, and longing for more daughters to whip to death? Are they not in the grave, the penitentiary, or the lunatic asylum, as the consequence of their crimes? All we ask of the South is to deal with its assassins in the manner in which the North deals with the wretches produced by its social condition. In other words, let it clear its streets of everybody who has wilfully killed, or tried to kill, or threatens to kill a human being—except the Sheriff.

MORE OF MR. BLAINE ON THE ISTHMUS CANAL.

A VERY curious interview with Mr. James G. Blaine about the Nicaragua Canal, was reported by the Washington *Post* on Monday. In it he expressed the sincere hope that Congress would not make a grant for its construction, on the ground that after it was made we should have no control over the Canal whatever, and have engaged, by the Clayton-Bulwer Treaty with England, "not to assume any control over it." "But did you not," said the simple-minded reporter, "yourself, as Secretary of State, take the ground that the (Clayton-Bulwer) Treaty was no longer operative?" "Oh, not at all, not at all," exclaimed the Retired Statesman, "with emphasis"; "I took the ground that the lapse of time and the great change in our continental relations justified our Government in asking several modifications in the treaty which I specified." The Retired Statesman has taken so many grounds about so many things in his busy career that it is not surprising that he should forget "with emphasis" what ground he took about the Clayton-Bulwer Treaty; but the fact is, that in his despatch of June 24, 1881, about this Canal matter, he ignored the Clayton-Bulwer Treaty altogether, and expressed himself as follows, besides much more of the same sort:

> "During any war to which the United States of America or the United States of Colombia might be a party, the passage of armed vessels of hostile nations through the Canal at Panama would be no more admissible than would be the passage of the armed forces of a hostile nation over the railway lines joining the Atlantic and Pacific shores of the United States of Colombia. And the United States of America will insist upon her right to take all needful precautions against the possibility of the isthmus transit being in any event used offensively against her interests upon the land or upon the sea."

In other words, Mr. Blaine here pledged the United States to do the very thing which he now says the Clayton-Bulwer Treaty prevents her from doing.

Probably the most charitable construction to put on this performance is that he forgot all about the treaty when he was writing that terrible circular to the European Powers in June, for when Lord Granville reminded him of it, in a cutting way, he did take it up and discuss it in the following November, and ask for modifications in it, pouring over the subject a flood of the lurid campaign rhetoric which has made his state papers so famous over the entire earth. It would seem from this interview, however, as if he were now conscious that Lord Granville had got the better of him, and that there is nothing left but to shake his head over the Canal prospects of a country which has discarded himself and his policy.

There is one other little matter in the interview which we trust he will explain early in the coming spring. Said the simple-minded reporter:

> "Do you think Great Britain will secure the recognition of her right of control of the Suez Canal from the other great Powers by treaty?"
>
> "No, of course not," said Mr. Blaine. "But why should Great Britain ask it? Her navy absolutely controls the Canal at both ends, and no European Power can place an army there to dispute the mastery of the ironclads. Why, then, should Great Britain ask a treaty to give her what she already has? But England's control of the Suez Canal is not more absolute than the same Power's control of the Nicaragua Canal would be if built under the provisions of the Kasson bill. We are bound by treaties both with England and Nicaragua not to fortify the Canal, and so of course that leaves the control of the British Navy just as absolute as at Suez."
>
> "But after all," queried the reporter, "does it make much difference who controls the Canal so that we get the commercial advantage of it?"
>
> "If that question could be authoritatively addressed to Great Britain, you would perhaps get an answer that would satisfy you. In the time of peace it would make little difference, with equal and impartial tolls, but if war should unhappily come, the nation controlling the Canal would have a vast advantage. With the control of the Canal in our hands a vessel of war lying in the Gulf of Mexico is just as available for the defence of San Francisco as for the defence of New York. With the control of the Canal in British hands an English man-of-war in the Gulf is just as available for attacking San Francisco as New York. The British Government understands the difference if we do not."

Now, what needs explanation here is, how fortifying the Canal will make it a convenient highway to San Francisco, if Great Britain controls the sea at both ends of it in the manner described. The American man-of-war will be safe in the Canal if fortified as aforesaid, but the Canal is not a harbor of refuge. It is only useful to those who can leave it; and suppose an American man-of-war were to leave it in order to get up to San Francisco, and the British iron-clad fleet was lying outside, and its Admiral knew that Mr. Blaine was not on board and attacked the American ship on the high seas, in what manner would the fortifications of the Canal help that man-of-war out of her scrape? This may seem to a really great mind a small problem, but, small as it appears, its solution, Mr. Blaine will find, affords materials for the highest mental capacity to work on.

FRENCH ANARCHISTS.

ACCORDING to some of our esteemed contemporaries, republican institutions in France are rapidly going to pieces, and the French people are anxiously looking about for somebody to govern them as a monarch. We do not believe things have as yet come to such a pass in France. But it cannot be denied that the recent demonstrations of activity on the part of the revolutionary element have made the popular mind there more restless than it has been for many years. There is no agitation of public questions calculated to work upon the passions of large multitudes. There seems to be no widespread desire for a fundamental change. But what might be called the subterranean element in politics, the plotters for revolution under any circumstances, are evidently at work stirring up local disturbances and outbreaks, which, as they appear one after

another, shake the popular sense of security in a very discomforting way.

The revolutionist for the sake of revolution is a peculiarly French product. Under the monarchy he conspired against the King, and called himself a Republican. Under the Republic he conspires against whatever government may exist at the time, and calls himself an Anarchist. It is an error to think that Anarchism and Socialism are one and the same thing. The doctrinaire Socialist wants to regulate everything—government, labor, the daily life of society—by the power of the state. The state is to exercise an all-powerful government in the paternal sense. The theoretical Anarchist wants to strip the state of its power and to let everybody do pretty much as he pleases. But it would also be a mistake to suppose that the common run of Socialists and Anarchists are in all respects clearly conscious of this difference in their objects. The fact is that it would be equally difficult for the Socialist and the Anarchist to give a clear account of the social and political condition he is aiming at. The Socialist has the advantage of at least trying to imagine something like a new social order, however fantastic it may be, while the Anarchist simply wants to destroy the government, as such, without giving himself the trouble to imagine any social and political organization that is to follow. Both are agreed as to two things: that the "bourgeois"—that is, the citizen who has got something, be it much or little, and who wears decent clothes, and who is not obliged to earn his living from day to day by working with his hands—is a nuisance, and that a Government controlled by the bourgeois must be overthrown. The Socialist wants to abolish him, because he imagines the bourgeois to stand in the way of the establishment of the "Republic of Labor"; and the Anarchist wants to abolish the bourgeois because, although he may be a Liberal, and even a Democrat, he still has some conservative streak in him, and because he is generally the ruling class "fattening on the sweat of the people."

If the Anarchist has any fixed and tangible programme, it is that revolution, change by force, should be the permanent state of society, and that, therefore, whenever a government is established, a movement must at once be set on foot to overthrow it. He is a revolutionist for the sake of revolution. This would seem to presuppose either a desire to take advantage of social disorder for the sake of plunder, or a deranged state of mind. But it is a noteworthy fact that most of the leaders of the professional revolutionists—among them men of considerable ability—were, as to the acquisition of property, not of a rapacious disposition at all. On the contrary, they were self-denying in the highest degree—content to live in poverty and want, despising domestic comforts, and apparently satisfied to go from one prison into another as martyrs for their cause, using their intervals of freedom in getting up revolutionary uprisings which uniformly came to nothing. Thus one of their principal heroes, Blanqui, who died not long ago as an old man, had spent the larger part of his life within prison walls, and always contrived to get there again as often as he was set free. There is more to be said in favor of the other theory. There is a strong histrionic propensity in the make-up of the French mind. A Frenchman likes to pose, if possible, after a model that has struck his fancy. Thus the young popular leaders of the first French Revolution were fond of regarding themselves as Brutuses, Cassiuses, Gracchuses, and the like; and thus the professional revolutionist of the present century wants to be a St.-Just, or a Robespierre, or a Danton, or a Babœuf. The methods of the first French Revolution, and especially of the Reign of Terror, are also gospel to him, and so he will insist that there will be no chance for true liberty in France until at least half a million heads are cut off.

Of late this element has found means to make itself very uncomfortable, even in quiet times, by the use of dynamite, which has rendered the old-fashioned "émeute" unnecessary. A dynamite cartridge thrown into a theatre, or a dry-goods shop, or a church, will cause as much consternation and alarm as an ordinary street fight behind barricades used to do. The danger is not that the Anarchists will succeed in organizing a great movement, capable of overthrowing the existing order of society and establishing a government of Anarchists in its place. In enterprises of such magnitude they always fail even under favorable circumstances—the Commune in 1871 showed the utmost limits of their capacity in that respect. But they may contemplate, by repeated strokes of mischief, such as recently happened at Montceau and Lyons, continually annoying and disquieting and exasperating people who want to live securely and peaceably, and thus bringing on a confusion favorable to their schemes. The only thing they could possibly accomplish would be gradually to produce a disposition in the popular mind to look once more for some strong hand to "save society." That the result would be just the reverse of what the Anarchists are aiming at is a matter of course. This point, however, seems not to have been reached as yet.

ENGLISH DIFFICULTIES IN EGYPT.

LONDON, November 18, 1882.

SINCE the victory of Tel-el-Kebir and occupation of Cairo in the middle of September last, nothing has happened to affect in any legal, formal, or permanent way the relations either of England or of any other of the European Powers with Egypt. Very little, indeed, has happened at all in that quarter. The British troops have been coming home in detachments until now only twelve thousand remain, and it is announced that in the meantime that number will be kept there to maintain (till more durable arrangements can be made) the authority of the Khedive and good order in the country. The self-styled Mahdi, a Mohammedan fanatic or impostor, who has appeared in the Sudan and collected a large, though very disorderly, force, has seriously disturbed, if he has not destroyed, Egyptian power in the negro-peopled countries to the south of Nubia. He has several times been reported to be moving down the Nile, and fears have been expressed lest he should attack Egypt itself; but at present he remains no more than a cloud hanging on the horizon.

In Lower Egypt the principal matter has been the trial of Arabi Pasha and his accomplices, an affair which has given the English Government a great deal of trouble, because while it is theoretically and technically in the hands of the Egyptian authorities, against whom these leaders revolted, it substantially involves the responsibility of England. It was to an English officer that Arabi surrendered, and it is England who is practically supreme in Egypt now; so that whatever punishments may be inflicted upon the rebels will seem to be inflicted by or under the sanction of England. The judicial methods of the East, even more than its military codes, are of course unlike Western ones, and in many ways repugnant to Western ideas. If England permits Arabi to be tried and found guilty in a manner or upon evidence which Western courts would not follow or admit, she will be thought guilty of injustice, and will be blamed not only by Europe, but by those who at home have taken the supposed head of the so-called National Egyptian party under their protection. If, on the other hand, she interferes with the trial, forbidding this and directing that, she will seem to be superseding those native authorities which it has been her object to strengthen, and which she has striven to represent as being still the legitimate Government of the country. Every interference is an assumption of responsibility, and also involves a weakening of the influence and credit of the Khedive and his ministers. The Tory and Irish Oppositions in the House of Commons have perceived this difficulty, and have not been slow to take advantage of it. In particular, the Tory skirmishers, though six months ago they were constantly urging the Government to act with more promptness and boldness in Egypt, and though they still blame the hesitation which allowed Arabi to strengthen himself, now exhibit a good deal of sympathy for him. They worry the Foreign Office by incessant questions intended either to entrap them into admitting that the trial is in fact being conducted under their supervision, or else to make it appear that they have dishonorably handed over their prisoner to his bitterest foes, to be dealt with according to Oriental ideas—that is to say, with brutality and injustice.

Meanwhile, the trial proceeds, as might be expected, very slowly. Delay is in the prisoner's favor. We have almost as great an aversion as you have to shedding blood, except in the open field. Although Arabi is being tried for a military mutiny or revolt against the person to whom he owed allegiance, his revolt was so like legitimate war, and he has himself obtained so much of the character of a political leader, that it will be found very hard to deal with him according to strict military law. Those of his accomplices who can be shown to have borne a direct and active part in the burning of Alexandria or in the slaughter of Europeans may, perhaps, be put to death; but it is very unlikely that a similar fate will befall him. Eminence, which in former times endangered a leader's life, now protects it. Although, as I have just said, Arabi's case is technically quite different from that of Abd-el-Kader or Shamyl, the two most famous Mohammedan heroes who have in this century been captured by European antagonists—because they were independent chieftains, while he is an adventurer heading a military rising against his sovereign—still, people involuntarily put him in the same category, and think that it would be as harsh to execute him as it would have been to execute Napoleon after Waterloo.

He has, besides, another point in his favor. Our information regarding it is still incomplete, but its relevance is obvious. There can be little doubt that his action was all along, even in its earlier stages before the crisis of April last, encouraged, and to some extent prompted, by the

Sultan. Although the Egyptian National party was, in its origin, directed not against Europeans so much as against Turks and Circassians —there being an old and bitter jealousy between the Arabic and the Turkish-speaking races in the Eastern world—the Sultan and his advisers seem to have recognized the value which a national Mohammedan movement would have as against the influence of Christian Powers. This feeling became stronger after the French conquest—for such one may call it—of Tunis, in the autumn of 1881. The Sultan feared that Africa would be lost to him, withdrawn from the Khalifal authority which he seeks to extend, and he resolved to regain in Egypt what he had lost in Tunis. He would, accordingly, seem to have stirred up the fanaticism both of Arabi and of the ecclesiastical party in Egypt, putting forward his own rights and claims as superior to those of the Khedive, and exhorting the faithful of Egypt to remember their allegiance to the head of their religion and maintain their resistance to the aggressions of infidel foreigners. Numerous letters from the confidants of the Sultan have, it is said, been found among Arabi's papers, approving the latter's conduct and assuring him that he was fighting the battle of Islam and of the Khalif. These letters are to be used at the trial in defence of Arabi, as evidence that he acted throughout under instructions—secret, but not on that account the less effective —from Constantinople. Supposing them authentic, they are important in two ways: they extenuate Arabi's offence in a moral point of view, because they show that he was influenced by religious motives, and because it seems hard that he should be put to death for doing what we cannot punish the Sultan, an independent and nominally friendly potentate, for having conspired with him to do; and they extenuate it also in its legal aspect, for the Sultan is still Suzerain of Egypt. It may be argued that Arabi owed allegiance to him as much as to the Khedive, and that if the wishes of the higher authority clashed with the authority of the latter, he was at liberty to obey the Sultan, who had also, as head of the Faith, a more sacred claim to his obedience. Putting all these things together, it may safely be predicted that the bullet which will pierce Arabi is not yet cast. Whether the Egyptian tribunal condemns him or not, the English Government—which has admitted that no sentence of death on him will in fact be carried out without its sanction—will not allow him to be executed. In all probability, he will be removed from Egypt and placed somewhere in a confinement which will prevent him from further endangering its peace.

Those who profess to know the East lift up their voices against such lenity. They declare that even now the Mussulman world does not realize—that the fellahs in the country parts of Egypt itself do not believe—that the insurrection has been suppressed and the champions of Islam overcome. Nothing but the death of the ringleaders will suffice, they urge, to bring this home to the popular mind. Clemency is in the East always attributed to fear. If Arabi is not executed, it will be because the Sultan has forbidden it, and the English dare not provoke the Sultan. "And why," they add, "should not an Eastern game be played according to Eastern rules? When an Oriental leads a rebellion, when he even intrigues against his master, he stakes his head upon the issue. The distinction which Westerns draw between political offences and ordinary crimes does not exist there, and is unsuited to the conditions of Mohammedan society. If Arabi had captured Tewfik, he would without doubt have put Tewfik to death; why should he fare better when fortune has gone against him, especially as he was morally, if not directly, guilty of the Alexandrian massacre?" Without disputing these reasonings, I can only repeat that every day which passes makes Arabi's head seem safer. England is in good humor over her successes; the massacre of Alexandria has receded into the distance; Arabi is in no more danger than was Jefferson Davis when he had been six months in prison.

These trials of the military rebels illustrate very clearly the difficulties which the English Government has to deal with in Egypt. They have to play an Eastern game according to Western rules, and that, too, with all Europe looking on. India is far away, and even now, in spite of telegraphs and newspaper correspondents, little of what passes in India attracts notice in Europe; but Egypt is near, and the great Mediterranean nations are interested in what happens there. All our mistakes are sure to be discovered and to be used unsparingly against us. Our position is novel, exceptional, indefinable. For some time Mr. Gladstone would not admit that we were at war in Egypt, and even in the vote of thanks passed by Parliament to the Army and Navy he spoke only of the "military operations" which had been successfully prosecuted there. We have not legally any further authority now in Cairo than we had a year ago, under the various treaties and protocols which secured various rights to France and ourselves and the other Powers. Such predominant authority as we undoubtedly possess is that of the sword; yet we are not conquerors, but allies who have been invoked to restore order. We are practically masters of the country, and responsible for whatever goes on there. If there is injustice, cruelty, oppression, Europe will blame us, and we shall blame ourselves. Yet how are we to prevent injustice, cruelty, oppression except by taking the administration out of the hands of the natives and assuming it ourselves? If we leave things alone, they go wrong; and we cannot sit by, keeping an army in the country, and quietly watch them getting worse. If we interfere, we destroy what prestige still remains to the Khedival Government, we annoy the native ministers and dispose them to intrigue against us, we make further acts of interference more natural, more inevitable. These perplexities make the reëstablishment of government in Egypt and the defining of our legal position there a very difficult problem.

In a future letter I hope to sketch the different views which prevail in England as to its solution. Mr. Gladstone's Cabinet is evidently quite sensible of the difficulty. Its members have carefully abstained from giving any glimpse of their intentions. Communications are believed to be passing between them and the other Powers of Europe, but no one yet knows how far such communications have gone. Meanwhile, a bold and unexpected step has been taken in despatching Lord Dufferin from Constantinople to Cairo, where he is to remain for some months, and no doubt to help the Government to prepare some scheme for a permanent settlement. It seems, from Mr. Gladstone's declarations in Parliament, that a convention regulating the occupation of Egypt by our troops is in preparation; but even this, a mere preliminary to further and more complicated arrangements, will not be given to the world for some time to come. Public opinion is thus permitted ample time to ripen. But from public opinion the Government have little light to expect: it is still uncertain and perplexed. Y.

VENICE REVISITED.

VENICE, October 30, 1882.

EVEN in the days of Byron and Samuel Rogers Venice was a melancholy place, which he who would be cheerful and joyous was bidden not to visit. The fantastic and dissolute luxury of the eighteenth century had been succeeded by languor, poverty, decay. It is not less melancholy now, when happier days, coming in the train of freedom, have dawned upon Italy. Indeed, in some ways Venice seems more weak and doleful, more entirely a thing of bygone days now, when she is free, than she did in the days of Austrian domination. Then, when a strong garrison held the city, when white-coated soldiers filled the streets, cannon stood loaded on the Piazza of St. Mark prepared to quell any sudden outbreak. The very efforts made to keep the people down made both place and people appear to have a life and importance in the present. One was reminded of the events whereby the ancient republic had fallen helplessly into the hands of France and Austria; and of those later days in which she had wiped out the dishonor of that fall by her revolt in 1848, and the gallant defence which she made under the leadership of Daniel Manin. One felt that another revolt, another struggle might be at hand, and speculated as to its incidents and its result. But now, when she and her old territories have been liberated, when she has subsided into the chief town of a province, with no separate and independent life of her own, and no prospect that any such will arise, the link between Past and Present seems to have been broken, and the Present displays nothing on which imagination can lay hold. It is only the Past that the stranger thinks of, and the thoughts that rise in his mind are those melancholy musings upon the greatness and decay of empires, upon the dissolution of old faiths, and the vanishing of old forms of art and life which the ruins of a feudal castle or the silent aisles of a mediæval cathedral suggest to the traveller from some new home of industrial democracy.

Not that Venice is either ruinous or silent. If she were so, this sense of a chasm between the present and the past would not be so strong, because the impression she would make would be purely one of the past, which would then be felt to have lived on into our own time, still to dominate the minds of the inhabitants no less than of the visitor. This is the impression which such places as Toledo, or Ravenna, or Carcassonne, not to speak of Egypt and the further East, leave upon the traveller. But Venice is exerting herself to recover commercial consequence. There are steamers anchored in the Grand Canal and the Giudecca—steamers plying as far as Liverpool in one direction and Alexandria in the other. Two or three offices of ship brokers may be seen in the arcade which runs under the front of Sansovino's library. The glass and mosaic works of Murano employ a considerable number of workmen; nor are efforts wanting to reëstablish other manufactures. So far, however, the trade of the port has not come to amount to much. Trieste, on the one side of the Italian peninsula, receives most of the goods destined to cross the Alps into Austria and East Germany; Genoa, on the other side, those which find their way to Switzerland, Western Germany, and the populous districts of Lombardy and Piedmont. The steamers injure the picturesque aspect of the place not only by their unshapely forms, but also by the volumes of smoke which they emit. They do not add much to the prosperity of the town, a large part, some say one-fourth, of whose population are steeped in pauperism. The real industry of Venice and the source of such prosperity as she enjoys is the reception of tourists. She has become one large art-gallery, cabinet of curiosities, architectural museum, for the travelling races of Europe and America.

Especially for the Teutonic races. This is perhaps what strikes one most on returning to the island city after the lapse of twenty years: this

and the disappearance of the priestly and monkish garb. Visitors of course there were even then, as there have been for a century past or more, ever since art died in Italy and people came to look at her grave. But they were then comparatively few, almost confined to rich people who were making a sort of grand tour of Italy, and artistic people who had a special purpose in studying Venetian architecture and pictures. Most of them were English, and the French were not wholly wanting. Now the Northern barbarians have descended upon Italy in a flood, though, to be sure, a fertilizing flood which scatters gold in its path. Germans predominate, not only because they are nearest and have easy access by the three lines of railway which now cross the Alps from Teutonic territory, but also because they are a curious and active-minded people, extremely fond of travel, and so simple in their habits as to be able to travel cheaply. Next to them in number seem to come the Americans. The English have only the third place, and the French, if there are any French, appear quite lost in the superabundance of Teutons. During the tourist months, and especially, of course, during September and October, one might think that there were as many strangers as natives in Venice. In and all round the Piazza of St. Mark nothing is heard but German and English. Most of the handsome palaces at the sea end of the Grand Canal have become hotels, and new ones are continually being opened. The consequences are not altogether pleasant. There is always a crowd in all the more famous places of resort, such as the Ducal Palace and the three great "show churches." One is not permitted to see anything in one's own way, for officious cicerones are pestering at every turn; nor can one even ask the way in the street, for somebody rushes forward who insists on accompanying and becoming a guide for the rest of the day. It is entertaining to watch the result of the efforts which enthusiastic ladies make to study art under the auspices of Mr. Ruskin. They go with his book, 'St. Mark's Rest,' in their hands to the façade of the Ducal Palace, hoping to verify his description of the sculptured capitals and to feel all the profound symbolism which he discovers therein. Before the first capital is finished a beggar is at the student's elbow. She endeavors to appear absorbed, but in a few seconds yields to the whine and bestows the soldo. Then another comes, and another, and another. The stock of small change is exhausted, and the decipherment of the capitals is abandoned before half of them have been compared with Mr. Ruskin's pages. Tiresome as all this is, no one who sees how much real interest the tourists, German, American, and English, are learning to take in what they see, how much more they are profiting by it now than they would have done twenty or thirty years ago, will regret the growing afflux. But one asks one's self what it will have become when every German feels himself uneducated till he has seen Italy, and when America contains three hundred millions of people.

As the number of strangers who come to see Venice increases, the value of that which is to be seen diminishes. That passion for restoration which overspreads Italy and France could not be expected to spare a place so much in the world's eye. The municipality is poor, but these restorations are often undertaken by the King's Government, so that even poverty is no protection. There has been a great deal of controversy over the necessity of the works undertaken at St. Mark's and the Ducal Palace, some contending that there was no way to preserve the buildings except by taking down the old walls and column shafts and putting up new ones, while others declare that a little judicious propping would have been sufficient. So as to the mosaics: one set of artists and architects, mostly Englishmen interested in these matters, condemns altogether the taking down of the ancient mosaics and putting up of new ones in their places, alleging that this is done partly in order to provide work for local artists and manufacturers, partly from the preference which Italians have for bright, new, gaudy things over old and mouldering ones; while the Italians reply by insisting that the old mosaics were dropping to pieces, so that nothing remained but to replace them by new ones copied as closely as possible from the old. Whatever the truth may be, the value and beauty of the buildings cannot help suffering. Scarcely anything stands now as it stood twenty years ago. Half the capitals on the lower sea façade of the Palace are new; and whether their sculpture be good or bad (for as to this, also, a controversy rages), their fresh white contrasts painfully with the weather-beaten dark gray of the remainder. The new mosaics in St. Mark's do not harmonize with the old ones: parts of the outside which have been scraped have lost that softness of hue which ages of exposure had given them.

Some of these misfortunes are unavoidable; but other errors have been committed which might have been spared. A very long high wall has been erected around the Arsenal on the north-east sea front; and both the color of its bricks and the tastelessness of its design make it spoil one of the most striking general views of the city. On the smaller islands that lie round Venice new and hideous buildings are being erected where formerly gardens or vineyards surrounded a few houses or some lonely little convent. Two large lunatic asylums cover two such islands which one sees in going out to the Lido; on a third, S. Francesco in Deserto, they are putting up a big iron foundry, whose chimneys will mar a singularly romantic and characteristic prospect. In the city itself large gas-lamps have been set up in the middle of the Piazza and Piazzetta, so that those effects of brilliant moonlight in the open, contrasting with the deep shadows under the buildings, which used to be so fascinating, and kept one sitting half the night upon the Piazzetta quay, under the spell of that matchless scene, are now no longer to be had. The impressiveness of the Piazza itself, with its great smooth unbroken space, the one large space in a city of narrow lanes and tiny courts, is sadly diminished. They have started a service of steam omnibuses on the Grand Canal—little shrieking creatures whose whizz and cry is never silent all along its winding shores. The protests of American and English visitors against these "improvements" find no echo among the native Italians—indeed, seem to nettle them. For modern Italy does not like to be admired for the sake of her achievements of centuries long past, but for herself—for what she is now and is to be in the future as a free and powerful nation. She is not content to be a land of ruins and old pictures; nor can one blame her, however regrettable the results of her desire to restore and to improve.

These are jarring notes in the symphony of Venice. Yet even were they far more numerous they would not make its music mute. Venice retains her strange and peculiar charm beyond all other cities of Italy—beyond Rome and Florence, though they have far more to show in the way of art and history; beyond Ravenna and Pisa, though they are more perfect fragments of the earlier Middle Ages; beyond Verona and Perugia, though the Alps look down on the one and the Apennines upon the other. And this charm is not less powerful over the pensive mind of maturer age than on the fresh enthusiasm of youth. What is the secret of this charm? It is not to be wholly found in the mere singularity of Venice as a city whose streets are of water, though this is the first thing which strikes the visitor and the one characteristic which everybody knows. Beautiful as the canals are, the rich and infinitely varied picturesqueness of the place is better appreciated when one saunters through it on foot, losing one's self in the maze of lanes connecting tiny courts and crossing tiny bridges, each of which is like enough to the others to perplex one's recollection, yet different enough to have the charm of novelty. This complexity produces a wonderful impression of the size of the town, so that when one mounts to the top of the great Campanile and looks round, it is hard to believe that what seemed so large when one was wandering through it is really a place of very moderate size—not bigger than Detroit or Richmond, not as big as Edinburgh or Sheffield. Nor, again, is it in the peculiar grace of that Gothic architecture which we call Venetian; nor in that richness of color which is the glory of Venetian painters; nor even, perhaps, in the strange and romantic sense of isolation due to the position of the city, lying out at sea, yet in a calm and peaceful sea, with a perpetual silence brooding over her. All these things do, no doubt, help to weave the spell, but its potency seems to be most of all in the peculiar lines and lights of the surrounding landscape, and in the marvellous sense of breadth and space which that landscape gives. The silver floor of sea that stretches out all round the town throws up a sheen of light which glorifies the humblest building. The vast expanse of sky—a true sea sky, as those familiar with the ocean know—has room for an endless play of clouds, for storms here and sunshine there, for swift changes from gloom to brilliance and brilliance back to gloom. The pearly light that glitters along the southern horizon over the Adriatic is matched on the north by the shadowy forms of the great Alps, stretching further than eye can follow to the east. Westward the sharp volcanic outline of the Euganean Hills, dear to every lover of Shelley, breaks the level line of plain and stands out vivid against the sunset, while in the remotest northwest, a hundred miles away, a patch of gleaming white marks the snowfields of the Adametto and the frontiers of Italy. And in Venice one can never forget this background, for on all sides the streets and the canals open out on the sea and the free space beyond. You emerge from a dim church or glide out of a dark canal, and see far down the vista the glowing blue of the lagoon, and over it an endless depth of air. Nowhere, not even in mid-ocean, does one seem to have such a sense of space all round, nor such a variety of those most tender and delicate effects of color which vast air spaces give; nor do any prospects appeal more to the imagination, for on one side we look down that sea highway which the navies and the merchantmen of Venice traversed, conquering the islands of the East, and bringing home its wealth; on the other there hangs over the plain that mighty mountain rampart from whose recesses all the conquerors of Italy have descended, and behind which they have within our own memory retreated.

It is not only because Venice and her landscapes touch the mind and the emotions in so many ways that her fascination is so peculiar, but because these influences are so quiet and subtle, rather felt than perceived, and not all felt at first, but slowly growing day after day upon the traveller as he becomes more attuned to his environment. Those, therefore, who pass hastily through, as most of us do now when there is so much to visit and so little leisure to visit it, lose no small part both of the benefit and the pleasure. There is not only less left to see now than there was a century ago, but less favorable

conditions for seeing it. Yet the taste is finer and the knowledge wider; the average tourist, whom it is the fashion to sneer at, is usually abler to see and judge and profit than were the rich dilettanti of last century.

Correspondence.

SOUTHERN HOMICIDES.

To the Editor of The Nation:

Sir: Only through quotations made by other papers have I seen your article referring to the too frequent use of deadly weapons by men of the best classes in the Southern States. I have no time to speculate as to the cause, but I know that in the main you are right as to facts and deductions. Two generations ago it was the custom among Southerners to fight duels, public opinion countenancing it, as I know from the fact that my maternal grandfather, a Kentucky editor born in Virginia, fought and bore the marks of almost deadly wounds of pistol and knife. Though duelling is now infrequent, the street and bar-room rencontres have taken its place. Unless this habit can be cured, the Southern people must degenerate to the level of the worst Spaniards and Italians, and he is their best friend who points out the fault, not who declares it does not exist. Southerner.

Missouri, December 1, 1882.

To the Editor of The Nation:

Sir: Being Southern born and educated, fully appreciating Southern faults, personal and political, having always denounced and ridiculed duelling, and denounced in all proper ways the struggle for the "lost cause," you will concede that any dissent from the severity of your criticisms, and any defence of the South by me, proceeds not entirely from Southern prejudice. Your criticisms—I refrained from calling them fierce denunciations—have been too severe, and positively, but not intentionally, unjust, for the following reasons:

You always allude to "civilization" and the manners of "savages." Now, the first question to be settled is, What is civilization? I don't attempt to define it at all, but I venture to suggest that a healthy and fruitful civilization has several elements in it besides the "sacredness of human life." We must aim to discover the general average of benefits conferred which make human life happy, make it worth having. Your argument is one-sided because it discusses and dwells upon but one feature of life—an occasional homicide, certainly very much to be deplored and deprecated. The severity of your criticisms is unwise, and they amount to a positive public calamity because of the feeling of injury and injustice which they excite in the minds of the good people of a whole section. The result is the Southern people say, "The North either cannot or will not understand us; they continue to insult and denounce us outside of politics"; and the day of real union is postponed, if not prevented.

Leaving out of view homicides caused by or growing out of political or race quarrels, which have been numerous, have been owing to exceptional and temporary causes, of very great heat and bitterness, and are rapidly on the decline—leaving out these, homicide is not much more frequent at the South than at the North, Mr. Redfield to the contrary notwithstanding. Homicides at the South are nearly always for personal causes or feelings, while at the North they are far more frequently for plunder. Homicides at the South are nearly always in open fight, while at the North they are more frequently by stealth, preconcerted arrangement, to take the victim at a disadvantage. Violence to females, leading to the homicide of either the victim or the perpetrator, are less frequent at the South than at the North.

Still, leaving out of view political homicides, which cannot be too severely denounced, but which have been exaggerated, the fact remains and cannot be denied that homicides at the South are more frequently among those who are called and ought to be gentlemen, certainly citizens of prominence, while at the North they more frequently occur among the low and vulgar. This gives greater prominence and publicity to Southern homicides, and makes them more frequent than at the North, and seem more frequent than they really are. Why is it that at the South homicides are more frequent among supposed-to-be respectable people than at the North? The answer is not far to seek. Though historical, it lies on the surface; and in pointing it out we again find ourselves involved in that larger question of "civilization" which you always mix up with this one question or fact of homicide. The North was peopled mainly from New England, and New England was peopled, morally and socially speaking, from Plymouth Rock. The Pilgrims—the severely religious Roundhead Puritans—fled from the Cavaliers and the Established Church. They and their children, though good soldiers against the Indians, the French, and the British, had a religious, moral, domestic education that abhorred personal combat and bloodshed. The Cavalier fled from the Puritan and liberal ascendancy in England, and settled in Virginia and the Carolinas, and Virginia and the Carolinas have peopled the South. These were not only gentlemen in the conventional sense, but, for their day and generation, they were gentlemen. But they were gentlemen of the pistol and rapier school. They were fox-hunters, they were slave-owners, and they were fighters—that is, not often actually fighting, but very ready to fight. The least imputation upon personal honor or truthfulness, the least affront to a lady, might instantly lead to bloodshed. A more gallant, genial, graceful, frank, courteous, hospitable, high-toned set of fellows were never found in this or any other country. They brought the duello with them. Now, all the people of the South are not descendants of these gentlemen. Far from it. But we know how their manners and habits, especially the worse features of them, will permeate, leaven, educate the whole community, and how the things supposed to be required by "honor" will coarsen as they descend among the vulgar; how the courtly duel will develop into a street or bar-room fight, with "Arkansas toothpicks" as the weapons. But did these gentlemen, whose manners were formed in Europe, on the pattern and in the school of chivalry, do no good? With all the good-natured raillery, and sometimes fierce contempt, heaped upon the follies of the original article of chivalry in Europe, has it done the world, civilization, no good? Let woman answer that question.

I would not at all encourage personal combat, the avenging of one's supposed wrongs by one's own hands. With a few rare exceptions and emergencies, it cannot be too severely condemned nor too promptly punished. But I do solemnly protest against making "the sacredness of human life," or "respect" for human life, the only or even the principal test or measure of civilization. Life is a means, an opportunity to an end. That end is happiness. But that happiness is the happiness of our neighbors, of the community, as well as the happiness of the owner of that particular life. Society cannot exist except on the theory that certain things forfeit the right to live. This "sacredness of human life" may easily become a morbid, unwholesome sentimentalism. It may become a two-edged sword. It has already done so—for all you know. One man kills another at the South. The slayer is indicted. The advocate for the defendant talks ingeniously of passion and hot-blood, deeply regrets the death of the slain, dwells upon the "sacredness of human life," says one valuable life is gone, we can't restore him by hanging another, and the defendant is acquitted, when he ought certainly to have been hanged.

Finally, recurring, as you always compel us, to the question, What is civilization—what is savagery? I will not discuss it, but only submit that the test is not solely the absence or presence of duels and street fights. I have not heard of the civilization of the South producing a Professor Webster nor a Nathan case; we do not hear of the professional boy-killer at the South; nor of a religious fanatic sacrificing his little daughter; nor do they have so many Malley cases, nor Hayden cases; nor do we hear of the uniformed protectors of society clubbing an anxious father while sitting on his door-steps to give the sick infant in his arms a little fresh air. While living at the South I was exceedingly provoked with some Southern preachers, because they so quickly and so powerfully fanned the flames of rebellion. But I never heard of one of them whipping his little girl to death because she did not say her prayers correctly. The North has more good colleges than the South, but I never heard of a Southern professor chasing and shooting a student because the lad had lifted the professor's front gate off its hinges. Was there insanity in any of these cases—a fanaticism run mad? Possibly. But what did it? What are all the elements of a wholesome and useful civilization—a civilization that produces happiness? Our answer must not be one-sided, nor based on a few street fights.

Y.

New York, November 25, 1882.

ART FOR ART'S SAKE.

To the Editor of The Nation:

Sir: In your review, on the 9th of November, of Tuckerman's 'History of Fiction,' you touch upon the underlying moral purpose in the Anglo-Saxon novel, and the Neo-Pagan criticism of such purpose from the artistic standpoint. You allude to the fact that the highest development of prose fiction has been produced by this method, but fail to point out that such a moral purpose underlies every great art period. It is this moral purpose which produces that quality which we call the grand manner. The great masters of the great art periods have all been distinguished for the high and serious quality of their work. No great art period has existed without it. We find it everywhere: in the Greek periods of song and sculpture, in Raphael, in Michael Angelo, in the divine Dante, in Boccaccio and Cervantes. Lack of purpose is the want felt in the French school of prose fiction and painting.

Has not the Neo-Pagan method of art for art's sake alone, and the development of what you call the anti-moral phase of art, marked the decadence of all great periods? C. P.

A BATTLE THAT IS A BATTLE.

To the Editor of The Nation:

Sir: In your review of 'The Friendships of Mary Russell Mitford,' a queer old English Tory, Sir William Elford, is noticed as being apparently quite in earnest in holding that war, plague, and famine are the necessary means, "according to the course and construction of the animal world," of keeping down population, and war is the least

unpleasant of the three; "so that to deprecate war is to fly in the face of nature." An Englishman named Thompson fought as a volunteer in the Texan Army at the battle of San Jacinto. He was walking meditatively over the field among the Mexican dead, soon after the battle, when he was accosted by Dr. Sheppard, my informant, with, "Well, Thompson, how is this for a victory?" "No victory at all," was the reply. "Why, what's the matter? haven't we killed enough?" "Oh, yes, it will do; but I have always wanted to be in a battle where they were all killed on both sides!" Sir William and this Thompson were much akin. N. N.

BELLEVILLE, Ill.

Notes.

THE CENTURY CO. will publish directly, from advance sheets, a new and enlarged edition of Ogilvie's 'Imperial Dictionary of the English Language,' in four octavo volumes, illustrated profusely, as this work has always been; indeed, if we remember aright, its example in this direction was what led to the pictorial Webster and Worcester. The 'Imperial Dictionary' has very distinct and admirable features.

Jansen, McClurg & Co., Chicago, will issue in a few days 'The Times of Gustav Adolf,' as the first volume of Topelius's 'Surgeon's Stories.'

'A Gift of Gentians, and other Verses,' by May Riley Smith, will be brought out with holiday elaborateness by A. D. F. Randolph & Co.

If there was need of an American illustrated scientific weekly like the London *Nature*, there were two places at one or other of which it should be published—viz., Washington, and Cambridge, Mass. The attempt made in this city by the projector of *Science* proved a failure, as might have been predicted. The name, which was a good one, being thus left unappropriated, it has been adopted for a new venture to be published by Moses King, at Cambridge, on behalf of a powerful organization of scientific men, with a fund at their command and Dr. A. Graham Bell at their head. The editor will be Mr. Samuel H. Scudder, who resigns his position as assistant librarian of Harvard University. The new paper will appear early in the coming year. Its collaboration will be on a commercial basis so far as regards original contributions, book reviews, etc. It is perhaps a pity that it will not be printed as well as published in Cambridge.

The *Atlantic Monthly* will hereafter be published in England simultaneously with its appearance in this country, through Ward, Lock & Tyler, instead of, as heretofore, through Trübner & Co.

Much the most sensible discourse we have ever read on the "Study of Short-hand" appears in the *Californian* for December, 1882, from the pen of Mr. T. S. Van Dyke.

B. Westermann & Co. send us Parts 54-56 of the new "chromo edition" of 'Brehm's Thierleben' (Mammals). They will also soon have from across the water a new novel by Georg Ebers, entitled 'Ein Wort.' The time is of the sixteenth century, and the hero a German adventurer in foreign lands.

The Christmas number of the *Publishers' Weekly* is, as usual, a picture-book quite as much as a guide to book-buyers.

D. Appleton & Co. put their imprint on a pretty English edition of 'Sir Roger De Coverly,' of which the illustrations are by Mr. Charles O. Murray. This designer is seen at his best, we think, in the etched frontispiece of Sir Roger and the widow. The woodcuts, though well enough, are not remarkable.

R. Worthington has published, in a showy octavo volume, with large type and open page, Alexander Thomson's translation of Suetonius's 'Lives of the Twelve Cæsars,' apparently the text as revised in Bohn's edition. The latter, however, contains also the treatises on famous grammarians, rhetoricians, and poets, which are wanting in the present edition. On the other hand, engravings of the busts of the emperors and their wives have now been usefully inserted.

We have already noticed as they appeared Macmillan's illustrated sixpenny quarto editions of 'Tom Brown's School Days,' Waterton's 'Wanderings in South America,' and Irving's 'Old Christmas' and 'Bracebridge Hall.' These have since been bound up together, in the order given, with tasteful cloth covers. Inside, the result is rather heterogeneous, owing to the mixture of two and three-column pages, large and small type, the diversity of designs, etc. The price, too, for the binding seems large, but altogether it is far below the cost of the several books in any other form.

The quality of Wilhelm Busch's humor is already known somewhat widely in this country by his 'Max and Maurice.' It resembles nothing American, and is not likely to have any imitators among us. That it has admirers and propagandists is shown by the Rev. Charles T. Brooks's further translation of the text which accompanies Busch's designs, in 'Plish and Plum' (Boston: Roberts Bros.).

Mr. John A. Jennings's 'Readings from the Works of Charles Dickens' (Dublin: Carson Bros.) shortens to advantage many of Dickens's own selections as given in the Ticknor & Fields edition of 1868. It also adds a number which are certainly not hackneyed, but the taste of which for public delivery is somewhat doubtful. Mr. Jennings seems to have aimed to make the readings as dramatic as possible, and has succeeded very well in this. On the whole, the compilation is to be recommended for its declared purpose. The print is clear, but rather too fine.

We have received the prospectus of a subscription work, of which the limited edition will be numbered and signed, derived from the MS. 'View of the State of the Clergy within the County of Essex [England],' preserved at Kimbolton Castle among the papers of the Duke of Manchester. The date is about 1603. The editor, Mr. B. Beedham, of Ashfield House, near Kimbolton, is engaged upon an introduction, illustrative notes, and an index which will greatly enhance the value of this publication. To give some idea of its interest, especially for New Englanders, we may state that Mr. Beedham has made extensive researches concerning Ezekiel Culverwell, who officiated at the marriage of John Winthrop, then aged seventeen, with his first wife, a resident in Culverwell's parish of Great Stambridge, and who remained on intimate terms with the future Governor. Little has hitherto been known about Culverwell, and many corrections will be made in the accepted accounts of him. Though nominally of the Church, the Essex clergy of the period in question were Nonconformists at heart, and Culverwell was deprived of his rectory for refusing to conform. The subscription price for this work is fifteen shillings.

We are glad that Mr. Goldwin Smith's return to America insures the revival of his personal organ, the *Bystander*. The first number of a new series is, we understand, now in the press.

The great success of the free lectures at the National Museum in Washington has led to the enlargement of the course for the coming year, and to the institution of a course for the High-School pupils, which will precede the other.

From the General United States Agency, No. 2 Wall Street, we have received the ground plan of the Dutch International Exhibition, to be held in Amsterdam from May 1 to October 31, 1883.

L. Prang & Co. send us a great variety of their Christmas and New Year illuminated cards, including under the former head the designs for which prizes were awarded (*a*) by a committee of artists and (*b*) by popular vote. There was coincidence of judgment only in the case of the first prize, won by Miss Dora Wheeler, and, barring some incongruities in her conception, it was rightly preferred to the others. Miss L. B. Humphreys's child kneeling to Santa Claus at the hearthstone ranked second, and has perhaps more genuine and natural sentiment than any of its competitors. The remaining themes were somewhat hackneyed.

Miss Leggett, too, offers "premium Christmas cards," seven in number, of which three were designed by male artists who were successful also in the Prang competition. They are of nearly uniform size, and range from Mr. Alfred Fredericks's conventional "Angels and Child" to Mr. W. H. Beard's animal feast. The color printing is not comparable with that of the Prang series.

At the formal reopening of the courses in the University of Liége, says the *Athenæum Belge*, the Rector, M. Trasenster, delivered an address on the necessity of admitting women to the higher education (*de créer un enseignement supérieur pour les femmes*). His views as quoted in the journal just named deserve to be translated, as their bearing is not confined to France and Belgium.

The sixth part of Leuckart and Nitsche's 'Zoologische Wandtafeln' (Cassel: T. Fischer; New York: B. Westermann & Co.), containing plates xv.-xvii., has just appeared. It includes a plate by Dr. Leuckart on the structure and development of the tape-worm, one on the hydroids, and a third illustrating the structure of Phylloxera, its injurious effects on the vine, and its distribution in France. This number fully sustains the character of the series as the best and at the same time the cheapest set of wall plates in the comparative anatomy and embryology of invertebrates. Each plate is devoted to a single class or order, and shows the anatomy and main features in the development of one or more forms. There are, on the average, about nine figures in each plate, and these are printed in colors either natural or (in anatomical illustrations) diagrammatic. In the present number, plate xv. contains a large figure of Tænia saginata, and detailed figures of the head and mature segments in two stages of this species and those of T. solium, with a figure of the cysticercus of the latter species. Plate xvi. has five figures on the structure of Hydra, and seven others of typical hydroids. Plate xvii., in addition to figures of diseased roots and leaves of the vine, has thirteen illustrations of eggs, larvæ, and adults of the Phylloxera. The series now includes in its illustrations of insects three of the most destructive forms—the grasshopper, the potato-beetle, and the Phylloxera. Each plate is about forty-two by fifty-four inches in size, is accompanied with explanatory text, and, unmounted, will cost in this country about one dollar.

—Our civil-service deformity manifests itself as well in State and municipal as in national affairs. Last June we noted the fact, which came out at the Cincinnati Convention of Librarians, that the greater part of the Western librarians owe their appointment to, and fear removals from, purely political causes. We have just heard that the State Librarian of Indiana, a capable officer, has been decapitated in consequence of the recent elections, to make way for one of whom

we know nothing, but who, it is safe to say, has probably not superior qualifications. The State Librarian of Michigan is also threatened. This is a particularly aggravated case. The present incumbent is declared by competent judges to be the only good librarian the State has ever had. When she took charge of the library the room was a lounging place, the sets of books were very incomplete, and in the way of further spoliation. She soon established order and decorum; she made herself familiar with the books, so as to direct inquirers, and set herself to fill up deficiencies, by purchase or exchange, as fast as the means of the library would allow. The library thus well cared for received more attention and larger appropriations from the State, and is now declared to be, for its size, a remarkably good one. The law library particularly is said to be well selected; for Mrs. Tenney, one of the judges says, has shown more judgment in buying than most lawyers. This is the official who is to be turned out to make way for a woman who has stumped the State for the victorious party. If the new claimant were an excellent librarian, it would be gross ingratitude to turn out a faithful and efficient officer to make way for her. Probably she knows nothing whatever of the work. Librarians are born, but they have to be made also. When one who was evidently a born librarian has also been made by the experience of a number of years, it is very poor political economy, however good politics it may be, to let her services be lost to the State, and take in her place one who has all the experience to gain. A few instructed persons know that to perform the work of a librarian fairly requires months of apprenticeship; to perform it well requires years of practice. This, however, after all, is not to the point. The desire of the politician is, not that the public service should be well done, but that his friends should be so treated that they will support him at the next election.

—In his address before the Physics Section of the American Association for the Advancement of Science, at Montreal in August (now printed in pamphlet form), Prof. T. C. Mendenhall has given a clear and concise view of the problem presented to our colleges, universities, and schools of science in the methods of instruction in physics. He shows that the cour es of instruction which have been adopted are unbalanced. In some schools, physics is used merely as the ground on which to display a mathematical analysis whose symbols often convey to the student but vague conceptions of the physical relations which these symbols are intended to show. In support of this opinion the author quotes Mr. G. H. Darwin, who, in speaking of his experience as examiner in the highest school of mathematical physics, says:

"The subject which exhibited the average weakness of grasp most flagrantly was thermodynamics. A great many men had read something of it, but very few really understood what they attempted to explain. Extraordinary muddle and confusion was sent up in answer to a question on the absolute scale of temperature. On another question, while the very elements were unknown to those who answered, the same men reproduced faultlessly the algebraic calculation of the thermodynamic function for a perfect gas."

In other courses of physics too much is done in mere qualitative and indefinite work, of little value in those applications of physics which are affecting so profoundly the relations of individuals and of nations. Professor Mendenhall, we think, is quite right in urging that quantitative work should alone be pursued in our physical laboratories, and that mere qualitative or illustrative work should be relegated to the lecture-room. The teaching of physics in a school of science may be divided into three parts: (1) a thorough course of mathematics; (2) a course of text-book and lecture work (fully illustrated by carefully prepared experiments), in which the student shall learn to apply his mathematical knowledge in the elucidation of the phenomena of physics; (3) the work in the physical laboratory, in which each problem given shall be discussed mathematically and experimentally, and more attention be paid to the quality than to the amount of performance. The balancing of these three parts of the course so as to bring about their harmonious operation is a point to which Professor Mendenhall wishes to call special attention.

—It is not long since we had 'Arrows of the Chace,' a collection of Mr. Ruskin's letters to the newspapers, and now Mr. Charles Reade has gone and done likewise, and we have a volume of 'Readiana: Comments on Current Events' (London: Chatto & Windus; New York: Scribner & Welford; 8vo, pp. 330). A very few of the articles here gathered together are regular essays or sketches; the "Box-Tunnel" is one, and "A Brave Woman" is another. The rest have at least the form of letters. In the catalogues of dealers in autographs we often see appended to some showy item the phrase, "a characteristic specimen." There is scarcely a letter in this volume to which this phrase might not be applied justly. Most of them are perfervid and fiery, and recall the epigram to the effect that "Mr. Reade is a literary fusee—you have only to touch him and he goes off!" Some are feeling and eloquent appeals, like "A Hero and a Martyr" and the tribute to "A Dramatic Musician." Some deal with topics of permanent interest, like the hundred pages devoted to "The Rights and Wrongs of Authors," which is in fact a historical discussion of the copyright question, recalling the earlier work on "The Eighth Commandment." But most of them have been called forth by some passing wrong either against himself or against some one who needed a defender; and all of these are written at white heat, and glow even now as we read them through the non-conducting types. More interesting to an American reader than any argument about Col. Valentine Baker or the Tichborne claimant are the many defences of Mr. Reade himself and of his works. We have here the letters defining the "Sham-Sample Swindle" and the "Prurient Prude," and the letters defending 'A Terrible Temptation' against the charge of indecency, and 'Foul Play' against the charge of plagiarism. Altogether this collection of Mr. Reade's epistolary correspondence with the public through the papers is a volume which no one can afford to overlook who is really interested in one of the most original and vigorous writers of fiction of our time.

—The transformation of France from the most bellicose to the most pacific of nations has been commented upon by all the journalists with astonishment and in some cases, one fancies, with a slight feeling of disappointment. It is so much more commonplace to settle down into the calm pursuit of physical or even of artistic comfort, than to shriek *La gloire!* to astonish Africa with zouaves, and to see Europe listening to catch even the silence of one's Emperor; quiet and money are so much less romantic than *la revanche*. A similar change is making itself seen in internal affairs. It is not so many years ago that the Commune held a carnival of unreason in the French capital. Compare with this the result of the strikes at Montceau-les-Mines, and the threatening letters which turn out to be hoaxes in that formerly most dangerous city, Lyons, and the entire indifference shown by the miners at St.-Étienne to the Socialist Congress held there late in September. The Socialists, after quarrelling among themselves (the "Opportunists" expelling the "Révolutionnaires"), finding, like Mahomet, that the mine would not come to them, resolved to go to the mine, and organized conferences to which they invited the miners; but at one of these, when they urged the latter to take possession of the mine and the plant, they met with a unanimous cry of protestation. "Since the miners are not *à la hauteur*," said one of the Socialists, "we will go into the mine and bring them by force into the workman's party." To which a miner replied: "Well, come into the mine and see how you will be received. If you knew what the miners think of you, you would moderate your propaganda. When workmen leave your conferences they carry away this opinion of you: that you are trying to force yourself forward at their expense, and only excite them to revolt because you find it profitable for yourselves." The reproach is said to be deserved, the members of the Congress being almost entirely *bourgeois*, some of them pretty well off, or writers, or members of liberal professions, and by no means laborers. It is a healthy sign when workmen begin to feel some distrust of counsels coming entirely from the outside, and from persons who have nothing to lose by the course which they advise. The accredited representative of the miners is of an entirely different character, M. Michel Rondet, an energetic, hard-working, and intelligent miner, who has been forced by his companions to leave underground work and devote himself entirely to the defence of their interests. For this service he receives five francs a day—not magnificent pay for an advocate; but if he received more, they would trust him less.

—The Socialist Congress having shown itself entirely unpractical, the Syndical Chamber of Miners called for October 1 a meeting of all the deputies of the mining districts, in order to lay before them the grievances and claims of their laboring constituents. Nine deputies came. A representative of the great companies spoke first. He was followed by M. Rondet, who read the manifesto of the Syndical Chamber, setting forth their demands, which bore chiefly on three points: *caisses de secours*, hours of labor, and accidents. The deputies promised to take the demands into serious consideration and labor to find a solution of the difficulties. A dinner followed, of which perhaps the most noteworthy feature was that the miners kept on their hats during the whole of the three hours that it lasted. With the most friendly intentions the deputies could not follow their example. We do not suppose that there are to be no more communistic cakes and ale, any more than that we have seen the last French war. At this very meeting of conciliation the last thing said was the remark of a representative of the miners to the deputies: "You know now what we wish. If you do not grant our demands, we shall see what we shall see." But there is evidently a beginning and more than a beginning.

—The prolific French novelist, M. Louis Ulbach, who has been taking a short trip in Holland, expresses his wonder at the progress made since, eighteen years ago, he made one of those little journeys which Liberal writers used to find necessary now and then under the Empire. Amsterdam has more than doubled its population and its extent. Moreover, owing to the force of individual initiative and independence upon the Government to do everything, "as we Parisians do," it has gained as much in quality as in quantity. The tramways, as all Europe calls our horse-cars, are more comfortable and more profitable than in Paris; everybody uses the telephone—the man that does not is remarked; a great zoölogical and botanical garden, which the Jardin des Plantes might envy, has been founded; and finally, a great exhibition is to be held

there in 1883, and the Dutch, who have been rivalled only by the Belgians and the Americans in literary piracy, are to see the sixth Congress of the International Literary Association, and perhaps be converted.

—The French School at Athens continued last summer its investigations in Delos, which have been going on for several years. The results of the work of this season are not without much interest, although it could not be expected that they would approach in importance the work already done upon the Temple of the Delian Apollo, and the discovery a few years ago in the sacred precinct of the wonderful series of archaic sculptures which have thrown new light upon the study of early Greek plastic art. Among the most important discoveries of this season are a fine inscribed mosaic, found near the sacred harbor, a colossal statue of the Goddess Force, by Melanos the Athenian, and a statue above natural size of a kneeling Gallic soldier—a work of Agasios of Ephesus, the artist who carved the famous "Borghese Warrior" of the Louvre. The excavation of the theatre has also been begun, and has revealed great marble tripods set up in the orchestra as votive offerings, and two Atlantes, which once supported either (like those of the Dionysiac Theatre) the floor of the stage, or some raised platform or part of the stage building. The seats immediately surrounding the orchestra of this theatre are provided with backs similar in character to those of the Odeion of Herodes in Athens.

—A new imitator of *Notes and Queries* has appeared at Padua—*Giornale degli Eruditi e Curiosi*, of which the first number appeared in October, and the price is twenty lire ($4) a year. It may be worth while to recall the other journals of like character. They are, so far as we can recollect, *Notes and Queries*, 1849-82, the parent of them all; *De Navorscher*, Amsterdam, 1855-82; *L'Intermédiaire des Chercheurs et Curieux*, Paris, 1864-82 (No. 347 is dated October 25); one published at Madrid called, if we remember right, *El Intermediario; Educational Notes and Queries* (Salem, Ohio, 1875-81); and finally the long-titled *Miscellaneous, Literary, Scientific, and Historical Notes, Queries, and Answers* (No. 1, July, 1882, Manchester, N. H.). Every library of any size has *Notes and Queries*, but *L'Intermédiaire* is not often to be met with, and we doubt if half-a-dozen libraries in the country have *De Navorscher* and *El Intermediario*. The *Educational Notes and Queries*, also, is very scarce in the East. A number of periodicals have a column of "Notes and Queries" (*Polybiblion* and the *Library Journal* occur to us at this moment). Several libraries hang up strips of yellow paper, headed "Questions and Answers," as an intermediary for their frequenters. The column "Answers to Correspondents" in numberless journals amounts to the same thing. So does Mr. George Augustus Sala's "Echoes of the Week" in the *Illustrated London News*. Thus, knowledge is broken up fine, as soil is made by Mr. Darwin's earthworms. What will grow in it?

—It is now—thanks, mainly, to the researches of Professor Dozy, of Leyden—well established that there are two Cids: a legendary Campeador, the hero of a thousand battles for the Cross and paragon of all chivalric and civic virtues, and an historical Rodrigo Diaz de Bivar, a famous freebooter, fighting by turns under the Christian banner of Spain and under that of her infidel foes. It was ultra-scepticism which tried to consign the Cid among such mythical heroes as Amadis de Gaul, Tell, or Romulus. And his Ximena, too, is no myth. The very marriage-contract which united them in wedlock is still extant in the original. The remains of both have also been preserved in a double sarcophagus at the Carthusian monastery of San Pedro de Cardeña, near Burgos. They were, however—as has recently been made public—not left intact there after the victory of the French near that city in November, 1808. About a year ago a literary company, including Dr. von Lehner and Dr. Lauser, a diligent writer on Spanish history, on visiting the art galleries of Prince Charles Anthony of Hohenzollern, at Sigmaringen, were surprised by their host's pointing out to them an artistically-wrought sarcophagus, containing, as he said, bodily relics of the Campeador and his famous consort. Lauser subsequently revisited Sigmaringen in the company of Tubino, a member of the Spanish Academy, and, with the permission of the Prince, examined both the remains and the documents referring to them in the Archives of Hohenzollern. The facts elicited are these: After the battle of Burgos, Prince Salm-Dyck and two French officers of high rank visited the monastery of San Pedro, which had been ransacked by the French soldiery. The double sarcophagus being found broken open, they carried off a part of its sacred remains, which Prince Salm-Dyck afterward placed in a small sarcophagus executed after the Spanish model. A protocol, drawn up in Paris in 1811, duly authenticated the fact of transfer. In his old age, in 1857, Salm-Dyck presented the treasure to his friend Prince Charles Anthony. The latter, being asked by his guests whether he would be inclined to restore the relics to Spain if the gift were deemed valuable, answered in the affirmative. The necessary inquiries were made, King Alfonso XII. sent the Prince an autograph letter, and the favor asked for has been politely granted by the father of the Prince, Leopold of Hohenzollern, who, in 1870, was offered by Prim and his followers the crown of Spain, torn from the brow of Alfonso's mother.

—The third volume of Sara F. Hennell's 'Present Religion' (Trübner, 1882) is introduced by a prolonged dissertation on comparative ethics from a somewhat novel standpoint. After premising that "the future ripening of all true philosophy will be identified with the ripening of the minds of women," who are more platonistic and immaterialistic than men, the writer proceeds to develop the "sexhood theory," which she had applied in religion, with reference to morals also. By introspection, and by subjecting all opinions elsewhere derived to self-appeal till her intuitions are contented, she seeks to reach the distinctively woman's view of morals, which it is assumed will rest less upon the science of ethics (which relates only to conduct, and is more masculine) than upon religious morality, which is more feminine and emotional. The general result attained by this method is that neither empiricism nor supernaturalism can give the true basis of morals, but that the comparative ethics of sexhood must be "developmental," and must rest on a sense of duty as the most personal of all our sensations, and one which can have no strength, at least to women, if impersonal or if undirected either to God or to human beings. The power of truth, whether intellectual or moral, is at bottom loyalty, and implies a will subordinated to the general order of things in the universe. Duty thus involves dualism. The authoress's "sense of deepness," always shocked whenever serious works are addressed—as are most except the Bible and much of Mill and Comte—to men readers only, was especially wounded by Herbert Spencer's theory, that a sense of duty diminishes with increasing moralization, till only pure spontaneity remains. This, and the position he ascribes to women generally, makes a very different ethics and sociology from his own—probably her own—the logical culmination of all of Spencer's works preceding his 'Ethics.' The fact of dying and the dread of death are the basis of awe, and therefore, when softened by a slowly unfolding trust in nature despite death, of religion. Notwithstanding its peculiar stringyness of style, modelled on that of Comte, which makes it hard reading, the work is not without much suggestiveness, especially on account of its frankness.

—The third number of the 'Schweizerisches Idiotikon' lies completed before us, and gives evidence of rare linguistic ability combined with the most laborious industry on the part of the two editors, Profs. Fr. Staub and Ludwig Tobler. It embraces only the German dialects of Switzerland, and is the result of the coöperation of more than 400 contributors from all classes of the people. From 1862, when the Society of Antiquaries in Zurich first appointed a commission for the purpose, contributions have been pouring in from teachers and clergymen, from Government employees and professional men, from linguists and from untrained agriculturists, to illustrate the Swiss dialects in every manner and shape; even foreign university professors have extended a helping hand. To digest the contents of all these manuscripts, a corps of assistants has been busily engaged for ten years; the federal and some cantonal governments have contributed to the national work by aiding it financially. The dictionary is published by J. Huber, at Frauenfeld, in Roman type and quarto size, with two columns to the page, and is edited after the most approved method of modern lexicography. The quaint and ever-varying pronunciation of the various cantons necessitated the use of a linguistic alphabet with some letters bearing diacritical marks, and also a peculiar alphabetic order, by which, for instance, the words beginning with vowels had all to be brought together on account of their interchangeability in passing from one valley to another. Whenever a term is used in several significations, these are presented in the order of their historic evolution. The key to this evolution is furnished by the etymology of the word, and particular pains are taken to elucidate the linguistic origin at the end of each item. The principal dialectic variations of the terms are often helpful in disclosing the etymology, and a full array of them is quoted after each heading. References taken from early and recent authors, from proverbs, popular songs, ditties, and other folk-lore, from every-day conversation and from other sources, are given in profusion as helps for establishing the various definitions of a term. Wherever it is desirable, other German dialects are adduced to prove certain acceptations of a word of rare occurrence. The references from Swiss authors date back to the sixteenth century, although a few go back to the thirteenth, in order to exhibit fully the historic connection of the present idioms with those of former centuries, especially with the period called *Mittelhochdeutsch*, whose chief literary products sprang from Southern Germany and contain many vocables identical with or closely akin to terms found occurring at the present time only in German Switzerland. That the Swiss dialects are, linguistically speaking, the most important German dialects was stated long ago by the celebrated Jacob Grimm. The 'Idiotikon' gives the derivatives under the heading of the base or stem of which they form compounds—*e. g.*, *Unachtsami* under *Acht*, *Schifferi* under *Eri*. Political and ecclesiastical history, economy, husbandry, local and personal nomenclature, are equally well illustrated by the rich contents of this laborious publication, and there is no end

to appellations from the domain of natural science; thus we find the names of several hundred species of apples and more than thirty species of potatoes. Very amusing and instructive at the same time are the popular rhymes illustrating the customs, habits, and practical philosophy of the country rustics.

—Some points of general interest are developed in the introduction to the 'Bibliographie de l'Astronomie' (by J. C. Houzeau, Director of the Royal Observatory of Brussels, and A. Lancaster, Librarian of the same), the fourth and last fascicule of the second volume of which has lately appeared. The authors have tabulated the number of astronomical papers by the dates of publication, from 1600 to 1880, and have plotted the results in a *Courbe des Travaux astronomiques*, which illustrates with striking effect the rapidity with which the number of these articles is increasing with the time. Political revolutions have but slightly affected this progressive activity—excepting only the great wars of the First French Empire, which occasioned a remarkable decrease in the number of papers, the epoch of greatest depression being the year 1815. Important astronomical discoveries and events have had the most marked effect in stimulating the production of astronomical works; for example, the last transit of Venus, 1874, and the discovery of Neptune, 1846. Of some 1,800 articles indexed in this volume of the 'Bibliographie,' 6,000 are written in the French language, 5,800 in English, 4,400 in German, 800 in Italian, and 600 in Latin—the remaining 400 being divided unevenly among nine other languages. The four most prolific names are those of Secchi, Lalande, Zach, and Bessel, while those who have averaged the greatest number of papers per annum during the period of their activity are Flammarion, Secchi, and Proctor. The sections of this volume are nine in number, and relate to the History of Astronomy, Biography, Spherical Astronomy, Theoretical Astronomy, Celestial Mechanics, Astronomical Physics, Practical Astronomy, Monographs on the principal bodies of the Solar System, and Stellar Astronomy. The first and third volumes, being thought of less pressing importance than the second, will be published subsequently, and will relate the first to Works (or separate publications), and the third to Observatories and the observations made at them.

BARTLETT'S FAMILIAR QUOTATIONS.

Familiar Quotations: Being an Attempt to Trace to their Sources Passages and Phrases in Common Use. By John Bartlett. Eighth edition. Boston: Little, Brown & Co. 1882.

THE appearance of a new edition of this useful handbook will be welcomed by all lovers of good literature, especially when they learn that "the present edition contains quotations from one hundred and twenty-five authors who are not represented in any former edition." From its modest beginning, in 1855, in a little volume of less than three hundred pages, mostly confined to quotations from the English poets, down to the present substantial one, more than three times as large, and containing a medley of citations, prose as well as poetical, and from various languages, we have remarked a constant increase in its usefulness. For literary workers it has become a *vade-mecum*, not only on account of the wide range of its selections and the completeness of its index, but especially for its accuracy in citation, by which it has enabled every one to discharge with great saving of time and trouble the much-neglected duty of "verifying quotations." It is by far the best collection of quotations that has ever appeared in any country or in any language; and whoever will undertake the task of preparing a similar manual from the Greek and Latin writers will deserve well of all classical scholars. But while we cheerfully bear witness to its steady improvement, we must hint to the author that if it has increased in bulk, so has it in price; and, as there would seem to be no limit to its future size, we would whisper gently in his ear the saying of Callimachus: "τὸ μέγα βιβλίον ἴσον εἶναι τῷ μεγάλῳ κακῷ."

Naturally, many persons must have contributed to the production of this work, and to some of them the author makes grateful acknowledgment, while stating that the "editorial labors" have been shared with another gentleman. To this divided responsibility possibly we may attribute certain faults in its execution which may readily be corrected in subsequent editions. There are far too many commonplace quotations from inferior writers, which neither are nor deserve to become "familiar," by whose removal space would be gained for important contributions from better sources. The suggestion of parallelisms of expression, and the hunting up of instances of the use of the same thought or figure of speech by different authors, has been carried to an inordinate length. On comparing the present with the last edition, we remark at once a great improvement in the index of authors, which in that was disfigured by numerous errors in alphabetizing. Of course we have a right to expect as one of the chief merits in such a work scrupulous accuracy, both in giving the quotation and the place where it is to be found. Some slips in this regard which we have detected we will proceed to point out, as well as to make our contribution toward the improvement of the work by suggesting certain omissions, which may be remedied in future editions.

Among the new authors, Omar Khayyám makes his début somewhat unluckily, as "pity" is printed for "piety" and "conceal" for "cancel" in Fitzgerald's translation of the 'Rubaiyat,' st. lxxi.; and we do not understand why the striking and often-quoted couplet from st. lxvii. should not also have been given: "Heaven but the vision of fulfilled desire, And Hell the shadow of a soul on fire." We miss the name of Matthew Arnold from the list of contributors, although space has been found for that of S. J. Arnold; but surely we should never have heard so much about "sweetness and light" if 'Culture and Anarchy' had never been written, and he might at least have been noticed in a note to the quotation from Swift's 'Battle of the Books.' We would also suggest the admission from his 'Stanzas from the Grande Chartreuse,' of "Wandering between two worlds, one dead, the other powerless to be born," as well as "The kings of modern thought are dumb." Charles Kingsley and Mrs. Browning are each represented by a single extract, to which we would add as equally deserving candidates for the honor, "Be good, sweet maid, and let who will be clever; Do noble things, not dream them all day long," from 'A Farewell,' and "Men must work and women must weep," from 'The Three Fishers'; and for Mrs. Browning, "Knowledge by suffering entereth, And life is perfected by death," from 'A Vision of Poets,' imitated from Æschylus (Agam., 177, "Πάθει μάθος"); and from 'Aurora Leigh,' b. ii.:

> "God answers sharp and sudden on some prayers,
> And thrusts the thing we have prayed for in our face,
> A gauntlet with a gift in it."

Mathew Roydon gets the credit for his beautiful verses upon Sir Philip Sidney, but twice they are absurdly called "An Elegie on a Friend's Passion for his Astrophill," instead of "Elegie, or Friend's Passion," etc. Moreover, we know no reason why Prof. Child's edition of Spenser should be given as the authority for Todd's discovery that they are not the production of Spenser. Philippe Gaulthier, author of the famous "Incidis in Scyllam, cupiens vitare Charybdim" is stated to be of "about the thirteenth century," although Charles Sumner, in an elaborate article in the *Atlantic Monthly*, Dec., 1865, showed that the "twelfth" is the correct date. Buffon's celebrated phrase is quoted, "Le style est de l'homme même," although the preposition has no business there ('Œuvres Complètes,' vol. xxv., page 269). The inscription over the door of the library at Thebes is translated "Medicine for the soul," while its real meaning is not "medicine," but the place where it is dispensed. On page 423, n. 2, "another and the same" is given as the equivalent of the Latin phrase "alter et idem" instead of "aliud et idem."

Most of the quotations from Boswell's 'Johnson,' on page 317; from Wordsworth's 'Excursion,' on page 422; and from Macaulay's 'History,' on page 522, are so badly misplaced that we would advise their complete revisal. We suggest the insertion of Johnson's anecdote about "the retired tallow-chandler," anno 1775, and of Macaulay's "Young Levite" ('Hist.,' vol. i, chap. 3). We should also append to the quotations from 'The Excursion,' b. iv., "Recognizes ever and anon the breeze of nature stirring in his soul," and "So build we up the Being that we are."

We sometimes notice a tendency to mutilate quotations, as in the instance from Milton's 'Samson Agonistes,' l. 129, where it reads "Ran on embattled armies clad in iron," but omits the pith of it—"And weaponless himself made arms ridiculous." So the editor quotes from the Twelfth Sonnet, "License they mean, when they cry liberty," but omits the next line, "For who loves that must first be wise and good." We are also surprised to miss from "Lycidas" l. 188, "He touched the tender stops of various quills." From Sir Thomas Browne's 'Religio Medici,' part ii., sec. 9, he takes what is said about the "music of beauty," but omits the more beautiful passage about the "music of the spheres." In the citation from Michael Drayton's lines about Marlowe, he leaves out "Had in him those brave translunary things that the first poets had."

Sometimes an authority is quoted at second hand, when a little search might have discovered the original, as in the anecdote about Burns, on page 372, taken from 'Chambers's Cyclopædia,' instead of Lockhart's 'Life of Scott,' vol. i., chap. 4. On page 283 a blank is left, which might have been filled with the name of Mr. Broadhurst, who might thus have been easily rescued from oblivion; and the inquirer for the origin of the beautiful translation from Uhland, "Take, O boatman! thrice thy fee," might have been referred to the *Edinburgh Review* (Oct., 1832). So when Coleridge says he borrowed the expression "myriad-minded," to apply it to Shakspere, from "a Greek monk, who used it of a Patriarch of Constantinople," his error might have been corrected. The monk was Naucratius, who employs it in an encylical letter upon the death of his teacher, S. Theodore Studita, Abbot of the Monastery of Studium, and not Patriarch (Migne, 'Patrologia' [Ser. Græc.], vol. xcix., p. 1828). The proverb about the "mills of God grinding slowly" is given from the Greek under two different forms, but we are not told that both come from an adage cited by Plutarch in his treatise "Concerning those whom God is slow to punish," chap. 3, and that the one was put into a metrical form by Henry Stephens, and inserted in his 'Thesaurus,' while the other passed into the apocryphal collection of the Sibylline Oracles.

As to what may properly be styled "familiar quotations" deserving a place in such a hand-

book as this, and what authors ought to be included in it, there must necessarily be wide diversity of opinion. But since Molière and Voltaire have both figured in the last two editions, we cannot understand why "Que diable alloit-il faire dans cette galère" ('Les Fourberies de Scapin,' Act ii., Sc. 11); or "Tuer un amiral pour encourager les autres" ('Candide,' chap. xxiii.); or "Le superflu chose très-nécessaire" ('Le Mondain,' 1736), should all have been omitted. Of course the miscellaneous appendix is capable of indefinite expansion, and naturally will include many familiar quotations from the Greek and Latin; but we should certainly recommend as candidates for admission such as are almost universally misquoted, like "Ne sutor supra crepidam" (Plin. 'Hist. Nat.,' xxxv., 36, 12—not "ultra"), or "Non passibus æquis" (Verg. 'Aen,' ii., 724—not "haud"), or "Dictum sapienti" (Plaut. 'Pers.,' iv., 7, 19; Ter 'Phor.,' iii., 3, 8—not "verbum"). There are also many phrases, particularly Latin ones, whose origin is not generally known, and these it might be proper to put upon record in a place where they would naturally be sought for. Such are "E pluribus unum" (Verg. 'Moretum,' l. 103; Cic. 'De Off.,' i., 17), and "Manus hæc inimica tyrannis Ense petit placidam sub libertate quietem,' which assuredly should find a place in such a Boston book. About the origin of this quotation there is some uncertainty. A correspondent of *Notes and Queries*, March 10, 1866, stated that the first line is to be found in a patent granted in 1616 by Camden (Clarencieux), from which it may have been borrowed by Algernon Sidney. It was written by him in the Album of the University of Copenhagen, according to a letter of his father ('Familiar Letters written by John, late Earl of Rochester and other persons of honor and quality'), or in that of the King's Library, according to the statement of Lord Molesworth, who adds that it was torn out by the French Ambassador ('An account of Denmark as it was in the year 1692'). We would call to the editor's notice another elaborate article by Charles Sumner in the *Atlantic Monthly*, Nov., 1863, upon the origin of the famous compliment paid to Franklin, "Eripuit cœlo fulmen, sceptrumque tyrannis"; also a paper in the Transactions of the Cambridge Philological Society, vol. i., page 47, showing how the phrase "In puris naturalibus" is entirely misapplied, in borrowing it from the scholastic philosophy, in which it denotes "the natural powers of man prior to divine grace." "Stare super vias antiquas" is to be found in the Vulgate, Jeremiah, vi., 16; "Habent sua fata libelli" in Terentianus Maurus, 'De Syllabis,' v. 1007; "Pereant qui ante nos nostra dixerunt," in Donatus, apud S. Hieronymum, 'Comm. in Eccles.' i., 9 (Migne 'Patrol.' [Ser. Lat.], vol. xxx., p. 1019); "Semel insanavimus omnes," in Joh. Bapt. Mantuanus, 'Eclog.' i., 178; and "Perfervidum ingenium Scotorum," in the "Jesuita Vapulans" of And. Rivetus, and not in Buchanan, as has often been stated.

But as the work is principally designed to give the sources of "familiar quotations" in the English language, we will proceed to mention a few that certainly ought to have a place in it. Such are, for example, the story about "the poor and pious girl, who wrote poor and pious poetry"; this can be found in a note contributed by Richard Grant White to page 59 of the first American edition of Burton's 'Book-Hunter.' Another is the expression, "Sons of Liberty," which was first used by Col. Barré, in a speech on the Stamp Act, February 7, 1765. To the quotations from standard authors we would add: "The greatest clerkes ben not the wisest men," 'Canterbury Tales,' l. 4052 (The Reve's Tale). "I think we do know the sweet Roman hand," 'Twelfth Night,' Act iii., Sc. 4. "Outdid the meat, outdid the frolic wine," Herrick, 'Ode for Ben Jonson.' "Here are sands, ignoble things, Dropped from the ruined sides of kings," Fr. Beaumont, 'On the Tombs in Westminster Abbey.' "While his off-heel, insidiously aside, Provokes the caper which he seems to hide," Sheridan, Prol. to 'Pizarro.' "Doing good, Disinterested good is not our trade," Cowper, 'Task,' b. i., l. 673. "Not rough nor barren are the winding ways Of hoar antiquity, but strewn with flowers," Warton, Sonnet written in Dugdale's 'Monasticon.' "Rushed into the field, and foremost, fighting fell," 'Childe Harold,' c. iii., st. 23. "Hiving wisdom with each studious year," *id.*, *ib.*, st. 107. "The fatal facility of the octosyllabic verse," Preface to 'Corsair.' "Handsome is that handsome does," 'Vicar of Wakefield,' ch. i. "Fair exchange was never robbery," 'The Antiquary,' ch. xxxviii. (Motto, Old Play). "Those blessed consolations in distress," Preface to the 'Excursion.' "Those old credulities to nature dear," Wordsworth, 'Memorials of a Tour in Italy,' iv. "O be wiser thou, Instructed that true knowledge leads to love," *id.*, 'Lines left upon a yew-tree seat.' "His honor rooted in dishonor stood, And faith unfaithful kept him falsely true," 'Idyls of the King' ("Elaine," l. 873). "The long, mechanic pacings to and fro, The set, gray life and apathetic end," Tennyson, 'Love and Duty.' "Like glimpses of forgotten dreams," *id.*, 'The Two Voices.' "Laurel greener from the brow of him that uttered nothing base," *id.*, 'To the Queen.' "Olympian bards who sung Divine ideas below; Which always find us young, And always keep us so," Emerson, 'Ode to Beauty.' "Hammer in the Horologe of Time," Carlyle, 'On History,' and 'Death of Göthe.' "The one thing finished in this hasty world," Lowell, 'The Cathedral.'

Want of space and no lack of material compels us to pause here, with the suggestion to the editor that he is slightly inconsistent in not placing beyond question the origin of the motto on his title-page from Montaigne ('Essays,' b. iii., ch. xii.), as its paternity has frequently been questioned. We will append such minor errors or misprints as we have noted. Page 138, line 3 from bottom, "Res" is printed instead of "Re"; page 154, line 3 from bottom, "Ibid" for "Book ii., Song 2"; page 167, line 20, "vol." for "book"; page 196, line 3 from bottom, "14" for "13"; page 212, line 4 from bottom, "n. 4" for "3," and for "ad. fin. 1" read "sect. vi., par. 18, 1"; page 253, line ult., for "278" read "298"; page 366, line 15, for "2" read "11"; page 364, n. i., read "page 606." On page 261 the quotation from Aaron Hill is printed as if the two stanzas were separated instead of successive, and the same is true, on page 387, of those from Burns's "Ae Fond Kiss"; on p. 360 the quotation from Cowper, 'Task,' book i., l. 702, belongs to book ii., same line; while in the index of authors, "Browne, Wm.," read "154"; "Darwin, Erasmus," add "423"; and "Shenstone," add "458."

Outlines of the Life of Shakespeare. By J. O. Halliwell-Phillipps, F.R.S., etc. The second edition. London, 1882. 703 pp.

Does it ever occur to us how deeply we are indebted to Shakespeare, not only for what he has done, but for what he has not done—for his virtues of omission as well as his virtues of commission? We may try to estimate what we owe him for his revelations of our springs of action, for his profound philosophy, for the matchless beauty of his poetry, for the harmony of his verse; but all these elements, and many more, do not exhaust his claims upon our gratitude. To a less degree, of course, these may be found in other poets. But more is Shakespeare's due for two other things which he did not do—viz., he did not read his proof-sheets, and he did not write an autobiography. No lover of his kind can contemplate with composure the idleness and torpor that would have benumbed editorial brains for the last hundred and fifty years had Shakespeare bequeathed to us his immortal dramas with every word spelled right, and all commas duly marshalled. Where would have been that ambition whose height is reached in the fit location of a semi-colon? Of what earthly use would be all our knowledge of ancient sports and pastimes, of unique black-letter volumes, or of Elizabethan learning generally, if we could not display it in explanation of "Vllorxa," or that "dram of eale," or if any schoolgirl could see through "runawayes eyes"? Verily, a deep debt of gratitude the world owes to "the divine Williams" for his contempt of printers, and to Isaac Jaggard and Edward Blount for deserving that contempt by issuing in 1623 that precious, misspelled, ill-punctuated First Folio; and the uncertainty of Shakespeare's text extends to the details of his life. We do not even know for certain the day of his birth, and we doubt the manner of his death; and how he amassed his large fortune is the wonder and despair of modern playwrights. It is even denied point-blank that he ever wrote any of the plays which pass under his name; that at most he merely copied them off, so that Heming and Condell could with truth affirm that there was "scarce a blot in his papers." This misty vagueness envelops even his tomb, bearing an epitaph which was written we are scarcely sure by whom, breathing a curse we scarcely know for what. The portraits of him that survive present every style of feature, passing in a series, from the familiar face to a resemblance to the newly elected Governor of Massachusetts, and so on to what is like nothing in the heavens above, or the earth beneath, or the waters under the earth. It is not to be supposed that the man and poet is for us only this dim outline because we will not rub our eyes and look for him. We have rubbed our eyes in search of him until they would gaze an eagle blind, but no clearer can we see him. Every nook and corner, cranny and crevice has been ransacked, but no vivid image of the man is to be found, and the supreme god of Olympus is quite as distinct a personality to us as the god of Stratford.

For this impenetrable obscurity shrouding his outward life, as has just been said, we should be duly grateful to Shakespeare. It permits every worshipper to mould his own image of his god. Just as the eye sees what the eye brings with it the power of seeing, so every reader will detect in Shakespeare's plays precisely those indications of his outward workyday life with which that reader is most familiar—the actor will detect the actor and stage-manager; the sailor will recognize his own and claim Shakespeare for an old salt; the lawyer, the physician, the traveller, the soldier all hail him as a copesmate. And in order to give every one a chance to substantiate his claim, Shakespeare, with a kindly, superhuman prescience, which does not surprise us, left five years of his mortal life an absolute, total blank, and in these five years he may be supposed to have served an apprenticeship to every trade and calling under the sun. From 1587 to 1592 he can be made to travel in Italy, to fight abroad, to sail the seas to the vext Bermoothes, to act in Scotland, to act in London, to study the classics, to carouse at the Mermaid, to stroll in Germany, to hold horses at the theatre door, to read Montaigne, to learn Rabelais, and to study law. Myriad-minded, as Co-

leridge pronounces him, he may well have been; he merely had a separate mind in each body.

The upshot of this rare combination of an imperfectly-printed text with an unknown personality has been the production of a vast amount of emendations, on the one hand, which plainly show that Shakespeare had no clear idea of what he meant to say, and, unable to endow his purposes with words, could only gabble monstrously; and, on the other, a life has been manufactured for him out of a supposed chronological order in which he wrote his plays—that he wrote tragedy when he was sad and comedy when he was merry—and this chronological order has been founded on the number of syllables in his lines. Under these circumstances, when the world is going Shakespeare-mad, the appearance of a book like that before us is most timely; in it the veteran scholar, surpassed in years by only one living fellow-editor, has given us the results of his lifelong study. Here are no surmises, but statements which rest on facts which can be substantiated. Mr. Halliwell-Phillipps has here proposed to construct,

"in plain and unobtrusive language, a sketch of Shakespeare's personal history strictly out of evidences and deductions from those evidences. Subtle and gratuitous assumptions of unsupported possibilities will be rigidly excluded, and no conjectures admitted that are not practically removed out of that category by being in themselves reasonable inferences from concurrent facts."

Admirably is the proposal carried out, and, in spite of the restrictions of his rigid rule, Mr. Halliwell-Phillipps has managed with the simplicity of truth to impart great interest to the meagre, commonplace material at his command.

In recording Shakespeare's life year by year, note must necessarily be made of the successive publications of the quarto editions of his plays, and herein will be found the surest chronological order of their composition. Of course, contemporary external evidence may modify this order, and, where the plays appear only in the folio, this, with scraps of internal evidence, is the only evidence we have; but all internal evidence is to be regarded with great caution. As Mr. Halliwell-Phillipps well says, "allusions to such matters as storms and eclipses are exceedingly treacherous criteria" (p. 285); and when we come to deciding on the order in which they were written by the moods through which we fondly imagine Shakespeare to have passed, we are at sea without compass, chart, or rudder.

Space will not permit us to do full justice to this admirable volume. The "Outlines" are followed by over a hundred pages of "Illustrative Comments," every one of which bears witness to the painstaking zeal and accuracy of the author. By the fulness of these "Comments" we can measure the restraint which Mr. Halliwell-Phillipps put upon himself to keep from wandering, in the text, into episodes and by-paths delightful and refreshing to the scholar's heart. Then follow elaborate and exhaustive essays on some fifteen or sixteen subjects intimately connected with Shakespeare, such as "The Theatre and Curtain," "The Coventry Mysteries," "Shakespeare's Neighbours," "The Davenant Scandal" (which is, or ought to be, hereby for ever dispelled), "The Ratsey Episode," etc., etc. We can give only a taste of their quality, for, alas! there is no table of contents. A hundred and fifty pages of "Documentary Appendix" close this invaluable book, which let any one read, learn, and inwardly digest, and we will guarantee him against all attacks of Shakespearian megrims, such as Baconian theories, or theories that "the poet, when engaged in dramatic writing, placed before his eyes an elaborate map of the scenes of his plot, or reckoned the exact number of hours to be taken by a character in moving from one spot to another; or, in the composition of each line of verse, repeated the syllables to ascertain if they developed the style of metre it was his duty to posterity to be using at that special period of his life" (p. 102).

On one point we wish Mr. Halliwell-Phillipps had been more explicit. On page 97 he says that "Love's Labour's Lost" "received some additions and improvements from the hands of the author," and on page 216, that "2 Henry VI." "may have been retouched by the author after its first production." These statements certainly countenance a theory which we hope Mr. Halliwell-Phillipps does not advisedly maintain—that Shakespeare remodelled his plays, or rewrote them—a belief which cart-ropes could not draw us into. A poet who could write "The Merry Wives" in a fortnight would never spend his time in rewriting anything that had once, in all its completeness, left his teeming brain. Must we for ever forget that Shakespeare wrote his plays to be seen and heard, and not to be read, and pondered over, and studied? Did Shakespeare make any corrections, or additions, or changes in "Venus and Adonis," the first heir of his invention, wherein, if ever, his maturity could have detected flaws? Or in his "Lucrece," the most popular of all his poems? Shall we never learn that in studying Shakespeare in the quartos we are looking at him "maimed and deformed by the frauds and stealthes of injurious impostors"? The mention of "The Merry Wives" minds us to say that we are afraid that the legend that Queen Elizabeth commanded Shakespeare to portray Falstaff in love, is one of those "unsupported possibilities" which Mr. Halliwell-Phillipps led us to expect would be "rigidly excluded" from his pages. Can it perchance be a "reasonable inference from concurrent facts"?

Tunis. The Land and the People. By the Chevalier de Hesse-Wartegg. With twenty-two illustrations. Dodd, Mead & Co.

THE Chevalier de Hesse-Wartegg appears to have made a good use of his time while in Tunis last year. Armed with special privileges, including the honorary title of Colonel in the Tunisian Army, he visited many places which unofficial Europeans probably rarely see, and had many opportunities for observing the working of the Government and the daily life of the people. These things he describes pleasantly, although we confess to a feeling of uncertainty at times as to whether he is relating what he himself has witnessed or what he has got from "other communications placed at" his disposal. His book, however, is a clear, and doubtless an accurate, account of the condition of Tunis at the time of the French occupation. He very carefully avoids any discussion of the causes or description of the events leading to the annexation of the country, the name even of M. Roustan not being mentioned throughout the work.

The city of Tunis, the second in point of size in Africa, differs but little in its essential features from other Oriental cities. A few clean and well-paved streets are to be found in the European quarter, but the great obstacle to improvement in this direction is the fact that so much of the land is owned by the mosques. This can never be sold, although estates may be exchanged. But the ground in which a saint is buried "must never be touched, but must remain in the same state, even if situated in the centre of commercial intercourse or before the palace of the Bey." These tombs appear to be numerous, and "woe to him who touches them! A Jew who some years ago put his foot on one of them to lace his shoe was instantly killed by fanatical Mussulmans." Architecturally considered, the city is uninteresting. There are "some pretty mosques, grand palaces, and, distributed here and there, some costly fragments of Moorish architecture." But the inexhaustible quarry of building material, ready cut and ornamented, furnished by the neighboring ruins of Carthage, would seem to have prevented the full development of the powers of the Arabian architects. For "in every second house are found Roman stones with inscriptions or sculptures, parts of columns and capitals. If Tunis were destroyed, her ruins would be the ruins of Carthage!" This seems to be equally true of other places throughout the Regency. "All these towns, with their palaces, mosques, towers, and walls, are built from the splendid stones of these Roman ruins." With other travellers, the Chevalier calls attention to the rich and comparatively unexplored field which the country presents to the archæologist. Under the new régime, it is to be hoped that scientific explorations will be instituted in the remains of Carthage, Utica, and the Roman towns in the south. Another circumstance which adds to the number of ruins is that, "according to a Tunisian custom, a reigning Bey must not live in a palace where one of his predecessors died." Mohamedia, built about thirty-five years ago for Achmet Bey at a cost of $2,000,000, was dismantled at his death. "The furniture was moved; the floors, glazed tiles, doors and windows were broken out and dragged to another palace. The heavy marble columns, statues, the curbs of the wells, etc., remained behind with the walls, and he who passes these imposing ruins to-day might think thousands of years have passed over them." Fortunately, the same fate does not await the Bardo, the great palace just outside the city walls, "a kind of fortified town by itself," as Mohammed Bey died in the Kasr-Said, a villa built by one of his ministers.

The Chevalier gives a favorable impression of this unfortunate monarch, describing him as an intelligent man "very familiar with European matters," and occupying "himself in his leisure hours with the reading of Arabian books, and photography, in which he has attained a certain dexterity." In some respects he was far from being the type of an Oriental ruler. "He hates women," the Chevalier tells us, and his mode of life was very simple. As a just judge, he enjoyed "the best reputation with the natives as well as with the Europeans, and all the sentences I have heard, or which have been reported to me, show a sound judgment, and even something of that Solomonic wisdom which distinguished Oriental Caliphs centuries ago." Unlike his predecessors, he was very reluctant to pronounce the death sentence. "When he is compelled to do so, he spends the day in prayer, and is wholly inaccessible." The best chapter in the book is that describing the "court of justice" held by him every Saturday, at which all were free to bring their cases for his decision. "A strange incident occurred some years ago during one of these judicial sittings. A Moor approached the throne silently, holding a large sack in his hand, out of which rolled two human heads bleeding, one a man's, the other a woman's. The Bey looked first at the heads, then at the Moor, and without saying a word made the sign which meant acquittal. It was simply a husband who had discovered his wife was deceiving him. In his excitement he made use of his traditional right to kill her and her lover, and presented himself the very same day before the Bey to confess his deed, not in words, but more significantly by showing the heads of the transgressors." His brother, Sidi-Ali, who has just been invested by the French Resident, M. Cambon, with the now merely nominal title of Bey, is comparatively

but little known. It is significant, however, that he alone of all the royal princes and ministers of the late Bey has "kept to the Arabian dress." The French press generally describe him as thoroughly devoted to the interests of France, and "at heart a Frenchman."

The various officials, from the Grand Vizier down, appear to be equally grasping and unscrupulous. Their extortions are such that the peasants suffer intolerable oppression, and many rich Moors avoid all appearance of wealth and live in comparative squalor, or enroll themselves under one of the Consulates, thereby escaping Tunisian jurisdiction and taxation. In order to do this, it is necessary to "prove a real or imaginary descent from Europeans. In most cases the Spanish Moors have to serve as ancestors, and the Spanish Consulate has to undertake the protection." Even the late Bey's Grand Vizier, formerly a barber, and the first native Tunisian who has held this position, "has entered his name on the list of the French Embassy."

The Jews form about a third of the population, and, though till recently subject to great oppressions and humiliations, are now, since the restrictions on their liberties have been removed, increasing in numbers, wealth, and social position. "They build new houses in European style, show themselves in smart, new dresses, and, owing to their intellectual superiority, get business into their own hands with surprising rapidity." Their habits of life are described with much detail, and an entertaining account is given of a Jewish wedding, in which there was an extraordinary display of jewels and rich dresses. The author also devotes a few words to some nomad Jews living with the Hammama Bedouins: "They have adopted the habits and customs, and also the dress, of the nomads completely, so that they can scarcely be distinguished; the Bedouins alone know them. They look after the trade of the tribe with whom they live; they buy and sell wool and skins, sell the goods stolen by the Bedouins, and supply the latter with the intoxicating Lacm—*tout comme chez nous*. They are, however, not allowed to marry into the tribe, nor to pitch their tents among the Arabs. They live outside the encampment —a Jews' quarter, built of tents." While speaking in general very favorably of them, the Chevalier accuses the women of a want of chastity: "Whole streets, and even quarters, swarm with Jewish houses of ill-fame"—which, if true, we are inclined to think is exceptional. Of the European residents in Tunis he says, that "in dress and general appearance they remain true to their origin, . . . but in their home-life they imitate the Orientals only too much."

In the second part of his book, the Chevalier gives some account of the provincial towns of Tunis, of which Sfax, distinguished for the industry and prosperity of her inhabitants, is one of the most important. As in Persia, so in Tunis, native manufactures, especially of carpets, are suffering from the introduction of European designs. "Only in the holy town of Kaironan [*sic*] has their carpet industry been preserved in its old glory." Everywhere, in fact, in the house architecture and interior ornaments, as well as in the street costumes, is to be seen that incongruous and thoroughly ugly mixture of the East and the West of which all recent travellers in Mohammedan countries speak. The Chevalier writes enthusiastically of the beauty of the great palm forests in the oases in the south, which furnish the dates that form so important a part of the Tunisian exports. It is to be noted that Mr. Broadley, the *Times* correspondent, and author of the latest book on Tunis, asserts that the late Bey protested firmly, and with reason, against the French scheme of flooding the schotts or salt lakes, on the ground that the excessive humidity would make all the dates uneatable, as is now the case with those growing in the oases bordering on the sea.

To some perfectly excusable infelicities of style, is added in this book a carelessness in spelling foreign words, which it is less easy to forgive. We have already called attention to a curious misspelling of the name of a prominent town, which is also to be found in the English edition. Other forms of the same place are Kairwan and Kerwan. We have also remarked Cheir-ed-Din and Kereddin, shachia and sheshia, kuffia and kufia.

Memoir of John A. Dahlgren, Rear-Admiral, U. S. N. By his widow, Madeleine Vinton Dahlgren. Boston: J. R. Osgood & Co.

It was hardly to be expected that a memoir of Admiral Dahlgren should be entertaining. Laborious, persevering, intelligent, and brave, his services were useful, but he seems not to have had a spark of the genius that kindles the imagination and captivates the fancy of men. For the last two years of the war he commanded the great fleet, sometimes numbering ninety-six vessels, before Charleston. In this command he showed an energy and personal courage above criticism, which called forth a warm eulogium from General Sherman. But the conditions did not admit of success, and beyond the blockade of the port his efforts were fruitless. His name is hardly remembered in connection with the operations about Charleston, and popular attention at the time was mainly directed to the Army. Admiral Dahlgren felt the injustice of this, and attributed it in part to unworthy conduct by General Gillmore. Hence, much wrath and bitterness, which is reproduced here from his private journal, apparently with little reserve or discretion, as, for instance, where a passage is quoted in which the Admiral speaks of a letter from General Gillmore as "a mean-spirited, craven, white-feathered concern."

Admiral Dahlgren's chief fame rests on his ordnance service, and, here, again, his career was quite free from those vicissitudes which sometimes make an inventor's life appeal so strongly to the feelings. When he was fourteen years old his father died, and at sixteen he was appointed a midshipman in the Navy. From that time his future was assured, and he was free from all anxiety for means of support. His investigations and trials were made by him in his official capacity, in the regular line of his duty in a Navy-yard fitted up for him on his own plans. Under these circumstances, the complaints in his journal, echoed by his biographer, of the cruel injustice of the Government in not paying him largely for his inventions, are open to question. These were, however, creditable and useful. The first was a percussion lock. He next devised bronze boat and field guns for naval use, which were adopted and are still retained. They are light and handy and can be fired as often as ten times a minute, but can hardly claim originality of principle as inventions. The production of the Dahlgren gun was the best achievement of the Admiral's life. It was a great advance on all our guns, including the old army Columbiad. It led to the new Columbiad and the Rodman guns, if it was not, as its inventor maintained, identical with them. Its endurance was not increased or diminished by casting hollow by Rodman's method, but its life was shortened by any variation from its regular model. It placed the United States in advance of the rest of the world "in the perfection of figure, material, and fabrication of its cast-iron guns." It revolutionized the armament of our ships of war. It was essentially a shell gun, though it was strong enough for solid shot. Shell guns were not new to the Navy, but their use had been neglected, and the skill and drill necessary for this more complicated service had not been cultivated. Admiral Dahlgren's influence was sufficient to have the *Merrimac* and *Plymouth* armed with his guns and provided with shells exclusively, for trial trips. The result was so satisfactory that this system became the rule in the Navy. These guns, with Parrott rifles, did nearly all the work of the Navy, afloat and ashore, during the war.

In 1864 the guns had a famous victory in the fight between the *Kearsarge* and *Alabama*. It was fought in smooth water, at a distance of 700 yards, or within easy range of the broadside 32s of each vessel. The armaments were singularly equal, the *Kearsarge* carrying one gun less than the *Alabama*, but having a greater weight of broadside. The *Alabama* had an English 68-pounder, then considered in England the best gun ever made, and one 7-inch rifled Blakely gun. These were balanced on the *Kearsarge* by two pivot Dahlgren 11-inch guns. In an hour the *Alabama* struck, and in twenty minutes more she sank. At the close of the war the Chief of the Ordnance Bureau said in his annual report: "But a single gun of the Dahlgren system has burst prematurely." This is a noble record, and the inventor's name will live in connection with his gun as Bormann's does with his fuse, Parrott's and Armstrong's with their rifles.

There seems to be some mystery about the origin of this invention. Admiral Dahlgren says he has often explained it, but never published it; that it did not depend on experiments, but on a principle; that it resulted from considering all the strains to which a gun was subjected. It does not appear whether he included among these the expansion of the bore from the heat of the explosion, as in Norman Wiard's theory. The likeness of the guns to soda-bottles is notorious. Could it have been that the inventor in a moment of reflection was struck with the virtue of a shape which even in glass could cope successfully with the embarrassing explosive energy of this popular beverage?

The book is bulky and diffuse, and its tone naturally partial and undiscriminating. It is largely composed of extracts from the Admiral's diary, giving a mass of details of his life, which may be useful for reference (though there is no index), but which are often as dry as his ship's log. His rivalries and animosities are needlessly revived, and sometimes supported with some disingenuousness. For example, the Department, without consulting the Admiral, had a 15-inch gun altered by reaming out the chamber and reducing the chase, and other guns were made on this model. Whereupon his widow remarks: "The Assistant Secretary—the would-be inventor of a bigger gun than the Dahlgren—was a worthy gentleman who was placed fresh from the successful manufacture and sale of woollen cloth in New England in a high sphere of official dignity at a critical moment in the country's history." This is all quite true, but it does not convey the fact that this gentleman's fitness for his position and success in it came from his regular training and ample service as an officer in the Navy.

Selections from the Poetry of Robert Herrick. With Drawings by Edwin A. Abbey. Harper & Bros.

This quarto volume, despite its flamboyant cover, is one of the two or three foremost holiday publications of the present season on this side of the water. Its manufacture is so far an "international episode" that the types were derived from a London establishment, while Mr. Austin Dobson furnishes a preface; and Mr. Abbey, it is

well known, caught his inspiration for this special task amid the scenes which Herrick's muse delighted in. Some, and perhaps all of the landscapes, are localizable. These, by the way, are the freshest part of the illustrations (for the figure pieces have mostly appeared already in *Harper's Magazine*); and such a one as that which beautifies page 5, or the snow scene on page 54, or again the charming lane on page 69, and incidentally the rural outlines in a number of plates, show no mean strength in the vein natural to American art. Mr. Abbey's figures are in general solidly conceived and drawn, though there are extremes of care and negligence in this respect; his compositions are graceful, and he is particularly successful in expressing movement, for the best example of which, and perhaps of his manner and imagination, his "To be Merry" may be cited (p. 66). No suite is to our mind quite so successful and harmonious as that of the "Discourse of Neatherds" (p. 9), in which every one of the five designs is admirable—a little pastoral in itself. Mr. Abbey's women are, whether of high or low degree, attractively and characteristically portrayed, as, to name a few, the damsel in "Delight in Disorder," "Mistress Susanna Southwell," "Chloris Walking in the Snow," "Musique," and the maid retreating from the room "upon Candlemas Eve." On the other hand, the physiognomy of tinkers, cobblers, the bellman, is humorously seized in its minutest details. Indeed, Mr. Abbey's mastery of expression in the human countenance is far more subtle on a small than on a large scale: compare Sappho (p. 42), Dianeme (p. 139), Cuffe (p. 140), with any of the smaller personages in his gallery.

On the whole, Mr. Abbey must be allowed to have wrought congenially with a poet whose verse would bankrupt the ordinary designer. His friend, Mr. Alfred Parsons, to whom he dedicates the fruit of his labors, and who contributes some of the head and tail-pieces, has been felicitous in his way also. Finally, the publishers have done exceedingly well by Herrick and his artist friends, and spared no pains upon the typography and presswork.

BOOKS OF THE WEEK.

Abbey, E. A. Selections from Robert Herrick, with Drawings. Harper & Bros.
Adams, W. H. D. Page, Squire, and Knight: a Romance of the Days of Chivalry. Boston: Estes & Lauriat. $1 75.
American Additions to Chambers's Encyclopædia. Complete in four vols. S. W. Green's Son.
Arr, E. H. New England Bygones. New ed. Philadelphia: J. B. Lippincott & Co. $5.
Baker, G. The Legendary History of Rome. R. Worthington. $7 50.
Barrill, A. G. A Whimsical Wooing. Wm. S. Gottsberger.
Berger, F. New Method of Learning the French Language. D. Appleton & Co. $1.
Bradon, Miss M. E. Flower and Weed: a Novel. Harper's Franklin Square Library. 10 cents.
Brehms Thierleben. Chromo-Ausgabe. Parts 54-56. B. Westermann & Co.
Bromfield, E. T. Picturesque Journeys in America of the Junior United Tourist Club. R. Worthington. $1 75.
Brush, Mary E. Paul and Persis; or, The Revolutionary Struggle in the Mohawk Valley. Boston: Lee & Shepard.
Buckley, Arabella B. Winners in Life's Race. D. Appleton & Co. $1 50.
Busch, W. Plish and Plum. From the German. Boston: Roberts Bros.
Butterworth, H. Zigzag Journeys in the Occident. Boston: Estes & Lauriat. $1 75.
Campbell, Helen. The Problem of the Poor. Fords, Howard & Hulbert. 90 cents.
Clark, E. L. Fundamental Questions, Chiefly Relating to the Book of Genesis and the Hebrew Scriptures. G. P. Putnam's Sons. $1 50.
Coffin, C. C. Winning His Way. Boston: Estes & Lauriat. $1 25.
Coffin, C. C. Building the Nation. Harper & Bros.
Crane, T., and Houghton, Ellen. Abroad. [Colored Picture-Book.] Marcus Ward & Co. $2 50.
D'Anvers, N. Lowest Forms of Water Animals. G. P. Putnam's Sons. 50 cents.
De Amicis, E. Sketches of Military Life in Italy. G. P. Putnam's Sons. $2.
Dies Iræ. Erinerungen eines französischen Officiers an die Tage von Sedan. B. Westermann & Co. 80 cts.
Doyle, J. N. English Colonies in America: Virginia, Maryland, and the Carolinas. Henry Holt & Co. $3 50.
Five Little Flower Songs. Boston: A. Williams & Co. 50 cents.
Forrester, Mrs. I Have Lived and Loved. Philadelphia: J. B. Lippincott & Co. $1.
French, H. W. Our Boys in India. Boston: Lee & Shepard. $2 50.
Gardner, E. C. The House that Gill Built: a Book on Home Architecture. Fords, Howard & Hulbert.
Golden Floral. The Breaking Waves Dashed High. Abide with Me. Nearer, My God, to Thee. Home, Sweet Home. Oh, Why Should the Spirit of Mortal be Proud? Rock of Ages. He Giveth His Beloved Sleep. Ring Out, Wild Bells. Boston: Lee & Shepard. $1 75 each.
Golden Thoughts on Mother, Home, and Heaven, from Poetic and Prose Literature of all Ages and Lands. Revised and enlarged. E. B. Treat. $2 75.
Grant, R. The Lambs: a Tragedy. Boston: J. R. Osgood & Co.
Greenaway, Kate. Almanac for 1883. George Routledge & Sons. 50 cents.
Gross, J. B. What Makes Us Unhappy? Philadelphia: J. B. Lippincott & Co. $1.
Harris, Amanda B. Wild Flowers, and Where They Grow. Boston: D. Lothrop & Co. $3.
Hastings, H. L. Fireside Readings for Happy Homes. Boston: H. L. Hastings. $1 25.
Herbert, George. The Temple: Sacred Poems and Private Ejaculations. Facsimile Reprint of First Edition, 1633. Scribner & Welford. $2.
Holmes, O. W. The Autocrat of the Breakfast-Table. New and revised ed. Boston: Houghton, Mifflin & Co. $2.
Holtzendorff, F. von. Encyklopädie der Rechtswissenschaft. 4th ed. B. Westermann & Co.
Jennings, J. A. Readings from Charles Dickens. Dublin: Carson Bros.
Kaspar Hauser. B. Westermann & Co.
Knight, C. The Works of William Shakspere. In 3 volumes. George Routledge & Sons. $3 75.
Student's Concordance to the Revised Version of the New Testament, showing the Changes in all the Words Referred to. D. Appleton & Co. $2 50.
Suetonius's Lives of the Twelve Cæsars. R. Worthington. $4 50.
Sunshine in the Soul. Selected. Poems. Boston: Roberts Bros.
The Thrift Book: a Cyclopædia of Cottage Management and Practical Economy for the People. Ward, Lock & Co. $3.
The Children's Circus and Menagerie Picture-Book. George Routledge & Sons. $2.
The Silverland Library. A. C. Armstrong & Son.
Thompson, Mrs. E. H. Gems of Scripture and Song. Gems of Religious Literature. Gems of Literature. 3 vols. Phillips & Hunt.
Tom Brown's School-Days; Wanderings in South America; Irving's Old Christmas; and Irving's Bracebridge Hall. Many illustrations. Macmillan & Co. $1 50.
Vanderwater, Rosalie. Two Tea-Parties. Cassell, Petter, Galpin & Co.
Van Dyke, T. S. The Still Hunter. Fords, Howard & Hulbert. $2.
Watterson, H. Oddities of Southern Life and Character. Boston: Houghton, Mifflin & Co. $1 50.
Wilder-Gage. Anatomical Technology as Applied to the Domestic Cat. A. S. Barnes & Co. $4 50.
Wilson, J. A. Song-Captives. Boston: A. Williams & Co.
Wood, Alice, and Others. The Salmagundi Birthday-Book. S. W. Green's Son.
Yriarte, Charles. Florence: Its History—The Medici—The Humanists—Letters—Arts. 500 engravings. Translated by C. B. Pitman. Scribner & Welford.

We will send a Harvard neatly boxed, all charges prepaid, to any address, on receipt of $1. Holds 5 or 50 books equally well. Self-adjusting. 5,000 already sold. Wherever we send one, others are ordered. LIBRARY BUREAU, 32 Hawley Street, Boston, Manufacturers of Readers' and Writers' Labor-savers.

NEW HOLIDAY GIFT-BOOKS.

Evangeline,

The Place and the Story. By Prof. Noah Porter, President of Yale College. Accompanying nineteen magnificent original illustrations by Frank Dicksee, A.R.A., fifteen of which are elegantly reproduced in Photogravure, and printed on first quality French plate paper by Messrs. Goupil & Co., Paris, and four are proof impressions on India paper from the original blocks,

Edition de Luxe, limited to 500 copies, numbered and signed by Prof. PORTER.

PRICE ON APPLICATION.

(*The right is reserved to advance price on unsold copies without notice.*)

The typography of this beautiful volume is all that could be desired. The binding is of a rich and tasteful design, making the handsomest gift-book of the season—one which all lovers of art will delight to own.

A very few copies may be obtained in sheets.

The Changing Year.

Being Poems and Pictures of Life and Nature, with illustrations by Barraud, Boot, Edwards, Giacomelli, Gow, Gregory, Macquoid, Small, Wagner, Wylie, and many others of the best artists of the day. An elegant volume, with an illustration on each and every page, with accompanying text, either original or selected, from favorite poets. One vol. large quarto, beautifully printed on fine paper, and bound in extra cloth, full gilt, price $3 ; full morocco, $7 50.

"There is a pleasant domestic feeling in the poems which will make them acceptable when the changing year brings warmth to the heart and keenness to the sympathy."—*N. Y. Tribune.*

"Profusely illustrated with engravings of good workmanship."—*N. Y. World.*

"Has beauties of language or design in every one of its pages."—*Evening Bulletin.*

Wild Animals and Birds.

Their Haunts and Habits. By Dr. Andrew Wilson. Large 4to, with eighty illustrations by Wolf, Specht, and others (over forty-five of them being full page). Extra cloth, full gilt, and colored inks (new style), $3 ; full morocco, $7 50.

"All that the printer's art can do has been done to make this volume as attractive in appearance as in value."

"An attractive holiday book."—*N. Y. World.*

"Handsomely printed and illustrated."—*Christian Union.*

"In this sumptuous volume the reader has presented to him in the most graphic manner, both by pen and pencil, the animals in their wild haunts, their natural aspects and habits of life, together with sketches of their structural history."—*Boston Home Journal.*

Dante's Inferno.

WITH GUSTAVE DORÉ'S SUPERB ILLUSTRATIONS.

Translated by the Rev. Henry Francis Cary, M.A., from the original of Dante Alighieri, and illustrated with portrait and 75 full-page woodcuts, from the original designs by Gustave Doré, with Critical and Explanatory Notes, Life of Dante, and Chronology. In 1 large folio volume, bound in extra cloth, full gilt, price $6 ; in full morocco, gilt, $10.

"That his drawings (Doré's) are works of art, many of them masterpieces ; that every object in each picture is made to contribute to the story in a remarkable degree, are well-known facts, everywhere accepted."—*Christian Intelligencer.*

For a complete list of our elegant Books for Holiday Gifts, ranging in price from $1 to $150, see our New Catalogue, now ready, and sent free on application.

J. W. BOUTON'S

NEW AND IMPORTANT

ART PUBLICATIONS FOR 1882-83.

Complete Works of E. Meissonier.

Reproduced from the Original Pictures by the Heliogravure Process of Dujardin. INDIA IMPRESSIONS. Plate 10 x 12. Outside margin, 18 x 25. In 15 parts. By subscription only.

This is an entirely new undertaking, with a view of reproducing all of the pictures painted up to the present time by this great artist. The process chosen for the purpose is that of Photogravure, so favorably known from the various issues of Messrs. Goupil & Co. It gives a facsimile of the original painting having all the perfection of the photograph, with the beauty and softness of a mezzotint engraving. And the fact that they are printed on a copperplate-press, with printers' ink (thus securing the intense black tone so much valued in a well-printed etching), renders them perfect and artistic in every respect.

Gerome's Works.

Consisting of Portrait of the Artist and EIGHTY-FOUR *superb reproductions from the Original Paintings, by the Photogravure Process of Messrs. Goupil & Co.* BRILLIANT EARLY IMPRESSIONS. *Printed on India paper.* With descriptive Notes. 2 vols. royal folio, new half morocco, gilt top, $175.

These superb volumes contain all the most notable productions of the most popular of living painters. The examples are reproduced in large size, direct from the original paintings, in the most admirable manner, by the Goupil process, and present the most truthful and satisfactory exposition of the artist's work obtainable.

Makart's (Hans) Five Senses (Die Funf Sinne).

The Series of Five Plates after the celebrated paintings by HANS MAKART, *reproduced on copper in the most artistic manner by the Photogravure Process.* BRILLIANT IMPRESSIONS ON INDIA PAPER. Plates, 6 x 20. Margin, 13⅛ x 28½. Upright folio, with cover, $12. *Proofs before letter*, $24.

The History of Ancient Art.

Translated from the German of John Winckelmann. By G. HENRY LODGE, M.D. With Life of the Author prefixed. 4 vols. royal 4to. Printed on heavy calendered paper, by hand-press, in the most careful manner, and *illustrated with Portrait, Proof Impressions, and a Series of Seventy-five fine Engravings in Outline*, exhibiting some of the most notable examples of classic art. Price for the 4 volumes, 4to in portfolios, $25.

*** Edition of one hundred copies only, each being numbered.

A Descriptive and Historical Catalogue

OF THE WORKS OF DON DIEGO VELASQUEZ AND BARTOLOME ESTEBAN MURILLO. Comprising a list of the paintings of these artists classified by subjects, the name of the present owner, and a minute description of each picture, with its history from the earliest known date, and references to the oldest authors by whom it has been mentioned, the collections in which it has existed or sales in which it may have appeared, with prices realized, and other historical notes. Also a list of the engravings after each composition, and a complete index. By CHAS. B. CURTIS, M.A. *With four fine etchings.* Demy 8vo, about 400 pp., $5.

*** A very limited edition only will be printed.

An Edition de Luxe, on Imperial Columbier paper, with PROOF IMPRESSIONS OF THE ETCHINGS IN TWO STATES. *Strictly limited to* ONE HUNDRED COPIES, *each of which will be numbered.*

"Bible Myths"

AND THEIR PARALLELS IN OTHER RELIGIONS. Being a comparison of the Old and New Testament Myths and Miracles with those of Heathen Nations of Antiquity, considering also their origin and meaning. *With numerous illustrations.* Pp. 600, demy 8vo, $4.

Dumas's Art Annual:

AN ARTISTIC RECORD FOR THE WORLD, 1882. *With nearly three hundred facsimile plates from original drawings.* 8vo, paper, $1 25.

*** An entirely new project, giving a full and comprehensive survey of the Art progress of the year throughout the world, a main feature of which will be a record of the various Exhibitions in both Europe and America, with graphic illustrations of the most notable productions. The work will be published in the same style and manner as the Catalogues of the Paris Salon, which have become so deservedly popular. It is intended to continue the work in yearly issues.

L'Ombrelle, Etc.

Par OCTAVE UZANNE. With *sixty-eight charming vignettes*, reproduced from the original drawings by P. Avril, and *beautifully printed in colors.* Royal 8vo.

*** This volume will form a complement to 'L'Eventail,' from the press of M. Quantin, which was received with so much favor last season. One hundred copies printed on *Japan*, and a small edition on Holland paper. The first volume is entirely out of print in Paris, and will not be reprinted.

J. W. BOUTON, Importer and Publisher, 706 Broadway, N. Y.

*** *A priced Catalogue of new and recent English and French Art Publications sent to any address.*

The Nation.

NEW YORK, THURSDAY, DECEMBER 14, 1882.

The Week.

It is cheering to witness the moral effect of the November elections upon Republican politicians in Congress. The business of the session has been taken in hand with a vigor and alertness not seen in a great many years. The session is little more than a week old, but the House of Representatives has already passed two important appropriation bills; bills to reduce internal-revenue taxes and tariff duties are vigorously taken in hand in committees; the idea that this time no River and Harbor Bill is to be passed finds general favor, almost as a matter of course; and the popularity which the cause of civil-service reform has suddenly won among Republican Senators and Representatives is fairly amazing. It is a period of signs and wonders. Here we behold Senator Hale, of Maine—the same Mr. Hale who last season made a powerful speech in defence of the Hubbell mode of levying political assessments upon public servants, which was considered worthy of the place of honor on the list of the unique documents published and circulated for the enlightenment of the American people by Mr. Hubbell's Committee—the same Mr. Hale exclaiming on Friday on the floor of the Senate, we suppose with a virtuous flush on his cheeks, "Do you suppose anybody here would vote against a proposition to strengthen the law prohibiting political assessments?" Mr. Hale will be in the front rank of those condemning that abominable abuse. Here is Mr. Allison, a member of Mr. Hubbell's Committee, who not only frankly agrees "that public sentiment has crystallized against the system of contributions from officeholders," but who "will go as far as any Senator to prohibit the soliciting of them." "Call up your Civil-Service Bill," says he, "and I shall give it my hearty support."

Steve French, Clint Wheeler, Mike Dady, Bob McCord, and John F. Smyth, some of the statesmen who have lately had charge of the affairs of the Republican party in this State, have all gone to Washington—a striking illustration of the serenity with which practical men meet the storms of adversity. If a parcel of "theorists" had taken charge of a State election, and had had a majority of 196,000 thrown against their candidate in a total vote of less than 878,000, they would unquestionably have disappeared from the public gaze for several months. Some would have gone to Europe; others would have buried themselves in their families and private affairs. All would have avoided large gatherings of every kind, social or political, and would, above all, have stayed away from Washington, which is full of political managers, by whom political mismanagement is considered peculiarly discreditable. But our statesmen seem to have such greatness of soul that they can go anywhere without a blush. It is said now that they have not only gone to Washington, but have gone to get President Arthur to do what old topers are said to do when they try to cure their morning headache by a little more of last night's whiskey—take some "of the hair of the dog that bit them." He has frankly acknowledged in his Message, in a way that does him great credit, that the voters object to arbitrary removals; so they propose, it is said, that he should make a few more. The Message they are said not to understand. It read so strangely that they felt that nothing but a personal interview could clear it up. "Has 'Chet' Arthur," they ask each other—this being their pet name for the President—"lost his senses?" So they packed their gripsacks, got their hats ironed, and started for Washington. They want him, it is alleged, to "reorganize the party" by removing Postmaster Pearson, Collector Robertson, Appraiser Howard, and various other officers, and think, apparently, that when this is done the 196,000 majority who voted against Folger will vote the Republican ticket next time.

One of the things they desire earnestly is that Mr. Burt, the Naval Officer, whose term expires in February, shall not be reappointed. Mr. Burt is especially odious to them, both because he is an excellent officer, and because he has been the leading promoter of the competitive examinations in the Custom-house and an ardent civil-service reformer. So they want to substitute for him an ex-Congressman of their own set, known in the set as "Jimmy" Smart, but, we believe, absolutely unknown out of it either as a legislator or administrator. He is besieging the White House for Mr. Burt's place, and all the workers are working for him. That Mr. Burt's place ought not to be considered vacant because his term has expired, never occurs to any of them. For this reason we commend his case to the notice of Mr. Kasson, and all others in and out of Congress who think the civil service would be improved by the introduction of short fixed terms for all offices. Mr. Burt served for nine years in subordinate offices in the Custom-house before he was promoted to his present position, and this was, we believe, the first time in the history of the Government that any of the three leading places in the Custom-house was filled in this way. He is, in all respects, a first-rate example of fitness, both as regards character and capacity. In a properly conducted civil service, the thought of dropping him ought not to enter any one's head. The President ought not to be bothered for one moment about filling his place. And yet Smart, the ex-Congressman, who has no experience of business of any kind except the business of "fixing primaries," thinks he ought to get it, and all the bummers, heelers, workers, and henchmen think he ought to get it; and all of them who can afford the travelling expenses go on to Washington to help him to get it, and have Burt turned out. The Civil-Service Reform Bill framed by the House Committee actually proposes to bring 100,000 offices into the arena, once in every four years, to be scrambled for in this way, there being now less than 3,500 which "the boys" can get without making vacancies for the purpose.

The defendants in the Star-route case have adopted new tactics. Evidence is accumulating that they have organized a "literary bureau." Despatches and letters, remarkably like one another in tone and argument, are constantly appearing in various newspapers, trying to create the impression that Mr. Brady and ex-Senator Dorsey were malignantly persecuted by the late Postmaster-General James and the late Attorney-General MacVeagh, for no other reason than that Mr. Dorsey had opposed the appointment of these two gentlemen as Cabinet officers; and that Attorney-General Brewster is continuing that persecution from motives of general "cussedness" and depravity. They further seek to make the public believe, that the removal of certain Government officers on account of their demonstrative and active sympathy with the Star-route defendants means the beginning of a reign of terror, for the purpose of forcing a verdict of guilty. Messrs. Brady and Dorsey have apparently become so much afraid of a trial by jury that they would now rather essay a trial by newspaper first. They may indeed find an audience with that class of readers who are fond of spicy and sensational stories even when they are not true; but they will, after all, not gain much by it. For even if Messrs. MacVeagh and James and Brewster were as vindictive as Messrs. Brady and Dorsey try to make them out, the question would still recur whether Messrs. Brady and Dorsey did not actually engage in fraudulent practices and rob the Government.

Senator Brown, of Georgia, on Monday objected to the taking up of Mr. Pendleton's Civil-Service Reform Bill, on the ground that as the Democratic party had now a fair prospect of gaining possession of the Government, it would be imprudent to embarrass it, by a Civil-Service Reform Act, in the exercise of the power to put the Republicans out of the offices and to put the Democrats in. Mr. Brown has the reputation of being a very astute politician, but his shrewdness is evidently of the short-sighted kind. If the Democrats get into power, the possibility of which is admitted, there are several dangers the party will have to overcome in order to maintain itself there. One of these dangers is that the hungry hordes of Democratic officeseekers will make such a rush for the public plunder that the people will stand disgusted and horrified, and will be eager for an opportunity to take the power of the Government again out of the hands of such a crowd. Every wise Democrat will wish to prevent such an exhibition, and, inasmuch as it is certain that it cannot be prevented except by a law standing in the way, he will be in favor of the strictest civil-service reform bill that can be framed. Senator Brown evidently does not mean to stand among the wise men of his party.

Mr. Eugene Hale is trying how not to do it by proposing a substitute for Mr. Beck's resolution of inquiry into the operations of Jay Hubbell's Committee among Government officers, so as to make the inquiry cover the collection of money by the Democratic Congressional Committee. The object of this is, of course, either to prevent inquiry altogether, or to make the field covered by it so large that nothing can come of it. With the Democratic modes of raising money for the canvass the public has no concern, any more than with the Republican modes of raising money, in so far as they do not include the extortion from Government employees of a percentage of the salaries paid by the United States Treasury, under thinly-disguised threats. What either party gets from others than Government officials, the public does not care. Now, the Democrats got nothing and attempted to get nothing from Government employees. Hubbell treated all Government employees as ex-officio Republicans. None dared to excuse himself on the ground that he was a Democrat and wished to send his money to the Democratic Committee. Indeed, Hubbell assumed that every clerk was so much interested in the defeat of the Democrats that he must consider it a "privilege and a pleasure" to pay something toward bringing it about.

Of course, what Mr. Hale seeks is by an appeal to the widespread and well-founded belief that the "Democrats are just as bad," to divert popular attention from the real issue. No reform whatever would be possible if we were prevented from punishing or restraining the wrongdoing of the party in power by the consideration that the Opposition would do the same thing if it got a chance. In politics we have to concern ourselves with acts and not with states of mind. It would in criminal justice be the height of folly to refrain from punishing one clerk in a store for embezzlement because the character of another clerk was bad. In like manner, it would be the height of folly now to pardon everything to the Republicans on the plea that their opponents are unscrupulous. The first and great concern of those who wish to keep the Republican party in power should be the stoppage of all practices on the part of the managers which contributed to the late defeats. That the levying by Congressmen of contributions from Government clerks, of which they rendered no account, was one of these practices, no one denies. If the Beck investigation will help to stop it, let us have it, therefore. It is not surprising that Mr. Hale should not like it, because he was not only a member of Hubbell's Committee, but composed a little discourse in defence of political assessments, which Hubbell sold at, we believe, fifty cents the hundred, or about cost, although he gave out that he wanted the assessments to aid him in distributing documents gratis.

The report of the Tariff Commission, although more enlightened than it was generally expected to be, contains some very staring absurdities. For instance, while recommending a reduction of duties amounting to twenty or twenty-five per cent. upon the existing scale, it makes an exception of lumber and timber, thereby keeping in force the existing bounty of twenty per cent. offered for the destruction of our rapidly lessening forest area. Although we are a lumber-exporting country to a large extent, we put a duty of twenty per cent. on the importation. This is an absurdity on its face, but there is a reason for it, if we search far enough to find it. Our lumber exports are from the Southern and the Pacific States. Our lumber imports are from Canada, reaching us chiefly through the Northern lake ports. It is to encourage the lumbermen of Maine, Michigan, Wisconsin, and Minnesota to strip the ground of its pine as swiftly as possible that we maintain a duty of twenty per cent. on Canadian timber. Mr. T. G. Shearman, in a recent lecture before the Revenue Reform Club of Brooklyn, remarked truly that instead of offering a bounty of 20 per cent. for the destruction of our remaining forests, we ought rather to pay a bounty for the importation of lumber from abroad in order to preserve our forest area as long as possible. In fact, the Government is at this moment offering bounties to persons for growing timber on the public lands. To offer a premium at the same time for cutting it down is a solemn mockery, which ought to strike both gods and men with awe. Why, then, should the Tariff Commission, in proposing a general and wholesome reduction of duties, make special exception of an article whose supply among us is limited, and whose preservation is of the greatest importance for sanitary and climatic as well as industrial reasons? Lumber ought to have been put on the free list. Instead of this the Commission have put on the free list spices—an article of luxury, yielding more than $1,000,000 per annum, one of the series of things best fitted in the whole list of imports to be retained as a permanent source of revenue.

The cigar-makers, or certain of them, in this city, have drawn up a petition to Congress praying for a repeal of the tax on cigars. In support of this petition they say that, "unlike any other occupation in this country, our labor is proscribed and the free use of our skill makes us criminals in the eyes of the law. This species of oppression we have endured for the past twenty years, realizing that the necessities of the Government required an internal tax upon those things which are commonly known as luxuries," etc. We are unable to see how the cigar-makers can contrive to get into the criminal class without taking the bankers along with them as companions. Both are subjected to an internal-revenue tax, and if the one class are to be put into the category of malefactors, the other should be put there also. Are we to suppose that all persons earning an income were "criminals in the eyes of the law" while the income tax was in force? There is such a thing as overstating your case, and this is what the cigar-makers have done. They go on to say that there are many other things in use in this country which are better entitled to be classed as luxuries than cigars, but they forbear to mention them. Their petition concludes by saying that whenever changes are proposed in the law stagnation, idleness, and suffering ensue in the trade. This is true; and so far as the present suffering is concerned they ought to hold Judge Kelley, Mr. Randall, and their coadjutors on the Committee of Ways and Means responsible for it, since they are the persons who have called for the change. The dealers in tobacco and cigars ask for a rebate equal to the tax upon all stocks that have paid the existing tax. This they would be clearly entitled to if the Kelley bill should become a law, of which, however, we see no immediate danger.

There could hardly be a more elevating spectacle than the way in which Mr. Blaine's antagonists occasionally lend a hand in getting him out of the scrapes into which his remarkable facundity so often plunges him. When he avowed his friendship for Bosler, and his desire that he should go to Congress, Mr. Wayne MacVeagh, knowing Bosler, declared his belief that Mr. Blaine could not have known him, or he would not have commended him. In like manner Captain Phelps, one of the corporators of the proposed Nicaragua Canal Company, being asked by a reporter how he accounted for Mr. Blaine's recent deliverances about the Canal and the Clayton-Bulwer Treaty, declared that "he must have been misquoted in the interview, for it was not possible that a gentleman of his extensive and complete knowledge of events transpiring in and out of Congress should have been so wholly ignorant of the subject of the interview." This is very touching, but Mr. Blaine ought not to abuse this great kindness by drawing on it too often.

If any one wants to know why homicide is such a prominent feature of Southern life, and why it exercises such an unfavorable influence on the material and social progress of the South, he will find it in such telegrams as the following, which appeared in the morning papers of Tuesday:

ATLANTA, Ga., December 11.—To-day Governor Stephens issued a pardon to Capt. E. Cox, who was sentenced to life imprisonment in the Penitentiary for the murder of Col. Robert A. Alston, at this place, in 1879. The murder and trial created a profound sensation, owing to the prominence of the parties.

Cox committed an unusually brutal business homicide. He did not like the terms on which Mr. Alston had disposed of his interest in a contract for convict labor which they held jointly. So he began threatening to kill him, and followed him about, challenging him to fight in the old familiar fashion. Finally he attacked him in one of the public offices in the State House. Shots were exchanged, and Alston fell dead. There was the usual sensational trial, with weeping and hysterics, but Cox was found guilty and sentenced to the State prison for life. There was not one softening feature in the crime. Every social, moral, and commercial interest of the State called for his prompt execution, or, failing this, for his perpetual imprisonment. He is no more fit to go at large in a civilized community than a tiger, or an elephant in a condition of "must," and yet he is discharged after three years' confinement. What wonder if

the Georgia boys feel "cavalierish," and the pistol and shotgun business flourishes, and prudent investors keep clear of the South!

The Speaker of the Mississippi House of Representatives, Mr. Tison, has just been killed in a typical social homicide, at Jackson, in that State. It seems there was "domestic trouble" in the family of the Speaker's brother, which led to the two Tisons and their two sons giving a terrible beating to a Baltimore merchant named Saunders, which laid Saunders up for a good while. Now, most Speakers would have been satisfied with this. The Speaker of any Northern Legislature, or the Speaker of the House of Representatives in Washington, or of the House of Commons, or the presiding officer of the French or Italian Parliaments, would have undoubtedly dismissed Saunders from his mind after having given him a severe thrashing. Not so Speaker Tison. While Saunders was confined to his room, Tison went about, in the regular old Southern fashion, threatening to kill Saunders as soon as he got well, and of course the news was brought to Saunders by sympathizing friends, who were doubtless smacking their lips over the prospect of a beautiful street fight; and the inhabitants of Baldwin were getting their "gloom" ready for this "shocking tragedy." Saunders was equal to the occasion. He thought no more of applying to the law for protection, and having the Speaker arrested, than Stanley or Brazza would have done if he had heard that a chief on the banks of the Congo had laid a little ambuscade for him. On Monday last the doctors for the first time allowed him to leave the house, and he issued forth with his old family shotgun, and meeting Mr. Speaker shot him dead on the spot. The event is much deplored and regretted in and about Baldwin, where the parties were well known and highly respected. We advise Saunders now to keep a sharp eye on the surviving Tison brother and the two Tison boys.

Miss Stokes has been acquitted by the Arkansas jury on the charge of murdering Miss Melinda Stephens. After the trial she requested the jury to call on her at her room, that she might thank them in person, which they did in a body, when she gave way to "hysterical expressions of grief" mixed with thanks. We need hardly say that the jurymen wept freely. Further details of the affair throw doubt on the alleged high social position of the parties to the tragedy. If Miss Stephens was, as she was at first reported, working in a flower-garden and receiving the morning call of some mounted friends, when they quarrelled, it was easy to believe that they "moved in the best circles." But if the Stephens girls, as is now said, were working in a field when Miss Stokes rode up to ask Mrs. Stephens "what Jane was mad at her for, and what she said she was going to whip her for"; and if Mrs. Stephens replied "that it was for the lies she had been telling or hiring others to tell"; and if at this point the gallant old grandmother of the Stephens family, Mrs. Kesterton, appeared on the scene, and advised "Lindy" Stephens "to pull off her horse and beat to death" "anybody who had talked about her mother, as she (Miss Stokes) had talked about hers"—if all this be true, the ladies in the fray were not exactly "society girls," or "belles," or anything of that sort. It was when endeavoring to carry out her aged grandmother's injunctions, by dragging Miss Stokes off her horse, that Miss Melinda received the fatal stab which was inflicted with a clasp-knife.

There was a new variety of homicide, which might be called vicarious homicide, produced in North Carolina on Thursday. Mr. Nelson, a young farmer, called at Mr. Martin's house for a visit, and in a conversation with Miss Martin got the worst of it in a somewhat acrid chat. He thereupon announced his intention of shooting some of her friends, and accordingly shot her brother, who was sitting by the fireside, dead. Vicarious homicide, however, does not seem to have secured popular recognition as legitimate, for the sheriff's posse started after Mr. Nelson, who was wounded, and, we presume, captured. It would certainly be a very serious matter if men were liable to punishment with the shotgun for all the indiscretions of speech of their female relatives.

The news from London on Friday, that serious changes in the composition of the British Ministry are impending, has probably caused no great surprise in England. It was well known that Mr. Gladstone could not, at his age, much longer hold both the offices of First Lord of the Treasury and Chancellor of the Exchequer, besides leading his party in the House. The burden was too great even for a younger man, and Mr. Gladstone long ago made known that it was but a temporary arrangement. His retirement from office altogether, too, it is intimated, is not far off, and this, also, is probably a by no means unexpected announcement. He has set the Liberal party on its legs, and by the changes in procedure given its majority powers which the majority has never had in Parliament before. Its legislative programme, too, has been pretty clearly sketched out under his direction, and a very vigorous set of younger men has within the last ten years come forward to take charge of it. Lord Hartington, Sir Charles Dilke, Mr. Chamberlain, Mr. Goschen, and Mr. Courtney make a little phalanx to which the Conservatives have nothing to oppose, and they are by this time pretty well imbued, it is to be presumed, with Gladstonian ideas. They are now, it is said, to be reinforced by Lord Derby, whose accession, both as the great apostle of common sense, or rather of what is called here "horse sense," and as a great nobleman, will do something to make the party less alarming to the landed class. It is well, too, the most ardent admirer of Mr. Gladstone must admit, for him to withdraw from the work of active management while his influence is still unshaken and his power unabated. The defect of his statesmanship has been that he is too much to his party. He not only dominates it, but provides it with its ideas. A good Liberal of late has been too apt to be simply a man who believed in Mr. Gladstone, and was ready to "say ditto" to Mr. Gladstone. The consequence of this state of things is that if Mr. Gladstone were suddenly cut off, it would leave the party in great confusion. It is much better for its interests that he should withdraw gradually, while his counsels can still be had, and get the party accustomed to following other leaders, before he passes finally from the scene.

The first of the rumored changes in the British Cabinet has been announced. Lord Derby has accepted the Secretaryship for India. The others will probably follow soon. Still, there must be more or less uncertainty and complication caused by the serious illness of Mr. Fawcett, the Postmaster-General, and of Mr. Childers, the Secretary for War, although the former is not in the Cabinet. In the new arrangement it appears almost certain that Sir Charles Dilke, now Under Secretary for Foreign Affairs, and one of the coming men, if not *the* coming man, will get a seat in the Cabinet. The fiftieth anniversary of Mr. Gladstone's service in the House was celebrated on Tuesday in London with much editorial eulogy and reminiscence from both sides in politics. He must indeed be a bitter enemy of the Premier who can look back over his career without feeling a glow of admiration for all that he has done, and much wonder at all that he has seen. The England of 1832, in which he entered on public life, is, it is no exaggeration to say, an England that has passed all but completely away, and nobody, living or dead, has contributed more to the production of the new and better England which has taken its place than Mr. Gladstone. The Journals of the House of Commons, and the Statutes of the Realm during the Victorian Age, make him a monument such as no other Englishman has left behind him, and a single glance at it—if it could be all taken in at a glance—makes all mention of his faults seem almost absurd, as well as ignoble.

One of the principal aims of Prince Bismarck's policy is to make the Imperial Government more and more independent of the Parliamentary power. His scheme to change the annual budget into a biennial one—that, is to have all appropriations of money made for two years—which would of course give the Government much greater freedom of action, and relieve it of the unwelcome frequency of a critical overhauling, runs in that line. But since the Liberals and the Clericals in the Reichstag have united in opposition to this scheme it is certain to be defeated. It is reported by cable that the Prussian Government will introduce in the Bundesrath a motion in favor of increasing the timber duties with a view to deriving a larger revenue from the forests. Like other measures recently resorted to by the German Government, this is to fill the treasury by increasing the cost of the necessaries of life. The first effect of such an impost in a country like Germany is to limit the consumption of the article made dear by taxation, and so this increase of tariff duty is likely to result in decreasing the consumption of timber by building houses and in other ways, instead of increasing the revenue from the Government forests.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 6, to TUESDAY, December 12, 1882, inclusive.]

DOMESTIC.

IN the House on Wednesday, after a long debate, a bill was passed giving to the State of Georgia $35,000, which was expended in 1777 for the common defence. On Thursday the Indian Appropriation Bill was passed. The bill appropriates $5,208,955, which is $274,200 less than the appropriations for the current year, and $1,516,766 less than the estimates. The reductions were principally on the items for subsistence. On Friday a bill for the relief of the officers and crew of the *Monitor*, which participated in the action with the Rebel ironclad *Merrimac*, on March 9, 1862, was defeated.

On Saturday the Diplomatic and Consular Appropriation Bill was passed by the House. The bill appropriates $1,258,255, which is a decrease of $78,250 from the amount appropriated for the current year. The most important changes proposed in the bill are the consolidation of the Paraguayan and Brazilian, and the Uruguayan and Argentine Republic missions; provisions for a Minister Resident in Siam; the restoration of the consulship at Algiers, and the establishment of a new consulate at Malta; an increase of $10,000 in the appropriation for consular officers not citizens of the United States; and a special contribution of $1,350 for international weights and measures.

On Saturday Mr. Page, Chairman of the Committee on Commerce in the House, demanded the passage of a resolution requesting the Secretary of War to furnish certain information in regard to the river and harbor appropriations, and then proceeded to defend the River and Harbor Bill in a violent manner. He was followed by Messrs. Robeson, Reagan, Horr, and McLean in the same strain.

The House Committee on Post-offices and Post-roads has unanimously agreed to report favorably a bill fixing the rate of domestic letter postage at two cents.

The Select Committee of the House on Civil-Service Reform reported a bill to improve the civil service on Saturday. The bill is to apply to clerks of all classes and grades. In making appointments the principle of prorata apportionment among the several States and Territories is to be observed. All first appointments are to be probationary for a period of time not less than three months nor more than one year, in the discretion of the appointing officer, at the end of which time the applicant shall receive appointment for a term of four years, and shall not be removed during this term except for cause; and, after having rendered faithful service during said term, shall be entitled to one reappointment. Removals are to be made only for specified causes. A Civil-Service Board, to be designated by the President, and which shall consist of three officers who shall have been confirmed by the Senate, of whom not more than one shall be taken from any one executive department, shall have cognizance of all cases of complaints for removal, and of all charges and specifications, with the answers thereto.

The Senate on Wednesday discussed the bill establishing a uniform system of bankruptcy. On Thursday Senator Brown, of Georgia, introduced a bill to repeal all internal-revenue taxes, and Senator Beck, of Kentucky, called up his resolution for an investigation into the collection of political assessments from officeholders during the recent campaign. Senator Hale thought that if the conduct of the last campaign was to be investigated, the investigation ought to extend to both parties, and offered a substitute for Senator Beck's resolution ordering the Judiciary Committee to investigate the doings of the Democratic as well as the Republican Congressional Committee. Senator Beck objected to the substitute, and on Friday a lively debate ensued on the question of the adoption of two resolutions.

Several amendments to the Pendleton Civil-Service Bill were reported from the Committee on Tuesday in the Senate. Two of them prohibit the solicitation or collection of contributions for political purposes by officers or employees of the Government. Another amendment proposes to reduce the number of Civil-Service Commissioners to three, at a salary of $4,500. Several others propose to define in a general way the character of the examination. Senator Pendleton made a speech advocating the bill. It is believed by those who are closely watching the course of legislation concerning civil-service reform that the Pendleton bill is gaining ground in the Senate, and that it will have the determined support of a number of Republicans.

Senator Hawley has introduced a bill into the Senate to prevent officers of the United States from collecting subscriptions or assessments from each other. The bill provides that no member or member-elect of either House of Congress, nor any officer or employee of the United States shall, directly or indirectly, solicit or receive or be in any way concerned in soliciting or receiving any assessment, subscription, or contribution for any political purpose whatever from any person receiving any compensation from moneys derived from the Treasury of the United States, under penalty of being punished for a misdemeanor by a fine not exceeding $5,000, or imprisonment for a term not exceeding three years, or both.

In the Senate, on Monday, the Lowell Bankruptcy Bill was substituted for the Judiciary Committee's bill by a vote of 34 to 30.

In the House, Mr. Belmont made a speech in opposition to the Nicaragua Canal Bill, and the bill for the collection of taxes in the District of Columbia was passed.

Secretary Folger decided a question of some interest in connection with Chinese immigration on Wednesday. A Chinaman residing at Portland, Oregon, wished to bring his wife and child, who were in Victoria, British Columbia, to Portland, and the Collector at Portland asked for instructions. Secretary Folger decided that the wife partook of the status of her husband, and was entitled to the same privileges. The Collector was therefore instructed to permit the wife to come to Portland.

The certificate of awards made by the Garfield Board of Audit was presented to the Secretary of the Treasury on Tuesday. Warrants for the amounts allowed each individual included in the list will be issued at once, so that the payments can be made by Thursday or Friday.

The preliminary motions in the Star-route trials are being argued before Judge Wylie in Washington. The Court has refused to grant the motion to postpone the trial on account of the alleged blindness of Dorsey, which, Mr. Ingersoll said, would make it impossible for him to attend the trial. Judge Wylie also made an important decision on Monday, reversing his former one, and placing the prosecution and the defence on a more equal footing in the matter of selecting the jury. In the former trial there were eight defendants, and they each of them had four peremptory challenges, but in the coming trial the six defendants will only have four peremptory challenges altogether, while the Government will have three.

The report of the Connecticut Board of Health says the disease that has been most common throughout the State during the fall months is typhoid fever, and that so extensive is its prevalence at the present time that there seems to be a pandemic wave of typhoid fever, nor does it seem to be at all confined to the regions affected by malaria. The increased frequency of nervous diseases is alluded to in the report.

The total vote for Secretary of State of Iowa at the recent election was as follows: Hall, Republican, 149,059; Walker, Democrat, 112,180; Gaston, Greenback, 30,817. Hall's plurality, 36,871, majority, 5,704.

A newly issued Census Bulletin gives statistics of manufactures, from which it appears that the number of manufacturing establishments in the United States in 1880 was 253,840, and the amount of capital invested in manufacturing was $2,790,223,506, but General Walker says that these last figures are untrustworthy, and he regards it as doubtful whether this amount represents one-fourth of the capital actually contributed to the annual gross product.

Several of the leading companies and operators engaged in the production of petroleum in Pennsylvania have signed an agreement to stop drilling from December 15 to May 15.

An Indian chief named Juh and a band of Indians have murdered, in Mexico, a band of thirty men who started to punish them for some depredations. The pursuers were surrounded by 200 Indians, and sent for assistance, but before the relief party could reach them the massacre was accomplished.

The transit of the planet Venus across the sun was observed by astronomers at various points throughout the continent of North America on Wednesday. In the United States and Canada the early part of the day was cloudy, and the results obtained at some points were somewhat unsatisfactory, but on the whole the transit was much more successfully observed than the last one.

FOREIGN.

The London *Times* says that it has reason to believe that soon after Christmas Lord Derby will be invited to join the Cabinet; that the Right Hon. Hugh C. Childers, now Secretary of War, will become Chancellor of the Exchequer, and that Sir Charles Dilke, at present Under Foreign Secretary, will enter the Cabinet. The *Times* adds that these changes may be the precursors of even more important ones, and that it is possible that before the end of the next session of Parliament Mr. Gladstone may consider himself entitled to retire, in which contingency there is little doubt that Lord Hartington will become Prime Minister.

The London *Daily News* on Monday stated that it was understood that Lord Derby would immediately enter the Cabinet, and that no other change than that made necessary by this step would occur before the meeting of Parliament.

The election in Liverpool for the seat in the House of Commons made vacant by the elevation to the peerage of Viscount Sandon took place on Friday, and resulted in the return of Mr. Samuel Smith, Moderate Liberal, who received 18,208 votes, against 17,879 votes for Mr. Forwood, the Conservative candidate. This is looked upon as a great triumph for the Ministry, as Liverpool has been a Conservative stronghold.

Mr. T. D. Sullivan, member of Parliament for Westmeath, in a speech on Sunday evening at Trim, County Meath, said he was there to show the Government that neither the Irish people nor their leaders were dismayed by the prosecutions. He advised the people to pay all their creditors before paying their rents. He urged organization, and endorsed all that Mr. Davitt had said in the speech for which he is being prosecuted. The Dublin *Freeman's Journal* says that Mr. Davitt intends to subpœna Mr. Gladstone and Mr. Trevelyan to depose at his trial as to the influence of the agitation in Ireland on the passage of the Land Bill.

The trial of the three men charged with the murder of the two Huddys was begun in Dublin on Thursday. It is said that it will depend upon the result of this trial whether the murderers of Detective Cox will be tried by jury or by a commission of three judges. On Saturday, notwithstanding the fact that the Judge's charge was strongly against the

prisoners, the jury after an hour's deliberation failed to agree. On Monday the second trial was commenced.

Mr. Parnell has lodged a petition in the Land Court for the sale of his property in County Wicklow. The extent of the property was given as five thousand acres, and the total incumbrances as £13,000.

From an instalment of the last Irish census, which has just been published, it appears that in the ten years from 1871 to 1881 there was a decrease of 47,222 in the number of inhabited houses. The statistics of marriage are also significant of the absence of prosperity, fifty per cent. of the men and nearly forty-five per cent. of the women being unmarried. The police barracks average fifty to each county and six or seven constables to each barrack. The number of agrarian outrages in Ireland during the month of November was eighty-nine.

A great fire broke out in London on Thursday night. The whole block between London Wall, Philip Lane, Addle Street, and Wood Street, with the exception of two or three warehouses, was destroyed. The burned area extended over two acres. Eight hundred persons were thrown out of employment, and the total loss is estimated at £3,000,000. On Wednesday night, after the performance, the Royal Alhambra Theatre in London was destroyed by fire.

The returns issued by the Board of Trade in England show that during the month of November British imports increased £632,000 and exports decreased £420,000, as compared with the same month of last year.

The funeral of the Archbishop of Canterbury took place at Addington on Friday. The service was performed by the Vicar of Addington, and the Archbishop of York pronounced the benediction. The funeral was attended by a large assemblage.

A great snow-storm prevailed in the United Kingdom on Thursday. Telegraphic communication between London and Glasgow was interrupted, and traffic on the railroads in many districts entirely suspended.

Mahmud Samy, Abdellal Pasha, Ali Fehmy, and Tulba Pasha were arraigned on Thursday. They pleaded guilty, and were sentenced to death, but their sentences were commuted to exile for life by the Khedive. Arabi has been exiled to Ceylon. Mahmud Fehmy, Arabi's military engineer, and Yacub Samy, his Under Secretary of War, have also been sentenced to exile. A peaceful demonstration of several thousand of the poorer members of the foreign colony at Alexandria was made on Sunday, before the consulates of the great Powers, to protest against delay in the payment of indemnity for losses sustained during the bombardment of Alexandria. Nearly all the consuls promised to send telegrams to their respective governments representing the demands of the people. The French Consul expressed an apprehension that long delay in the payment of the indemnity would cause serious disturbances among the lower classes. A despatch from Cairo on Tuesday said it was expected that in a few days a decree would be issued degrading Arabi and the other condemned Pashas, and ordering the confiscation of their property. Lord Dufferin is reported to be opposed to the restoration of the Chamber of Notables. The subject of popular representation in Egypt will be considered after the questions of the Army and the native courts have been settled. The London *Times* says that it understands that Egypt will contribute £3,200 monthly toward the expenses of the army of occupation. A high law officer will shortly go to Egypt from England, for the purpose of arranging judicature affairs there.

It was announced on Thursday that England had offered France the permanent Presidency of the Debt Commission, which would give France the exclusive management of the Egyptian revenues. It is stated, however, that the French Government has refused this proposal, on the ground that its acceptance would make necessary the maintenance of impartiality, which would debar France from defending her interests.

Colonel Stewart, who was sent to the Sudan to investigate the condition of the country, telegraphed from Khartum, under date of the 9th instant, that the False Prophet had been repulsed, and that Khartum was safe.

The French Chamber of Deputies adopted the estimates of the Minister of Commerce on Wednesday. On Thursday a motion was made in the Chamber that the tax on personal property be increased, but it was rejected by a vote of 332 to 132. On Friday the Budget was adopted by a vote of 54 to 46. On Saturday the Senate passed unanimously a vote of credit for 1,000,000 francs to relieve the sufferers by the floods in the Seine district.

In the debate on the extraordinary budget in the Chamber of Deputies on Monday, M. Tirard, Minister of Finance, explained the financial situation. He said that the deficit of 65,000,000 francs in the budget for 1882 was more apparent than real, as 100,000,000 francs had been devoted to the redemption of the public debt; moreover, that the deficit for 1883 would not reach 1,000,000 francs. The Government, he said, was determined to oppose all fresh expenditure not strictly justified. He insisted upon the necessity of carrying out public works by instalments. M. Tirard's speech was received with great demonstrations of approval.

The French Senate, by a vote of 138 to 87, passed an appropriation of 10,000 francs for the expenses of the funeral of Louis Blanc, who died last week. At the funeral, which took place with much circumstance on Tuesday, an address by Victor Hugo was read.

M. Édouard Pailleron, poet and dramatist, and M. Charles de Mazade, publicist and historian, have been elected members of the French Academy.

The floods in Paris caused by the rise of the River Seine threatened to become very serious on Sunday. The water had reached the heart of the city, and rose to a level with the streets. The cellars of the Foreign Office were flooded, while the Notre Dame quarter swarmed with rats driven out from the sewers, and the people were suffering from their depredations. The water is now subsiding.

The losses by the floods in the valley of the Rhine, Mosel, and Main Rivers will be considerable. The loss in the Rhenish districts will amount to millions of marks, the damage to the town of Duisburg alone amounting to one million. The King of Bavaria has given 40,000 marks to assist the people rendered destitute by the floods.

In the German Reichstag on Monday a motion to refer the budgets for 1883-4 and 1884-5 to the Budget Committee for the purpose of having the Committee consider whether or not the objections to the system of biennial budgets have a solid foundation, was rejected. It is stated that the defeat of the biennial budget scheme is certain. During the discussion of the budget on Saturday Herr Richter made an attack upon the protectionists, in the course of which he declared that the interdiction of the importation of American pork was much less a sanitary than a protectionist measure.

The Chambers of Commerce of all the seaports of Germany have protested against the exclusion of American pork, but it is understood that the Government will persevere in the determination to prohibit its importation.

A despatch from Rome reports that the negotiations between M. de Giers, the Russian Foreign Minister, and the Vatican, have resulted in the latter agreeing to contribute to the eradication of the disaffection in Poland, in return for Russia's agreement to allow the Consistory to preconize Polish bishops.

The festival of St. George was celebrated in St. Petersburg on Friday. A banquet was held at the Winter Palace at which the Czar proposed the health of Emperor William, of Germany, which was drunk with enthusiasm.

A despatch from St. Petersburg on Sunday stated that the *Novoe Vremya* newspaper said that the Prefect had ordered the police to expel all Jews residing within the municipal boundaries of St. Petersburg without official permission, and that the *Golos* said the Senate had decided that Jews are incapable of holding landed property in Russia.

The extensive emigration from the mountain districts of Hungary to America has caused the Hungarian Government to request Austria to stop emigrants not provided with passports.

The Spanish "Red Book" has been distributed. It contains a note in which Spain demands that the United States shall not enjoy the exclusive right of intervention in connection with the Panama Canal.

In the Spanish Senate on Wednesday, Marshal Serrano delivered a speech explaining the programme of his party. He declared that he was a partisan of the Constitution of 1869, but believed it susceptible of modification. He desired the establishment of universal suffrage, legalization of civil marriage, reform of the general administration of War and Marine, reduction of taxation, improvement of the national credit, and liberty of the press and public worship. He believed that the Monarchy under King Alfonzo was compatible with the Constitution of 1869. Señor Sagasta, President of the Council, replied to Marshal Serrano's speech. He said that he was glad to hear that Marshal Serrano was a partisan of the present dynasty, and maintained that he had carried out a better programme than that just announced by Serrano. He reminded the Senate that the Democratic party had accepted the Constitution of 1876, which guaranteed the principle of monarchy. He regretted that the Conservatives supported Marshal Serrano. A resolution was then offered declaring that any modification of the Constitution would be dangerous, and unpatriotic, and contrary to the will of the nation. This resolution was, on Thursday, upheld by a vote of 116 to 61.

At a meeting of Spanish Republicans in Madrid on Sunday a coalition of Republicans of all shades of political belief was resolved upon. Señor Salmeron advised the party not to oppose Marshal Serrano's programme, as the restoration of the Constitution of 1869 would promote the development of Republican principles.

The Spanish Ministry has resolved to present a bill in the Cortes authorizing, subject to slight limitations, the free introduction of cereals, in order to relieve the distress in Andalusia.

Signor Bertani, the acknowledged leader of the Italian Radicals, took the oath of allegiance to the King on Wednesday.

It is reported that China is making great preparations to resist French designs on Tonquin, and telegrams from Saigon report that 10,000 Chinese troops have crossed the Tonquin frontier.

The *Diario Official*, of Lima, Peru, has published a telegram from General Pierola announcing his inability to accept the unreasonable proposals of Chili, and stating that he has deferred his return to Peru until more favorable conditions present themselves.

The Mexican Government has made contracts for the establishment in Paris of a permanent exhibition of Mexican products, with branches in various French cities, the object being to increase Mexican commerce.

A fire destroyed the business portion of Kingston, Jamaica, on Monday, destroying property valued at millions of pounds sterling, and leaving hundreds of persons homeless and in need of food.

HOW NOT TO DO IT.

We have to warn the public that, in spite of the recent very emphatic and undisputed condemnation by the voters of the spoils system in the civil service—a condemnation so emphatic and undisputed that it has even made the President ready to accept the Pendleton bill—there are signs of an intention on the part of the Civil-Service Committee of the House to get rid of the whole subject by a bill of their own, which it is not too much to pronounce "a mockery, a delusion, and a snare." But we would warn the Committee also, and the Republican members of both Houses generally, that if they suppose they can shirk their responsibility in this matter, and put the public conscience to sleep, and get the party ready for a decent appearance in 1884 by a mere pretence of reform, they are hugely mistaken. It is ten years at least since such a bill as the Committee now proposes would have satisfied public expectations. Since then there has been too much discussion of the subject, too much familiarity with the various dodges, tricks, and evasions by which politicians have sought to avoid dealing with the question, to make the success of this last one possible, even as a palliative. It will not only not reform the civil service, but it will not put the party right before the country on the question of civil-service reform. It is recorded that when

"The devil got sick, the devil a saint would be";

but it is not recorded that he had any success as a saint, or imposed on anybody. The lesson of his experiment is that nobody can be devil and saint at the same time, or, to translate it into political parlance, that you cannot save a political abuse by pretending to reform it.

The bill on which Messrs. Briggs, Kasson, Horr, and Tucker are said to have agreed, provides for the appointment of Government clerks on probation. This would be in no way an improvement in practice on the present system of appointment by Congressional favor. In fact, it would be an attempt to disguise the evils of appointment by Congressional favor by a sham probation. The places would still be filled, as now, by Congressmen with their own retainers, fit or unfit, and they would compel the head of the department, by the very influence they now exert, to treat the probation as satisfactory if they wished to have the man retained, or unsatisfactory if they wanted his place for somebody else. No system of appointment, in short, can be a remedy for the present evils which makes admission to the service depend on any man's favor; and members of Congress may as well get rid of the idea that they can satisfy the public with any change which does not divest them of the power of quartering their dependents on the United States Treasury.

The bill would provide for a fixed term of office for clerks of four or six years, during which they would not be removable except for cause. This, so far from creating greater stability of tenure, creates less. It extends the operation of the act of 1820, making the term of office four years, which now only reaches about 3,500 officers, to all officers in the service of the Government—or, in other words, makes a great and alarming extension of the spoils system. The act of 1820, which was undoubtedly passed to make office-jobbing easy, which was condemned by all the ablest statesmen of the day, and which has in its working amply fulfilled their predictions, only covers accounting officers—that is, officers through whose hands public money passes and whose nomination has to be confirmed by the Senate. It does not reach the remainder of the 110,000 who now hold during good behavior, tempered by occasional arbitrary removals for political reasons. But taking into account these removals, which have considerably diminished of late years under the reform outcry, the average length of service is eight or ten years. The proposed bill would, therefore, practically reduce the length of the term.

In addition to this it would diminish every officeholder's sense of stability. A competent and faithful officer now feels that in the present state of public opinion he is not likely to be dismissed unless the appointing power can provide an excuse for dismissing him which will bear public scrutiny. The proposed bill would, however, furnish the appointing power not only with the authority to make a large number of vacancies every four or six years, but with an apparent justification for making them. It would enable the President or head of a department to say, when making sweeping changes, that Congress had deliberately made such changes a feature of public policy. He would not need to apologize for making them, or to conceal them, or give reasons for them. He would, in fact, every year be able to provide for the politicians more spoils than now fall to their share in eight or ten years, and, to crown all, he would be able to call this monstrous perversion of his trust the execution of a measure of reform.

Though last not least, the bill by making vacancies in 100,000 offices at stated periods, and giving notice to all the world when these vacancies will occur, would practically put every place up at a periodical auction, at which all the tricksters, intriguers, bummers, heelers, henchmen, and ne'er-do-weels of every kind and description would be bidders. As the close of a faithful officer's term drew near, all the Guiteaus in the country would know of it, and go to Washington to "work" for it. At present they are discouraged by not knowing when a vacancy is like to be made, and the appointing power, which the President says is already overwhelmed by the applications, is able to get rid of them or keep them at a distance by telling them that no vacancy exists. The bill provides, in short, for a repetition, on a scale such as the world has never seen before, of the scramble for office which took place in Washington after Jackson came into power, and which Josiah Quincy likened to the fighting of a herd of hogs for access to the trough, in a passage which, as a vivid description of a beastly scene, has but few parallels in the literature of invective. We warn the House Committee that their contrivance will not do. The country will not stand it. The day for postponements and shams has gone by.

THE MARTYRDOM OF STATESMANSHIP.

There was an interesting debate in the House of Representatives last Saturday. The advocates of the famous River and Harbor Bill, the support of which has cost so many statesmen their seats, "set themselves right before the country"; or, rather, they proved to their own satisfaction how grievously an ungrateful and deluded people had wronged them. Had they voted for a bill taking $18,000,000, or a large part of that sum, out of the public treasury for a number of profligate jobs, as a licentious press had made the people believe? By no means. They had merely endeavored to promote works of public usefulness, aye, of public necessity. They had sought to improve the water-ways of the country for the purpose of fitting them for a healthy competition with the railroad monopolies. It was the cause of the people against the grasping corporations they had faithfully and courageously endeavored to serve by putting through the River and Harbor Bill, with its $18,000,000 appropriation, and by voting down the President's veto. And for their fidelity to this sacred cause they had been made to suffer. And for this they had been slandered and maligned by the metropolitan press, which wants to prevent the improvement of all other harbors so that the commerce of New York alone may flourish, and which is intent upon keeping the Mississippi in an unnavigable state so that the railroads may have the carrying trade of the country all to themselves. And thus the gallant Page, of California, went down, and thus that noble Roman, Robeson, of New Jersey, succumbed to the five railroads he has in the district which formerly was his and now is to be somebody else's. And in order to demonstrate that they suffered for a good cause and deserved wreaths of laurel rather than crowns of thorns, they want the Secretary of War to report upon the meritorious character of the objects which the eighteen millions appropriated by the River and Harbor Bill was to promote.

Well, let us have that report from the Secretary of War by all means. Let the character of those objects have the fullest investigation. Let virtue be vindicated, though that vindication come in some cases after punishment. The metropolitan press will, we hope, not seek to forestall the judgment. It may, however, in the meantime have to say for itself that it has, in a considerable majority, vigorously advocated the removal of the tolls from the Erie Canal, so that its competition with the railroad monopoly may be made more effective than it ever has been, and that, while opposing the squandering of money upon trout-streams and gravel-beds, it is always found in favor of any rational measure to improve and develop to the utmost the carrying capacity of the Mississippi, or any other waterway of a national character. It only objects to the trick of making such measures a vehicle to carry through jobs which are neither national nor rational; and in this respect it is likely to hold its ground.

But we have a piece of advice for the aggrieved statesmen. There are undoubtedly

some among them who voted for the River and Harbor Bill, with all its jobs, for the reason that it contained some appropriations of national importance and usefulness. We admit that it did. It would be remarkable, indeed, if a bill appropriating $18,000,000 for a great variety of ends had not some meritorious ones among them. The Congressmen who were guided by such reasons may plead that their offence was only an error of judgment, and that, as they had to share the fate of the bad company in which they were found, the verdict in their case should be tempered with compassion. Let them now consider how they got into that scrape. Had the different objects for which the $18,000,000 appropriation was made, instead of being rolled together in a single bill, been before them in separate and distinct legislative enactments, they would have voted for the good ones and against the bad ones. Or, had the President possessed the power to veto the appropriations for the bad objects, permitting those for the good ones to stand, they would have sustained the President's veto, and would not now be in need of a post-mortem vindication. They should now at least avail themselves of every opportunity to protect their successors against similar dangers.

There is pending before the House of Representatives a constitutional amendment, introduced by Mr. Flower, which is to give the President the power to veto parts of an appropriation bill without covering the whole bill with his veto. It is the same power already possessed, under our State Constitution, by the Governor of New York; and it is the unanimous opinion of the people of this State that the exercise of that power has been uniformly beneficial to the public interest. It has saved this State many millions of dollars, prevented all kinds of jobbery, and kept politicians out of endless mischief. The same system prevails in thirteen other States, and is alike successful in all of them. There is no reason why, in the hands of the President, such a power should not be equally productive of good. President Arthur recommends its adoption in his message. We are also of the opinion that, if such a constitutional amendment were submitted to the State Legislatures, it would soon have the requisite majority. The only thing necessary would seem to be that it pass the two Houses of Congress. There it will undoubtedly meet with opposition. The jobbers and log-rollers will all be against it. But that is a good reason why Senators and Representatives who are not jobbers and log-rollers should be in favor of it. Now, we suggest to those members of Congress who, as they thought last season, had to swallow some bad jobs for the purpose of serving other and meritorious ends, and who had to suffer for it, that the present session of Congress would be an excellent time for carrying through such a constitutional amendment. Let them resolutely put their shoulders to the wheel, and, aided by the present temper of the country, they may succeed in coupling their names with a very great reform.

Of course, it will require some time to obtain the consent of the State Legislatures. But President Arthur in his message covers this gap by another and most excellent suggestion. It is, that different appropriations for different objects be made by separate bills, each bill covering one object, instead of many different appropriations, for many different objects, being put together into one bill. Omnibus appropriation bills will thus be avoided, each appropriation will have to stand upon its own merits, and Congressmen will have the fullest opportunity to discriminate between them. Nobody who wants to improve the Mississippi will have to vote thousands of dollars for the improvement of Gravel Run at the same time. It may be said that this will make the appropriation business very cumbersome; but that will be the beauty of it. The more cumbersome the voting of an appropriation for Gravel Run becomes the better. For the meritorious objects there will be time enough. If the President's proposition were at once embodied in the rules of the Senate and of the House of Representatives, it might keep Congress out of much mischief until the constitutional amendment was passed. We repeat, it is well enough that the Secretary of War be called upon to say all he has to say about the late River and Harbor Bill; but the time the House of Representatives has devoted to the discussion of the call for information would have been better spent by taking up Mr. Flower's constitutional amendment, and the President's excellent suggestion as to a change of the rules concerning appropriations.

WHY CAPITAL DOES NOT FLOW INTO THE SOUTH.

THERE was news last Friday of the execution of four negro murderers and of the lynching of one at the South. This is good, except the lynching. We trust the news of the execution of the white murderers will now soon begin to come in, and under the term murderers we include any man who has sent notice to somebody that he meant to shoot him "at sight," and has then come on him unawares and killed him in cold blood.

One reason why we recur to the subject is that it is very important to the South from a business point of view. Very large amounts of capital, both European and Northern, have during the past ten years been invested in farm mortgages all over the Northwest. Some of these investments are made on a great scale through indemnity companies, others directly by capitalists or trustees. They are made in sums of $200 and upward to small and large farmers—people who in many cases have nothing but their land to offer as security. Now, there is every reason in the world why some of this money should go to the South, were the social conditions good. Its climate is mild, the soil is fertile, and some of its products are surer of a good market than any of those of the North. But the truth is that a Southern farmer cannot borrow abroad. We believe there is only one loan company—a Scotch one—investing any money in the South, and it is only just beginning. The Southern planter who wants money has to run in debt to his factor at rates made up in various ways—not much under twenty per cent. He ought to be able to borrow at the North, as the Northwestern farmer does, at six or eight per cent. Even in Southern cities of a commercial character, loans are not attractive to capitalists, and real estate is somewhat of a drug in the market. We know of a case recently where a capitalist refused an investment, on excellent security, in a Southern city, to take a lower rate of interest, on no better security, two or three hundred miles further North in a Northern State, and among the reasons which he gave for refusing all Southern loans, was the fear that his agents in collecting interest might encounter the shotgun. We believe the loan companies generally make it a rule to lend no money at the South. We are sure no prudent Northern trustee lends money on Southern farming lands, though trustees lend millions on farming lands in the Northwest. In fact, we think it might be said without exaggeration that nearly all the foreign capital which has gone into the South since the war has gone into railroads which the owners control, and which are conducted on a cash basis, and that the amount advanced to Southern men to develop the natural resources of their country is exceedingly small.

Now, the reason which these investors all give for avoiding the South is, that if they have to foreclose a farm mortgage, there is no sale for the land, and they are compelled to hold it themselves. There is no rising tide of industrious and intelligent white population—German, Swede, Norwegian, and Irish—to buy up every farm which is thrown on the market on which a fair living can be made, as there is in Iowa, Wisconsin, Minnesota, Oregon, Kansas, and Nebraska. Moreover, if they lend to the Southern farmer, and things go wrong, they shrink from having trouble of any kind with an angry, unsuccessful Southerner. They do not know what may come of it, but they vaguely fear some "unpleasantness." Agents are not ready to go down South as collectors of unpaid interest in out-of-the-way districts. Every man born in any of the countries which now send emigrants to the United States dreads a region where, if some one should threaten to kill him, the law will do nothing for his protection, and his neighbors will do nothing for his protection, and he will leave his home every morning fearing that he may meet his enemy and return no more.

Southerners may scoff at these fears, and say that such cases are rare. But they occur by the dozen in all parts of the country—or in sufficient numbers to create a sensible risk, that impresses the imagination, which men from countries where the law is all-powerful will not run if they have families, or are not of an adventurous spirit, for any profit which agriculture in the South offers. In short, our belief is that the suppression by law of the practice of "shooting at sight," and the stern punishment of uttering threats to kill, and of carrying deadly weapons, would be worth within the next fifteen years hundreds of millions of money, and many hundreds of thousands of white immigrants to the Southern States—would, in fact, effect a complete transformation of the South from all points of view.

LOUIS BLANC.

THE death of Louis Blanc makes another gap in the now small circle of the survivors of those who saw in the troubles of 1848 the beginning of a regeneration of society. He was one of the band of young writers who came on the stage immediately after the Revolution of 1830, and soon made a very conspicuous figure among the Parisian journalists and authors whose activity was so prominent a characteristic of Louis Philippe's reign. Probably no government ever came so near being newspaper government as that of Louis Philippe was. We do not mean by this, government by public opinion moulded by newspapers, but government under the direct personal influence in the capital of editors of newspapers and contributors to newspapers. Thiers, Guizot, Carrel, Girardin, all became great personages under the régime of 1830, without having anything behind them but articles in the daily press and in magazines.

Louis Blanc was too radical to become a Minister, but he became a power before he was thirty, simply by editing or writing for journals of very small circulation, and for the most part of very brief existence. He started the first periodical, the *Revue du Progrès*, which licked into shape the socialistic ideas that began to show themselves as soon as France got rest from the wars of the Empire, and, indeed, he may be said to have produced the first scheme which attracted general attention for making the state a wholesale employer of labor. The famous formula—"From each according to his capacity, to each according to his wants"—was not original with him, but he brought it into the political forum, and when the Revolution of 1848 came, he had prepared a large proportion of the working population in the great cities to believe in it as a practical basis for the reorganization of society.

His accession to power, when the Moderates helped the Reds to overthrow the Orleans dynasty, was inevitable, and, with him as the strongest man in the Provisional Government, the trial of the famous experiment of the "National Workshops" was also inevitable. It was, of course, an immense failure, and the disappointment it produced brought on the bloody insurrection of June, 1849, and prepared the way for the Man on Horseback. The angry reaction of the property-holders against Socialism compelled Louis Blanc to fly to England, where he remained in honorable exile for twenty-one years, only returning to France in 1870, when she was in the grasp of the Germans. That he believed in the state organization of labor firmly there is no reason to question, and that he ever really changed his belief there is no reason for supposing. His life in London was one of great dignity and literary industry, and he won the respect of a large body of English friends, including men of all parties. His letters to Paris papers on English social and political life, between 1850 and 1870, were so remarkable for their fairness and acumen that he attained to the position, which Englishmen accord to but very few foreigners, that of a critic worth listening to on their own affairs. His opinions on contemporary English politics were constantly quoted by the London press with a good deal of respect.

After his return to political life in France, he connected himself at once with the Extreme Left, and spoke and voted with them on all questions to the last, and was invariably supported by the Communist element in the population, showing the continued faith of his followers in his fidelity. Politics were never to him—and, indeed, are not to any Frenchman of his school—an experimental science. He started out in life with a stock of political principles, as a man starts out with the Ten Commandments, or any other code of morals; and difficulties or failures in the way of carrying them out no more caused him to question their value than ill fortune makes an upright man question the expediency of honesty. But he was among the very last of his kind. The Socialist leaders who have succeeded him have no system; they do not preach his gospel. State Socialism in France may, in fact, be said to have died with him. Those who are coming after have either gone over to co-operation, or have resolved on the total destruction of everything now existing before giving any thought to what is to take its place. He was an interesting and in many ways a noble character, but belonged to a closed era.

TO THE GREAT DISMAL SWAMP.

RICHMOND, November 28, 1882.

THE Great Dismal Swamp boat did not leave till three o'clock in the afternoon. It so happened that her license held good till the 23d of November, inclusive, and here was November 24. It was necessary for her to have a new one before she could sail with the proper consciousness of being able, in case of disaster, to shuffle off the responsibility on some one else. The inspectors did not arrive. The skipper assured me they had been sent for, by buggy, several times, but it was due to their dignity as officials at first not to be found, then not to come until they got ready. Otherwise, we should have been off at 6 A.M. I had had a charming journey in the Old Dominion steamer from New York to Norfolk. Instead of being tempestuous, as might naturally have been expected at this time of the year, both sea and atmosphere took their cue from the South which we approached. The water was as calm as that of the smoothest river; azure blue besides, and covered with a multitude of sails, mostly those of wood and lumber barks going North. At night the moon, exactly full, shone with a milk-like aspect in a faintly misty atmosphere. Having thus arrived at Norfolk under circumstances to soften the temper of the most austere, I was moved to venture southward into the Great Dismal Swamp, concerning which I had had from my earliest days a great curiosity. The large tract in lower Virginia and upper Carolina, dotted with conventional tree marks, and bearing this title in the school geography, seemed full of wonders.

Few Norfolk people have been to the Swamp, and I was advised as to the best means of getting there with that uncertain, deliberative look which it is never safe to trust. A hotel proprietor, after consulting with all his acquaintances, promised with a kind of cheery despair to let me know all about it before morning. An editor advised the taking of a train to Suffolk, with a view of getting down from there by a branch canal which the county map seems to indicate. "But suppose I should find that I could not get down from there?" I said. "Oh, then you could come back, you know," he offered as a happy solution. Some insisted that there was no canal from Suffolk, but that you could drive; others, that there was a canal, but no boats, while the idea of a road was preposterous. However, it does not do to push too far people who are trying to help you, and I trust I left to my informants a share of their self-respect. All agreed that Lake Drummond was the point to be aimed for; that without this—the heart and supply reservoir of the Swamp—its most distinctive feature would be missed. I found that there was a canal in good and regular standing extending through the whole tract to Elizabeth City, on the Pasquotank River, and that the *Thomas Newton*, propeller, was in the habit of making the trip to the terminus one day and returning the next. It did not go to Lake Drummond, it is true, which is three miles distant from the canal at its nearest point, but by degrees it dawned upon the skipper that a small boat might perhaps be obtained at a place he called Dukeses Wharf to complete the connection. The only question was, as the day waned, where I was to be left over night; but we all took the chances on that in the end, and I remained aboard.

The adventures of the long day until the hour of sailing, if set down, would be of the same kind as those in Howells's "A Day's Pleasure." Hope was crushed to earth with the coming of every man not a tatterdemalion, coal-black negro down the wharf, and rose again with his successor. Having no standard of comparison, it was difficult to tell what a Norfolk inspector would be like. We dined on board, and the excellence of the cookery is really worth remarking upon. The good Virginia beef, boiled ham, sweet potatoes, and corn bread, supplied by our grotesque negro cook in his white cap, were of a quality which is by no means surpassed as a rule in the hotels of this section, even at Richmond. We studied the cut and equipment of our boat. She was a double-decker of forty-seven tons burden. She was preposterously high and narrow, being limited as to width by the exigencies of the canal. Her speed was also limited, we found, to four miles an hour, for fear of washing out the canal banks. At length the inspector, a taciturn man with a broad back and a thick lead-pencil, which he often moistened in his mouth, was discovered to have been some time on board, and to be nearly through his labors. Nothing now remained to be secured but the signature of another inspector in another part of the town. This was done within an hour and a half, and we were off.

The canal makes out of the western branch of the Elizabeth River, due south of Norfolk. We steamed past a comfortable-looking marine hospital, backed by a tall grove of pine trees, then past the famous Gosport Navy-yard, evacuated and burned by our own forces a week after the attack on Sumter. General Mahone, since prominent in modern Virginia politics, was at the time President of the Petersburg Railroad. He ran empty trains up and down all night on his road, making the locomotives whistle and scream to the top of their capacity, with the object—in which he succeeded—of making the Union troops believe that the Rebels were mustering in force and thus causing them to leave their work incomplete. At the entrance lock an extremely ragged old negro, the "Uncle Snow" of the minstrel companies, slowly raised the gates for us. The water which came rushing out of them was, underneath the foam, of the color of port. Taken out in a glass it is of a rich amber tone. It is known as "juniper water," and is, as we had found at dinner, the favorite beverage of the section. It is supposed to be strongly impregnated from the juniper trees around the bases of which it flows, and to contain also sarsa-

parilla. An enterprising person is said to have lately begun bottling it for the New York market. It is certain that it contains plenty of vegetable mould of some kind, and that it appears to do the inhabitants no great harm.

On entering the canal there is no overarching of dark foliage with funereal moss depending from it, as might have been expected. On the contrary, at the left there is a considerable dry wide space with a good road upon it, bare of vegetation other than grass and weeds, and interspersed with corn-fields. On the right is a straggling expanse of forest bushes, vines, and reeds; the black gum, now denuded of its foliage, and numerous other trees blasted by fire, jutting out in a mournful way from the green. There are no snakes, no alligators, and few glimpses even of stagnant pools. Surprise continues to grow at the civilized appearance of things. One begins to doubt the existence of a swamp at all. The Great Dismal Swamp has in fact been much reduced in extent. It contains, strange as it may seem, some of the best farming land in either State; a railroad runs across a portion of it, and it is perhaps on its way to final extinction. Still, when one looks out at the impenetrable tangle on shore and learns that he might flounder through it for ten or fifteen miles before striking real terra firma, it is dismal enough. It was a certain Colonel Byrd, it seems, to whom was assigned the task of running a survey across it as far back as the year 1727, and was able to make but a mile a day in his journey, who gave it its name. It covers an extent of about twenty-five miles by twelve. Lake Drummond, in its centre —a sheet of water more than five miles long and three wide, though often estimated of much larger dimensions—is at the top of a knoll higher than any part of the surrounding area. By exhausting this lake, therefore, the swamp could be drained. It is more profitable, however, in its present condition. The great industry of the Swamp is lumbering. It is penetrated by small ditches, in connection with the larger canals, and by rude tram-roads, which haul the juniper, holly, and cypress logs down to be sawed up into shingles, railroad ties, fencing, and telegraph posts by mills conveniently placed. The lumbermen engaged in this work cluster together in temporary huts. If there be other residents of the swamp, successors to the fugitive slaves of whom it used once to be full, they are very few. The real dwellers in it are said never to die, but to dry up, or to be preserved from decay at least by their forests, like clothing contained in a juniper chest.

I had many of these details from a most courteous and kindly old gentleman of the old school. He was going down, with his small family and an orphan girl whom he had had bound out to him from the asylum, to his place at South Mills, on the canal, which he described as a pleasant and thriving village. Before the war he had been the owner of a hundred slaves. He had met no less than six of them employed as waiters at the hotel where we had just been stopping. The elders among them still call him Master, and all pay an extra attention to his wants. He complained of the difficulty of getting labor and of the poor quality of it.

"The young generation," he said, "will not work steadily. They cannot be depended upon. It is all politics, religion, and frolic with them. Their religion has no effect in making them conscientious and reliable. They are the greatest politicians the world ever saw. The only way to get work out of them is to find some old man with a slave bringing-up who has some boys, give him a piece of land and look after him, and he will manage to keep the boys at it."

He was a colonel—that goes without saying The only wonder was, that with a presence of such dignity and an experience of many years, as it appeared, in the North Carolina Legislature, he should not have risen to the grade of general. This was accounted for by the fact that he was one of the few to foresee the horrors of the war and to speak against secession to the last moment, though he ultimately joined the movement. Though a patriotic Confederate when once the die was cast, Jefferson Davis, his President, bearing this in mind, obstinately refused to advance him to higher posts, which I have no doubt he merited.

I did not proceed far enough to see South Mills, but there was another witness on board to testify that it was a place of attractions. This was a young lady who was addressed after the Southern fashion as, let us say, Miz Molly. She was a minister's daughter and had been to Norfolk to attend conference. South Mills, she said, had 250 inhabitants. It was a social, lively place, and she preferred it to any other in the world. Three other girls had come down early in the morning to see her off, but their patience had been exhausted by the inspector. "I am awfully glad to get rid of yo' all," Miss Molly had screamed after them as they went away. Her manners were good, those of the Colonel's lady were even better, and their local accent certainly very agreeable. In short, they were not at all the kind of persons one would naturally expect to describe as his fellow-travellers into the benighted Dismal Swamp. Miss Molly gave me, unsolicited, her opinion of the negro question, and I was not imprudent enough to argue it with her. "I do despise a negro," she said, "more than 'most anything in this world, I reckon. I got no use for 'em anyhow. If one of 'em was to sit down at the same table with me, I'd get up and go hungry. The teacher down our way is almost white, and she's a graduate of Rahleigh College. It don't make any difference. No money would hire me to do it. I'd get up and go hungry."

We passed the village and locks of Deep Creek. Some years ago, when shingles were made by hand, Deep Creek was a flourishing, ambitious settlement, full of money, which was gambled away in great sums at a sitting. Now that the machine has usurped the place of hand labor and its principal industry gone elsewhere, it is a mere knot of houses and a shabby store and bar-room or two, with their shutters principally up. Roper, a Northern man, come in since the war, is doing a prosperous business in cutting up shingles and staves for juniper buckets—"Every clip a shingle," commented our skipper in admiration, as the sharp broken song of the saws rang out upon the air.

The sun set red over the dark forest. Some scattering negro huts with a few cornstalks around them, and a negro with an axe returning from the forest, were seen. Then the perfect full moon came up. The tall narrow *Thomas Newton* plodded steadily onward her four miles an hour, displacing a great deal of water, which rushed backward in a surf-like wave on each side, yet so discreetly as not to harm the banks of the canal. What with natural scenery, and the counsels of the skipper, the Colonel, Miss Molly, and others upon my new situation, it seemed all too soon when eight o'clock arrived and I was set ashore. It had been determined that I had better be left at "Wallace's," a mile this side of Duke's Wharf. At Wallace's accordingly, in the heart of the Great Dismal Swamp, of a bright moonlight night, I was left. There were several of the name, the most well-to-do family in all the section round about, and their white farm-houses, granaries, store, and saw-mill could be seen clustered near together. I made a bargain with a negro boy to have a row-boat ready for me at seven in the morning, to take me to the Feeder, as it is called, and so up into Lake Drummond. It should be explained that Lake Drummond through this feeder furnishes the main water supply for the canal. In the house were found refined and hospitable people, children who had been sent away from home to be educated, the magazines and other good reading matter.

I was awakened out of a sound sleep by a loud knocking at the door below. It was not yet daybreak, and the air was very raw and chilly. I made sure that it was my attendant come to announce the boat as in readiness. It seemed a dismal swamp indeed that required the getting out of bed at that hour to penetrate to its dark lake. Fortunately this proved a false alarm; it was but little past midnight, in fact, and the boatman, with the promptitude of his race, did not arrive till a good hour and a half after the appointed time, when the sun was high and genial in the heavens. His name was David Taylor. He had brought a ponderous old yawl, with a pole and a bit of broken oar as means of propulsion. He at first undertook to scull the boat, while I walked briskly along the tow-path for the exercise, but he made at the rate of hardly more than a mile in two days. Then I took a rope from the bow over my shoulder with the design of pulling him on while he kept the boat off in the stream. This proceeding appeared to impress David Taylor by its vigor, and he inquired if I was not from the North. He was not able to keep the craft from running at every moment into the bushes. This would never do, as I wished to return by noon, in order to get back to Norfolk at night. By my order he abandoned the yawl, and we hurried on to Duke's Wharf, where we were fortunate enough to secure a light skiff with two pairs of oars. Duke's Wharf is simply a store and shipping point for lumber kept by one Duke.

The narrow little feeder, of about the dimensions of a good irrigation canal on the Pacific Slope, was entered soon after this. The wind sprang up dead against us, but the vegetation shielded us from it in the main. There were no great gloomy trees here more than before, but the reeds, vines, and underbrush constituted a maze that seemed hopeless to penetrate. Bunches of gall-berries and the red seed berries of the wild rose were prominent in front. In summer there are said to be plenty of moccasin snakes. When there is a fire in the woods it drives them out, with bears and other denizens of the thickets, in great numbers. Such fires are not infrequent, and they often take a hold that is unknown elsewhere, burning into the very vitals of the ground. There are in places deposits of dry vegetable matter ten and twelve feet deep before any soil is arrived at, and this constitutes inflammable material. It is thought by some that the bed of Lake Drummond itself may have been formed in this way, a vast hole having been burned at the summit of the knoll, and afterward filled by the springs. Through the fires and constant lumbering of a hundred years the great primitive junipers have been destroyed. Those now sought, though of good size, are of hardly more than twelve years' growth. Washington was the owner of a large body of lands in the Swamp, and recommended the cutting of the canal, which was one of the earliest works of its kind in our country. It was navigated in small boats, and shingles and lumber got out to go to the West Indies, before the close of the last century. The latest locks, of the improved and widened system, were put in about 1831. It fell into difficulties of one sort and another after the war, and a work which had cost more than $1,000,000 was sold for $275,000. It is now in the hands of a management which seems able to draw from the transport of the cotton, garden truck,

and other matters, in addition to lumber, which pass up and down on it, a shrewd profit.

We met with some large lumber barges, or lighters, empty and full, going to or returning from a principal camp on the far side of Lake Drummond. The negroes on them seemed of a wilder, more essentially Ethiopian sort than those we are accustomed to at the North. Those having the empty barges in charge propelled them by walking on the slight, swampy tow-path and throwing their weight in a picturesque way on long poles attached to thole-pins on the sides. At a final lock near the lake lived a lonely, spiritless gate-keeper, in a house which had been carried down by the weight of its brick chimney into the spongy ground, and imitated in its poor way the leaning tower of Pisa. By it stood a persimmon tree hanging full of over-ripe fruit, which made the eyes of David Taylor sparkle.

"If it was me," he said in a tone of regret at such shiftless waste, "I would have me some good beer out of it befo' Christmas." "Beer out of persimmons?" "Yes; you get you a good barrel—a flour or cider barrel—put in plenty o' persimmons; then you put you in your water, plenty o' water; then let stand, then I reckon you put you in a little mo' water. In 'bout fo' six weeks you got you some right smart good beer."

The three miles up the narrow feeder, with the wind and current against us, had seemed interminable, but it was over. Beyond the lock was a charming reach of quieter wide canal. It was completely overarched, and the sunshine struck through the foliage, mellowed by the tints of autumn, making a most genial golden-green bower of it. But now was seen a striking and mysterious spectacle. The wind, which was shorn of force in this quiet bower, was driving up the waters of the lake into a powerful surf. The white-capped breakers were running at the edge of the dark blue turbulent expanse in an angry and quite terrifying way. "Better not cross the lake to-day unless you are water-birds!" the lock-keeper had told us, and it was useless indeed to try. We went out a little way, however, till we were pitched and tossed about in lively fashion, and pounded upon one of the stumps hidden like rocks below the surface. Then we made under the lee of a little islet, formed by the knotted roots of a couple of trees growing out of the water, and held fast a while for the view to a tangle of vines twisting about them. If the place were once a haunt of runaway slaves, the condition must have been hard indeed to which this would be preferred. A man might sleep, perchance, by lashing himself securely in among these vines, but he would not have a foot of earth to stand upon. The water is often six feet and more in depth among the trees, but in front of us, amid the dashing waves, rose isolated cypresses, some black, some weather-worn gray, with broad bases, tower-like, with openings between their gnarled roots, and a scanty russet foliage above. Here and there project the fangs of rotted black stumps. The line of distant forest, all around the great expanse, was a line of bare stems taking a faint violet tone in their remoteness across the troubled dark blue. What a *noli me tangere* place! Absolutely not a landing spot in all its margins. It might be a new punishment added to the Inferno to conceive a storm-driven bark seeking haplessly round and round it in search of one.

The return, with everything favoring, was made in very much quicker time. We left our skiff again at Duke's, and I had an opportunity, under the guidance of my hospitable host, of examining the mills and farms by daylight. The whole establishment was like a great piece of Yankee enterprise, and by no means in accord with conventional traditions of the Southern way of doing things. The principal farm building was a real mansion; the smaller, comfortable low cottages, their porches clad with honeysuckle. One would fancy himself among the richest agricultural lands of central New York or the Illinois prairies. Some one thousand acres of land were here under cultivation, carefully drained, and giving a great yield of corn and hay. The raising of hay is a new experiment and has proved very successful. A considerable quantity of rice was also raised, on the dry, instead of the flooded system, as further south, but gave less to the acre, I was told, than at South Mills, nearer Elizabeth City. The land upon which the scattering black gum, useless itself as timber, grows is excellently adapted to agriculture. That which contains juniper, on the other hand, is comparatively worthless when the timber is cut off. Gen. B. F. Butler, whose proceedings in so many ways we have been accustomed to find remarkable, conceived some years ago a notable project with regard to this section. He was a member of Congress at the time, and a bill was introduced to facilitate it. He proposed to make the Dismal Swamp Canal a ship canal, buy up, with the aid of a company, a half mile of land on each side of it, clear it off, and make a truck patch, similar to those about Norfolk, for supplying vegetables to the Northern cities. It was then not too long after the war, and Butler still rested under a peculiar odium from it. He is said to have been jeered at and grievously insulted even by the hackman who drove him out to the site of operations, so that he threw up the project in disgust, and it has never since been revived.

I was driven back to Portsmouth, opposite Norfolk, sixteen miles, in late afternoon, behind a horse whose driver said of him: "I don't reckon there is a more willin' horse anywheres around than this. He'd go till he dropped." And he did indeed show evidences of this peculiar kind of ambition. We passed the sedate *Thomas Newton*, on her return trip, to-day, standing up out of the water like a small light-house, within eight miles, though she had had two hours the start of us. We went over an excellent piece of shell road the last half of the way from Deep Creek. The fields along the way were as green with grass, turnips, and rutabagas as in summer.

W. H. B.

ENGLAND—THE SCHOOL-BOARD ELECTIONS.

LONDON, November 27, 1882.

ONCE in every three years the management of our elementary schools comes up before the people on the occasion of the election of the members to serve on the various School Boards established over England by the Elementary Education Act of 1870. Before that year there was no such thing as public local school administration. Large sums were dispensed by the national exchequer as grants to primary schools, but these schools were private affairs, established by individuals or societies, supported to some extent by their subscriptions, and under state control only in so far as that a Government inspector visited each of them once a year and examined their pupils for the purpose of awarding the grants. The ancient system of local government in parishes and counties had, of course, nothing to do with education. Even at the Reformation it was only by the establishment of endowed schools here and there that anything was done to provide for what we now consider among the first of national needs. For a decade or more before 1870 it had been felt that some general provision of schools for the people was needed; but their establishment was delayed by disputes over what was called "the religious difficulty." A very large number of schools in connection with the Church of England had been set up, partly by private subscriptions, partly by building grants from the state. A considerable number, also founded by subscription with the aid of grants, were in the hands of the Roman Catholics, or of the Wesleyans, or of a powerful association, supported by the Nonconformists, called the British and Foreign School Society. When it was proposed to create public schools under public management everywhere, the friends of denominational schools were up in arms, because they feared the extinction of these existing schools. So also were the clergy of the Established Church and of the Roman Catholic Church, together with the great bulk of the Conservative party, because it was feared that such new schools would have a secular, and therefore an irreligious, character. Was there to be any religious teaching; and if so, what? Could there be any religious teaching except what was definitely denominational? Must not the alternative to such teaching be the total exclusion of the Bible, and would not that be a national misfortune? These were the questions, debated with much earnestness and heat, which impeded the settlement of the question.

However, at last the pressure became too strong to be resisted. The political influence of the Anglican clergy had declined. The Reform Act of 1867 had extended the parliamentary franchise to all rate-paying householders; and Mr. Lowe cried, in words which have become proverbial, "We must educate our masters." Mr. Gladstone's Government carried in 1870 a measure which, though sharply criticised at the time, has been since accepted by all parties as fairly satisfactory. It was to some extent a compromise. It allowed all the existing elementary schools, denominational and others, to subsist, and to receive grants of money from the state as heretofore. But it created also, wherever no adequate provision of primary schools existed, a new local public authority called the School Board, elected by the rate-payers of the district, charged with the duty of establishing primary schools, and empowered to levy a rate on the locality for that purpose. Under this statute a great many School Boards were at once called into existence. In all the larger towns school accommodation was deficient, so that Boards were needed. In country parishes this was less often the case, because the Church of England had been making and made when the act passed considerable effort to provide denominational schools of her own, and so avoid the necessity of the public ones. Still, even in the rural districts, there are a good many School Boards, and the number continues to increase. As respects the so-called religious difficulty, the act of 1870 drew a distinction between School Board schools supported by the rates, and those founded by denominations or individuals, which now usually go by the name of voluntary schools. The former were permitted to give religious instruction, but forbidden to use any catechism, creed, or formulary distinctive of any denomination—*i. e.*, the master might read and explain the Bible and dwell upon any fundamental religious propositions he thought proper, but must do nothing to inculcate the dogmas proper to any one sect, while, of course, any child might at pleasure be withdrawn by its parent from religious instruction altogether. As regards the voluntary schools, they were suffered to retain their denominational character, but in consideration of their continuing to receive an annual grant, it was provided that they should not require any pupil to receive religious instruction if his parent objected. This provision, which goes by the name of the conscience clause, is now, therefore, in force in all state-aided schools.

As the act of 1870 left the voluntary schools on the ground confronting the Board schools, there

was naturally much rivalry between them. The former were the favorites of the Anglican clergy, supported by the Roman Catholic priesthood, the latter of the Radical party, the more extreme section of which had desired to extinguish the voluntary schools altogether and to forbid all religious instruction. Hence, in the first years of the new system the chief question of educational policy which occupied people's minds, and came up at School Board elections, was as to the attitude which School Boards should take up toward voluntary (*i. e.*, denominational) schools. They had no right to extinguish them, but they could practically injure them by starting Board schools in their neighborhood so as to draw away the scholars, and could in other ways interfere with their action. On the other hand, they could also encourage them in a variety of ways which it would take too long to explain. Hence, a considerable difference in the behavior of these new School Boards. In places where, like Birmingham, the Liberal party was in the ascendant, they went on vigorously establishing public schools and almost affecting to ignore the voluntary schools. In such a town as Liverpool, where the Church of England and the Tory party command a majority, the voluntary schools received ample scope and friendly encouragement. This jealousy of the two sets of schools and their respective sympathizers still continues to exist, but in a less pronounced form. Both the extreme clerical and the extreme Liberal party are sensible that neither can gain the ear of the country, which has accepted with satisfaction the middle path indicated by the act of 1870. The denominationalists no longer fear the immediate destruction of their schools. Their opponents see that denominationalism in education is a less formidable influence than they had supposed, and believe that in time it will die out. Nor can there be much doubt that voluntary schools are declining in number, whereas a public school, once established, always holds its ground.

From what I have said, your readers will understand to what extent our School Board elections are fought on party lines. The divisions of educational opinion do not exactly coincide with those of political opinion, but they tend to coincide. A man may be a Liberal yet a denominationalist, or a Conservative and yet (though this is much more rare) in favor of the public-school system. In the main, however, Conservatives support the clergy, and Liberals the extension of School Boards. The chief charge brought against the latter is their cost. Our people have not yet acquired your habit of looking on education as one of the first and most necessary branches of state expenditure, so that there is always some grumbling over the school rate, and many criticisms on the extravagance of School Boards. The denominationalists have always insisted that voluntary schools are far cheaper to the ordinary citizen, because he pays no rate in respect of them, their cost being defrayed partly by subscriptions, partly by fees, partly by the subscriptions of the rich residents. Hence, the Conservatives are in this sphere the party of retrenchment, and while the war cry of the Liberals is "Efficiency," that of the Tories is "Economy." These are the cries that have been most frequently heard during the present electoral contest. The middle classes, and particularly the smaller shopkeepers, feel the pressure of the rates, have no great fondness for education, and as a rule do not send their own children to the rate-supported schools, thinking them somewhat too plebeian. The working classes, on the other hand, are anxious that their children should have the best teaching, and as they pay a much smaller rate, and use the schools themselves for their children, they care less for the expense. Hence, while the shopkeeper clings to the idea of economy, the workingman usually votes for the candidate who promises to make the schools better and have more of them.

Other questions are sometimes mooted, but have less effect upon the result. Such is that of gratuitous education. In our public schools fees are charged, small fees no doubt, ranging generally from two to ten cents per week, but still such fees as the poorest and most unthrifty part of the population declines to pay. It has therefore been found necessary to remit the fees of a certain number of children, and the existence of the charge is made a pretext by many parents for neglecting to send their children to school. A party has, therefore, arisen which seeks to make all public education gratuitous, and which appeals to the example of America as an evidence of the success of that means of bringing all children under instruction, and making the instruction good. The Conservatives resist the proposal because it would destroy the voluntary schools, which could no longer support themselves by fees if their rivals charged nothing. Many Liberals also oppose it on economical grounds, holding that it would make parents value education less than they do now, and relieve them of what is in fact a part of their duty. The question is still in the background of politics, but no one can say when it may come into the foreground. Another point that has been lately canvassed refers to the position of school managers. Every Board school has a small local committee of managers, but while in some towns (Liverpool, for example) the Board allows great power to this committee, in others, as in London, it keeps the control of all its schools in its own hands, and leaves but little to the managers. In this case also the differences of view do not coincide with differences of political opinion.

More important to the successful working of the system than the decision of such questions as the foregoing is the quality of the men who are selected to work it. In small places, where everybody knows everybody else, it is not so hard to choose the best men. But in London, where there is only one School Board for four millions of people, the difficulty is serious. It is surprising that so many good candidates are found, for there is, of course, no salary or other emolument whatever attached to the office —the members even pay out of their own pockets for their five o'clock tea; it does not carry much honor or fame with it; it is, if a member does his duty, extremely laborious, involving attendance not only at the weekly meetings, but at several committees. The prospect of a little power has, however, its attractions for many men and women, while those of a higher stamp find in the office the opportunity of rendering important services to the community. The first London School Board, which sat from 1870 till 1873, contained a good many persons of eminence. At later elections the level sank, though there always remained a sufficiency of able men to do the work in a thorough way. During the present contest a somewhat greater number than usual of good candidates have offered themselves, notwithstanding the serious trouble and expense (amounting, where a candidate stands alone, to from $2,000 to $3,000) which candidature in such vast constituencies as those of the London boroughs involves.

The School Board elections have had an interest for us altogether irrespective of educational affairs as the field in which two experiments have been tried: those of the eligibility of women and of the cumulative vote. In 1870 three ladies stood, and two were returned; and at every succeeding election several have been successful. Seven or eight had seats on the Board which has just expired, and four of these were very prominent members, filling the public eye at least as much as any of the men. I need hardly say that among them there were good and bad members; in fact, with the exception of one, who seems to have raised more opposition than any other member, male or female, they showed just the same merits and the same defects as others. Judicious observers report that if any difference can be discovered between the men and the women, it lies in this, that the women take up personal questions more warmly, and are swayed by feelings of personal aversion more strongly than the men are; but they add that some of the more active women members show a diligence and a mastery of details quite equal to that of the best men. Thus the experiment turns out to have proved only what sensible people predicted, that women can do all kinds of administrative and deliberative work as well as men, but are a little more liable to be led by the keenness of their feelings into more pronounced expressions. It must not be thought that because this criticism is made there is any disposition to discourage female candidates. The services of the better ladies have been sufficient to secure the continuance of a considerable female element on the Board.

The other experiment, that of allowing an elector to accumulate all his votes on one or more of the candidates out of the whole number, has been less successful. It works in this way. If there are five members to be elected, you may give all five votes to A, or three to A and two to B, or two to A and two to B and one to C, or two to A and one each to B, C, and D, or one each to A, B, C, D, and E. The result has been that a candidate supported by a comparatively small section can get in by persuading his friends to cumulate all their votes upon him. Thus a man of no eminence, but favored by one denomination, or faction, or particular local area, secures his seat even though the large majority dislikes him; and the Board, elected after this fashion, is apt to contain too many crotcheteers, or representatives of particular "isms." Hence, when a perverse man gets on the Board, he may defy the censure of his colleagues and the electors generally, so long as his own faction remains faithful to him. From such men several School Boards have suffered, nor is it impossible that this mode of voting may be abolished whenever Parliament has time to return to educational topics.

The result of the elections in London, which has been announced since the above lines were written, tends to confirm this view of the cumulative vote, and shows that the electors are not very careful in marking the services of the best men. One of the most obstructive members of the Board has been returned by a triumphant majority; one of the most capable and industrious has lost his seat, apparently because he relied on his merits, and did not canvass with sufficient vigor. Otherwise these elections leave the balance of parties very much where it was before. The majority, who have pursued in time past what is called the School Board policy of building public schools energetically wherever they were needed, instead of carefully avoiding all interference with existing denominational schools, are the majority still; and the work of the Board will doubtless proceed upon the same lines.

Y.

THE RUINS OF ALEXANDRIA.

ALEXANDRIA, November 18, 1882.

To a resident in Alexandria who left Egypt in May for business or refreshment in England and returned in November, the change in outward things would seem much less than might have been expected. There are the same crowded thoroughfares, the same appearance of active

business, the same intermixture of races, of languages, and of costumes, and the same outward relations between the foreigner and the native. To be sure, the red-coated English soldier is ubiquitous, and whole streets, together with the leading square, are nothing but masses of crumbling ruins. But there is something to compensate even for this. In the square, long rows of really picturesquely-built and gayly-ornamented wooden shops and stores have occupied the spare space within the garden rails surrounding the cultivated portion of the area. These structures (too many of them drink-shops) are decorated with advertisements and the obtrusive display of wares, and thronged in front with venders and customers taking coffee and more mysterious fluids at festive little tables. The bright, or rather dazzling, sun glares down on the scene and prevents a particle of color being lost or overlooked, while it refines even the ruins to a blinding whiteness and renders them almost as picturesque as they are, on a moment's reflection, distressing. Along the side streets, however, where no substituted erections relieve and distract the eye, and where few carriages or passers by are visible, the scene really recalls Livy's graphic description of the *læta mœstitia* and *triste silentium* which hung round the site of Alba after its savage destruction by Rome.

The judicial delays in the matter of compensation account for so little having been done as yet even to clear away the ruins, let alone rebuilding the town. Any proprietor would sacrifice his claim to compensation if he interfered ever so slightly with the débris covering his burnt premises before the official *expertise* which will hereafter be the sole and sufficient evidence of the fact of loss. As to the extent of the loss, of course, no ex-post-facto evidence from without can be worth anything; and it is on this point that the main difficulty in adjusting claims to compensation will arise, and, indeed, is already arising. Of course, where there were fire insurances some check upon fabulous estimates of the amount of loss is forthcoming. It is reported that the smaller claims will be settled first, and this is equitable and wise, because the small loss incurred by small owners is to them out of all proportion in value to the large loss of wealthy capitalists. Without some little money to start with, it is impossible for a returning refugee to set up his little business again, and there is some danger even that money-lenders may be in request and the claims to compensation be trafficked with in an usurious market. The preliminary *expertise* is in all cases a somewhat expensive process, costing £3 sterling at the very least for mere court fees. This initial process is conducted by the machinery of the international courts, but the adjudication upon the claims will be remitted to a Special Commission Court which has not yet been constituted.

The obstacles to a speedy settlement of such matters as these and to the rebuilding of Alexandria are characteristic of the political situation of the country at the present time. In the first place, there are no municipal authorities in Alexandria to undertake the reconstruction of the European portion of the city, which has been almost annihilated. In the second place, the central Government is so weak and dependent on its military supporters that it scarcely ventures to take the initiative in any matter, however pressing, which may financially bind it beyond the very limited reach of time to which the present political prospect extends. A time, however, has been fixed (about a month hence) within which all claims against the Government must be sent in, and in the case of indigent claimants the period for paying judicial fees for an *expertise* can be, on the intervention of their consulate, deferred till the compensation is awarded. So soon as Lord Dufferin has had time to look about him and devise some settled scheme for the administration of Egypt, it may be expected that the Government will feel itself strong enough to entertain some comprehensive plan for the reconstruction of Alexandria. A.

PLON'S 'BENVENUTO CELLINI.'

PARIS, Nov. 22, 1882.

M. PLON is not only a publisher, he is also a writer and a great amateur. He has published 'Thorwaldsen: His Life and Works'; he has written a small volume on the Danish sculptor Bissen; he gives us now a truly magnificent quarto volume on Benvenuto Cellini. The work is really worthy of the great master, from the beauty of its numerous illustrations. M. Plon has not attempted to write a complete biography of the famous Florentine sculptor: have we not the amusing and original 'Vita di Benvenuto Cellini, scritta da lui medesimo'—a book full of lies and boasts, to be sure, of extraordinary confessions, of audacious anecdotes, as romantic as any novel, but bearing in the midst of all its defects the true mark of life, and giving an exact picture of the manners of a time which will always be so interesting to all lovers of art? M. Plon has made it his study to verify the assertions of Cellini, to search in the memoirs of the time whatever could help him to verify or to control them. He has profited by the researches of the Marquis Campori, of Modena; of Bertolotti, of Rome; of Carlo and Gaetano Milanesi, of Florence; of the Marquis de Laborde, of Paris. This work of control and of criticism has been but the beginning of his difficult task; he has been struck by the small number of the really authentic works of Cellini, and at the same time by the immense number of works which are attributed to him. He has therefore made two catalogues, one of the works the authenticity of which he is able to prove from the memoirs of Cellini, by letters, even by inventories, receipts, etc.; he has placed in a second catalogue all the works which are still attributed to Cellini, but which nothing proves to have been his work except their style and their intrinsic beauty; and, in order to help the reader to form an opinion, he has given reproductions of many of these interesting works.

Benvenuto Cellini was born in Florence, on November 1, 1500, in a house on the Via Chiara di San Lorenzo. His father was an architect and a musician. He learned the trade of jeweller with Michelangelo Bandinelli, the father of the famous Baccio Bandinelli. He was very wild and undisciplined, and did not stay long in the same place; he went to Sienna, to Bologna, to Pisa, and always quarrelled with everybody. He felt a great enthusiasm for Michael Angelo, who was twenty-six years older than himself, and who already competed with Leonardo da Vinci. These two famous men represented the taking of Pisa by the Florentines for the Palace of the Signoria. "As long as they existed, these two cartoons," says Benvenuto in his passionate style, "they were the school of the world; and though the divine Michael Angelo afterward built the chapel of Pope Julius, he never approached even half the value of this work, and his genius never found again the vigor of these first studies." Surely, nothing can be finer than the group of soldiers bathing in the Arno. Benvenuto always looked upon Michael Angelo as his great master and inspirer. (The two famous cartoons of the battle of Pisa were destroyed during some civic commotions.)

Benvenuto went on foot to Rome, with one of his friends, at the age of nineteen, and his career is divisible from that time into three parts: first, the time spent in Rome under Clement VII. and Paul III., from 1523 to 1540; secondly, the time spent at the court of Francis I. in France, from 1540 to 1544; then his return to Florence, under Cosmo, where he remained till he died, in 1571. In Rome he was chiefly a jeweller; he became a sculptor in France; and he attained in Florence the highest degree of the noble art of sculpture, though he always kept amusing himself, so to speak, with artistic jewelry.

Everybody knows the part which Benvenuto took in the defence of Rome, when it was attacked by the Constable de Bourbon. He does not boast in his memoirs of having killed the Constable, as is generally said; he only tells us how, with some of his friends, he fired into a group which was very ardent in the attack, and how afterwards the besieging army fell into a great confusion. Rome was taken by storm, notwithstanding the death of Bourbon, and completely sacked. Benvenuto had taken refuge in the Castle of Saint Angelo, along with the Pope, and he took a great delight in becoming there an expert artilleryman. All the researches of M. Plon tend to confirm rather than to invalidate the accounts which Benvenuto gives of his actions. He was of a very fiery character, and did not stop at murder: he killed with his own hand one of the Roman police who had killed his brother. The Pope pardoned him, for he would not deprive himself of such an artist. It was not, alas! his only murder: he used his sword and his stiletto as freely as the too's of his trade. M. Plon enters into very minute details as to the murder of a certain Pompeo, and shows by what circumstance Cellini escaped the punishment which he deserved. It is more agreeable to turn from the man to the artist, though even in his artistic works there always remains a certain sort of violence. The famous "Perseus" may be considered as the finest expression of violence in art.

When he came to France, Francis I. gave him permission to establish his studio in the Petit Nesle, a castle which was on the left bank of the Seine, on the spot where the palace of the Institute now stands. The Pont Neuf did not exist at the time, and it was not always safe to cross the river in the night. Cellini lived there in great style, receiving many pupils and entertaining his compatriots. Francis I. often paid him visits; he employed him for the embellishment of his dear Fontainebleau. Cellini became naturally a rival of Primaticcio; and as the favorite Madame d'Étampes favored his rival, he became disgusted with his French service and returned to Italy. He settled in Florence, and Cosmo immediately gave him a house for his studio and his workshops. In Florence he soon quarrelled with his old enemy Baccio Bandinelli. This artist could not bear the idea that Cellini should have undertaken to become from a mere jeweller a sculptor, and that a man who made medals and figurines should try his hand at giants and colossal statues. The Duke Cosmo had given to Cellini an order for the "Perseus and Medusa," which was to stand before the famous Loggia. One day, in the presence of Cosmo, Cellini said to Baccio, "You had better provide for yourself another world, for I will suppress you in this one." Baccio answered: "Tell me one day before, so that I may confess and make my will and not die like a brute, like you." The Duke reconciled them for the moment by ordering them both to make his bust.

The "Perseus" is certainly one of the most extraordinary and most beautiful statues of modern times. If nothing was left of Florence but this work of Benvenuto, it would give an idea of what Florence was under the golden days of the Renaissance, as a fragment of a marble gives us an insight into the Hellenic civilization. In the

"Perseus" you have a specimen of an art which has borrowed from the old models their idealism, their expression of the pure beauty of humanity; and yet with it there is a movement, a force, a passionate agitation which marks a more intense life than what is found in the calm and almost dreamy gods of antiquity. "Perseus" has an almost savage movement; he looks defiant; he shows proudly the bloody head of Medusa in one hand, and in the other he holds his sword horizontally, as if his hand was not tired, but ready, and almost impatient, to strike again. He stamps on the convulsed Medusa. This is the general impression, but when you begin to look at the details it seems as if your eye could never be tired. Here, in the multitude of things, you find the jeweller. The pedestal is a world in itself; it is a shrine of architecture, with its innumerable ornaments, its admirable little statues, and its extraordinary basso-relievo.

The principal works executed at Florence by Cellini are the incomparable "Perseus," the bronze busts of Cosmo and of Bindo Altoviti, the marble bust of the Duchess Eleonora, the restoration of the Ganymede, the group of Apollo and Hyacinth, the statue of Narcissus, the models of the colossal Neptune, and the marble crucifix which Cellini intended to be placed over his own tomb in Saint Maria Novella, but which is now in the Escurial. Florence still possesses the "Perseus," with the little model of this great work, the magnificent bronze of Cosmo, and the Ganymede. The crucifix was presented to Philip II. by the son of Cosmo. During twenty-five years spent at the Court of Cosmo, Cellini never ceased to work as a sculptor and as a jeweller; the number of jewels, gold and silver plates, and vases which he executed, with the help of his pupils, must be very large indeed; but some of them have been lost, and many cannot be authenticated.

M. Plon has a chapter on the private life of Cellini. His violence, his irascibility, did not fit him for a quiet life. His models, who were chosen solely on account of their beauty, invariably became his mistresses, and it is painful to say that he ill-treated them in the most brutal manner. He was constantly quarrelling with his employers about the payment for his works. When he became old, he was so tired of his life that he thought of taking orders. There is a note in his handwriting, dated June 2, 1558: "Remember that I, Benvenuto Cellini, have taken the tonsure—that is to say, the first order of priesthood—from the hands of the Most Reverend Monsignor de' Serristori, in his house at Borgo Santa Croce, with all the accustomed ceremonies." But after this memorandum comes a note: "In 1560, having a desire to have legitimate children, though secret, I asked to be relieved of these vows, and I recovered my liberty." The Dorothea who had been his model when he made the "Perseus," had two children; he adopted one of them, and assured to him, in his will of December 3, 1560, a sum of 1,000 gold *écus*, which the young man was to receive when eighteen years old, but on condition that he should make himself a sculptor. The year after, he had another son by a model called Piera; he educated him with care, but lost him. Piera gave him a daughter, and finally he married her; he had afterward three more children by her. His adopted son gave him no satisfaction; he quarrelled with him, and the act of adoption was annulled.

When Michael Angelo died, Cellini was one of the four artists chosen by Florence to attend his funeral, which took place in the church of the Medici family, San Lorenzo, a church which Michael Angelo has made more famous than the Medici could have done. Vasari has given an elaborate description of the ceremony. Benvenuto found himself ill on the appointed day, and was wanting in the gorgeous cortège; he suffered from the gout. He kept changing his will during his last years, almost to the eve of his death, which took place on February 14, 1571. He died in the house which is now numbered 59 in the Via Pergola. He had not been allowed to make his tomb in Santa Maria Novella, and he was buried in the convent of the Servi della Nunziata. Like all the artists of the Renaissance, Cellini was a writer; he wrote sonnets, but his immortal work will always be his 'Vita'; for, with all its defects, its insane pride, its lies, it gives the most vivid picture of what might be called the fermentation of the Renaissance; it has the charm of naïveté, if not of sincerity.

Correspondence.

THE NAVAL OBSERVATORY.

To the Editor of The Nation:

Sir: Since my name has been dragged into the matter, allow me to correct the singularly erroneous and even distorted statements respecting the Naval Observatory, by your correspondent "T. N.," in the last number of the *Nation*.

The professors have no power to turn away young men from the Observatory; this rests alone with the Secretary of the Navy. And, as a matter of fact, no young man has been turned away. All whose names are mentioned by "T. N." have left of their own accord, being attracted elsewhere by more lucrative and conspicuous positions. When I say that one had his salary nearly trebled, all will understand that he needed no more urgent inducement to leave.

Although it is not possible to gauge the innermost thoughts of men, yet, certainly, the professors have small cause to be jealous or envious of the other classes of men attached to the Observatory. Has a gold medal been awarded to anybody at the Observatory, it has always been a professor who received it; has a man been elected as an honorary member of a foreign society, or even into our own National Academy of Sciences, it has still been a professor who obtained the honor. How utterly absurd is the imputation of jealousy or envy to the professors, in regard to the assistants, may be gathered from an incident which fell under my own observation, and which I may be pardoned for relating. One of the assistants whom "T. N." mentions, during his whole stay here, made one of the family of a professor, receiving from the latter almost daily instruction in mathematics; and the relations between them could have been hardly more cordial and affectionate had they been father and son.

It was not Secretary Hunt who ordered the board of examiners mentioned by "T. N.," but Secretary Goff; and the examination occurred during the secretaryship of the latter; but the Hayes Administration coming to its close in the interim, the report was made to Mr. Hunt. It is strange that the existence of this report should be doubted by "T. N.," since the House of Representatives called for it last spring, and it has appeared in print as a House document. The epithet "freeze out," applied to the examination, is calculated to mislead the public as to its true character. Two days out of the five were devoted to astronomy, one to theoretical, the other to practical. The conduct of the whole examination was eminently just and fair; and, that none may say I speak in praise of it because I was successful at it, I may add that two of the unsuccessful candidates have, in my hearing, admitted that it was so.

Nothing can be further from the truth than the statement that, after the examination was over, the members of the Board discouraged the appointment of the two men who passed. On the contrary, it is within my knowledge that one of them, at least, urged upon the Secretary, in the strongest manner, at the last moment, the desirability of appointing these men. But Mr. Hunt chose rather to be guided by the advice of certain line-officers who had a personal interest in promoting the gentlemen at Annapolis; and the result is what we now see.

The statement by "T. N.," that a bill was passed by Congress authorizing the appointments that were actually made, is a mistake, for at the time the Senate alone was in session, for the purpose of confirming President Garfield's nominations. Hence, the course of the Secretary was to send in the nominations on the last day of the session, and they were duly confirmed, subject to an examination, which examination was conducted by a wholly new board, composed of professors having no connection with the Observatory.

The order of Mr. Hunt, that the two appointees should not be examined in mathematics, must be regarded as a naïve confession on his part that it was a solecism to dub these gentlemen professors of mathematics.

Very respectfully, G. W. Hill.

Nautical Almanac Office, Washington, D. C., December 4, 1882.

To the Editor of The Nation:

Sir: My attention has been called to your editorial of the 9th ultimo, on the revolution which is taking place in the Naval Observatory, at Washington, as well as to the communication of "T. N." which appeared in your issue of November 30, together with your comments thereon. Your words were well-timed and just. It is hardly to be supposed that men whose training is intended primarily to fit them for sailors could, with no other preparation, take charge of an astronomical institution and accomplish scientific results worthy of consideration.

"T. N." is mistaken in supposing that "there are no persons other than line officers in the Navy to take charge of the instruments." On the other hand, I am reliably informed that it is actually proposed to *dismiss all the civilian astronomers except one* as one of the steps toward transforming the Observatory into a pleasant asylum for line officers on shore duty.

While the astronomical force at the Observatory is not as great as it ought to be, it is not right to suppose that Professors Hall and Eastman are the only experienced observers there. It is hardly just, for instance, to speak of Professor Frisby, who has seen nearly fifteen years of faithful service at the Naval Observatory, as "a new man," "with comparatively little experience as an observer." It must be remembered, too, that besides the professors of mathematics there are also the civilian astronomers already mentioned, all of whom are trained men and some of them of many years' experience.

Replies to the remaining points in "T. N.'s" communication are unnecessary, as they do not touch the question at issue. It would not be difficult, however, to show that the "narrow selfish policy" attributed to the professors is greatly exaggerated, and that the story of the filling of the two vacancies for which Messrs. Hill and Johnson were candidates, as told by "T. N.," places the Observatory professors in a totally false light.

The real question, as you say, is not what the professors want, nor what the line officers want, but what is best for the proper conduct of a Government institution which has contributed

so much to the scientific reputation of our country.

In the light of present and past experience, the first thing to do is to pass a law that shall take the Observatory out of the hands of the Navy, place it where its scientific interests will be properly protected, and require that the Superintendent shall be an astronomer of acknowledged ability and experience.

Very respectfully yours, ORMOND STONE.

LEANDER MCCORMICK OBSERVATORY,
UNIVERSITY OF VIRGINIA, Dec 7.

THE ORDERS TO THE *MONITOR*.

TO THE EDITOR OF THE NATION:

SIR: In your issue of November 30, Rear-Admiral John Marston, U. S. N., the senior naval officer at Hampton Roads at the time of the battle between the *Monitor* and the *Merrimac* in 1862, calls in question the statement made by me, in a communication published in the *Nation* of November 2, that "Lieutenant Worden acted on his own responsibility in going up to attack the *Merrimac*, for it does not appear that he received any orders, either from Washington or from his superior at Hampton Roads."

In refutation of this, Admiral Marston quotes from an article written by him and published in *Harper's Weekly*, January 25, 1879 (which, by the way, I never saw before), in which he says: "I informed Captain Worden that my orders were very positive to send the *Monitor* to Washington, but that I was going to disobey those orders, at the risk of my commission, and send him up to Newport News to look out for the *Merrimac*."

In reply, I will simply say that I was guided in my remark by the following statement:

"I left the Navy-yard on the morning of March 6, and reached Hampton Roads about 9 o'clock P. M. of March 8, and immediately reported in person to Captain Marston, commanding the *Roanoke*, the senior officer there. In my short interview with him nothing was said by him as to any orders he had received from the Navy Department to send the *Monitor* up the Potomac, and I left his ship with the verbal understanding that I was to go to the assistance of the *Minnesota*, then aground off Newport News; which I did immediately on my return to my ship. (Signed) JOHN L. WORDEN,
"Rear-Admiral, U. S. Navy."

While disclaiming any desire to cast a single reflection upon Admiral Marston, I cannot but believe that I was fully justified in drawing from the above the inference which I did.

I remain, very respectfully yours,
JOHN D. CHAMPLIN, JR.

NEW YORK, December 6, 1882.

THE CASE OF HASTINGS GANTT.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* of the 23d inst. I find that you have stated some things quite at variance with the facts, and most unjust to an honest man—no doubt quite unwittingly. I presume that you have confused names, or have been misinformed, and that you will be glad to be set right and to do justice in the matter.

Mr. Gantt has never left public life, but has been elected duly, and by large majorities, at every election since the overthrow of the Republican party in this State. He was one of the few Republicans in the Legislature of 1876 who were not either expelled from their seats or intimidated into resigning. He was accused of bribery and taken before the Investigating Committee. He was there advised to resign, but he steadily refused to do so, saying he had never taken a bribe nor sold a vote, and defying any one to bring proof that he had done so.

The Hampton Legislature could bring no proof against him when he was tried before that body, and he was allowed to retain his seat, which he has held ever since with the respect of his constituents, white and black.

He has everywhere a good record as regards honesty; he has been in some posts of great responsibility, and has never incurred reproach, nor failed in faithful discharge of duty.

I have known him well for nearly twenty years, and have employed him in business matters of trust and importance, and have found him a man of uprightness.—Very respectfully,

LAURA M. TOWNE,
Chairman Board School Trustees,
St. Helena Island, S. C.

FROGMORE, BEAUFORT CO., S. C.,
Nov. 29, 1882.

[We subjoin two extracts from the 'Reports and Resolutions of the South Carolina Legislature' of 1877:

"Hastings Gantt testifies that he 'voted for the bill and received a paper calling for seventy-five dollars. Solomons wanted him to take groceries for it, which he refused, but discounted the paper at Mrs. Love's store.'

"Hastings Gantt, being further examined, deposes on oath as follows: 'I was a member of the House of Representatives from the county of Beaufort in the year 1872, when the Blue Ridge Scrip Bill and the Validating and Financial Settlement Bills were passed. Mr. Jno. J. Patterson told me, if I would vote for these measures, he would give me $200. After the passage of them, Mr. Niles G. Parker, then State Treasurer, paid me $100, in the Treasurer's back office, for supporting the measure. I did not receive any more.'"

—ED. NATION.]

GIDDINGS'S 'HISTORY OF THE REBELLION.'

TO THE EDITOR OF THE NATION:

SIR: Your very kind review of my little book, the 'Life of Giddings,' has just come to my notice. Will you permit me to say one word as to the 'History of the Rebellion,' my statement concerning which you naturally call in question? This work was prepared by Mr. Giddings during his later years, after the attack of apoplexy which so nearly proved fatal to him. It was, if my memory serves me, upon the press at the time of his death. A critical examination, after that event, led to the discovery of so many inaccuracies—the result, no doubt, of failing mental powers—that his friends deemed it wise to arrest the issue of the edition. Some copies escaped their vigilance, but the work was never really published. The Hon. George W. Julian then intended to revise and correct the History, but has never done so.

Very truly yours, WALTER BUELL.

CLEVELAND, O., December 6, 1882.

[The work has found a lodgment in a number of public libraries.—ED. NATION.]

ANOTHER VIEW OF THE ART TARIFF.

TO THE EDITOR OF THE NATION:

SIR: Why should foreign books be subject to the heavy duty of twenty-five per cent. without a word of remonstrance from the press, while the lighter duty of ten per cent. upon foreign pictures is denounced as illiberal and oppressive? Is it not because our publishers, with their extensive patronage, have an influence beyond the resources of the artists? Why should art be more free than literature? In the civilization of the country literature has been a much more important factor than art, and as one of the most vital ideas of our country is the greatest good to the greatest number, surely the necessities of the people should not be sacrificed to the interests of the publishers. The most instructive foreign books are not usually reprinted, the reprints being mainly of popular novels. Now, if the pictures that are said to be kept out of the country by the present duty could exert as beneficial an influence as the proscribed foreign books, it would be manifestly unjust to continue the tax; but on the contrary such art (?) is positively debasing in its influence, as it prevents an appreciation of all true and worthy work.

The American artists have never objected to the importation of good foreign pictures; but they do object to the trash with which we are deluged by the foreign picture-dealers. When the effort to change the tariff was made the artists asked that the rate of duty should remain as it then existed on all paintings of a less value than $500—above that, the rate to be reduced; but that every painting should pay at least a duty of $50. Pictures that cannot pay such a duty are not likely to be of a quality to benefit any one except the dealers, and the tax would be comparatively nothing on all meritorious works of art, and would become still lighter in the degree of their superior excellence. Our artists would be willing to have the duty entirely removed from good works of art, and have a rate of duty that would be prohibitory imposed only upon the rubbish that is manufactured and imported by the shipload; but such a law would hardly be practicable, as the dealers would then claim that all of their importations were of sufficient merit to pass upon the free-list, and our Custom-house officials are not the best judges of art in the world.

Let us, then, have a specific duty of, say, from $20 to $50 upon every foreign picture imported. The dealers in cheap pictures would be the only persons injured, and the public and the importers of the better class of works of art would be proportionately benefited. The value of works of art is so uncertain, and varies so much with the artist's reputation, the fashion of the moment, the supply and demand, and the general business condition of the country, that no *ad valorem* duty can be imposed that will not be successfully evaded by the dealers, who think it no sin to get the better of Uncle Sam. In the case of the exhibition of Alma Tadema's pictures, to which reference was made in the *Evening Post* of Saturday by a correspondent, of course the Custom-house regulations bore hardly. Such a case does not often occur, and it would be easy to make a proper and accommodating change in the laws without jeopardizing the art interests of the whole people by an indiscriminate removal of the duties upon all art works.

AMERICAN ARTIST.

NEW YORK, December 9, 1882.

[Yes, but the American artists have never told us who was to judge whether a foreign picture was good enough to be imported or not, or who was to point out to us what was "trash" and what was not. The test our correspondent proposes—the money price—is obviously an unfair and unfit one. The highest-priced pictures are not, as everybody knows, always the best ones. The prices of pictures are, more than the prices of anything else, fancy prices. The larger ones are too often paid by persons whose art judgment is absolutely worthless, and who buy because they have more money than they know what to do with, and desire to have the works of the fashionable painters of the day as furniture. To rate pictures by standards thus created, for the purpose of taxing those to which rich amateurs do not take a fancy, or in which they have discovered no excellence, would be preposterous. The dealers in cheap foreign pictures are, from the artistic point of

view, just as respectable a body of persons as the dealers in cheap American pictures; no better, but no worse. And cheap foreign pictures do no more harm to art than cheap American pictures, if so much. If they are to be taxed at the Custom-house in the interest of the beautiful, then the internal-revenue collector ought to be let loose on the unknown American artist, and he ought to pay $50 to the Treasury for every poor picture he publicly exposes for sale, and $100 for every picture so exposed which, in three months, say, finds no purchaser. If we are going to elevate the artistic taste of the American people through protective taxation, let us do it thoroughly. And, by the by, why has an American who cannot afford dear pictures not a right to purchase cheap and bad ones if he pleases, without consulting the artists whose pictures he does not want to buy? Is not the very proposal to fine him for taking such a liberty what Mr. Squeers called "richness"?—Ed. Nation.]

Notes.

Specimen sheets of Poole's 'Index to Periodical Literature,' third edition, brought down to January, 1882, are now being sent out by J. R. Osgood & Co., who expect to produce the work complete during the present month. It is well to recall the fact that the two previous editions of 1848 and 1852 are embodied in the one now on the press, and that the alphabetical key is thus offered to no fewer than 240 different periodicals, or 6,205 volumes. It is announced that supplements to this Index will be issued in the same style at stated periods.

Houghton, Mifflin & Co. issue this week the 'Life of Ole Bull,' by his wife; 'J. Fenimore Cooper,' by Prof. T. R. Lounsbury; J. W. Mollett's 'Illustrated Dictionary of Words used in Art and Archæology,' an English work; Mr. W. H. Bishop's 'House of a Merchant Prince'; Prof. Anderson's translation of Björnson's 'Magnhild'; and two volumes of poetry: 'Monte Rosa,' by Starr H. Nichols, and 'The Hill of Stones,' by Dr. S. Weir Mitchell.

Funk & Wagnalls have in press Meyer's 'Critical and Exegetical Commentary on the Acts of the Apostles,' edited by Dr. William Ormiston.

Mr. R. H. Stoddard has edited the 'Mrs. Browning's Birthday Book' just brought out by James Miller. The chief novelty we remark is that death-dates of eminent persons are noted in addition to the usual birth-dates.

Lee & Shepard have reduced from the rank of books to that of Christmas cards the several poems illustrated for the holiday season by Miss L. B. Humphrey during the past six or eight years. The list includes 'Home, Sweet Home,' 'Ring out, Wild Bells,' 'Nearer, My God, to Thee,' 'Rock of Ages,' 'He Giveth His Beloved Sleep,' 'Abide with Me,' 'O Why should the Spirit of Mortal be Proud?' and 'The Breaking Waves Dashed High.' Each poem has a special illuminated cardboard cover, described as "golden floral, flexible, fringed, gilt edges," and is enclosed in an envelope. In this form there is no reason why the series should not take a new lease of life.

Longfellow's 'Flower de Luce' has been similarly got up by S. E. Cassino, Boston, except that the poem is given in facsimile of the author's MS., and that the illustrations are in color by the deft hand of Mr. Isaac Sprague. A further curiosity is the printing in ordinary type of the two states of the poem, between which any one may choose for himself.

The "æsthetic" devices of tradesmen to attract attention are usually so odious that one is ready to forget the advertising purpose of so pretty, well-chosen, and well-printed a budget of verse as the 'Paradise of Daintie Devices—A Collection of Poems, Songs and Ballads,' distributed by Charles Pratt & Co. The typography and presswork are by Francis Hart & Co.

A facsimile reprint of the rarer kind, in which types for which special punches have been made are used, has been very successfully carried out by T. Fisher Unwin, 17 Holborn Viaduct, London (New York: Scribner & Welford). The copy of George Herbert's 'Temple,' in the British Museum, dating from 1633, has been closely followed in every particular, even to the color of the paper and the binding. The result is highly illusory. The first edition of this reprint was made in 1876. For the present one, the author of 'John Inglesant' has been induced to furnish a preface, and it cannot be said that he underrates the influence of the ritual on the welfare of mankind, or the products of the Church of England—"a culture unequalled in the world beside"; "families—generation after generation—which no other country, and no other class in this country, ever saw."

One of the cleverest mystifications we have ever seen comes to us from the house of Felix Bagel, Düsseldorf (New York: Westermann). A droll artist, C. M. Seyppel, has versified and pictorially illustrated Herodotus's story of King Rhampsinitus and his treasure-house, with such poetic license as not only heightens the fun, but makes the narrative unobjectionable. There is a skilful adherence to the Egypt of the monuments in costume, figure-drawing, symbolism, etc., and at first blush one would readily take the book for what it purports to be—an "ausgegrabenes Buch," the very one dug up by a German archæologist who accompanied Wolseley's late expedition against Arabi Pasha. To carry out the illusion that this is a *unicum*, and has been really buried under ground, the leaves are stained, torn, discolored, soiled in the most realistic fashion; and the purchaser can confidently assert that no other copy of 'Schlau, Schläuer, am Schläusten' exactly resembles his. In spite of all the pains spent on this "Ægyptische Humoreske" (which, by the way, though in German, interprets itself graphically to English eyes), the price is not dear.

At the instance of one of our leading artists, the Heliotype Company, of Boston (J. R. Osgood & Co.), have attempted a reproduction of Bastien-Lepage's painting, familiar to New Yorkers, of "Joan of Arc." The task will be at once recognized as very difficult, and apparently the great size of the canvas compelled the taking of the negative in two parts, so that one sees a joint in the print as in a wood-engraving of which the blocks have sprung. Still, the success has been as great, perhaps, as could be expected; the vision being distinct enough, and the Maid—the first and last object of interest—perfectly so, while the values of the background, notably of the trees, are somewhat lost. The memento is worth having, and will give pleasure.

J. W. Bouton sends us heliogravures of Hans Makart's panel paintings, the "Five Senses," which were exhibited and much talked about in Germany some two years ago. Five nude female figures, drawn with much subtlety, more or less directly symbolize the sense ascribed to each respectively. Touch or Feeling (*Gefühl*), naturally the most difficult to represent, is, in fact, obscurely recognizable; but it is one of the loveliest of these remarkable designs. The heliogravures, which have broad margins, measure about 12x3 inches.

Not less than twenty "University Studies in History and Political Science" are enumerated in the prospectus of the Johns Hopkins University issued by Dr. Herbert B. Adams, the editor of the series. Two of these are already in print separately, and procurable of the Publication Agency (N. Murray) of the University; the rest are in hand, or have appeared in periodicals. They relate, save one, to American institutions, and embrace New England, the Middle States, North and South Carolina, Illinois, Michigan, etc. They are of great promise for the future of historical investigation in this country.

An Early Scottish Text Society has been instituted at Edinburgh. Its publishers will be W. Blackwood & Sons.

The second part of Marquardt's 'Privatleben der Römer' has just appeared, completing the work. It is not materially altered from the original work, part 2 of vol. v. of Becker and Marquardt's 'Römische Alterthümer.' There are about forty more pages, but the original order and arrangement are closely adhered to. A marked improvement is in the Table of Contents, in which every heading is given with exactness, so that it is easy for any person to find whatever subject he is in search of. The topics treated in this division are food, clothing, house, and furniture; professions, education, and sports. This finishes, we suppose, Marquardt's part of the Mommsen and Marquardt's 'Römische Alterthümer' (of which it composes vol. vii.). This great work is now complete, with the exception of vol. iii., 'Bürgerschaft und Senat,' by Mommsen; for this, we suppose, we are fated to wait indefinitely—we are only told that it "is in preparation, and will appear by and by (*später*)."

Prof. Nicola Fornelli's excellent work, 'L'Insegnamento Pubblico ai Tempi Nostri,' noticed in No. 904 of the *Nation*, is being translated into French.

Among the latest announcements of Parisian publishers is 'Démocratie, Roman américan.'

The second performance by the Comédie-Française of Victor Hugo's "Le Roi s'amuse," on the fiftieth anniversary of its first performance, has afforded M. Jehan Valter (the name has a most Romantic flavor) an occasion to publish a little book of a hundred and fifty pages devoted to Hugo's play and its history. 'La Première de "Le Roi s'amuse"' (Paris: Calmann Lévy; New York: F. W. Christern) contains facsimiles of a letter of Hugo's, and of three rough sketches made by him to illustrate the scenery.

The library of the late Professor Benfey, the distinguished Sanskritist of Göttingen, has been purchased by Mr. O. Harrassowitz, of Leipsic, who will send catalogues of Benfey's books gratis upon application.

Mr. Wm. Goonetilleke, of the Oriental Library, Kandy, Ceylon, proposes to publish Panini's 'Sanskrit Grammar' in the original text, accompanying it with an English translation and commentary. The editor expects to issue it in monthly parts, and to complete it in two years, and in two volumes. The price to subscribers in advance is 12 rupees a volume. This may be remitted by British Indian postal order for 24 shillings to Mr. Goonetilleke; or subscriptions may be made with Trübner & Co., of London.

—Professors John Trowbridge and Rowland have returned from the official Conference of Electricians in Paris to which they were sent by the United States Government. The session continued from October 16 to October 26, but it did not reach positive results, and adjourned to October 1, 1883. It was evident that no agreement is at the moment obtainable in respect to the value of the ohm, and accordingly measures were taken to secure further researches upon this fundamental point. Five promising methods of inquiry were recommended by the Conference,

and it was decided to seek Government aid in the prosecution of the investigation. The Congress also urged continued observation in respect to safeguards against lightning (*paratonnerres*), and more exact efforts to establish an absolute standard for the measurement of light. The conclusions of the Conference may be found succinctly given in the *Revue Scientifique* for November 4, and a list of the delegates in the *Electrical Review* for October 21. Simultaneously with this conference on electrical units, an international conference on the protection of submarine cables was held in Paris, which was attended chiefly by men engaged in the highest stations of telegraphic administration.

—Illinois has made a valuable contribution to the subject of medical education in America—a theme which more and more demands the attention of thoughtful men. The Board of Health in that State has undertaken to find out how many medical colleges in this country are in "good standing," and, with a great amount of well-directed effort, has made up a directory or descriptive catalogue of existing institutions and of those which have been closed. Ninety-nine medical colleges are recognized as in "good standing," five are accepted conditionally, and eighteen are absolutely rejected. It would be worth while to ask how many said to be in "good standing" would be recognized as such in any other civilized country, and how many prescribe any adequate standard of intellectual attainments as a condition for admission to a course in medicine. The utmost that the Board itself ventures to insist on as essential is "a good English education," which is described as including "mathematics" (without saying whether that means the multiplication table or the calculus), "English composition, and elementary physics." The whole record is not creditable to the profession, nor to the promoters of education in this country; but this presentation of the facts, this diagnosis, if we may call it so, which the Illinois Board has given to the press, is an excellent step toward the discovery of a cure for a disorder which has been persistently chronic, but is not irremediable. With this report, by the way, may be read an extraordinary statement, proceeding from Chicago, of the mode in which the "Bellevue Medical College of Massachusetts" (stealing the good name of a college in New York) bestowed its diploma and certificates of attendance upon two courses of lectures on a fictitious applicant, the reporter of a newspaper, who with laughable ingenuity personified an illiterate candidate engaged in medical practice, and wanting "a Diplomey, cheep." The entire correspondence is printed, and is only equalled in the annals of medical education by the detection and punishment of "Doctor" Buchanan, in Philadelphia, some little time ago, likewise by the tact of one of the newspapers.

—One of the most remarkable examples of contemptuous disregard for the public good is the Congressional action that has placed the National Board of Health in a state, practically, of suspended animation. In 1879 this Board was organized by law, in response to vigorous appeals from sanitarians. It was charged with advisory functions in relation to the public health, and with coöperation, so far as was legal, with local boards against the introduction of foreign disease. This latter duty was required by a special law, known as the Quarantine Act, that expires by limitation in 1883. The dual form of government, the jealousy of State authorities, and the extreme repugnance of commercial communities to restrictive measures that affect their particular interests, made protective expedients very difficult to devise and carry out. And, indeed, it is only through local authority that any positive work can be done. Notwithstanding these obstacles, the National Board succeeded in limiting the spread of epidemic diseases without materially interfering with traffic—notably when yellow fever threatened the Mississippi Valley—as had never before been done. In its advisory capacity it set on foot important investigations as to certain preventable diseases, with very encouraging prospects; it practically suppressed the smallpox of immigration that threatened the Northwest; and it accomplished the whole within the moderate appropriations with which it was endowed. But in some way friction, especially with the Louisiana Board, was generated; an undertone of complaint not yet vented in open charges has been heard in New England; objection was made on the floor of the House to agents of the general Government inquiring into the cause of disease; gross misstatements as to its expenditures were announced in Congress; and that body, repenting the good it had done, or forgetful of the past and unmindful of the future, crippled both the resources and the jurisdiction of the Board. Finally, when $100,000 was placed in the President's hands to use against epidemic disease, he made the Marine Hospital Service his agent, and the National Board found constructive insult added to the injury that, as a scientific body, it had already received. It would be strange if a new organization, with such delicate functions, should not have committed some errors; but it is safe to say that a small non-political council that contained such men as Cabell, of the University of Virginia, Bowditch, of Massachusetts, and Bemiss, of Louisiana, could not go far astray in either aim or method.—A preliminary report on the yellow fever in Texas, by the Supervising Surgeon-General of the Marine Hospital Service, shows that a *cordon sanitaire*, extending for several hundred miles, was the particular and effectual means employed to defend the uninfected regions.

—Bohemia, it is said—the Paris Bohemia—is getting civilized. Gavarni and Mürger would hardly recognize their heroes. But a wild idea does occasionally crop out. The painter, Jules Lévy, has organized as an exhibition a Salon des Arts Incohérents—as one might say, of the Arts of Topsyturvydom. The portraits, for instance, instead of the usual sketch of a head, represented the feet alone. If any full length was shown, the subject must have been taken standing on his head. Then there were shown the works of not celebrated artists, but noted authors—very remarkable canvases from the hands of the poet François Coppée, the dramatist Monselet, who exhibited an Ascension, in which at the very top of the paper were the toes of the vanishing Christ, the rest of the field being blank. To crown all, the verdicts of the jury were drawn by lot.

—The Greek Government has finally awakened to the importance of pushing on the excavations at Eleusis. A certain part of the sacred peribolos has been cleared of the huts that obstructed it, the owners receiving compensation from the public treasury, and investigations have been proceeding for some months already under the direction of the Athenian Archæological Society. The results obtained are not as yet of much importance. The ruins of the great Temple, or Megaron, of Demeter and Kora have been laid bare, as have been those of a stoa (in the northeast corner of the peribolos), and, in part, those of a building—perhaps the ancient entrance to the sacred precinct—of which the object has not been fully made out. A few statues, coins, and vases of small value have been found, and about forty inscriptions—among them, two psephisms and a catalogue of objects belonging to the Temple. Most of these inscriptions are more or less mutilated. Among those which are perfect the most interesting is a psephism to the hierophant Chairetios, a Sacred Herald and Eumolpid.

—The New York Chorus Society opened their second season on the 6th instant with a successful performance of Gounod's new oratorio, "The Redemption," which was first produced a few months ago at the Birmingham festival in England, under the composer's personal direction, and subsequently repeated at Bristol and London. The performance at Steinway Hall was the first outside of England, although the work is in preparation in a dozen Continental cities. The hall was full, and the applause after each act genuine and hearty. To be listening to a "sacred" work by Gounod probably appeared paradoxical to many who know him only as the composer of "Faust," "Romeo and Juliet," and a few other operas. But Gounod has always had a natural inclination toward sacred subjects. He studied theology for two years, and barely escaped becoming a priest. Among his earliest compositions were two masses. At Rome he carefully studied Palestrina, and on returning to Paris accepted a position as organist. In one of Fanny Hensel's letters, dated Berlin, 1843, occurs this passage: "We talked much, too, about his own future, and I think I was not wrong in putting oratorio before him as likely to take the first place in music in France. He entered so fully into my views that he set to work at once on the libretto; 'Judith' is the subject he has chosen." These facts show that he has not gone out of his way very far in producing such a work as the "Redemption." We doubt, however, if it will help to secure for oratorio the "first place in music in France" or elsewhere. It suffers from the general fault of all oratorios—the fault of being a hybrid in form: half lyric, half dramatic or quasi-dramatic. To listen to such a work for three hours produces a feeling of monotony which it would take scenery, action, and costume to overcome. A scarcity of ideas is another fault of the "Redemption." It does not contain a single immortal number. The "Creation" prelude, with its weird harmonies, is not equal to the "Faust" prelude; the March to Calvary is far inferior to the "Faust" march; and the same could be said of most of the other parts as compared with corresponding earlier compositions of Gounod's.

—It follows from this that the "Redemption" is not a great work; but it is nevertheless an interesting one, full of fascinating details which repeated hearings will endear to all hearers, and destined to occupy a prominent place in the repertory of chorus societies for years to come. Like Wagner, Gounod has in this case written his own libretto, and he has done so with considerable skill, although with more poetic license than occurs in the texts of the great oratorio composers of the past. The scope of the "Redemption" is thus expressed in his own words: "This work is a lyrical setting forth of the three great facts on which depends the existence of the Christian Church. These facts are: I. The passion and the death of the Saviour. II. His glorious life on earth from his resurrection to his ascension. III. The spread of Christianity in the world through the mission of the Apostles. These three parts of the present trilogy are preceded by a Prologue on the Creation, the Fall of our First Parents, and the promise of a Redeemer." The oratorio was conceived in 1867 and only completed a few years ago, the author having at various times returned to his task, which, when completed, he stamped as "*opus vitæ meæ*." He calls it a

"sacred trilogy," but there is no reason why it should not be called an oratorio, considering how great are the differences between the various kinds of stage plays classed together as "operas." From the older oratorio the "Redemption" differs chiefly by the omission of arias, and the transference of the melody from the vocal parts to the orchestra, which in Gounod's hands often becomes a vivid mass of rich or delicate colors. In these features it is easy to recognize the influence of Wagner; but Gounod has neither Wagner's inexhaustible wealth of *melos*, which is required to sustain the symphonic interest in the orchestra, nor has he in banishing the aria from the oratorio correctly applied Wagner's ideas. An aria is out of place in an opera because it arrests the action; but an oratorio has no action, hence it is the very place where an aria is called for. The declamation indulged in by the soloists would be eminently proper on the operatic stage, whereas on the concert stage it becomes monotonous. The frequent use of chromatic harmonies, as well as passages on pp. 28, 48, 135, etc., of the vocal score, shows that Gounod is familiar with the scores of "Siegfried," "Lohengrin," "Götterdämmerung," and "Carmen." A "typical melody" or leading motive of the Redeemer occurs frequently, but it is always in the same form and not subjected to the rhythmic and harmonic changes of Wagner's leading motives. Several of the choruses, including the chorales, are of great beauty; but in all of them except the last the absence of all attempts at polyphonic writing is noticeable, while in the orchestra it is frequently employed.

—About a year ago Brahms's second pianoforte concerto was for the first time played by the composer himself at one of the Philharmonic concerts in Vienna. It was subsequently incorporated into the repertory of Dr. von Bülow's travelling Meiningen orchestra, with which Bülow made such curious experiments. At one of his concerts, for example, Bülow played Beethoven's Ninth Symphony twice in succession, while at others all the musicians were called upon to play a symphony from memory. Brahms's concerto, too, was presented in an original fashion. First, it was played by Brahms while Bülow conducted, and then Brahms assigned the piano to Bülow, and himself took up the bâton. Such odd but interesting experiments we have to dispense with in this country; but that we have all the requisites for giving a perfect performance of such a work as the new concerto was proved at the Academy of Music on Saturday evening, when it was one of the features of the second Philharmonic concert. The orchestra was in one of its best moods, and by giving due emphasis and expression to each part enabled the hearer to follow readily the details of the very intricate score. Mr. Joseffy, who interpreted the piano part, and who, as usual, was obliged to add a piece of his own after the performance, astonished even his greatest admirers by the manner in which he performed his task. There is in this concerto but little of the light, graceful, and dainty, of which Mr. Joseffy has made a special study: it calls for sustained power, breadth of execution, and deep expression; and all these qualities Mr. Joseffy added to his easy mastery of the enormous difficulties which abound in the score. With pianists who only care to astonish the audience with tricks of virtuosity, the Brahms concerto will never become popular, because in it the piano does not appear as a sort of lyric prima donna, but merely as a component part of the orchestra. A Vienna critic has called it a symphony with piano obbligato; and this title is borne out by the fact that it consists of the four movements of a symphony—a fourth movement, which may be called a scherzo, although it is marked allegro appassionato, having been added to the usual three movements of a concerto. It is, however, the least successful part of the work, recalling the gambols of bears and elephants rather than fairy movements; for Brahms is anything but lively and graceful. The andante can be readily appreciated at a first hearing, and it is only surpassed in beauty of treatment by the final movement, which also contains several of those pregnant ideas which, though not of frequent occurrence, mark the originality of Brahms's genius. Dr. Hanslick, who is Brahms's high-priest, justly says that this concerto is related to the first as his clear, intelligible, and richly-colored second symphony is to the sultry, mysterious first. There is no excess of clearness, however, nor of spontaneity either in the second symphony or the second concerto. Erudition always prevails over imagination, and our feelings are rarely swayed by that irresistible force of genius which characterizes the works of Rubinstein, who will be placed high above Brahms by the verdict of posterity as the champion of absolute music in our period. It is true of all Brahms's works that they improve on closer acquaintance; but it is equally true that in his most inspired compositions—the sextet, one trio, the Rhapsodie, etc.—the beauty does not play at hide-and-seek with the audience, but becomes manifest at a first hearing. The other pieces on the programme, Mozart's "Jupiter" Symphony and Raff's "Im Walde" or Forest Symphony, are too familiar to call for comment.

HOLIDAY BOOKS.

Mr. Charles Yriarte's 'Florence' (Scribner & Welford) will not, we incline to think, be found so readable as his 'Venice,' which appeared in an English translation just three years ago. But no one who owns the earlier work, or the intervening volume on 'Rimini,' will miss adding this to the series, which in its progress southward from city to city reminds one of the triumphant conquests of the Gauls. The superabundance of material and the largeness of his scheme seem to have hampered the author, and reduced him against his will nearly to the condition of a cataloguer. His endeavor, too, to give representations of Florentine works of art either less familiar or absolutely unpictured, has not, we infer, been as successful as he intended. There is a large number of unauthenticated sketchy portraits of artists which can but excite distrust, and even the copies of rare and unique engravings, like the Petrarch portrait, add little to the collector's store. Still, the number of illustrations of all kinds is very great, and the photogravures of sculptured works, particularly of funeral monuments, are a decided accession. So, too, are the curious facsimiles of contemporary engravings of the fêtes attending the nuptials of Bianca Capello. The divisions of the work embrace a specially full account of the Medici family; a short chapter on Florence's lead in the Renaissance; biographical notices of illustrious Florentines, which M. Yriarte considers the most novel feature; a glance at Etruscan art; the architectural monuments of Florence; sculpture, and painting. The volume, in size a quarto, is beautifully printed, solidly bound, and decorated externally in excellent taste.

'The Highways and Byways' of Mr. W. Hamilton Gibson (Harper & Bros.) is a permanent reproduction of articles that have appeared in the publishers' *Magazine*. That is to say, the text is the same, and the illustrations are identical; but the quarto page demanded a more generous letter, and in respect of paper and binding the volume is a worthy companion of the same author's 'Pastoral Days.' Mr. Gibson's designs continue to be as delicate and poetic as hitherto, and some of his landscapes strike us as among his very best. In representations of the wayside tangle of weeds, and of all the neglected forms of humble or mischievous vegetation, he is without a rival. Excellent, too, is the drawing of the surprised old fisherman on the rail fence (p. 88); and the frontispiece of maiden reverie is interesting, even if the girl's figure is a little less robust than so sweet a face deserved. The book is divided into four chapters—"Along the Road," "The Squirrel's Highway," "Across Lots," "Among Our Footprints." All of them proceed from a deep love of nature and an intimate acquaintance with the New England country. The native inhabitants are typically hit off with great fidelity and much humor, and the animal creation of squirrel and bird and creeping thing is comprehended with both artistic and scientific insight. A literary flavor pervades the whole, and gives Mr. Gibson an unquestioned place among New England writers of out-of-doors, if we may coin and be permitted the expression; while his gift with the pencil, which, as we have before intimated, is the higher of the two, makes his position unique.

Mr. W. J. Linton could hardly have rendered his adopted country a greater service than by writing his 'History of Wood Engraving in America,' a labor of love which first saw the light in the *American Art Review*, and is now handsomely brought out by Estes & Lauriat. Mr. Linton both rescues from oblivion the pioneers, with Alexander Anderson at their head, and passes judgment on the "New School" and its representatives, with whom, it is well known, he is not in perfect sympathy. His criticisms, however they may be regarded, have the weight of expertness, and cannot fail of instruction when accompanied, as they often are, by the cuts under review. In a new chapter (ix.), which concludes the work, Mr. Linton extends his criticism, with the aid of several large engravings, including some of his own, and no one can mistake his standpoint or impugn the consistency of his argument. On the whole, we think the critical value of this work, for all who are interested in the art of engraving as amateurs or as practitioners, must be pronounced not inferior to the historical. We should add that the volume is provided with blank pages for the insertion of proofs illustrative of the subject, and that as no plates have been made, the edition (limited to 1,026 copies) is definitive.

In eight chapters and a few more than two hundred pages Mr. George E. Woodberry's 'History of Wood-Engraving' (Harpers) satisfactorily fulfils its purpose. Though some portions of it appeared in *Harper's Magazine*, it is not, strictly speaking, a popular history. It has avowedly a philosophic character, and is not content with a simple presentation of the successive phases of the art; the author's aim being to illustrate the value of wood-engraving as "a fine art practised for its own sake, as a trustworthy contemporary record of popular customs, ideas, and taste, and as an element of considerable power in the advancement of modern civilization." The details which make Jackson and Chatto's 'History' so valuable for reference and so difficult to digest, have been sparingly used by Mr. Woodberry, whether drawing from that or from other sources; and it is quite easy to grasp the lines of progress and the epochs of development and decay as indicated in his brief but orderly review. Like Mr. Linton, he ends with criticism of certain American engravings of recent date, which accompany the text, though, again like the English expert, he concedes that no engraver can be fairly judged without knowing what the draughtsman set before him. The tendency is to exact of the former

a higher artistic capacity than the latter possesses: that he should supplement the defects of the designer—put texture into his vague hints of surface, and bone and muscle into his mushy anatomy, fill his meaningless background with incident, correct his drawing and his perspective—in short, be the real artist, creating and not copying or literally interpreting. It is not hard to see the unreasonableness of this, and we should, in Mr. Woodberry's place, have felt safer in confining ourselves to praise of well-selected examples of the best work of the time. In one or two other particulars, of small importance, we should dissent from his statements or his views; for instance, we think he underrates the best achievements of modern German xylography, while giving as favorable specimens of it two charming woodcuts, to be sure, but a reversion to the facsimile and copperplate mode of engraving whose day is past for our author. The book is very fresh in its illustrations, and the cover is a remarkable success—none more elegant has come to our table this year.

There can be nothing new to say of Doré's illustrations of Dante's 'Inferno,' of which Cassell & Co. send us a new imprint from the plates (4to, pp. 183). The translation is Cary's.

Since the first appearance of Mr. Dana's 'Book of Household Poetry' (Appletons), in 1857, many similar collections have been put upon the market, but none has supplanted it. A new edition, revised a second time and enlarged, is now offered to the public in fresh type and in a shape designated as royal octavo. A convenient summary furnished by the publishers enables us to see at a glance who are the new-comers, and what is the best they bring with them. Some pieces that have taken a strong hold on popular favor—like Edwin Arnold's "He who Died at Azan," Sarah Flower Adams's "Nearer, my God, to Thee," William Knox's "O Why should the Spirit of Mortal be Proud?" (impliedly admitted because it was Lincoln's favorite poem), together with Bret Harte's "Plain Language from Truthful James" and C. G. Leland's "Hans Breitmann's Party"—have doubtless on this account obtained the editorial passport. Others, again, like Clough's "Where Lies the Land," Lowell's "Without and Within," Emerson's "Woodnotes," Pierpont's "Pilgrim Fathers," and perhaps George Eliot's "O may I join the Choir Invisible," may be regarded as afterthoughts of Mr. Dana's critical judgment. That six poems are admitted from Walt Whitman, and three from Rennell Rodd (his sponsor, Mr. Oscar Wilde, is allowed but a single representative, though long enough), strikes one as a whimsical deference to the fashion of the hour. Christina Rossetti, hitherto neglected, has but one poem allowed her, while Dante Rossetti is still "out in the cold." Yet we feel sure that the "catholic as well as severe taste" which the editor has sought to exercise would have been better manifested by a sample of this poet-painter than by either one, say, of Mr. J. T. Trowbridge's newly admitted verses, or by a large number of others now first included by Mr. Dana. However, the collection is still a fine one, and one of its great merits is the accuracy of the text. We will call the publishers' attention to an error on page 457, by which "Thomas Dibdin" is printed for Charles Dibdin—not quite so ludicrous an exchange, by the way, as that we once saw, at the foot of a stanza on Longfellow, of "Austin Corbin" for Austin Dobson.

A number of single poems illustrated and otherwise fitted to become books hardly call for more than bare mention. If there be any choice amid a general mediocrity and feebleness of design, perhaps we should name first 'Bells Across the Snow,' by Frances Ridley Havergal (E. P. Dutton & Co.). The rest are Tennyson's 'Ring Out, Wild Bells' (Lee & Shepard), the designs by Miss L. B. Humphrey; 'Rock Me to Sleep, Mother,' and Schiller's 'Song of the Bell' (Estes & Lauriat); Buchanan Read's 'Christine,' illustrated by F. Dielman (Lippincott); and George Eliot's 'How Lisa Loved the King' (Claxton & Co.). With the foregoing may be classed Mrs. May Riley Smith's 'Gift of Gentians, and Other Poems' (A. D. F. Randolph & Co.), in which the verses are mostly on domestic themes, and especially are calculated for the consolation of mothers. They could not be very inspiring to the artist, for they are unpretentious and not highly original; and in fact but one or two of the designs will delay him who turns the leaves critically.

Better than the "gift of gentians" we must esteem Amanda B. Harris's 'Wild Flowers, and Where They Grow' (D. Lothrop & Co.); but for the text rather than for Miss Humphrey's designs, though we prefer these to her imaginative work. The book is such pleasant and sympathetic gossip about the humbler growths of wood and pasture that it merited congenial and masterly illustration like that which Mr. Gibson might have given it.

Mr. Blackmore's fortunate novel, 'Lorna Doone,' celebrates its twentieth edition in fine linen and gilt, with the help of many illustrations. Those which represent the landscape of Devonshire, the scene of the story, heighten considerably the value of this edition for American admirers. It is issued in this country with the imprint of Jansen, McClurg & Co., and is altogether very comely.

We have searched in vain for a clew to the date of the six months' sojourn which prompted the Rev. Joseph Cross, D.D., to write, from his teeming note-books, his 'Edens of Italy' (T. Whittaker). Nothing in his unrelieved guide-book discourse points to any familiarity with the results of the recent excavations in Rome, for example, and there is no more freshness in his book as a whole than in the pictures, which surely are from forty to fifty years old. The excuse for such a compilation is accordingly not very apparent. The publisher's part has been executed in good taste.

R. Worthington has assumed a work originally produced in Philadelphia, 'The Legendary History of Rome,' from Baker's translation of Livy. The make-up of this large quarto is peculiar. A heterogeneous mass of illustrations, not one expressly prepared for this edition, unless the photogravure of Glaize's "Conjuration" be an exception, and none among the wood-engravings being recent, are distributed through the text, and even through the notes when these consist of apposite selections from Macaulay's 'Lays of Ancient Rome.' The result is not a beautiful book, but the illustrations are generally of a helpful kind, and the print is excellent. Children, at least, may be trusted to make their way through the volume.

If we should be told that Dr. Andrew Wilson's 'Wild Animals and Birds, their Haunts and Habits' (Cassell & Co.) might properly be classed with juvenile works, we should not dissent. Any child would be interested by it, and would find a large part of it intelligible. Still, the style is evidently adapted for adults. The author, an evolutionist, is an instructor in biology and speaks by the card, but in a popular manner, with many pleasant anecdotes. As the engravings are also both large and good, the volume may be commended for the Christmas season or for any other.

The same publishers issue 'The Changing Year,' chiefly interesting to Americans as making them acquainted with numerous minor English poets, designers, and engravers; and 'Sea-Pictures, Drawn with Pen and Pencil,' by Dr. James Macaulay. This treats of the Sea in Poetry, the Physical Geography of the Sea, the Harvest of the Sea, and the Sea in History—all in a manner to instruct measurably, if not highly. We miss from the first chapter such poets of the sea as Wordsworth and Clough could be, on occasion.

CHILDREN'S BOOKS.—IV.

BESIDES Mr. Greey's 'Tokio,' already noticed, there is a remarkably large assortment this season of books of travel for children. In all respects Part iv. of Mr. T. W. Knox's 'Boy Travellers'—"Egypt and the Holy Land"—published by the Harpers, deserves to be named first, and stands least in need of being described, because the rest of the series have found such wide acceptance. Colonel Knox has the great advantage of a world-tourist, and is consequently able not only to check the works he draws upon to fill up his narrative, but to select wisely and to assimilate thoroughly. Hence, considering the mass of information he imparts—too great, at best, we are inclined to think—he is singularly successful in not fatiguing his readers. His humor has much to do with his success. An occasional touch like this (p. 73) does wonders. The duty of beating down prices in Egypt had been enforced:

"Frank profited by the advice, but carried the lesson too far. When he went the next day to the post-office to send some letters to America, the clerk weighed the letters, and told him the postage amounted to two francs and a half. The youth offered one franc and a half, and on the clerk refusing to accept it, he turned to walk away. Suddenly realizing the mistake he had made, he returned," etc.

The account of the Boulak Museum is made very interesting, and the discovery of the royal mummies last year is described at length. Zagazig, Tantah, Alexandria, and other names familiar since the late war occur, but the "Boy Travellers" had passed on to Syria before the outbreak. The illustrations are abundant, but some depicting Eastern costumes and character should have been discarded as never true, and as having no relation to Egypt.

Not a particle of humor entered into the production of 'Rip Van Winkle's Travels in Asia' (T. Y. Crowell), another "sequel" to a book published last year. Partly it covers the ground covered by the 'Boy Travellers,' and no better comparison of the methods of the two authors could be obtained than "Rupert Van Wert's" description of bathing in the Dead Sea (p. 181) affords. Here an authority, "a New York clergyman," is quoted direct; whereas Colonel Knox borrows from the same source, but in his own words, and with all the air of relating his personal experience. "Rip Van Winkle," a schoolmaster, sends letters home from a large part of creation, including Zanzibar, Madagascar, and India; but he was so little abreast of the times that he stopped at Pergamos without learning anything of the great sculptural find which is now the pride of the Berlin Museum. The book is very superficial

The height of the improbable is reached in 'Our Young Folks in Africa,' by James D. McCabe (Lippincott). Ninety-four of its 312 pages are devoted to Algeria, and contain many solid chunks of history separated by pictures which seldom have any reference to the immediate text. The rest of the book is based upon Serpa Pinto's 'How I Crossed Africa.' Now, it would have been worth while openly to condense that florid work for youthful reading; and why should it not have been just as interesting as to introduce four preposterous, fine, manly, typical, wealthy young Americans and their professor, and to pretend that they had only to plan such a journey to find it feasible and secure parental con-

sent to it? We should have been spared seeing the Portuguese explorer's portrait figuring as "Professor Moreton," and his benefactors, the Coillards, portrayed as the Gaillard family. Mr. McCabe does indeed leave the native African names untouched. One high-handed piece of international robbery he has been guilty of: the cuts on pp. 103, 104, 111 really relate to the French possessions in Senegambia, but are here transferred to Portugal, so that, for example, a view of St. Louis of Senegal does duty for St. Philip of Benguela. But most of the non-Algerian cuts are from Serpa Pinto's book.

We shall not discuss the merits of Mr. C. A. Stephens's 'The Knockabout Club Along Shore' (Boston: Estes & Lauriat). It opens with an hysterical defence of the defunct "Woodruff Expedition" and its plan, and we shall dismiss the book after making three quotations from pages which, if not addressed to children, are meant to be placed in their hands:

"Year by year the conviction deepens among Americans, that to plant a boy for four years in some dull little college town is not the most profitable way for him to spend those four of his best years. Surprisingly little comes of it in the way either of general culture or special fitting for the business of life" (p. 12).

"Twenty-three millions of dollars in club-houses and sumptuous *maisons de joie!*—tasteful beastliness. . . . But not a dollar for the Steamship College.

"The money of the country tends now more and more to run together into those chance pools termed great fortunes. . . . There will follow a stern and terrible (to the rich) commune, which will level all present laws of inheritance. Justly. . . . No child of a millionaire can deservedly inherit more than ten thousand dollars" (p. 14).

Mr. Hezekiah Butterworth's 'Zigzag Journeys in the Occident' (Estes & Lauriat) is avowedly a *Tendenz* work. "It is the purpose," says the preface, "of this story-telling volume to explain homesteading, and to give a glance at the resources of the great Northwest and its opportunities for the emigrant." This seems rather singular food for babes, but Mr. Butterworth's truly zigzag method explains the mystery. He begins with an absurd conversation between the lads who are bent on journeying across the continent, and then launches into his usual medley of stories and original and selected verse, in which the thread of adventure is lost out of sight a hundred times. This, he admits, is "open to objection," but asks if it has not "proved popular," judging by sales?—a question more proper for a dime-novelist than for the maker of holiday books. It is enough to give as a sample of the information about "homesteading" that Garfield's career is lugged in, and his shooting by Guiteau depicted in a woodcut. The disorder of the text attends the cuts also, which in some places are shovelled in rather than inserted. Such slovenly book-making is ruinous to the literary taste of the young.

The fair look of Mr. William H. Rideing's 'Boys in the Mountains' (of Colorado, namely), of which the Appletons are the publishers, together with his known skill as a magazine writer, led us to expect a good result. But his forte is evidently not story-telling, as it is not of most of the authors mentioned above, and he hardly struggles to keep up the pretext. The *dramatis personæ* are first introduced to us, and then the author enters upon the scene with long descriptions of the country and accounts of his own adventures. By and by he remembers that the young gentlemen should have the floor, and retires for a while in their favor; but he cannot stay away long, and so the see-saw goes on. Moreover, Mr. Rideing's style is not accommodated to his supposed readers. Hear him:

"Where these odd formations exist, fertility is usually absent, and the former seem like the offspring of some abnormal mood, some vindictive bit of coquetry on Nature's part, or some incomprehensible ambition in the direction of artifice" (p. 14).

The sincere self-depreciation of the author of 'Picturesque Journeys in America by the Junior United Tourist Club' (Worthington) disarms criticism. His scheme is not bad, but he has lacked the skill to carry it out. His children do not talk like children, and his language is too elevated for the majority. If it were necessary to go into details, we should question the accuracy of some of his Adirondack views and statistics.

No doubt there is much information conveyed in Mr. Harry W. French's 'Our Boys in India' (Lee & Shepard), but we cannot praise his choice of a sensational adventure—a Charlie Ross abduction—as a thread for his narrative. The conversation of the kidnappers is not edifying, and too much slang is put in the mouth of the boy in quest of his lost brother. He ends by pledging himself to turn missionary, and the friend who has inspired him to be a true hero applauds his resolution with "Go it, Scott. You're on the right track." The Indian illustrations, mostly from photographs, are the best things in the book.

Something of England was shown in a pretty way, by means of colored prints, in 'At Home,' published last year by Marcus Ward & Co. A companion book, 'Abroad,' now gives some idea of France, and of Normandy in particular. The story is told in rhyme constructed for the infant intellect, and serves well enough to explain foreign ways and scenes. In the interest of truth, however, we must object to the poetic license which accounts for the flag-women on the Continental railroads by assuming laziness and wilful neglect of duty on the part of their husbands.

Harper & Brothers publish an octavo volume, 'Building the Nation,' by Charles C. Coffin, intended to attract children to a study of the political and economical growth of the United States. The historical student might take exceptions to many of the writer's most unqualified assertions, and to his generally summary decisions upon points which are still debatable; but from the boy's point of view there is very little to criticise. The principal attraction is the illustrations, about 350 in number. Some of these are old acquaintances, having figured long ago in Abbott's 'Life of Napoleon' and elsewhere in the *Magazine* of the publishers. Others, such as the "Scene in Tangiers" and "The Desert," are thrust in without any very evident excuse; but the great mass are useful and attractive, and make up a satisfactory holiday book.

Mr. Charles Henry Hanson's 'Homer's Stories Simply Told' (T. Nelson & Sons) is a fairly good abstract of the 'Iliad' and 'Odyssey,' but derives no beauty from the author's phraseology. Much better work is the Rev. Alfred J. Church's 'Stories from the Greek Tragedians' (Dodd & Mead), in which the flavor of the original is skilfully retained by often very close paraphrases. Mr. Hanson, on the other hand, depends too much on long versified extracts. Both of these books have Flaxman's illustrations.

Two story-books from Macmillan, 'When Papa Comes Home,' by the clever author of 'When I was a Little Girl,' and Mrs. Molesworth's 'Rosy,' have in common the merit of good English and refined sentiment, and are both interesting, though in different ways. 'Tip, Tap, Toe,' as the first story is also called, has no plot, and just tells the doings from day to day and from week to week of a harmonious household, to whose complete happiness papa alone is wanting till the last page is reached. There is more humor in it than in 'Rosy,' which relates the chastening of a little girl dissatisfied with her "environment." Of 'A Moonbeam Tangle' (Cassell) what need be said except that it is a flat and distant echo of 'Alice in Wonderland'?

Dr. True's 'Life of John Smith' (Phillips & Hunt) is well fitted to interest boys in the early history of their country, and may be recommended to those who wish this best class of books for boys—heroic biography. It is got up in a less elegant style than most boys' books at the present day, but it is in good plain type. The story of Smith and Pocahontas, we notice, is told in the old way, with no intimation that it is a fable. It is all right to relate such stories, but the reader should be cautioned about them in a note.

In 'Facts and Phases of Animal Life,' by Vernon S. Morwood (Appletons), we have certainly a remarkable production for this era of scientific activity. "The following pages," says the preface, "have been written chiefly for the young"; "several amusing and useful anecdotes, many of which are original," "have likewise been introduced, which may help the reader to form a proper estimate of the animals to which they refer." In the first chapter it is truly stated that "the following estimate of the number and classification of animals is both curious and wonderful." The estimate records the number of species of mammals as 1,658; of birds, 6,266; of snakes, 657; turtles, 8; sea-snakes, 7; insects, 550,000. The existence of other groups of animals is not even hinted at, though to the above, in a "classification of animals," p. 12, *fish* are added and defined as "the natives of our seas, rivers, lakes, and ponds," while insects are described as "all those creatures which come to a perfect state of existence by a metamorphosis process." In chapter ii. we are told that "the majority of the inhabitants of the great deep belong to the vertebrata, or to the finny tribes possessing a spine or backbone. From the tiny whitebait to the huge whale, every kind of fish is adapted," etc. Then follows an "amusing and useful anecdote," probably "original," about a codfish which "blew with great force" (!), and the author sagely remarks that "when we consider that naturalists have discovered 13,000 species of fish, one might almost suppose that this planet had been created purposely for them. The sea is indeed wonderful to contemplate." It would be useless to multiply extracts to show how worse than worthless is this miserable compilation. The "anecdotes" consist largely of obnoxious stories conspicuously silly, teeming with errors of fact, often superstitious or ludicrously credulous. It is a book which should not be put into the hands of any child. The illustrations are mostly old, worn cuts, which seem in part to have been taken from spelling-books of a past generation. The press-work and binding are good, and are the only good things about this publication, though the author is styled on the title-page "Lecturer to the Royal Society for the Prevention of Cruelty to Animals."

In refreshing contrast to the preceding appears Miss Arabella Buckley's 'Winners in Life's Race' (Appletons), a neat volume devoted to the vertebrates, which are denominated the "great backboned family." This book, though complete in itself, forms a natural successor to the same author's 'Life and Her Children,' which treated of invertebrates, and carries the reader through the vertebrate series from *Amphioxus* to the apes. A careful examination has revealed no serious errors, and from incidental remarks it is evident that the author has resorted to recent and eminent authorities for the facts which are marshalled with praiseworthy clearness in orderly succession. The illustrations, though a trifle coarse in execution, are fresh, sufficiently accurate, and in a majority of cases original. There is little poetry, no cant, and no objectionable sentimentality. The paper and typography are

good, and there is an excellent index. But one criticism suggests itself: the clearness of the narrative is somewhat impaired and the style encumbered by the attempt to carry to completeness a substitution of colloquial for technical terms. "Feeding-tube," "backboned family," "milk-givers," "line of nerve telegraph" seem weak and unnecessary equivalents for "œsophagus," "vertebrata," "mammalia," and "nervous system." These terms are practically part of the language, and have, in this country at least, long passed out of the technical stage. In a work of this sort they strike one much as "blazer," "beamer," and "twinklers" would, in an elementary astronomy, as equivalent terms for sun, moon, and stars. This, however, is a comparatively small matter. The book is to be heartily recommended.

A Group of Etchers. With Text. By S. G. W. Benjamin. Dodd, Mead & Co. 1882.

THIS collection of twenty etchings includes plates by some of the best modern etchers—Haden, Herkomer, Rajon, Hamerton, and Whistler among them. They are bound up in a handsome folio, with text accompanying each plate, and the whole is in good taste, with exception of some showy and meaningless gilt ornamentation on the cover.

Mr. Seymour Haden's plate, "Twickenham Church," the first one in the series, is by a widely-known and appreciated artist. What Mr. Haden does is done—so far as concerns the technical processes of etching—in a masterful way. There is neither timidity, correction, nor technical fault in his lines or touches, but they are, on the other hand, by no means of such character and significance as to justify the freedom with which they are executed. Mr. Haden is an artist of much natural feeling and power, but his work often shows the want of thorough discipline in the very elements of graphic design. He seldom grasps the character and beauty of natural lines. His trees and herbage are inorganic and often meaningless; and his rendering of the forms of earth, sky, and water is equally inexpressive. Moreover, he seldom shows a fine sense of proportion or design in the general construction of a subject. These defects are illustrated in the plate under consideration. The great mass of foliage on the left is not simply sketchy, as it might be generally considered, but it is without suggestion of form. The lines and touches in it do not indicate thought and purpose: they are not graphic. Regarded simply as a mass of shade, it is equally unhappy, being at once heavy, unbalanced, and unconnected with other parts, save with the dark grasses, which are led out across the foreground with a downward inclination that gives an unpleasant slanting impulse to the design. In his great plate etched from Turner's "Calais Pier" such defects do not appear. Here the composition and the leading lines were already prepared by a great designer, and on this basis his own skill as an etcher could work with good effect. We by no means mean to imply that Mr. Haden supplied nothing beyond his mere technical skill in translating the design into the terms of etching, though to do that well would be in itself worthy of high praise. We think he did much more than this. He entered with sympathy into the spirit of the work, and found his own best artistic powers quickened by it, so that the result is a great deal more than a mere abstract of Turner. It is, in some sense, an original and a great creation.

"Words of Comfort," by Mr. Hubert Herkomer, represents a peasant-girl reading from the Bible to an aged woman. The form and pose of the girl—especially of the arms, one of which supports the book while with the hand of the other she is about to turn a leaf—are graceful and true beyond what is common in modern art. But there is a want of harmony in the outlines which injures the effect of the work. This is shown in the unduly thick line of the girl's upper arm, and the very thin ones of the sleeve just above it. There is also a want of harmony between the thick outline of the face and the very delicate shading within it. We do not mean that outlines ought always to be of precisely the same strength. But, as a general principle, they should, for good effect, be at least approximately so. The drawing of the drapery and the other subordinate parts of this subject is too vague and inaccurate in suggestion.

The example by Rajon, after a picture called "Prayer," by Chalmers, is a poor specimen of this artist's work, which has occasionally been of the highest excellence. The defect of overshading is very marked, and is not atoned for by qualities like those of his expressive and masterly portraits of Darwin and Mill.

Mr. Hamerton's plate, "Moonrise on the Ternin," though suggestive of a pleasing sentiment, is very imperfect in expression of the facts of nature which are treated. The full moon is rising into a sky mostly covered with bars of dark cloud, deepening gradually toward the zenith. Under such a sky nothing could exhibit the strong light (the untouched white paper) which Mr. Hamerton has given to his foreground water, and even to the banks on either side of it. The whole chiaroscuro—and the subject is one in which true suggestion of chiaroscuro would be nearly everything—is thus false and disagreeable. In point of drawing, the masses are hard and edgy, though there is evidence of effort to be truthful in form, especially in the trees. The design evinces little sense or power of composition. It is simply a commonplace actual scene ungrammatically rendered; and it does not fairly represent Mr. Hamerton's abilities as an artist and etcher.

"Billingsgate," by Whistler, is one of this artist's rough sketches on copper. It shows his limitations as regards delineation and design more fully than it does his good and subtle qualities. Little detailed remark is necessary upon the other plates of this series. The frontispiece, "In Summer Woods," by C. P. Slocombe, contains some fairly good tree drawing, but it is scattered and spotty in light and shade. There is not enough middle-tint. The darks are over-bitten and are too equally black; and in the shading of the principal tree-trunk the reflected light contends too strongly with the high light. In Mr. Frederick Slocombe's "Winter Evening" the composition is good, and the naked tree forms are well outlined against the bright sky; but the chiaroscuro is in some minor respects faulty. The roadway ought to reflect more light from so bright a sky, and the figures would certainly tell more as strong darks against it. We have before in these columns expressed our conviction that the method of producing tints by *retroussage* is a bad one when pushed too far, because its results are largely a matter of chance. The effect in this plate is got by this method, and we think that had it been produced by the artist's own work on the metal the faults we have just noticed might not have existed. The "Rood-Screen in the Church of St.-Étienne du Mont," by H. Toussaint, is a skilful though a somewhat mechanical and overwrought piece of etching. "The Vanguard," by Murray, after a picture by MacWhirter, is a clever rendering of a vigorous piece of naturalistic painting. The worst plate in the book is "The Wayfarer," a dry-point by Legros. It seems to us utterly bad in all points of design and execution, with the one exception that it, more than any other in the series, conforms to the essential principle of etching as a process of frank delineation rather than of elaborate rendering of tones. In nearly all the rest there is evidence of more or less misunderstanding of this principle. The limitations of etching are, like those of all other processes, such as grow out of the nature and capabilities of the materials employed. When these are understood etching is seen to be, first, a method of pure delineation, as in the plates of the "Liber Studiorum," and, second, of suggestion, though never of full realization, of tonic values.

John Randolph. By Henry Adams. [American Statesmen.] Boston: Houghton, Mifflin & Co. 1882.

WE already have a larger and more complete life of Randolph, by Hugh A. Garland, but it has left full room for Mr. Adams's biography. The two sketch the Virginian from altogether different standpoints. His pride of ancestry, his arrogance and self-sufficiency, his contempt for all law except individual will and power, his greed for land, his thriftlessness, even his bad personal habits, are conscientiously detailed by both; but the ingenuous and unconscious sympathy of Garland, and the evident antipathy of Adams, make them almost biographers of their sections as well as of their subjects, and will in conjunction give the reader a stereoscopic view of John Randolph in his round (or linear) entirety.

The different attitude of Garland gives his work, viewed as a biography, the greater value, for Randolph was to him a man, with all the affections, purposes, and disappointments of a man. To Mr. Adams, Randolph is, if not quite a lay figure on which to hang historical drapery, at least a cadaver, to be curiously dissected for the instruction of an interested class. However this may detract from the interest of the book as a biography, it very much increases its value to the political student. From no other source can he get such clear light upon the nature and influence of the decade, beginning with the annexation of Louisiana in 1803 and ending with the declaration of war against Great Britain in 1812, which sealed the death-warrant of State sovereignty, and changed the whole current of the country's history. It found the United States theoretically a congeries of sovereign States, and when the wave had passed it left behind it a nation. It found Randolph at the head of State Sovereignty Democrats; it left him stranded and helpless amid a new order of things, out of sympathy with his State, with his party, with the Administration, with the country, and with his whole political environment. It ruined his career, as it did that of every other leader who was not careful, while maintaining State sovereignty in words, to respect the national sovereignty in fact. Randolph, almost alone, endeavored to practise as well as preach the ancient theory, and he was as out of place in the Congresses of 1812-30 as a survivor of the Tertiary period would have been in Barnum's "happy family." In presenting to view this change in the national life, Mr. Adams has done a distinct and excellent piece of work, and has given us in one small volume more of general, if less of special, interest than is contained in the two larger volumes of his predecessor.

Egypt under its Khedives; or, The Old House of Bondage under New Masters. By Edwin De Leon, ex-Agent and Consul-General in Egypt. Harper & Bros.

MR. DE LEON'S account of 'Egypt under its Khedives' is a timely republication, with additions, of a well-known work he wrote some years ago, in Ismail's time, known as 'The Khedive's Egypt.' The present treatise brings the modern

history of Egypt up to the summer of the present year by means of a prefatory chapter on "the rise of Arabi Pasha and the Egyptian Revolt." Certainly, in respect of some of the purely military aspects of the revolt, Mr. De Leon, writing before the active English intervention, showed remarkable prescience. He says:

"Both Arabi and his 'National party' will collapse, like pricked balloons, should the threats of England be followed up by deeds, and the forts of Alexandria be knocked about his ears, with a respectable force landed at Abukir, Port Saïd, Ismailia, and Suez. That he would make fight is probable, but that fight could neither be bloody nor protracted, and his own courage and resolution would not be imitated by his army, now being reinforced by raw levies, picked up starving in the streets of Alexandria and Cairo."

Our author ventures on another chapter of prophecy, which events also seem in the course of fulfilling. He anticipates that the result of the revolt will be to weaken the connection between Egypt and Turkey. He says:

"The march of events has also strengthened the opinion expressed five years ago, that the Siamese ligature which has so long united the Arab to the Turk ought to be cut away, and Egypt form the nucleus of an Arabic-speaking Empire, independent of the Porte. It would indeed be a sad commentary on the morals of Christendom if Christian hands are again to rivet Turkish chains on a country from which a potent genius and patriotism freed it more than a century ago."

The work before us is a most readable history of modern Egypt, beginning with the establishment of the present dynasty under Mohammed Ali. The account of the last Khedive, Ismaïl, is a little too much *couleur de rose*, as might be expected from an author who was in diplomatic relations of a friendly kind with Ismaïl's Government. The more favorable side of Ismaïl's rule, which chiefly related to the public improvements, often of a most extravagant kind, is done more than justice to by Mr. De Leon, while the profligacy of the Court and the corruption of the whole Administration are passed over with too light a hand. However, there is scarcely a subject, social or political, relating to the present condition of Egypt which does not find a place in Mr. De Leon's book; and on some of these subjects, such as the history of the Suez Canal, and the different schemes originally devised for the International Tribunals, it is not always easy to obtain elsewhere full and generally correct information.

A question is suggested by comparing the new prefatory chapter with the substantial part of the book, as to how far the recent military movement conducted by Arabi was an organic sequence of earlier events and how far it was an exceptional and, as it were, isolated catastrophe. Writing at the time of the Conference at Constantinople, Mr. De Leon was scarcely in a position to contemplate the events as a whole, and in relation to what had gone before; and even now it is somewhat premature to be philosophical. But one thing is perfectly clear, that the complicated international arrangements, including the Anglo-French Financial Control, had the effect of making the civil administration in Egypt dangerously weak—so weak that a moderately well-organized army, under a united body of officers, must have in any case competed closely with it, even if there had been no real grounds of disaffection to the dynasty of Mohammed Ali on which a popular revolt might be ostensibly built. That there were such grounds it needs only the account of Ismaïl's indebtedness and oppression, as told in Mr. De Leon's pages, to establish. The misfortune was that, through unscrupulous military ambition, the people were induced to try and shake themselves free from that European intervention which, with all its faults, had alone stood between them and their profligate and avaricious despots.

My Portfolio: A Collection of Essays. By Austin Phelps, D.D., late Professor in Andover Theological Seminary. Charles Scribner's Sons. 1882.

A SON of Erin, attacked upon his travels by a ferocious dog, gave him a disabling blow with the big end of his stick. The owner of the dog expostulated with him, and suggested that he might at least have used the little end. To which Pat replied: "Why didn't he come at me with his little end?" This fable teaches that Dr. Phelps would have done well, perhaps, to have inverted the order of his recent publications. He came first with his 'Theory of Preaching'; next, he published his 'Men and Books,' a much lighter performance; and now we have his 'Portfolio,' which is lighter still, and more engaging. Beginning with this the reader would have been more likely to go on to the others than, beginning with 'The Theory of Preaching,' to arrive at this. The papers printed here may meet with various objections, but we can hardly imagine that any one should find them dull. They are too combative, too positive, too dogmatic to be amenable to the charge of "dear, sacred dulness." The most if not all of them have appeared before in various weekly papers. The first three are a warm and loving portraiture of Dr. Eliakim Phelps, the father of the writer. Two papers follow on "The Rights of Believers in Ancient Creeds." Some of the rights contended for will be allowed by all fair-minded persons. Others will not—for example: "The right to subscribe a confession as a whole without being held to endorsement of its every detail." These papers have an obvious and interesting bearing on the Dr. Newman Smyth controversy. But though Dr. Phelps is disposed to ameliorate to some extent the harshness of the ancient creeds, he has his fundamentals, and he insists upon them frankly, as in the article on "The Biblical Doctrine of Retribution." Chapters on "The Puritan and Christian Theories of Sunday" and on "Sunday Cars" have at the present moment a timeliness which they had not a few months ago. Concerning these matters Dr. Phelps is a strict-constructionist, for reasons clearly stated. Other subjects treated are "Woman Suffrage," which is tried in the balances with negro suffrage and found wanting, and "The Length of Sermons." The wisdom of the Doctor on the latter topic is that of the farmer who insisted that you couldn't plant potatoes too deep unless you planted them a little deeper than you ought to.

Natural History and Sport in Moray. By Charles St. John, author of 'Wild Sports of the Highlands,' 'Tour in Sutherland,' etc. Edinburgh: David Douglas. 1882. Large 8vo.

CHARLES ST. JOHN was evidently born a naturalist and sportsman, but appears to have had authorship thrust upon him. The thrust has been so effectual that he has taken permanent place in the literature of his favorite and lifelong pursuits, and seems not unlikely to become a modern Gilbert White. The editor of this latest, but doubtless not last, edition of his principal work gives some hints of its development into its present shape; but to trace its history satisfactorily we have been obliged to look elsewhere. St. John probably first appeared in print in 1845, in the *Edinburgh Quarterly*, when J. Lockhart was editor of that review. This was through the services of his friend C. Innes, then Sheriff of Moray, his present editor. "At that time I was in the habit," says Mr. Innes, "of writing an article occasionally for the *Quarterly*, and I put together one on Scotch sport, using as my material some of St. John's chapters. . . . The paper pleased Mr. Lockhart. 'It would be sufficient,' he said, 'to float any number.' . . ." In 1846 or 1847 (probably the former year*) was published a small volume entitled 'Short Sketches of Wild Sports and Natural History of the Highlands,' from the journals of St. John. This either appeared originally in, or was subsequently incorporated with, the series known as "Murray's Home and Colonial Library." This was followed in 1849 by 'A Tour in Sutherland,' 2 vols., containing his 'Field Notes of a Naturalist.' The latter work, for some reason, was not successful. The preface to the first edition of the present work, dated July 6, 1863, states that it was made up of entries in St. John's journals and note-books, incidents related in letters to his friends, and a careful description of the birds of Moray; with which new materials were incorporated the substance of the 'Field Notes' published in 1849. The author was born Dec. 3, 1809, and died July 12, 1856. The sumptuous, almost luxurious, volume before us is thus seen to be a second edition of that published in 1863, which itself consisted in part of matter from the 'Tour in Sutherland,' 1849, and was intimately related to the 'Wild Sports' of 1846 or 1847.

Such is a bibliographical outline of these 'Notes on Moray,' "which were at once welcomed by all lovers of nature, 'like the scent of heather bells or breezes freshened from the wave,'" and made Charles St. John's "a name dear to lovers of nature and manly sport." The editorship is the same, after a lapse of nearly twenty years, Sheriff Innes apparently inditing the note which prefaces the volume, in which he states that he has not thought it necessary to add anything beyond a few foot-notes to the text as approved by friends of the author in 1862.

The feature of the present edition is the series of forty beautiful sketches made specially for this volume by Mr. George Reid, R.S.A., and Mr. J. Wycliffe Taylor, reproduced by heliogravure, and printed by A. Durand, of Paris; together with numberless pieces from St. John's own sketch-book, introduced into the text. "It was somewhat puzzling," says the editor, "to know how to treat Mr. St. John's very vigorous pen-and-ink jottings—whether to have them prettily copied and 'improved' by a trained draughtsman, or reproduced in all their roughnesses by photography. A few experiments made it clear that the latter was the proper course, and these very graphic sketches have thus been given precisely as the author carelessly touched them off, while the impression was fresh upon his own mind." "Roughness" they certainly possess, almost as if St. John had thrown the inkstand at the paper, but withal a spirit of suggestiveness which makes them well-nigh unique among portraits of birds and other animals; and we cannot be too grateful to the editor for presenting them in this form.

St. John, like many another ardent sportsman and true naturalist whose works are treasures in the literary storehouse of natural history, seems to have been a thoroughly "unbookish" man, and a volume further from suspicion of mere bookmaking than this one would be far to seek. It smells of the woods and fields and streams, and their varied inhabitants; of the gun and rod, too, though not reeking with gunpowder, like the South African hunting-scenes of the author's most intimate friend, Gordon Cumming, who so tenderly cared for the closing scenes of his life. How much is owed to the editor respecting the final form the author's manuscripts acquired, we cannot say; but a more agreeable and appropriate style of narrative than that of many of the passages in this work is seldom to be found. The author appears to have paid

* See *Zoölogist*, first series, v., 1847, pp. 1596–1600, where appears a long editorial notice, doubtless by "Rusticus" (Edward Newman).

more attention to birds than to any other animals, and the volume is chiefly ornithological in the best sense of that term. His qualities as a close and accurate observer and scrupulously accurate recorder render his work a rich mine of information respecting the habits of birds, down to the ultimate details of their lives. Witness the directness and point of the opening paragraph:

"During the month of January, the wood-pigeons (*Columba palumbus*) commence feeding greedily upon the turnips. They do not, in my opinion, dig into the roots with their bills unless rabbits or rooks have been there before them to break the skin of the turnip. In fact, the wood-pigeon's bill is not at all adapted for cutting into a frozen and unbroken turnip. The crops of those which I kill at this season are full of the leaf of the turnip; and they appear not to attack the centre or heart of the green leaf, but to eat only the thin part of it. The wood-pigeon feeds more particularly on the leaf of the Swedish turnip, which is more succulent."

And so on, from beginning *in medias res*, through a chapter or two for every month in the year, to *l'envoy*, printed at the end, and breathing the very spirit of the book:

"In conclusion, I may say I have aimed neither at bookmaking nor at giving a scientific description or arrangement of birds and other animals. All I wish is, that my rough and irregularly put together notes may afford a few moments of amusement to the old, and to the young not amusement only, but perhaps an incitement to them to increase their knowledge of natural history, the study of which in all its branches renders interesting and full of enjoyment many a ramble and many an hour in the country which might otherwise be passed tediously and unprofitably. We all know that there is scarcely a foot of ground that is not tenanted by some living creature, which, though it may offer itself to our observation in the lowly shape of an insect or even a minute shell, is as perfect in all its features and parts, in its habits and instincts, and as demonstrative of the surpassing wisdom and power and goodness of the Creator, as the most gigantic quadruped which walks the earth."

The appreciative and feeling memoir of the author is by Mr. Innes; and the admirable piece of story-telling about the Muckle Hart of Benmore—apparently that which occasioned Lockhart's encomium in 1845—seems to have been finished by the same hand. Mr. Archibald Young, Commissioner of the Scotch Salmon Fisheries, contributes a valuable appendix on the herring. The well-known and perfectly competent ornithologist, Mr. J. A. Harvie-Brown, furnishes a systematic or classified index to the birds, with the most approved modern nomenclature. Mr. Douglas has evidently spared nothing to perfect the making of an elegant volume in every detail of mechanical execution.

BOOKS OF THE WEEK.

Allen, Elizabeth Akers. Rock Me to Sleep, Mother. Boston: Estes & Lauriat. $1 50.
Blackmore, R. D. Lorna Doone: a Romance of Exmoor. Chicago: Jansen, McClurg & Co.
Brinton, D. G. The Maya Chronicles. Library of Aboriginal American Literature. No. 1. Philadelphia: D. G. Brinton.
Bull, Sara C. Ole Bull: a Memoir. Boston: Houghton, Mifflin & Co.
Cross, Rev. J. Edens of Italy. With numerous illustrations, map, and index. T. Whittaker. $5.
Cunningham, Mrs. B. Sim. In Sancho Panza's Pit. Philadelphia: J. B. Lippincott & Co. $1 50.
Dies Iræ. Erinnerungen eines französischen Offiziers an die Tage von Sedan. Stuttgart: Carl Krubbe; New York: Westermann.
E. A. M., Mrs. Nonpareil Practical Cook-Book. Chicago: Jansen, McClurg & Co. $1 50.
Eliot, George. How Lisa Loved the King. Philadelphia: E. Claxton & Co. $1 50.
Everett, J. D. Vibratory Motion and Sound. Boston: Ginn, Heath & Co.
Forbes, R. B. Personal Reminiscences. Second edition, revised. Boston: Little, Brown & Co.
Francillon, R. E. Quits at Last: an Account in Seven Items. Harper's Franklin Square Library. 15 cents.

Parkman, F. Les Jésuites dans l'Amérique du Nord. Boston: Little, Brown & Co.
Poole, R. S. and others. Lectures on Art. Macmillan & Co. $1 50.
Read, T. B. Christine. Philadelphia: J. B. Lippincott & Co. $1 50.

Fine Arts.

THE FIFTH ANNUAL BLACK AND WHITE EXHIBITION.

THERE is hardly any better work done by our artists at the present time than that which is designed for the publishers of books and periodicals, to be engraved on wood. In the pages of the *Century* and of *Harper's Magazine* one may find material for a tolerably fair estimate of what is best in American art, as regards power of drawing and design. The present exhibition in the galleries of the Academy is largely composed of works thus executed for reproduction; and this object gives the practice of elaborating designs in black and white a *raison d'être* which it would not otherwise have.

Among the 491 pictures now hung in the galleries there is nothing of remarkable character; but there is a good deal that is worthy of praise in one respect or another, and not a little which indicates possibilities much beyond anything that is actually attained. No. 22, "A Pioneer House, Kentucky," by W. H. Drake, is a suggestive pen-sketch showing good feeling for the picturesque qualities of a simple subject, and considerable power of drawing. But it has the very common fault of being too unequal in strength of line and touch, and unequal in a meaningless way. For instance, the trees and buildings are drawn in with firm and black lines, while the group of figures and the roadway, in the nearer foreground, are rendered in pale lines. It would be better if the conditions were reversed; for distant things may, with more reason, be delineated in pale lines, although in pure line work like this, where tones are not expressed, very little if any difference ought to be made between near and distant things as regards strength of execution. That is to say, in delineation we should, as a rule, have delineation pure and simple, according to the method of Holbein, Titian, Turner, and all other excellent workmen. No. 26, "Down by the Shore," by Arthur Quartley, is a good arrangement of light and dark; but the drawing is indeterminate, and, in the water, it is wholly characterless. It is not essential, indeed, that drawing should be very determinate in mere sketches of light and shade like this, but it ought not to be wholly without character. No. 150, "Dawn," by the same artist, is a good effect of morning twilight. The design is injured, however, by the long wooden building with a painfully rigid roof-line. Such buildings constantly occur in our American landscape, it is true; but an artist of feeling will generally avoid them, especially where they form so conspicuous a feature in a subject. In the boats moored against the wharf, in this design, the rigging is too pale, and is executed with too soft and crumbling a line. In nature, these ropes would appear clear and dark against the bright sky. No 32, "A Twilight," by Bruce Crane, contains so much unmodified black that its value in setting off the other tones is largely lost. Too much of the subject is thrown into deep shade. Even under those effects of nature where there is least light, as in moonlight, the deepest shades occur in points rather than in extensive masses.

No. 35, by Mr. E. Blashfield, represents a child seated before a piano, and a young lady placing its hand upon the keys. Variously disposed about the room are some glazed jars, and on the piano is a dark, shiny bust. The execution of the whole subject is skilful, but far too much is made of the sharp lights on the varnished wood of the piano-case, on the glazed jars, and on the salient parts of the bust. A sparkling effect results from this which destroys quietness and truth. No. 39, "Zephyr," by George W. Maynard, together with the six other contributions by this artist, while showing a degree of power that might be turned to good account, is a most ungraceful and even a repulsive thing, in every quality of form and composition. Not only is the figure an extremely ugly one, but there is not a true nor a finely sweeping line in all the fluttering drapery which partially enwraps it. In point of execution, also, these drawings of Mr. Maynard's may be taken as examples of all that is vicious. No. 54, "Looking up the Arno," by Walter Shirlaw, affords illustration of the inadequacy of the rough popular modes of conception and treatment in charcoal drawing, when dealing with subjects in which grace of line and fineness of proportion are leading elements. The Ponte Vecchio in Florence is extremely fine in the proportions of its piers and arches; and the picturesque old buildings along the shores of Arno exhibit many graceful roof lines against the sky caused by settlement of time, and variety of inclination and altitude. These characteristics constitute the essential charm of such a subject. They constitute, in fact, nearly all that makes it worth drawing. But Mr. Shirlaw gives not the slightest expression of them. His Ponte Vecchio and his Arno houses do not differ in these respects from the most commonplace objects of this sort. Nor can we commend more highly his other contributions in charcoal. His "Washing at Roman Well," No. 59, is an ill-composed and ill-drawn group of figures. They are falsely conceived in chiaroscuro—not telling against the bright sky in the darkness of mass that each figure would have under that effect in nature. The circular marble basin, too, around which these figures are gathered, is drawn incorrectly. His "Italia (Panel Design)," No. 142, is the largest and most conspicuous example in the exhibition. It shows more excellence of drawing than any of his other works in this collection. But it is a spotty piece of design, and it bears, in parts, considerable likeness to the work of the English painter, Burne Jones, although it possesses none of the beauty of that master's work.

No. 86, "French Fishing-Smack," by Mr. Harry Chase, is good in expression of movement, in waves and sails, and the boat is buoyant and well poised. More middle tint, set off by smaller points of extreme shade, would improve the design, however, which is otherwise very good in point of chiaroscuro and in composition of lines. "An Old-Time Melody," No. 115, by Mr. Percy Moran, is a pretty subject, executed with much apparent facility, and with a good deal of power as regards general drawing, though it nowhere reaches any subtle qualities. The chiaroscuro is not well studied. It has the look of being made up in a conventional manner. One cannot tell for certain where the light comes from. The strong light on the young lady's arm and sleeve would indicate that it came from the window which she is facing, but the head, which is more exposed to that light—the arm being below the top of the up-

right piano which comes between the window and the figure—is very slightly, if at all, influenced by light from that quarter. We would not say positively that this is wrong—chiaroscuro depending upon so many conditions that may not be known—but it has a wrong look to us; more especially since the general light and shade of the picture has a conventional and uncertain appearance. This is most marked, perhaps, in the apparently forced suppression of the various subordinate objects, particularly the arm-chair in the background. No. 120, "Over the Roots (China-town, San Francisco)", by Julian Rix, is effective in execution, and has a strong look of nature, though the subject is unworthy of an artist's skill. The picturesqueness of interesting or noble things—like rural cottages or architectural ruins—may supply material for beautiful art; but the roofs of China-town, in San Francisco, possess no elements of beauty or pathos which should commend them to the artist as subjects for painting. A pencil head, No. 199, by J. Symington, shows uncommon power of drawing. The outline of the top of the head is remarkable for sureness and freedom. In the shades, however, there is too much uncertainty and confusion. Photographs from the drawings of the old Florentine masters illustrate what is best in work of this kind. They not only teach a true and tranquil manner of outline and simple shade, but they show also that drapery may be executed with freedom, and at the same time with accuracy. Mr. Symington's drapery is unnecessarily loose and inaccurate. We are glad to see a drawing of this kind, and we think that excellent results would follow if our artists should form the habit of working more in this way. Mr. George H. Smillie exhibits a considerable number of lead-pencil sketches of landscape subjects. They are pleasant things, somewhat in the manner of Harding's lithographs, though lacking the truth and variety as well as the power of Harding.

In the Northwest Gallery are hung a number of etchings and engravings of varying interest and merit. Of these No. 277, "A Corner of Portland," by C. A. Platt, is a clever etching in Whistler's vein, and with some approach to Whistler's skill. No. 281, "Public Garden, Venice," by H. M. Rosenberg, has some gondolas in the foreground which quite miss the subtle beauty of form that is characteristic of the Venetian gondola. No. 285, "Old Welland Canal," by Edith Cooper, is a delicate and unaffected etching, though the artist could, we think, by resolute effort, express distance with more truth and mystery. Her "Mother and Child," No. 289, is too much elaborated, and it is ill drawn in parts. The hair of the figures and the surfaces and folds of the draperies are not well studied. No. 286, a portrait by Léon Richeton, shows some beautiful work with the needle in the development of the profile edges, and in modelling of masses. His portrait of Dean Stanley, No. 301, is also a good quiet piece of work. No. 311, a portrait of Carlyle, is less excellent. Mr. Henry Farrer's "East River Sunset," No. 291, is by no means up to his best mark. The principal boat is very badly drawn, and the whole execution is mannered and wanting in graphic significance. Indeed, we regret to see this mannerism growing upon Mr. Farrer; for he is an artist of excellent native capacity, and his large plate here, No. 322, is, in spite of this tendency, a very beautiful work. It is a quiet passage of familiar autumn landscape. A stream of water crosses the foreground with partly denuded trees rising out of the opposite bank, and a level stretch of meadow land with more distant trees beyond. The trees are all drawn with feeling and character, and the large one on the right is a masterly piece of delineation. Mr. Farrer's etching always conforms to what may be called the normal characteristics of the process. Mr. Seymour Haden's two plates, Nos. 303 and 313, convey a very inadequate idea of his best powers as an etcher. They are over-shaded and heavy, with little expression of feeling for the visual facts of nature. No. 335, "Giant Goatsucker," by Frank French, is a highly-skilful piece of work. It possesses qualities akin to those of Bewick, save that it lacks Bewick's appreciation and truthful drawing of the order and flow of the plumage.

On the south wall of the corridor is hung a group of drawings by some of the foremost of our rising artists. Among these are three by F. Dielman, William M. Chase, and J. Alden Weir respectively. No. 478, "A Girl I Know," by Dielman, has none of the ragged and sketchy execution which is now so common. But it is so smoothly wrought, and the edges of all objects represented are so equally softened, that the character of the work verges on mere prettiness, and gives it somewhat the aspect of an over-elaborated photograph. It has, also, the further defect of faultful tonic relations, the lighted portions of the face, and those of the white kerchief folded across the breast, being of precisely the same value. The shaded side of this white kerchief, and the dark sleeve just below it, have also the same value. There is no justification for this in a drawing which is so fully shaded, and the defect, together with that first mentioned, detracts greatly from the merits of an otherwise beautiful drawing. Mr. Chase's "Burgomaster," No. 485, is comparatively rough in execution, but it is similarly incorrect in its rendering of related values. There is also an unquietness of the masses which destroys breadth and unity. The shaded side of the face is full of scattered light spots, and the light side is similarly disturbed by dark spots. That is to say, the details of modelling and marking are not enough subordinated to the general effect. The same remarks may apply to the other parts: into the white shirt dark patches of shade are carried which rival the depth of the dark outer garment, and the background is broken and unquiet like the rest. Mr. Weir's figure, No. 486, is like a study of an indifferent model. It is without grace of pose or strict veracity of drawing or tone. Yet it has qualities which make us feel that the artist might, if he would, do excellent work. Nearly all our rising artists need, we are convinced, more than anything else, to subject themselves to courses of discipline of a kind which cannot be had in Parisian schools or studios, but only in the galleries and churches of Italy, and especially of Venice, where all the fundamental qualities of painting are to be found in balanced perfection. In closing our remarks on this exhibition we must say that the catalogue is disfigured by a title-page of pretentious ugliness, the influence of which cannot be otherwise than pernicious. The illustrations, also, are without exception about as bad as they could be. A cleanly-printed catalogue, without any decorations or illustrations whatever, would be vastly preferable.

There is little that need be said of the exhibition of the Brooklyn Art Association, which opened to the public on the 4th instant. It is largely made up of pictures from the fall exhibition of the Academy. Among those which did not appear at the Academy, and deserving of high praise, is a picture by Mr. Gilbert Gaul, No. 184. It represents a soldier reclining in bivouac, on frozen ground, with a fire of a few sticks at his feet, while a comrade approaches from the distance with an armful of fresh fuel. The truth and pathos of the conception are in all respects admirable, and the execution shows a power over form and color hitherto hardly equalled in American art. There is a portrait by Mr. A. F. Bellows, No. 199, also, which seems very much in advance of Mr. Bellows's average painting. But with these, and perhaps a few other exceptions, the collection is a most feeble one.

At Knoedler's Gallery there is a collection of portraits, in water-color and oil, together with a number of etchings and engravings in mezzotint, by the English artist, Mr. Hubert Herkomer, which are of far higher character than anything that we habitually see in New York. Among them is a portrait of Mr. Ruskin, in water-colors, which, for beauty of color and subtlety of drawing, may be justly ranked with the best art of any time or country. It is good, also, as a likeness—better, a great deal, in this respect, than the mezzotint engraving made from it which was exhibited here some time ago. The oil work of Mr. Herkomer is strong and manly, but it lacks something in refinement, and it has not the living variety and beauty of color for which the Ruskin portrait is so remarkable. The least excellent in the series is, we think, the portrait of Mr. Lowell. This is comparatively foul in color and slovenly in execution. Indeed, Mr. Herkomer, in his oil work, leans rather too much toward the loose and sloppy modern methods of execution. But he is a true artist, and every piece of his work bears more or less impress of earnest purpose and high capacity. In his etchings and mezzotints there is much beauty; but in these, as in the oil portraits, we detect more of the coarse modern methods than is compatible with the just expression of Mr. Herkomer's refined artistic powers.

Henry Holt & Co.'s

New and Standard Books.

Symonds's Renaissance in Italy:
The Age of the Despots. $3 50. Revival of Learning. $3 50. The Fine Arts. $3 50. Italian Literature. 2 vols., $7.

Kinley Hollow. A New England Story.

SCRIBNER & WELFORD

Offer the following Superbly Illustrated Works to the Public, confident that in intrinsic merit, permanent value, and sumptuous appearance, they are unequalled as appropriate Holiday Gifts:

FLORENCE.—Its History—The Medici—Its Scholars, Architecture, Painting, Sculpture, etc. By Charles Yriarte, author of 'Venice,' etc. Illustrated by over 500 photogravures and engravings. 1 vol. folio, richly bound in cloth extra, gilt edges, morocco backs, $20; or in full morocco, $28.

THE HISTORY OF FASHION in France; or, The Dress of Women from the Gallo-Roman Period to the Present Time. From the French of Augustin Challamel. By Mrs. Cashel Hoey and Mr. John Lillie. 1 vol. imperial 8vo, with 21 richly-colored and illuminated plates, handsomely bound, imitation of satin-wood, and gilt, $10.

JAPANESE ARTS: A Description of the Architecture, Decorative Arts, and Art Industries of Japan from Personal Observation. By Christopher Dresser, Ph.D., F.L.S., etc. Square 8vo, with 202 illustrations, stamped crash binding, gilt top, *net*, $10.

This is the only book published on Japanese *Art Manufactures*, which Dr. Dresser went to Japan purposely to study, and no one can understand the subject or buy judiciously without knowing this book. The illustrations are by Japanese artists, and the best ever done.

SIDE-LIGHTS ON ENGLISH Society. Sketches from Life, Social and Satirical. By E. C. Grenville-Murray. Illustrated with nearly 300 engravings. Second edition. 1 vol. 8vo, 450 pages, $4.

ANCIENT GREEK FEMALE Costume. Illustrated by a series of 112 full-page plates and about 30 smaller illustrations. With explanatory letterpress and illustrative passages from Homer, Hesiod, Æschylus, Sophocles, Pindar, Herodotus, Euripides, Aristophanes, Xenophon, Theocritus, Plutarch, and Lucian. Selected and arranged by J. Moyr Smith. Crown 8vo, cloth, $3.

BELT AND SPUR. Stories of the Knights of the Middle Ages from the Old Chronicles. With 16 illuminations. 12mo, cloth, $2.

"Whatever this publishing season may yet have in store for us, we venture to prophesy that it can yield no gift-book more entirely welcome than this."—*Academy.*

STORIES FROM LIVY. By the Rev. Alfred J. Church, author of 'Stories from Herodotus,' 'Homer,' 'Virgil,' 'Greek Tragedians,' 'Lucian,' 'Josephus,' 'Persian War,' etc. With 16 illustrations in colors after Pinelli. 12mo, cloth, $2.

SOCIAL LIFE IN THE REIGN of Queen Anne. Taken from original sources. By John Ashton, author of 'Chap Books of the Eighteenth Century,' etc. With 84 illustrations by the author from contemporary prints. 2 vols. 8vo, cloth, $9.

THE ROYAL DUKES AND Princesses of the Family of George III.: A View of Court Life and Manners for Seventy Years, 1760–1830. By Percy Fitzgerald, author of 'History of the English Stage.' 2 vols. 8vo, cloth, $9.

PARIS IN PERIL. Edited by Henry Vizetelly, author of 'Story of the Diamond Necklace,' etc. With illustrations. 2 vols. 8vo, cloth, $9.

ILLUSTRATED EDITIONS OF STANDARD WORKS.

1. *NAPOLEON BUONAPARTE,* Life of. By J. G. Lockhart. With nine illustrations in Permanent Photography and numerous Woodcuts. 8vo, cloth, gilt, $3.
2. *WELLINGTON, LIFE OF.* By W. H. Maxwell. A new edition, revised, condensed, and completed. With twelve illustrations in Permanent Photography, numerous woodcuts, and plan of the Battle of Waterloo. 8vo, cloth, gilt, $3.
3. *THE PILGRIM'S PROGRESS* from this world to that which is to come. By John Bunyan. With 12 illustrations by Thomas Stothard, R.A., reproduced in Permanent Photography. Demy 8vo, cloth elegant, gilt edges, $3.
4. *ROBINSON CRUSOE,* The Life and Adventures of. By Daniel Defoe. With a memoir of the author, and twelve illustrations by T. Stothard, R.A., in Permanent Photography. Demy 8vo, cloth, gilt edges, $3.
5. *ROYAL CHARACTERS FROM* the Works of Sir Walter Scott. Historical and Romantic. With twelve illustrations in Permanent Photography. Demy 8vo, cloth elegant, gilt edges, $3.
6. *THE VICAR of WAKEFIELD.* By Oliver Goldsmith. Illustrated with twelve Permanent Photographs, from paintings by Mulready, Maclise, and other eminent British artists. 8vo, cloth, gilt, $3.

*** The above books are for sale by all booksellers, or will be sent upon receipt of advertised price. Catalogues of rare and curious second-hand books, and detailed lists of our regular stock, will be sent on application by

SCRIBNER & WELFORD,
745 Broadway, New York.

STANDARD BOOKS
SUITABLE FOR
Holiday Presents.

ARNOLD. The Poetical Works of Matthew Arnold. American Edition, 1 vol. 12mo, $2; English Edition, 2 vols. 12mo, $5.

BLAKE. Life of William Blake. With selections from his Poems and other Writings. Illustrated from Blake's own blocks. By Alexander Gilchrist. New edition. 2 vols. 8vo, $15.

BROWNING. Selections from the Poetical Works of Robert Browning. First and Second Series. 12mo, each, $2 25.

CLOUGH. The Poems of Arthur Hugh Clough. With a Memoir. 12mo, $2.

—— The Poems and Prose Remains of Arthur Hugh Clough. Edited by his Wife. 2 vols. 12mo, $6.

COLERIDGE. The Poetical and Dramatic Works of Samuel Taylor Coleridge. 4 vols. foolscap 8vo, $9.

FINLAY. The History of Greece from its Conquest by the Romans to the Present Time. By George Finlay. New edition. Edited by H. F. Tozer. 7 vols. 8vo, $17 50.

FREEMAN. The History of the Norman Conquest of England. By Edward A. Freeman, D.C.L., LL.D. 6 vols. 8vo, American Ed., $20.

HODGKIN. Italy and Her Invaders, A.D. 376–476. By T. Hodgkin. 2 vols. 8vo, $8.

STUBBS. The Constitutional History of England, in its Origin and Development. By William Stubbs, D.D. Library Ed., 3 vols. 8vo, $12.

The Nation.

NEW YORK, THURSDAY, DECEMBER 21, 1882.

The Week.

EX-SENATOR DORSEY is making a desperate effort to divert attention from his participation in the Star-route swindles by entertaining the public about his share in the management of the Presidential campaign of 1880, General Garfield's appreciation of his efforts, his friendly correspondence with the President-elect, and the advice he gave the latter with regard to the formation of the Cabinet. This correspondence, interspersed with oral remarks from Mr. Dorsey, who recently asked the court for an adjournment of the Star-route trial on account of his physical sufferings rendering him unable to attend the court, but who now proves a very ready talker, fills nearly two pages of last Monday's *Herald*. From the letters printed it appears that General Garfield had a high opinion of Mr. Dorsey as a campaign manager, and expressed himself as much gratified by his skill, energy, and success. It appears also that he, after the election, invited Dorsey's opinion and advice with regard to the manner in which his Administration should be organized. But it is an historical fact that while Garfield invited and received Dorsey's advice, he failed to do the things Dorsey most earnestly urged him to do, and he did the things Dorsey most vehemently protested against. The statement that Garfield offered to Dorsey the Secretaryship of the Interior so far rests upon Mr. Dorsey's own assertion, and we see good reason to disbelieve it until it is supported by documentary evidence or other indisputable testimony. But whatever light this correspondence may throw upon Mr. Dorsey's political activity, or upon Garfield's way of treating people, or upon his character generally, the question which Mr. Dorsey just now has to answer, and from which the public should not permit their attention to be diverted, has nothing at all to do with these things. It is simply whether Mr. Dorsey is a thief; or, in other words, whether he has conspired with others to rob the Government. This question is to be decided after a fair trial by a competent jury. And if the jury finds that Mr. Dorsey has done the things for which he stands indicted, then his management of the campaign of 1880, or General Garfield's confidence, or the weaknesses of Garfield's character that may have been disclosed in this correspondence, should not, and, we trust, will not, stand in the way of his being punished like any other person convicted of an infamous crime.

A point of striking interest in Mr. Dorsey's correspondence with General Garfield is the extremely poor opinion Mr. Dorsey entertained of Mr. Wayne MacVeagh, and of Independent Republicans and reformers generally. There is no meanness and villany he did not think them capable of. The excessive virulence of his language with regard to Mr. MacVeagh seems almost to indicate very gloomy forebodings on his part as to what might be in store for him in case Mr. MacVeagh should occupy a seat in President Garfield's Cabinet. In that respect he was not disappointed. His remark in one of his letters to Garfield, that he would much rather see a representative Democrat than an Independent Republican in a Republican Cabinet, is thoroughly characteristic of the Machine politician. Far more than the "common enemy" he hates and fears men in the ranks of his own party who are hostile to Machine methods. With a Democrat who is a thorough partisan, a Republican Machine man can strike hands; with him he can come to an understanding; with him he has sympathies, views, and objects in common; with him he can coöperate—with an anti-Machine man never. Dorsey's wish to have a good Democratic partisan in Garfield's Cabinet in preference to an anti-Machine Republican, is therefore perfectly logical and intelligible. We have had similar things in this city quite frequently, and invariably the co-operation of the two machines was an expensive luxury to the public.

The chief difference between the decision in the Curtis case by the Circuit Court and that rendered on Monday by the Supreme Court is, that the latter places the legal and constitutional objections to political assessments on a broader and clearer basis than the former. It will be remembered that the act under which General Curtis was indicted only prohibits certain classes of officers and employees from receiving or soliciting money from one another. Had the Curtis litigation never taken place, it might with some plausibility still be contended that, while Congress might prevent this, it could not prohibit assessments by or payments to volunteer committees, or, in other words, that by a slight change of machinery the system of collecting a percentage on salaries might be kept up. But no one can read the opinion of the Court carefully without seeing that, while its actual effect is only to affirm the constitutionality of the present act, the grounds on which the opinion is rested are such as to imply that Congress has all the powers that the most extreme reformer can ask. The object of the existing statute, the Court says, is clearly to protect employees from extortion under threats of dismissal. But this is only a small exercise of the authority vested by the Constitution in Congress. A "voluntary" payment to Jay Hubbell is a piece of extortion on the one side, but it is a bribe on the other, or, as the Court says: "If persons in public employ may be called on by those in authority to contribute from their personal income to the expenses of political campaigns, and a refusal may lead to putting good men out of the service, liberal payments may be made the ground for keeping poor ones in." Again, if part of the compensation received for public services must be contributed for political purposes, "it is easy to see that an increase of compensation may be required to provide the means to make the contribution, and that in this way the Government itself may be made to furnish indirectly the money to defray the expenses of keeping the political party in power that happens to have for the time being the control of the public patronage."

This reasoning, of course, applies to the whole system of political assessments, whether it is carried on by Executive officers, or Congressmen, or anybody else. It means that Congress can legislate on the subject so as to prevent all interference with Treasury clerks and letter-carriers, all attempts to wring money out of them, or to cajole them into paying a bribe to keep themselves in office, no matter what cloak is thrown over the abuse. The system, if carried on by volunteer committees of ministers of the Gospel, will be no more sacred than if it is in the hands of office-holders. Congress can protect the service from outside interference in any quarter just as it can protect the voter at the polls. This is what the Curtis decision means, and the public has every reason to be grateful to the General and the "boys" who have helped on his litigation for the valuable contribution they have made to the cause of reform.

The examination of Mr. William H. Vanderbilt and of Mr. Rufus Hatch by the Committee of the Legislature which is trying to find out whether there is anything wrong in "grain corners," and, if so, what is the best means of preventing them, was interesting as showing how little about corners those know who are popularly suspected of making them. Mr. Vanderbilt was apparently almost as ignorant of their working, except in so far as they sometimes kept long lines of his cars standing filled with cornered grain, as the Rev. Dr. Crosby, who knew nothing about them except what he saw in the newspapers. He made no corners himself, he said, and he hardly speculated in stocks, or, if he did, it was on a large margin. In a general way he thought ill of corners, and so did Mr. Rufus Hatch. Mr. Vanderbilt disclaimed, and doubtless with much truth, a large part of the activity which "newspaper men" ascribe to him, and insinuated that they kept him constantly cornering and speculating, as part of their "business." One cannot help hoping that these investigations of corners and stock-gambling, if they do not reveal the true nature and cause of corners, will at least make somewhat clearer the futility of trying to prevent them by legislation. The belief that speculation can be stopped by statute is centuries old. The English statutes against "regrating and forestalling" were attempts to prevent speculation in produce; they seldom succeeded, and when they did they made produce dearer than it would have been if they had not been executed. The great check on speculation in Wall Street, or in any other street, is to be found in Mr. Vanderbilt's assertion that "not one man in ten goes into Wall Street but he is sure to be a loser in the long run." This is doubtless true, and it constitutes a penalty of the most tremendous kind, which is self-inflicting.

It may be said that this argument, if good for anything, is good against interference with gambling-houses by the police, because nearly everybody who goes to a gambling-house loses his money. But then what goes on in gambling-houses is not the excess or perversion of a good thing. If playing three-card monte and throwing dice were up to a certain point useful occupations, as the buying and selling of stocks are, and became injurious only when carried to excess, it would be terribly difficult for us to suppress gambling. Gold and silver mining is another example, besides stock and grain dealing, of a useful occupation out of which much gambling excitement may be and is got; but who would or could forbid mining simply because nineteen-twentieths of those who put money into mining lose it, or because there is vast speculation in mining prospects? "Selling what you have not got," which is most condemned in all these inquiries, is immoral, if done for immoral ends, but it is one of the commonest and oldest and most useful of human transactions. Everybody who promises to do anything at some future time for a consideration, even to pay a debt, sells what he has not got. It might be a very good and beautiful world in which nobody sold anything which he could not deliver on the spot, or promised anything which he could not instantly perform, but it would be a world so different from this that but few of this generation would want to live in it.

The prevailing opinion as to the good management of the New York Post-office is confirmed by the report of the commission of inquiry appointed by the Postmaster-General. What is said of the manner of making appointments is especially deserving of attention: "All applicants are treated alike, no matter who recommends them or to what political organization the applicant may belong." This impartiality of treatment is what real civil-service reform would secure in all departments of the Government. Its practice in our Post-office has not proved destructive of patriotism. It has not established an offensive officeholding class. The applicants for places are examined "in penmanship, in arithmetic, in geography, in English grammar, in the history of the United States," and in such public matters as may be necessary "to test general capacity or special fitness for the postal service." This certainly is "practical." It does not require familiarity with Sanskrit, or Greek, or abstruse astronomical problems. It does not restrict competition to college graduates, as some of our old-fashioned statesmen have feared competitive examinations would do. It is precisely a practical test such as this that real civil-service reform would secure in all departments of the Government. Objection to this reform is sometimes founded on the assertion that it is merely theoretical. The New York Post-office, however, has made an earnest experiment with the principle, and, as these objectors lay such stress on the value of facts as compared with arguments, the results of the experiment ought to be conclusive with them.

The proposal of the Joint Committee on Shipping to pay a cash bounty to shipbuilders on the materials of home production used by them equal to what the duty would have been if the same materials had been imported from abroad, is a dangerous one from many points of view. In the first place, it will kill the wooden shipbuilding trade, which is really in a flourishing condition notwithstanding the outcry raised on the subject. We have seen a statement published to the effect that more ships were built this year at Bath, Maine—the principal centre of the industry on the Atlantic coast—than in any previous year. We have made some inquiries of our own upon this point which lead to the conclusion that the trade is really in a prosperous condition. Now, even if it be adjudged deserving of death, we submit that Congress ought not to destroy it by offering a premium to iron shipbuilders—a premium collected from the whole body of the people, including the builders of wooden ships. Iron ships are better than wooden ones, and they earn more money for a given amount of freight transported. The difference between the two is so marked that it is quite within the range of possibilities that iron may supersede wood in our own shipyards for ocean-going vessels within the next ten years, even without the intervention of a bounty from the Treasury. But let us have fair play, at all events. If bounties are to be paid, let them be paid on tonnage, and not on materials. The Maine shipbuilders are as good protectionists as the Pennsylvania shipbuilders, and have equal rights to put their hands in the Treasury. Another point of danger is that the annual appropriation of money by Congress, to pay shipbuilders for the supposed losses incurred in their trade, will attract so much criticism and shed so much light on the tariff policy of the country, as to put the whole protectionist system in peril.

The Keely stockholders were cheered on Wednesday by the report of Mr. Boekel, the engineer appointed by the court as custodian of the Secret. The report shows the Secret to be in very fine condition, notwithstanding its long keeping; but what it is Mr. Boekel declares that it would be improper for him to explain, beyond the fact that the Keely engine "disintegrates" water so that its "molecular structure is broken up," and "there is evolved therefrom a permanent expansive gas, vapor, or ether, which result is produced by mechanical action." Mr. Keely, he says, will soon have an engine completed, and it is his purpose to call the attention of the Pennsylvania Railroad Company to the matter. We trust, however, that if that company persists in continuing to use steam, some rival trunk line will be given an opportunity to try the new motor, for the public has the right to the best motor known.

Thomas Crittenden, of Anchorage, Kentucky, has committed a business homicide on a negro named Rose Moseley, for testifying against him in a lawsuit. We have no doubt that, although Moseley was a negro, this occurrence will produce "gloom" in Anchorage and a general wish that Crittenden had let Moseley alone. It may even lead to a trial of Crittenden, in which there will be considerable weeping; but the sympathies of the jury will probably be rather with the wounded spirit of a man who has been testified against by a negro than with the Commonwealth or the dead negro. There will not be any weeping over the scandal which the affair brings on the community and its administration of justice. Some one wittily said of the South after the war, in the Ku-klux period, that if Southerners would only raise more cotton and less "hell," all would be well. It may now be said that if Southern towns would indulge in less "gloom," and spend more on halters and hangmen, it would work an enormous improvement in their condition. We firmly believe that $5,000 spent in hanging man-slayers would yield richer returns than $25,000,000 spent on river and harbor improvements. In Opelika, Ala., the other day, "every doctor in the city," we are told, "was engaged in extracting buckshot from the bodies of the wounded, and Mr. Maloney lies dangerously, and it is feared mortally, wounded." "How came it?" asks the local chronicler. Well, there were some special causes at work in this case, but the main reason why "it came" that there was so much buckshot in the bodies of the wounded, and that Mr. Maloney is in such a sad state, is probably that several of the wounded were not executed years ago for some of their previous frays.

Governor Stephens of Georgia says he has pardoned Cox on "numerous petitions, numbering hundreds in all, embracing many eminent citizens, lawyers, jurists, merchants, bankers, ministers of the Gospel, journalists, mechanics, and farmers, and including a majority of the House of Representatives and two-thirds of the Senate, of the present General Assembly, asking Executive clemency in his behalf." He ought to publish their names and reasons, those of "the ministers of the Gospel" especially. According to every account of the affair in the local papers, the killing of Alston was as brutal a homicide as ever was perpetrated; and if the eminent citizens of Georgia—lawyers, jurists, merchants, bankers, and divines—think three years' imprisonment sufficient punishment for it, they must have highly original notions about the duty of the State in the matter of protecting life.

The homicide question had begun to attract attention abroad before we took it up. Dr. von Holtzendorff, of Munich, one of the foremost of European jurists, had an article on American homicide in a recent number of the *Deutsche Rundschau*. The subject had arrested his attention before we began to discuss it. In fact, foreign jurists, and divines, and penologists who wish to study homicide in all its phases, will begin to come to this country, as fifty years ago they used to come to study our prison system. Medical authors of works on 'Gunshot Wounds, their Diagnosis and Treatment,' will also begin to appear in the Southern States before long in large numbers, because there are in no other part of the world

the same opportunities for studying the action of buckshot on the human frame. The effect of the single bullet is well known, but hardly any foreign surgeon has had an opportunity of observing the results of a good charge of buckshot from a shotgun. A paper, for instance, from an Opelika doctor, who has spent a day or two extracting buckshot, would excite great interest in foreign medical societies.

The Spanish-claims naturalization question has been finally decided, as it was plain to be seen it must be decided, by the adoption of all of Mr. Frelinghuysen's suggestions. That is to say—claimants must prove their citizenship exactly as they must prove any other fact; the judgments of our naturalization courts are to be taken as conclusive except in cases of actual fraud, or of want of jurisdiction, or where they conflict with some treaty stipulation or rule of international law. This disposition of the matter is exactly what Mr. Blaine wanted to secure, and could have secured had he clearly defined what the question at issue was. But, funnily enough, he wrote a paper on the subject, in which he appeared to take the ground that the United States insisted that naturalization papers fraudulently obtained were just as good in an international court as any others—a position about which the Commission naturally thought there was a good deal of doubt. Had Mr. Blaine been a lawyer his mistake would have been impossible.

A large number of well-known clergymen have issued an address to the ladies of New York, urging them to "put no wine or strong drink upon their tables" on New Year's Day, and calling attention to the fact that in past years "this course has been very largely followed in the best social circles." That there has been an enormous falling off in the consumption of wine at New Year's receptions in the past fifty years no one will be likely to dispute, and the "best social circles" are entitled to the credit of the improvement. They may indeed point with pride to their record in this respect. The reform has been the result of voluntary social action, unassisted by penal machinery, such as the Prohibitionists insist is necessary to restrain intemperance. One fact, however, the clergymen who sign the address seem to have overlooked—that the best social circles have, within the past few years, taken a more effective way of guarding against their guests becoming intemperate, by not having any guests at all. Providing tea and coffee is, after all, only a palliative, for guests who insist on making an "old-fashioned" festival of the day, will always find means of getting fuddled during their round of visits, while the simple device of shutting up the house and leaving town for the day, which has got to be so common of late, goes to the root of the matter, and leaves both host and guest in a state of security which under the old system it was impossible to attain. The abandonment of New Year's receptions is clearly the true way to effect a complete and permanent reform, and now that a distinct move in this direction is being made by society, clergymen and moralists have a weapon ready to their hands far more effective than tea or coffee.

It appears that there is a hitch about getting Sir Charles Dilke into the Cabinet. He first appeared in political life in 1868 as a Republican, and made his début in politics by several fierce attacks on the Queen's civil list, which he denounced as extravagant, and accused her of not paying the income tax. He fell into many mistakes in matters of fact about which it is difficult for an outsider to get information, and the general effect of his crusade on his political prospects was supposed, as far as office is concerned, to be fatal. But hardly any mistake is fatal to a man who is young, rich, accomplished, and clever; and all of these Dilke was. In the House of Commons he learned rapidly that even young men are not omniscient, began to cultivate silence, and grew a little more conservative, distinguished himself as a debater and man of business while the Liberals were out of office, and got over the social discredit brought on him by his Republicanism and his criticism of the Queen so far as to become even hand in glove with the Prince of Wales. Consequently, when Gladstone came back to power, he was one of the rising men who had to have something, and he got a post for which he was admirably fitted—the Under-Secretaryship of Foreign Affairs—for he is a remarkable linguist, has travelled much, and made a close study of foreign politics. The time has now come for him to go into the Cabinet, but it appears he cannot get the Chancellorship of the Duchy of Lancaster, which Mr. Bright held, because the revenues of the Duchy are part of the civil list, and have to be paid over to the Queen, and she is not so forgiving as the Prince of Wales, and would probably not care to have any part of her income managed by a gentleman who had criticised the whole of it so severely. The Duchy of Lancaster is an old principality which has been merged in the Crown, but still has its revenues kept separate from those of the Crown, amounting, net, to about $200,000 a year.

Lord Derby is objected to as a member of the Cabinet on the ground that his desire to cut loose from Egypt altogether makes him, if not a bad Whig, a bad Gladstonian. But his attitude on the Irish question is far more objectionable, from the Gladstonian point of view, than his attitude on the Egyptian question, for he apparently declares himself opposed to Home Rule in any shape, or to doing or saying anything about it that will make it a practical question. His theory about Ireland is that Irish hatred of England must be recognized and treated as a permanent and ineradicable evil, and met by dull, steady resistance as in the past. These views are the product of his temperament rather than of his intellect. He sees so well the difficulties of all action that he would avoid action wherever avoidable, and where he had to act would act to-day as he acted yesterday.

The definitive rejection by the German Bundesrath of a motion favoring the abolition of "compulsory civil marriage" has a significance going beyond the merits of the question itself. The law making the celebration of marriage by a civil magistrate compulsory was one of the fruits of Bismarck's "liberal" period, and of the beginning of the *Kulturkampf*. Civil marriage, especially compulsory civil marriage, has always been one of the greatest eyesores to the Catholic Church. The Clerical party, supported in this instance by a considerable number of the Protestant clergy, have, therefore, spared no effort to compass the repeal of the act. The secret sympathy of the Emperor and the Empress was counted upon by them in this respect. They hoped that compulsory civil marriage would be sacrificed by way of concession to the Vatican, when it seemed to be Prince Bismarck's policy to conciliate the Church and the political party attached to it, at any price. The decisive step taken by the Bundesrath, which would not have been taken without the consent of the Chancellor, seems to indicate that the limit of concession has been reached, for the time being at least.

The periodical Russian scare seems to have broken out once more in the European press. We are told that Russia is strengthening her western frontier by fortifications in a most extraordinary manner; that no less than seven railroads, for which no commercial necessity exists, have been built in that quarter, evidently for military purposes, and that large bodies of troops have been concentrated near the Galician line. All these things are interpreted as indicating hostile intentions on the part of Russia against Austria and Germany. Then, again, we are assured that the mission of Mr. Giers to Berlin is of the most pacific character, that the diplomatic relations between the three emperors are very satisfactory, and that the movements of troops on the Galician frontier mean nothing but the "ordinary annual regimental changes." But the scare has had the effect of greatly unsettling commercial relations between Russia and Germany, and of seriously depressing the value of Russian securities and the Russian paper currency at Berlin and Vienna. We learn also that Prince Bismarck, through his organs in the press, while not denying the existence of any danger, gives the world in general and the German people in particular to understand that he has amply provided for the emergency by renewing the alliance between Germany and Austria. This circumstance throws some light upon the character of the whole excitement. Prince Bismarck is fond of having a little diplomatic byplay when he gets seriously embarrassed in his home policy. He loves to remind the German people that they are surrounded by very dangerous neighbors, but that he is still there to keep those neighbors at bay. He delights in the rôle of the "necessary man," who must be humored. But when he says that by the Austro-German alliance all international emergencies are sufficiently provided for, he is undoubtedly right. The military power of Germany and Austria combined is so colossal that no one of the hostile neighbors will, single-handed, dare to defy it; and even a combination of enemies such as Russia and France would have a very hard task on its hands in attacking it.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 13, to TUESDAY, December 19, 1882, inclusive.]

DOMESTIC.

ON Monday the Supreme Court rendered a decision in the political-assessment case of N. M. Curtis. The constitutionality of the law under which General Curtis was convicted is affirmed, and the petition for a writ of habeas corpus denied. Chief-Justice Waite delivered the opinion of the Court, Justice Bradley dissenting.

In the Senate, on Wednesday, Senator Hawley delivered a speech in support of the Pendleton Civil-Service Bill, and several amendments to the bill were adopted, including that offered by Senator Logan, requiring the examination to be practical in character, and such as to test fairly the relative capacity and fitness of the persons examined to discharge the duties of the service into which they seek to be appointed. Senator Beck's resolution for an investigation of political assessments, and Senator Hale's substitute therefor, were referred to the Judiciary Committee. On Thursday, Senator Brown, of Georgia, did what he called "some very plain talking to Democrats" on the question of civil-service reform, the substance of which was that the Republicans have had the offices for twenty-two years, and, if the Civil-Service Bill is passed, will continue to have them, a fact which will take all the "energy and zeal" out of the Democrats in the Presidential campaign of 1884. Therefore, Mr. Brown advised his Democratic colleagues to oppose the bill. In the afternoon Senator Miller, of New York, began a strong speech in favor of the Pendleton bill, which he concluded on Friday morning. Senator George, of Mississippi (Dem.), also spoke in favor of the bill. Senator Pendleton moved that the first section of the bill be amended so as to require the Civil-Service Commissioners to be confirmed by the Senate, which was agreed to. On Saturday the debate was continued. Senator Ingalls characterized the bill as a cheat designed by either party to defraud the other, and Senators Voorhees and Plumb spoke in opposition to it. On Saturday the bill for the ascertainment of claims of American citizens for French spoliation eighty years ago was passed.

In the House, on Wednesday, the West Point Military Appropriation Bill was passed, the Agricultural Appropriation Bill discussed, and the Congressional Library Bill recommitted, with instructions to the Committee to report a bill for the erection of a library on ground belonging to the United States in Washington. On Thursday, the whole day was devoted to the discussion of the Post-office Appropriation Bill. On Friday, James H. McLean was admitted as a member of the House from the Second Missouri District. The Secretary of State of Missouri had refused to give McLean a certificate, on the ground that the Second District had been legislated out of existence. The discussion of the Post-office Appropriation Bill was resumed. On Saturday, the fast-mail item of the bill was defeated by a vote of 91 to 29.

On Monday the House voted not to take the usual holiday recess, and adopted a resolution fining any member absent during the holiday week without leave or reasonable excuse $50. On Tuesday, however, it voted, by a majority of 26, to take a recess from December 22 to January 2. It is said the Republican Senators have reached an informal understanding among themselves that they will oppose any resolution for an adjournment over the holiday recess. This will make it impossible for the House to adjourn for more than three days without violating the Constitution.

On Tuesday the Senate passed the Indian Appropriation Bill, with several amendments, among which was one requiring the Secretary of the Interior to have the approval of the President in setting aside bids detrimental to the interests of the Government.

The Judiciary Committee of the Senate finished the consideration of the Bankruptcy Bill on Monday, and in the afternoon Mr. Hoar reported the Lowell bill with a few amendments which do not change its essential features. It contains, however, an amendment providing that insolvent persons who shall "sell or buy, or agree to sell or buy, for delivery at a future period longer than three days from the date of such sale or purchase, any stocks, bonds, or other securities, or any grain, food, provisions, etc., without such vender being at the time of making such contract the owner or assignee or trustee of the property sold, or agreed to be sold, or the authorized agent of such owner," shall be deemed to have committed an act of bankruptcy.

The House Committee on the Judiciary, after three days' discussion, came to a vote, on Thursday morning, on the bill for the relief of the Supreme Court, and adopted the Davis bill, creating nine intermediate courts. The vote was two to one, the Republicans voting for and the Democrats against the adoption of the Davis bill. The Chairman was instructed to report the bill to the House, and ask its consideration under suspension of the rules at some future day at his discretion.

The Democratic Senators held a caucus on Thursday morning. The principal subject for consideration was the bill for the admission of Dakota to the Union. It was decided to oppose it, and the plan of cutting up the Territory into several States was condemned, partly on the ground that it would make too many Republican States. The Civil-Service Bill was also discussed, but, owing to the differences of opinion on the question of supporting the measure, no conclusion was reached. It is understood that Senators Brown and Voorhees said it would be impolitic for the Democrats to support it. The question of the tariff was discussed, but no conclusion reached. Except on the matter of civil-service reform, the caucus was harmonious. A committee of five Senators was appointed to confer with a similar committee of the House on matters of general party policy.

The Republican Senators met in caucus to discuss the Civil-Service Reform Bill on Saturday. The pending amendments were considered and criticised. The general sentiment was one of approval of all the amendments which have been offered by the Republican Senators. No vote was taken at the caucus, and no effort was made to bind Senators to any particular course, but it is understood that all the Republican Senators, with perhaps one or two exceptions, will vote for the Pendleton bill.

Godlove S. Orth, formerly member of Congress from Indiana and ex-Minister to Austria, died at his home in Lafayette, Ind., on Saturday night. On Sunday, Speaker Keifer designated a committee to attend the funeral, and on Monday the Senate adjourned early in the afternoon as a mark of respect to the dead Congressman.

The report of the committee appointed to examine the methods and results of the management of the New York Post-office says that the postal service in that city is "nearer perfection, all the details being considered, than in any other city in this country."

The President has nominated for Commissioner of the District of Columbia Mr. John F. Olmstead, a real-estate agent, for many years associated with a real-estate firm of which the leading member was Hallet Kilbourn. The nomination is severely criticised in Washington.

A list of Representatives in the next House has been prepared by Mr. Edward McPherson, classifying them as follows: Democrats, 191; Republicans, 119; Readjusters, 6; Independents, 5; and Greenbackers, 2. According to this classification, the Democrats will have a majority of 59.

In answer to a request from Pittsburgh, the Secretary of the Treasury has decided that a Chinaman, now residing in that city, cannot bring into this country, under the Chinese restriction, from China, a wife that he intends to marry, although if he were already married and his wife were in China she could come.

The jury in the new Star-route trial was completed on Thursday, and Mr. Bliss opened the case for the prosecution.

The building in Washington in which is the office of Richard T. Merrick, Government counsel in the Star-route case, was damaged on Saturday evening by an incendiary fire. It is conjectured that the fire was set with the hope of destroying evidence against the Star-route men.

On Monday certain New York papers published the correspondence between James A. Garfield and ex-Senator Dorsey, Secretary of the Republican National Committee, during the campaign which ended in the election of Garfield. From these letters Garfield seems to have reposed great confidence in Dorsey as a campaign manager, and to have asked and received advice from him in regard to the formation of his Cabinet. They are believed to have been given to the press by Dorsey with the object of influencing the course of the Star-route trial.

Representatives of State and other Boards of Health, who have come to Washington to impress upon the National Board of Health the importance of continuing the sanitary inspection of immigrants for the purpose of preventing the introduction and dissemination of contagious diseases throughout the country, held a meeting on Thursday and elected Dr. W. M. Smith, Health Officer of the Port of New York, Chairman. Congress is to be asked for an appropriation of $25,000 for the present year.

There was a special meeting of the Chamber of Commerce of New York on Monday afternoon to consider the subject of reviving the American merchant marine, and resolutions in favor of free ships were offered and referred to the Committee on Commerce.

About 240 Southern matrimonial and natal associations have been placed on the black list of the Post-office Department by order of the Postmaster-General, and the postmasters at the places where the societies exist have been instructed to return to the senders money-orders addressed to the associations.

Henry James, senior, the well-known author, died in Boston on Monday afternoon, at the age of seventy-two.

FOREIGN

Wednesday being the fiftieth anniversary of Mr. Gladstone's entrance into public life, most of the English newspapers printed articles on his career. Many political associations, and the Khedive of Egypt and the Greek Government, sent messages of congratulation to Mr. Gladstone.

On Thursday the *Pall Mall Gazette* said that it was authorized to state that Mr. Gladstone had resigned the Chancellorship of the Exchequer, and that the Right Hon. Hugh C. Childers, Secretary of State for War, had been appointed his successor, and on Saturday it was announced that the changes in the Cabinet had been completed and that the new Ministers had taken the oaths before the Queen in Council. They are as follows: Lord Derby, Secretary of State for the Colonies; Lord Kimberley, Secretary of State for India; and Lord Hartington, to succeed Mr. Childers as Secretary of State for War. It is understood that it was intended to make Sir Charles Dilke Chancellor of the Duchy of Lancaster, but that the idea was abandoned on account of the difficulty of conferring an office so closely connected with the Court upon one entertaining such views concerning the civil list as those which have been expressed by Sir Charles. It is said to be certain, however, that he will soon enter

the Cabinet in some capacity. On Monday the London *Times* said that obstacles had been raised to Lord Derby's appointment to the India Office, owing to the views he expressed in his speech at Manchester in relation to Egypt.

In the above-mentioned speech, which was made on Wednesday, Lord Derby rejected the idea of a protectorate for Egypt. England ought not to remain in Egypt longer than was absolutely necessary to restore order. English influence in Egypt should preponderate, but it was not necessary to exercise it in an offensive spirit, nor to exclude free and friendly consultation with France.

In the same speech, Lord Derby, touching upon the Irish question, gave it as his personal opinion that several millions spent in promoting emigration from Ireland would be a profitable expenditure. He believed that in a few years, despite the Land Act, small tenants in Ireland would be just as dependent as ever on the forbearance of landlords. He thought the Government should abstain from encouraging fresh large proposals for legislation in regard to Irish land, and should refuse to listen to the claim for Irish nationality in whatever disguise it should be presented. An Irish Parliament would certainly lead to a separation.

On Thursday morning two important arrests were made in Dublin in connection with the murder of Lord Cavendish and Under-Secretary Burke. They were made on the evidence of informers, and one of the prisoners has been identified by persons who were in Phœnix Park on the night of the murder as one of the men seen on the car on which the assassins rode. The detectives believe that they have got a direct chain of information in regard to the murderers. This was the news on Friday, but on Saturday the despatches said that although the authorities were in possession of valuable information in regard to the existence of secret organizations, they had not got a step nearer to the conviction of the Phœnix Park murderers. The two men arrested on Thursday have not been identified as the assassins. On Saturday evening Earl Spencer issued three new proclamations offering rewards for information relative to the Phœnix Park murders, including one of £5,000 for information leading to the conviction of the assassins, the authorities promising to insure that the names of the informants shall not be divulged.

On Friday, Patrick and Myles Joyce and Patrick Casey were hung for participation in the murder of the Joyce family at Maamtrasna on the 17th of August last.

On Monday Mr. Parnell opened a branch of the Irish National League at Cork. In his speech on the occasion he said the purpose of the League was not to serve any one class, but that its efforts would be devoted to national objects and the advancement of the Irish people of every class. A banquet was given to Mr. Parnell at Cork on Sunday, at which Mr. Parnell said he would always oppose any attempt of the Government to land emigrants in a helpless and penniless condition on the shores of the Eastern States of America. If England desired to promote the emigration of Irishmen, let them be placed on land in America, provided with homes and means to raise a crop the first year of their residence. He advocated relief for the crowded districts by purchasing for the people vast tracts of grazing lands in Ireland which were peopled before the famine. There was no reason, he said, why they should not be peopled again. He estimated that £3,000,000 arrears of rent would be wiped out by the Arrears of Rent Act, and believed that since the commencement of the agitation £3,000,000 reduction of rent had been obtained for the people. The Land Courts, under the present system, would take twenty-five years to settle rents. Such a settlement, he said, could never go to the root of the question, which could only be settled by the establishment of a peasant proprietary. The claims of the laborers required immediate attention, which must be brought about by agitation and organization.

At a meeting of the Organizing Committee of the Irish National League, held at Dublin on Friday, it was decided to merge the Home-Rule Association in the National League.

The correspondent of the London *Times* at Berlin said on Tuesday that the relations between Germany and Russia were the absorbing topic of discussion there. Russian exchange on the Berlin Bourse is lower than it has been since the battle of Plevna. There is a general feeling of uneasiness, although no good cause is assigned for it.

The Cologne *Gazette* states, on what it alleges to be good authority, that the Austro-German alliance, which was originally concluded for a period of five years, and which expires on October 15, 1884, will be prolonged because it has already proved of great advantage and furnishes a strong guarantee for the maintenance of peace. The *Gazette* says that the terms of the alliance are that if either empire is attacked from two sides, the other shall render assistance.

The Austro-German alliance meets with the unmixed approval of the entire German press. The *Germania* says the prolongation of the treaty will effectually bar Panslavist intrigues, Russia's expansion aspirations, and French plans for revenge.

In the German Reichstag on Wednesday the Imperial Minister of the Interior in reply to a question by Herr Windthorst, the Ultramontane leader, said the Bundesrath had decided not to give effect to the decision of the Reichstag in favor of the abolition of the law upon unauthorized exercise of ecclesiastical functions. The Government, he said, could not explain the reasons for the refusal, and declined on principle to give the Reichstag reasons for their decisions. Herr Vollmar, Socialist, offered a motion declaring that no sufficient grounds had been shown by the Government for prolonging the minor state of siege in Berlin, Hamburg, and Leipsic. He said that trifling concessions would make the Socialists abate nothing of their total demands. They had been made revolutionists by repressive laws, which, however, had given them cohesive strength and discipline. The motion was negatived, and the House resolved to take cognizance of the report submitted by the Government concerning the carrying out of the laws against the Socialists. The Reichstag has adjourned till January 9.

A despatch from Berlin says that a committee of merchants has decided to convoke a conference of delegates from all German chambers of commerce, for the purpose of organizing united action against the taxation of Bourse transactions.

A despatch from Berlin says the preliminary preparations for rendering the Weser River navigable for sea-going vessels from Bremerhaven to Bremen have been finished. It is estimated that the work will take six years, and will cost 30,000,000 marks. When completed it will give a great impetus to trade between Bremen and New York.

In the French Chamber of Deputies, on Thursday, M. Tirard, Minister of Finance, stated that the amount of the public debt redeemed in 1882 was 104,000,000 francs. On Saturday the Chamber adopted the extraordinary budget without modification. The Cabinet has decided to postpone bringing forward a credit bill for the Tonquin expedition for the present, but the report of the abandonment of the expedition is said to be without foundation. President Grévy and Admiral Jauréguiberry are reported to have had a difference on the question of who shall be intrusted with the expedition, the former wishing to intrust it to a civil commissioner, while the latter objects to the interference of a civilian in a military enterprise.

The French Budget Committee has decided to vote 23,000,000 francs to maintain the army of occupation in Tunis. In the debate on the budget in the Senate on Tuesday M. Léon Say said he hoped and believed that the state of the finances was more favorable than M. Ribot supposed. He said it behooved statesmen to place the finances on a sound basis in order to prepare the country for a renewal of the powers of the Chambers in 1885, as it was especially desirable not to accumulate difficulties for that period.

The Paris *Temps* has officially announced the refusal of France to accept the Presidency of the Egyptian Public Debt Commission, and says that France has formulated no counter proposal, but has given England a better idea of the political interests which France intends to uphold in Egypt side by side with the financial interests of her subjects.

News from Madagascar says the announcement of the murder of two Americans on the island has been confirmed. The London *Daily News* says that steps have been taken to call the attention of the United States Government to the facts of the case, and that the murder of the Americans is believed to have been due to the measures taken by the French representatives in Madagascar to prevent the Malagassy Government from exercising authority on the west coast of Madagascar. At a banquet given to the Malagassy Envoys, at present in London, on Thursday, the principal Envoy, replying to a toast, said he wished that right-dealing men from Europe and America would go to his country, taking there commerce and everything which would advance the people. He said that Madagascar did not wish to quarrel with France. It is stated that if Germany declines to make a treaty with Madagascar, the Envoys will visit the United States after completing the revision of the treaty with Great Britain.

At a meeting of the Geographical Society in Paris, on Sunday, M. de Lesseps promised that the Panama Canal would be ready to be opened in 1888. He said the health of the employees was satisfactory, and stated that the rate of mortality in Panama did not exceed that in France, and maintained that the fears that the canal would be liable to destruction by earthquakes were quite unfounded.

A despatch from Cairo on Thursday said that the Government had requested Arabi and the other prisoners sentenced to exile to be ready to start within ten days. Allowances have been granted them from their properties which were confiscated. The property belonging to their wives was not confiscated. The leniency shown to the prisoners is said to have produced a good effect upon the Arabs. Lord Dufferin has submitted to the Egyptian Government a scheme to reform the native courts of justice. He proposes that the tribunals shall be presided over by European judges, and that the code be, as far as possible, similar to that of the international tribunals.

It is stated that the Sultan of Turkey is becoming deranged. He has had built for himself an armored carriage, bullet and grenade proof. He is in constant fear of assassination, and the palace is practically in a state of siege, no one being allowed to enter unless summoned.

The Spanish Government proposes to settle the Parliamentary oath question by admitting either an oath or affirmation, and on condition of a promise of fidelity to Alfonso to omit the words "legitimate King of Spain." On Thursday, Señor Rivas, a leading supporter of Marshal Serrano, made a declaration that all the members of the Dynastic Left would accept the Constitution of 1876, and if called to power would reform it in a liberal sense on the lines of the Constitution of 1869. This is a complete abandonment of Marshal Serrano's original programme, and is practically the programme defended by Señor Sagasta in the Senate last week. The declaration caused great excitement in the Chamber.

TAX REDUCTION AND DEBT REDUCTION.

Among the popular fallacies now in circulation is one brought forward to sustain the free-tobacco bill, and to justify the repeal of the internal-revenue system generally. It is that since the national debt, or a large part of it, draws only three per cent. interest, while money is worth seven per cent. to the taxpayers, it is unwise to pay off the debt so rapidly—that we ought to reduce the revenue to the lowest point possible, and "let the money fructify in the pockets of the people." If this is a good argument against paying the debt rapidly, it is good against paying the principal at all. It is like saying that we should be better off if no part of it had ever been paid—that is, if it were about $1,000,000,000 greater than it is—for in that case we should have been earning seven per cent. with the money all the time, whereas, the debt has always been running at a less rate, and generally at a much less rate; and in short, that the national debt is a national blessing. It is assumed that the whole $1,000,000,000 would have been saved by the taxpayers and converted into capital—not spent unproductively, not lost, but saved and invested in such manner as to yield at least seven per cent. per annum. Otherwise there would be neither force nor pertinence in the argument.

The confusion of ideas which all this implies arises from the habit of looking only at the money which passes from the taxpayer to the bondholder—looking at the sign instead of the thing signified. As money is only the vehicle by which the real operation is facilitated, we must look deeper to find out the essence of the transaction. The operation of paying either principal or interest of the public debt is an operation of distributing the national earnings among the various members of the community by law. The national earnings consist of wheat, cloth, iron, fuel, and whatever we produce by our labor. In the absence of any debt, it would not be considered desirable for Government to take a portion of these products every year and hand them over to a particular class who are not rendering a corresponding service. So long as the debt continues, this is unavoidable, but the question how long the debt ought to continue is to be answered by a simple arithmetical computation. There are, say, $350,000,000 of three per cent. bonds outstanding, which the Government has the right to redeem. If they are redeemed at the end of three years, this arbitrary distribution of the national earnings will amount to $350,000,000 principal, plus $31,500,000 interest, total, $381,500,000. If the payment is prolonged to ten years, the total will reach $455,000,000; if to twenty years, $560,000,000.

The fact that the people can earn six or seven per cent. with their money does not affect the case at all. There are no presumptions to show that they would make better investments than the persons to whom it is paid—namely, the bondholders. In fact, the presumptions are the other way. The bonds represent capital in the hands of the holders; and when they are paid off, the sums they receive will in ninety-nine cases out of every hundred be reinvested as capital and not squandered. There is no reason to suppose that anything like the same percentage would be laid aside and converted into capital if the money were left, as the saying is, "to fructify in the pockets of the people," especially when we consider the countless driblets in which it reaches the Treasury. As a general thing, when a tax is removed from an article, the consumer will buy and consume more of it, instead of putting the difference into the savings bank. This would undoubtedly be the case if the tobacco tax were repealed. The assumption that the money, if not taken, will "fructify in the pockets of the people" is without any substantial foundation. It is much more likely to fructify if it goes to somebody who has already saved up the equivalent of it in a Government bond, and who depends upon the interest, that is, upon the usefulness of it, for his living.

We have, therefore, nothing left to consider but the question whether, in the case mentioned, it is better to discharge a given debt by paying $381,500,000 or by paying $455,000,000, or by paying $560,000,000. It may be asked whether it would not be better to pay the whole $350,000,000 now, and thus save all the interest. It would be better if it were convenient, but it happens to be inconvenient to pay so much at one time. The whole question of national-debt paying is one of convenience. If those who argue for a less rapid reduction can show that it is inconvenient to those who pay—not to those who receive—and more inconvenient than prolonged interest payments, they may make out a case. But to do so, they must prove that a forced distribution of the national earnings is a good policy *per se*, and ought to be perpetuated.

THE "CORNER" AND "FUTURE" INQUIRY.

The inquiry into the effect of "corners" and "futures" on public morality which a committee of the Legislature is carrying on, has assumed a distinctly bouffe character and reflects but little credit on all concerned. Indeed, it is enough to make a New Yorker hang his head for shame to have an official investigation of this kind pending in one of the leading commercial cities of the world. The appearance of the clergy in it is particularly regretable. Every man cuts a somewhat ridiculous figure who undertakes to throw light on a subject of which he confesses he knows nothing, and in this position the ministers summoned by the Committee seem to place themselves with a certain solemnity when beginning their testimony. The effect of their testimony is to make them a laughing-stock to the profane, and especially to the dealers in "futures," and to diffuse an uncomfortable suspicion that the Committee called them in order to diminish popular respect for their office.

The Rev. John J. Reed's testimony, in the course of which he quoted Proverbs against "withholding" corn, and in favor of prompt sales, and Amos against false weights and measures in the grain trade, was a melancholy example of the way in which a simple-minded clergyman may sometimes be betrayed into providing popular entertainment by the injudicious use of his professional lore. He had prefaced these citations first by acknowledging that he had no practical knowledge of his subject, and then by some politico-economical utterances which it is to be hoped have been jumbled by the reporters. If he is correctly reported, one does not know what comment to make on the dicta that "prices should be made to depend as far as possible upon the law of supply and demand," and that "other influences affecting prices should be looked on with suspicion," and that "there was a temptation to commit fraud where the right to property, and not the property itself, was transferred." Mr. Reed laid down these doctrines, he said, as a "teacher of morals"; but no one is fit to be a teacher of morals in our day, at least to business men, who has not some little knowledge of jurisprudence, of political economy, and of the casuistry of trade. It is to be hoped the theological seminaries have found this out.

The two witnesses who have up to this time distinctively made their mark in the proceedings are Henry Ward Beecher and Jay Gould. Mr. Beecher took in the farcical side of the inquiry at a glance, as proved by confessing himself a dealer in "futures" by profession. But in answering the numerous silly questions which were afterward put him, he gave the Committee some very valuable, though very elementary, lessons, both in political economy and applied morality. That these lessons were much needed may be inferred from the fact that he was asked "how he would regulate the standard of prices for commodities"; "whether nature does not contribute something to the value of the necessaries of life"; whether the prices of breadstuffs are not affected by "the laws regulating climate, the atmosphere, and various other causes controlled by the Deity"; what his opinion was of "the natural value of a field of wheat"; "what is illegitimate speculation"; and what was "his opinion of a man who does not try to cultivate Christian principles by controlling his temper."

Jay Gould showed himself a complete master of the whole subject, and his evidence might really be called a useful little lecture on speculation in produce and stocks. He holds, as everybody must hold who knows anything of the history of speculation, that the great check, and the only practical and effective check, on speculation in anything, is the great losses sustained by the vast majority of those who speculate. No legislation can provide a substitute for this. He holds, too, that corners in grain almost always result in giving higher prices to the producer, and thus stimulating production, while the losses fall on those who make the corners; that the less we interfere with traders, and the more we leave their rewards and punishments to the operation of natural laws, the better we make our market and the more capital we draw hither from all parts of the world; and the more capital there is, the more difficult "corners" and all other illegitimate transactions on a great scale become. Congress was, during the war, very much annoyed by "corners" and "futures" in gold, which it held were got up by the enemies of the country, and other wicked persons, to discredit the Government. Under the lead of

Thaddeus Stevens, it passed an act forbidding speculation in gold. Gold instantly rose higher than ever, and the act was soon repealed. The lesson ought not to be forgotten by this time, and yet this very foolish inquiry makes it seem as if it had been forgotten by the politicians, and as if some of our ministers had never heard of it.

There is one species of speculation to which inquiry ought to be directed, and which is as much within the purview of legislation as any other breach of trust, and now constitutes one of the crying scandals of American finance, and that is the speculation of railroad officers in their own stocks. Much of this is as fraudulent as any confidence operation, and much of it, though perhaps not all, could be reached by criminal justice, or by State supervision. State supervision, at all events, could prevent to a considerable degree the management of roads in support of a "short" interest in the stock on the part of the officers, or, in other words, the plunder of the stockholders in aid of the speculations of their agents.

THE BRITISH MINISTERIAL CHANGES.

Mr. Childers, who is to take Mr. Gladstone's place as Chancellor of the Exchequer, is the second person who has under him held that position after receiving his political training in Australia—a curious illustration of the reflex influence of the colonies on English social and political life. The career of Mr. Lowe, now Lord Sherbrooke, who was the first, in fact remarkably resembles Mr. Childers's. Both are sons of clergymen, both graduated with honors at Cambridge, and both went to Australia as soon as they left college. Mr. Lowe, however, practised successfully at the colonial bar, while Mr. Childers went at once into colonial politics, and rapidly became a leading man under the then newly-established government of Victoria, devoting himself mainly to questions of trade and finance. Both stayed in Australia seven years, and both then came back to England, and entered Parliament, and rapidly got into office, and both finally became Chancellors of the Exchequer under Mr. Gladstone. It is to be said, however, that Mr. Lowe did not fill the place successfully, and his mistakes had much to do with bringing about the defeat of the Liberals in 1874, although his unfitness had been recognized in the previous year by his transfer to the Home Office. It was his breakdown, too, which first led Mr. Gladstone to assume the double duty of First Lord of the Treasury and Chancellor of the Exchequer, from which Mr. Childers's appointment relieves him.

Mr. Childers was First Lord of the Admiralty under Mr. Gladstone's first Ministry in 1868, but had to resign in 1871 from ill health. His strength lies mainly in his organizing power, of which he gave striking proof while in the Admiralty, and still more striking proof recently in charge of the War Office, in which it has fallen to his lot to carry to completion and improve upon Lord Cardwell's great scheme of army reorganization. His experience in financial and mercantile affairs, owing partly to natural taste and partly to the possession of a large private fortune, is very great, and he has from time to time issued pamphlets on financial topics which, though not popular in the ordinary sense of the word, are considered weighty in "the City." He differs from his prototype, Lord Sherbrooke, also in believing in popular government, or, at all events, not fearing it, and in feeling that the best days of the human race are not yet over.

Lord Derby, who is said to be coming into the Cabinet too, but whose views, if this be true, about Irish Home Rule appear to differ curiously from Mr. Gladstone's, is the great English apostle of common sense. He forms a striking contrast in temperament to his father, who used to be called the "Rupert of debate" by his Tory contemporaries, and whose fervid genius and habit of dealing with questions offhand used to scandalize his painstaking and unimaginative son when he came into public life, and furnished at least a foundation for the story that the son observed, half in despair, "that if his father would only work he might come to something." Lord Derby really belongs to a very large type of Englishmen in whose lives the imagination plays little part, and who are always standing on guard with a kind of heroism against the illusions created by the feelings, and who make "seeing things as they are" the great business of man on earth. If it was not for a dogged courage which nothing can dismay or dishearten, and an endless capacity for toil, the type, which is a very large one, would long ago have arrested the stream of English progress, and given the state a distinctly Chinese civilization.

No public man now living can equal Lord Derby in seeing both sides of any question. Of this his dealings with Russia when he was the Foreign Secretary of the Beaconsfield Cabinet furnished an almost comic illustration. He used to furnish the deputations who came up to see him about the Russians or about the Turks with such excellent summaries of the reasons both for action and inaction, that he dumbfounded and reduced them to silence. He can talk common sense, too, on any subject by the hour, and is for this reason particularly happy as a popular lecturer on wages, or thrift, or land-tenure. In discoursing on themes like these to plain people, he has all the air of a man who is constantly trying to get the very most out of life, on an income of about $1,000 a year.

Lord Hartington's transfer to the War Office has no special significance, nor has Lord Kimberley's to the Indian Affairs. Lord Hartington has the Derby temperament, but with much less capacity for work. In fact, he is supposed to carry on a perennial and almost desperate conflict with constitutional indolence; but he has steadily grown during the last ten years in the House of Commons, speaking little, though always with force. Though the heir of a great dukedom, he shows, in the fidelity with which he follows the explorations of Gladstone's daring political imagination, that he has not only the traditional courage of his order, but that unquenchable faith in English political ideas and in the destinies of the English people which has always saved the English aristocracy from drifting into the attitude of sulky and alarmed isolation, of which the French nobility furnishes such a melancholy example.

FRENCH COLONIZATION.

The French Government has within two or three years been displaying an extraordinary eagerness to plant colonies and acquire dependencies in semi-barbarous countries. The same spirit showed itself during the latter part of the seventeenth century and the early part of the eighteenth, under the old monarchy. Extensive territories were seized in America, and a very large emigration for those days was poured into them, and settlements were made in India which seemed to promise at one time the rise of a French empire in that region to compensate France, as England was afterward compensated, for the loss of her possessions in America. Under the Empire, however, all colonial aspirations were utterly abandoned, and whatever spirit of adventure there was in the people was absorbed by European wars and attempts at European domination.

The Monarchy of the Restoration, to which the field of European conquest was necessarily closed, tried to revive the Bourbon traditions by the seizure of Algiers, now nearly fifty years ago, but there the matter ended. The Algerian colony has not succeeded. It has not yet got beyond the garrison stage. Few Frenchmen go there, and, when they go, show but little ability to get on without Government supervision or protection. Of late years there has been somewhat more progress, but it is slow and sickly. After the Algerian conquest, too, the great fact began to show itself that French population was stationary, and likely to remain stationary. This, when it first became apparent, about forty years ago, startled French politicians and surprised economists everywhere. During the early part of the present century it was the fixed belief of this latter class that, peace being restored, the French people would multiply enormously, as the Irish had multiplied. One English economist predicted that by our time France would be "the great pauper warren of Europe," and would furnish hewers of wood and drawers of water to all other countries. The French, however, refused to multiply, and, under the new social régime, began to display that deeply-rooted love of home and preference for thrift to adventure as a means of growing rich which are now such potent factors in French politics.

This killed all colonizing schemes on the part of the Government, and led the Second Empire to take up once more the rôle of an arbiter in European politics, and to attempt extensions of the French territory in Europe. It recognized the fact that, as the London *Economist* recently remarked, the French people have never supported their Government in schemes of distant aggrandizement; that nothing beyond the seas touches the French popular imagination. In fact, the French mind has always refused to take in the geography of the globe, and remains in much the same condition about the earth, in spite of all the schools and colleges can do, as that of the ancients in the days of Herodotus. The world for it contains France and two or three adjacent countries, all flat, and beyond them there is the "ocean stream" and Cimmerian darkness. In one of the recent

French opéra-bouffes one of the characters describes foreign parts generally as consisting of "le Canada, les Canaries, les Colonies, et cetera," which is probably as near as most Frenchmen come to realizing the world outside France. Hamerton, in his charming book on French home life, describes a French lady living quite near the Swiss border as being under the impression that Switzerland was further off than England, probably because she saw more Englishmen than Swiss.

The Republican Government is now turning to the foreign-colony enterprise for the same reason that the Restoration conquered Algiers, because it is cut off from republican adventures nearer home. The seizure of Tunis after the absurd campaign against the Krumirs would have been followed by interference in Egypt if that had not seemed to threaten European complications. But it has been followed by an attempt to establish a protectorate over the western and northwestern coasts of the island of Madagascar, against which the Malagassy Government has sent an embassy to Europe to protest, and by a similar attempt to establish one over the Anamese province of Tonquin, over which the Chinese now exercise some kind of sovereignty which they threaten to defend in arms. Finally, M. de Brazza's somewhat ridiculous treaty with King Makoko on the Congo has been submitted to the Chambers, and ratified with amusing haste and solemnity, as if it was a great thing which would make the British pale with envy.

It is pretty certain, however, that the French people will not support these schemes with anything like popular interest and attention, and, when once the novelty has worn off, these colonies will simply prove expensive garrisons, and not homes for French settlers. The reason is not wholly to be found in the absence of a superabundant population such as Great Britain and Germany possess. It is safe to say that distant conquests will never be popular in a country which raises its armies by conscription. Conscription is only tolerable when the troops are not likely to be taken far from home. It would be intolerable if they were much drawn on for service in distant and unhealthy climes. One of the great reasons why Englishmen have always so much enjoyed their wars at the far ends of the earth is that they are carried on by volunteers. In other words, the British foreign and colonial empire has been founded and is defended by men who soldier because they like it, and whose departure for the wars, therefore, sends none of the tremor of anxiety through the community which is produced in the Continental states by a scheme of military ambition.

THE DECLINE OF HOSPITALITY.

THERE exists an impression that American hospitality is in a bad way. To a certain extent the foreboding justifies itself. Any one can see that the lavish, unquestioning welcome of a primitive community to all claimants has well-nigh vanished; it lingers only on the frontiers; it is disappearing even from the South. In the cities, we keep our houses for ourselves and for our friends, especially our previously-invited friends. Nevertheless, among one class of Americans the tendency is for hospitality to grow freer and more diffuse. Nowhere is there a readier or—if one may so express it—more luxuriant hospitality than among very rich Americans. They fill their country-houses every summer. The travelling foreigner has some ado to save his digestion from their multitude of dinners. And the fashionable custom of always laying extra covers at luncheon for possible guests, speaks loudly for their ever-ready cordiality. Nowhere, too, is the entertaining more genuine, cheerful, or informal. Unhappily this charming hospitality stops with the very rich. They, truly enough, open their houses to their friends. The rest of us are apt rather to bar them, taking down the bars only on special occasions and with due formality. We still have to give the members of our own and our husband's immediate families bread and lodging, though no invitation have summoned them. But other people we keep civilly at arm's length. Our transient hospitality is as rigid. We do not like to have guests on the spur of the moment. How many husbands, for instance, venture to bring a friend home with them as often as inclination prompts? Men are hospitable by nature. They enjoy unceremonious entertaining. It pleases them to display their wives and children and houses. But, commonly, their wives are of quite another mind. The luckless husband is apt to run full tilt against some sacred household ordinance of washing, or ironing, or baking, with the saddest results to the family peace. His rash and ignorant good feeling hurries him into invitations and makes him forget that the day is Monday, a solemn occasion of purification, a day fittingly observed by a semi-fast, or that it is Tuesday, when we iron, or that a dressmaker is in the house, and all the week must be spared. But enlightenment comes soon. A succession of catastrophes teaches him a wise timidity. He grows wary through tribulation. The chances are so much against his hospitality hitting a day when no harm will be done, that he gives up asking his friends to risk them. Instead, if he lives in a large city and can in any wise afford it, he joins a club and takes his friends there. If he lives in the smaller towns, he can only gratify his sense of the obligations of good-fellowship, in a saloon, by "setting up the drinks." Neither of these alternatives is to most wives' taste; but they are the popular alternatives just the same.

Hospitality, then, would not appear to have waned among men; it has merely changed its form—and its place. The real decline has been among women. Yet very rich women are indefatigably hospitable; to be a delightful hostess is part of every "great lady's" social equipment. Behold a mystery. Here is one class of women actively promoting hospitality, and another class—many of them the equals of the first in everything save money—stubbornly though silently narrowing its limits. The mystery, however, is shallow. When all is said, hospitality is a sort of barbaric virtue only half acclimated in civilized climes, and thriving best among the class that has the nearest approach to the barbaric leisure and recklessness.

The barbaric welcome is fascinating, but, after all, it costs the barbarian little. The coming of a stranger is a pleasant break in a monotonous life. The barbarian has plenty of time on his hands; generally he has a rude plenty of provision and service; when he has not, he is too reckless of the morrow to be troubled, and shares his last crust with a stranger without dread of future hunger. Just how much improvidence has to do with generosity one does not venture to say; but, certainly, most of the hospitable races have been improvident—which holds true with the civilized as well as the barbarians. Take the Scotch Highlander, or the Irish peasant, for example. Now, the whole tendency of industrial civilization is to make men more provident. At the same time life constantly becomes more crowded; compared with an Arab sheik, all we civilized people are in a hurry. So it happens that we are at once too prudent and too busy to be barbarously hospitable. The single class possessing the barbaric requisites for hospitality—recklessness and leisure—is the very rich: they *are* hospitable.

There is another reason, possibly going deeper. One result of the generally diffused ambition of Americans is a general pretence. We all hope for better things than we enjoy, and meanwhile most of us try to seem to have captured more of them than we have. This pretence is a very deadly foe to hospitality. Barbarians are comparatively free from it; ignorant savages that they are, they have no "company dishes" or "company manners." The very rich resemble the barbarians, making little change in their manner of living for ordinary guests. But the average American woman is always struggling to live better before the outside world than she can before her own household. She "makes a difference" for "company." Hence these tears. As a rule she has too few servants for the work of her house; and "making a difference" involves additional work, which, flung on already overburdened shoulders, reacts on the servant's temper much as it would on that of any one else. Thus she comes to dread her husband's thoughtless hospitality, liable to light on Mondays, Tuesdays, or that awful season when the house is, as it were, recreated and goes into a preliminary chaos. In truth it is her lack of service, not her lack of kindliness, which makes her less hospitable than her rich acquaintance with the extra covers at luncheon. She has no leisure, because she tries to live outwardly as well with her three or two or one servant as does a woman with six. The disproportion, often, between the house, the dress, the table, and the service of an American family, especially outside the great cities, is something appalling. All over the land are women with large houses and a single maid-servant. The woman's husband is not poor, and the house is expensively furnished. Perhaps there are three or four children. By economy and clever observation, and doing dreadful things to her back over a sewing-machine, she contrives to dress her children and herself as "stylishly" as does her richest neighbor. This is a triumph. A triumph, also, is her little feast when she opens her doors to invited friends. But at other times the labor of the household is so ingeniously parcelled out that there are no spare chinks of time or thought for idle, aimless, unrequited hospitality.

Doubtless there is much to be said for this hard-working creature's refusal to do more than she does. Indeed, how can she?

JOTTINGS IN VIRGINIA.

NOVEMBER, 1882.

THERE are great new piers, storehouses, and coal-dumps at Newport News, and around them the dwellings of the workmen, with plenty more going up. The place has become a railway terminus, and, having deep water for ships without the annoyance of a bar for them to pass over, is to be made a great port. It is no longer an argument for not making a place a port that it is not one already. The age of short lines to tide-water and quick seizure of points of vantage on all our coasts has arrived. The stir at Newport News recalls that going on contemporaneously at San Diego, at the other extreme of the continent, though the enterprise there is at present not quite in the same hands. The Chesapeake & Ohio is a "Huntington line," just as

there are elsewhere Gould lines and Vanderbilt lines. Huntington, President already of the Central Pacific and Southern Pacific Roads, is anxious to have a transcontinental line. This is his ambition in life. Well, building here, buying and leasing there, and *en route* establishing a thriving city named after himself on the Ohio River, he bids fair to accomplish it, and that very briefly. He will make complete connections across the Southwest, running by way of Richmond, Louisville, Memphis, and Little Rock, with his Southern Pacific Road in Texas. Newport News will be the eastern terminus at tide-water of his new short line, and, as things have gone in the past, it is difficult to see how a city can fail to spring up there. And later on, if this should be accomplished, with so flourishing a city as Norfolk on the opposite side of the wide mouth of the James, and the favorable anchorage and climate, it will be according to all precedent if many important settlements should arise all round the circle of these waters.

Our train follows nearly the line of Keyes's advance, when he moved out in command of McClellan's left wing, keeping near to the bank of the James, ten months after Butler's repulse. It was my first visit to the country, and I confess that these war memories interested me more than anything else. There is very little actual provender for them along the way at this distance of time. I found a one-armed Virginia colonel in the train who was willing to talk a little about them, and I carried a copy of Webb's 'Peninsula' in my satchel, but they proved equally uninteresting. Here and there, as at Lee Hall, was a slight vestige of earthworks, gloomy mounds like beaver-dams, set between the trees of the forest along some brook or depression in the ground. It is at such points—a ravine, a morass, or petty bridge—that men die in war, filling up with their bodies the inequality of surface, as in a circuit of electricity the deadly spark of havoc leaps forth most fiercely where the direct way of communication is interrupted.

At quaint old Williamsburg, the seat of royal power in the colony of Virginia, is another trace of earthworks. Here Hooker lost 2,200 men. There is an attractive glimpse of sundry steeples and gambrel roofs, some of which seem green with moss. The railroad does not take pains to go too close to its curiosities, but, after the manner of the Levite more than the good Samaritan, passes them by on the other side. It is said that the Williamsburgers, content with their traditions of two hundred and fifty years, at first objected to the railroad, but they are now highly reconciled to it. The face of the country cannot have changed a great deal since the war. The railroad has some new stations, endowed with such names as Argenta and Oreana, which seem quite in the forest primeval. The Peninsula, in fact, has been more shunned by immigrants than some other parts of Virginia, on account of its having been early made an especial rendezvous and paradise of the colored people. They flocked into it when Butler held command at Fortress Monroe, and have never since gone away. They fish and take oysters a little in the rivers on either side, scratch the ground for some small corn-patches on the large, unimproved estates, and principally, if their white neighbors may be believed, "trifle" and "frolic."

We met the Chickahominy, in a lake-like bend partly veiled by pine-trees, at a station called Lanexa; then were presently crossing the battle-field of Seven Pines, at Fort Lee. It is a good fighting country this, for the tactics of regular warfare—level and clear but for a short scrub growth which must have come up since. There is a redoubt of red earth and the stylish new station of the railway to look at. Whoever would have realizations of the carnage of the Titanic contests hereabout, must draw them principally from his own imagination.

I advanced upon Richmond with much greater ease than the predecessors we have been considering, yet I cannot honestly call it a great prize to enter into the possession of. It does not correspond with preconceived ideas of the capital of a great State for which so much blood and treasure were poured out. I should call Richmond at present a rather shabby-genteel place, though it must be remembered that a part of it was burned and rebuilt. The best hotel is a very poor one; there are no large trees in the streets, and there is an absence in the dwellings, even those of the better class along the fashionable thoroughfares of Franklin and Grace Streets, of that air of genial breadth and comfort which has been supposed to be characteristically Southern. It is surpassed even by Norfolk in this respect. On the other hand, the modernness by which this is replaced is of the most cold and tasteless pattern. Rents are high in Richmond, I was told; it has now its eighty thousand people, and it presents along the James River a scene of active manufacturing in the departments of iron, of flour milling and warehousing, but it needs nothing so much as either a going back to old Southern traditions in the matter of building, or a start in that modern architectural and decorative movement which has taken possession of so much of the rest of the country.

I went to see Libby Prison. It is a fertilizer factory now, with an undesirable odor. There is no dungeon air about it. It is a long, stout brick building, once used as a tobacco factory, and rows of stout square posts uphold its three floors. It was only necessary to clap gratings over its windows, and there was a prison ready-made. One could camp out there for a night or two with a pallet, or even a blanket, comfortably enough. The hardship would be in the duration of it. There are some rude checker-boards marked out on the floors on which the captives cast themselves down, and vestiges of a tunnel through which eighty of them made their way out, coming up through a horse-stable and taking to the fields. The visitor need not fear to intrude. The place has become, in connection with the fertilizer industry, one of the few show places in this poor modern America of ours, and there is a talkative young cicerone to show you through. Every few days, he says, some old inmate comes back to muse again upon the scene of his incarceration. They tell him all sorts of anecdotes, and he writes them down in a book, which he says he intends to have published. I resisted the temptation to represent myself as a returned veteran, but endeavored to ingratiate myself in the next most effectual way by purchasing for an exorbitant price a good-for-nothing lithograph, with which a splinter of the floor was thrown in. Belle Isle, again, is a mere bare islet in the river, with a knoll in the centre and the pier of a railroad bridge resting upon it.

Hollywood Cemetery looks down upon Belle Isle. In this cemetery one of the most dignified monuments I ever saw has been erected by simply piling up a great pyramid of rough, uncemented stones, and training ivy upon it. It is to the memory of the Confederate dead. A great Confederate lies buried elsewhere, at the top of the principal slope of the place. A careful hand keeps his grave yet rounded and flowers lying upon it. "Maj.-Gen. J. E. B. Stuart," the lettering reads on the granite shaft, "Confederate States Cavalry, Wounded May 11, died May 12, 1864. Aged 31 years." The oak leaves were drifting down, and thick under foot; there were red holly berries to be seen among their glossy dark-green leaves; a Jacqueminot rose or two was yet in bloom, and it was very quiet there. Such fire and dash lying so still and unresisting under that bit of mound! The select club of Richmond is the Westmoreland, which occupies one of the few large old houses, and manages to keep up a certain stately air, while some one or two others have but a poor existence. There is to be seen on the walls of the club a portrait of this "Jeb" Stuart, which represents him with a long sandy beard, costumed in gray, with a peculiar kind of backwoods' dash, not unlike our own Custer in effect. The fashionable drive of the Richmondites is a bit of level road, by a reservoir, with white fences around it, and a race-track at one side for extra fast going. People go up one side of the short boulevard and down the other, and repeat. There are said to be more teams, in proportion to the population, in the place than almost anywhere else, but they are not often elegant, and the roads are very dusty.

I went from Richmond to Charlottesville. There had been a spatter of snow and hail in the afternoon; and though it passed over, so that we saw Louisa Court-House and other small stations, of which Gordonsville is the largest, and the pleasant-looking country about them, by moonlight, it was still cold. The old negro who showed me to my room at the hotel spoke of it as a good night to sleep in a feather-bed, calling my attention to the fact that I had one. I walked all over Charlottesville at once, stretching my legs before retiring, as, I make no doubt, is the way of many other travellers. It was sunk in profound slumber at half-past nine, the hour of arriving. Only a light or two burned in some of the large brick houses which looked imposing in the dark. They were less imposing by daylight, but still comfortable. Charlottesville has made a good deal of money in its time from tobacco. It is doing something now, also, in wine-growing. There is at one part of the town a sort of little plaza containing a rusty old yellow-washed court-house, with a classic portico and a Dutch cupola painted green. The shabby brick buildings around it had their shutters up for the most part, and seemed to be in the occupation of negroes. Jefferson once practised in the court-house. Saddle-horses were tied to the fence-posts, and rusty country lawyers with a self-satisfied air were seen going in and out of the offices.

Charlottesville contains the University of Virginia, a really charming place, without reservation, which I am glad to have seen. It is a little out of the town, and stands on a rise which makes the outer face of the buildings a story higher than the inner. They are in red brick, profusely colonnaded with white columns, and date from 1825. The main interior quadrangle is particularly attractive. I know of no other educational institution that has so genial a feature. A one-story colonnade, with students' rooms behind it, broken from space to space by professors' houses with classic porticos, borders each of two sides of a long level lawn. A third side is stopped by a great porticoed edifice, containing among other things the library, a round-domed room within, on the principle of the British Museum. The fourth side is open, looking off upon a pleasant country and blue hills. Toward this a student was seen stealing off now and then with his gun. The university, it will be remembered, was the last pet of Jefferson in his old age. Assisted by his accomplished daughter, Mrs. Randolph, he had the professors and students to dine with him regularly, taking them in turn, over at his seat of Monticello near by. I learn from a printed copy of some reminiscences with which an old alumnus favored the last Commencement that he made it a point to put each young man at his ease, finding some subject, as perhaps a person

of importance or a family from the part of the State from which he came, about which he could talk with confidence. It is a pity that such kindly and admirable manners are not more extensively imitated. This institution of learning prides itself on having been established on the eclectic or voluntary system of studies at the very first. The usual four years' curriculum and all "the old unmeaning titles," as they were called, were swept away. The student was to finish his course soon or late, and he was to be simply "Graduate." These were among the minor innovations of a man who was never afraid of anything new, who had more than anybody else to do with the abolition of primogeniture and entail and the separation of Church and State, and was once looked upon as a very dangerous radical indeed. The title Graduate was in time found not wholly to serve, and later there have been established Proficient; Graduate (of a school); Doctor of Philosophy (in a number of varied departments); Bachelor of Arts, and Master of Arts, the last two not differing greatly in significance from those to which we are used. In the library hung portraits of the same Jeb Stuart I had seen at Richmond, and of Lee. "You have heard of them," said the custodian, pointing with a thumb turned back. "Well, rather," I could afford to reply. It is fortunate that we can both have our side in the little joke. They fought magnificently, and gave us a world of trouble, but we beat them.

Mrs. Jeb Stuart, I may mention, keeps a school at Staunton—a notable place for select young ladies' schools, said to be chosen for the purpose on account of its healthful, mountainous situation. The lions of Staunton in "Porte Crayon's" time were its Deaf and Dumb and Lunatic Asylums and its refined society. I cannot judge of the refined society, which did not appear on the street to any great extent, in the throngs attending a sheriff's sale of stock at the court-house; but the others are its lions still. The principal business street is commonplace, with that kind of commonness inhering in the cheapest of little brick buildings. I actually walked through one ward of the Lunatic Asylum, and brought away a knowledge that it is pervaded by the usual odor of chicory coffee and chloride of lime belonging to public beneficent institutions everywhere—which is a fuller report than was rendered by the once so much read "Porte Crayon" himself.

On the way to Staunton and beyond it, in the intervals of gazing out at the striking mountain scenery of West Virginia, I found it interesting to read portions of the article of a young man published in the last number of the *Virginia University Magazine*. It covered all departments of life in the customary way, with a particular application of its philosophy to ourselves. It quite despaired of us in the matter of art. He had had the advantage of listening to lectures and investigating the most famous galleries abroad, yet "the lamented fact must be admitted," he said, "that the overdrawn and weird paintings of Gustave Doré, who is said to be a third-class artist of no genius, have given the writer more pleasure than the great paintings of Raphael or Angelo. . . . If, then, one who was willing to make a special study of this subject for several years, with the aid of the best advantages of Europe, was able to make such poor progress, what hope is there for the masses of our people?" Again, in literature, "a friend of the writer, a brilliant young Englishman, a Hibard scholar, A.M. of London, etc., held it as his opinion that, as things exist, it would be impossible for America to produce a literature of any importance." The writer does not agree to this, and hopes it may be wrong, but gives it only as "the curious and interesting belief of a man of great learning and good common sense." I do not know how much weight may attach to revelations from such a source, but this from the naïve and sophomoric author, on politics, was the most entertaining of all. Touching on the corruption of the ballot, he says:

"There were two alternatives offered our people: on the one hand, to suffer that blackness of chaos, the negro rule; on the other, the corruption of the ballot. . . . It is dreadful, we admit, to have the very foundation on which our Government rests corrupt and impure; it is pitiable to see old soldiers, who were once proud to call themselves Southern gentlemen, who were ever brave and true, fighting nobly through many battles, forgetting their former worth, and engaging in this wrong; but that blackness, the ruin of that other alternative, were by far the worst to be dreaded. We should pity ourselves that we have to use fraud and corruption because we are placed between two so great evils; . . . but we should never condemn ourselves, for here as well as elsewhere necessity knows no law. For a time this corruption was kept secret, and no man spoke about it; now it is talked of on all hands, and is so apparent that no one takes the trouble to deny it. . . . First, the negroes were offered inducements to come over to the Democrats, and while, through the corruption of the ballot, it was made to appear that many availed themselves of this opportunity, yet in reality this conversion has happened as rarely as the proverbial angels' visits."

W. H. B.

OPENING THE LANDTAG.

BERLIN, November 26, 1882.

THE Prussian Landtag was opened on the 14th instant by a speech from the throne. As it was the first session of a new legislative period, King William delivered the address in person. The old gentleman looked very much broken-down and infirm of age. Formerly stout and erect, with a splendid carriage, he appeared half a foot smaller, with his head inclining to one side. Considering, however, his eighty-five years, it is a wonder not only that he still can stand all the troubles of his position, but that he goes hunting in the country and attends parties and visits the opera-house. My impression is that any day may end the useful and uncommonly long life of a prince whose glory consists in always having fully and nobly done his royal duty.

During the elections for the Prussian House of Deputies the Government most carefully abstained from publishing any particulars of its immediate policy. The royal message, however, gives us an insight into it, and explains why all allusions have hitherto been avoided. In my opinion the late elections would have assumed quite a different character—that is, the Conservatives would inevitably have been defeated—if the King's views, prompted by his Chancellor, had been known before. A year ago the elections for the Reichstag had proved unfavorable to the Government on account of Prince Bismarck's widely-spread plans for new taxes and monopolies. He was too open and communicative then. For this reason he kept his plans secret while the elections to the Landtag were going on. The official and officious press hinted that the Chancellor's former plans had been modified or even laid aside, although people ought to have known that it is impossible to stop on a declivity, and that Prince Bismarck is not the man to give up any of his pet measures. Thus, it was repeatedly stated that the so-called "Verwendungsgesetz," which required the Reichstag to pass new taxes to the amount of 188,000,000 marks, in order to provide the funds necessary for covering the Prussian deficit, was no longer thought of. This statement was true as far as its form was concerned, while in fact not only 188,000,000, but more than 200,000,000 marks are now to be raised by the Reichstag in order to balance the Prussian accounts. All that Prince Bismarck desires is to exercise a coercion through the Prussian Diet on the German Reichstag, and therefore all the electors of the latter are greatly interested in what is now going on in the former body. If Prussia were to raise the funds necessary for her new budget within her own boundaries and under her particular laws, no non-Prussian would have a right to offer any objection; but as an enormous deficit will be created by the Government, and as the German Reichstag is to be required to make good the Prussian deficit by imposing hundreds of millions of new German taxes to pay the increase of Prussian expenses, people will be wide awake to keep off such a new and heavy burden.

Whether the Prussian Landtag will accept Prince Bismarck's draft, drawn on the Empire, remains to be seen; but so much is certain, that the Reichstag, in its present shape, will never honor such a draft. It has not the least interest in granting several hundred millions by increasing the German indirect taxes for the sole purpose of benefiting Prussia, especially as it has no constitutional authority to determine by its vote how the money shall be spent. Besides, it is utterly impossible to raise so large an amount from indirect taxes if the tobacco monopoly, or a very high tax on tobacco, be not included. The Reichstag, therefore, will reject such a demand. If so, Prince Bismarck will dissolve it, provided he feels sure that the character of the new Reichstag will agree with that of the present Landtag.

There is more method in this policy of creating an artificial deficit than may appear on a superficial glance. Mr. Scholz, the Prussian Secretary of the Treasury, even boasts of the deficit, as if he had accomplished a great triumph, and proposes to perpetuate it by voluntarily giving up the income tax of the four lowest classes. In order to cover this falling off, he further proposes to lay a domestic tax on large articles of consumption, such as tobacco, and on liquors sold in dram-shops—a measure which is unconstitutional, because the Reichstag alone has the right to impose domestic taxes and lay duties on foreign merchandise. As if the masses were not yet taxed highly enough! The Parliamentary Opposition does not object to a higher tax on tobacco, in itself considered, for tobacco does not belong among the necessaries of life; but the income of such a tax ought to be spent in alleviating other burdens. A heavy tax on liquors and spirits, of course, is humane and profitable, but it ought to be laid on their manufacturers, the rich real-estate owners in the eastern provinces, who always in the agricultural interest plead for the freedom of their trade, while they poison the people with their mean stuff, belong to temperance societies, and attend prayer-meetings. The truth is, that German spirits monopolize the European markets, and can easily bear a tax which will yield much more than if laid on small tavern-keepers and retailers. But not content with this, the Government soon proposes the increase of the duties on timber and wood, which three years ago were passed at the solicitation of the Silesian protectionists, among them one duke, five princes, ten counts (Field-Marshal Moltke one of their number), and about thirty barons, and other agriculturists. To secure to themselves still greater advantages at the cost of the poorer classes they also begin now to cry for higher duties on breadstuffs and provisions. I am not sure whether they will succeed in this or not. Whatever may be the result, the ultimate decision will not be given by the sound appreciation of moral justice and real facts, but by the conflicting interests of the agricultural and man-

ufacturing parties, the latter of whom declare themselves unable to increase further the prices of daily wants. For this reason, probably, no positive result will be reached, and a new loan must be raised to cover the large expenditures, which, with a little good-will, could easily have been avoided.

Let me mention, in this connection, a plan which greatly concerns the United States, too, and which belongs to the same class of schemes that benefit the well-to-do classes at the expense of the poorer people. I allude to the prohibition which the Government is preparing against the importation of American hogs and pork. Our farmers and agriculturists have for years kept up a lively agitation on this subject, and, while theoretically overflowing with pity for their poor brethren, had from the beginning, of course, a single eye to their own profit by excluding all cheaper competition from our markets. The matter is just as well as settled. The other day the Hamburg Chamber of Commerce sent two deputies to Berlin to remonstrate against the measure, but it was in vain. The Secretary told the gentlemen that in a few weeks the Federal Council would submit to the Reichstag a bill prohibiting all importation of American hogs and pork. Thus, the only hope rests in the Reichstag. I trust that it will endorse the Hamburg demands by rejecting the bill.

Our farmers, who have raised this artificial agitation, cannot and will not appreciate the fact that the development of a nation in an industrial and manufacturing direction requires a daily greater supply of victuals and provisions from abroad. Thus, by degrees, we have become a people which imports grain instead of exporting it, and in a like degree we have to import a yearly-increasing quantity of meat. The home production does not suffice to nourish the population, which has increased on a much larger scale than provisions and cattle. The question, therefore, for us, is not whether we must import meat or not, but simply where we can get it cheapest and best. Russia and Austria, which formerly supplied the German markets, have of late been surpassed by the United States, which sell their surplus of cattle and grain not only to Europe in general, but to Germany in particular. It is manifest that these enormous American imports have depressed the price and made the enjoyment of meat possible to the poorer classes here. Thus the mere fact that Germany is provided with cattle and meat by America is a real blessing for our people, which has since improved its standard of living. In fighting the plans of the Government, all our Liberals are led by the consideration that by the threatened prohibition our poor people will lose the opportunity of being nourished cheaply and well, and will be thrust back upon a lower standard. Lard, for instance, has only become a food with us on a large scale since it has been imported from America, while formerly it was a luxury. American lard, in 1879, cost 70 marks (or say $17) per 200 weight, and German 160 marks; but in consequence of the new tariff the relation of the prices of both of them is 125 to 145 marks.

Now our Government pretends that the American hogs and pork cannot be tolerated from a sanitary point of view, because the flesh and grease of deceased hogs are sold and packed together with those of killed ones; but this assertion is either an unfounded prejudice or a misrepresentation of well-known facts. The great bugbear for intimidating people here is the so-called hog cholera, which is represented as still raging among the American hogs; it is evidently calculated to make German consumers believe that they have to pay for dead and poisonous animals. Thus it appears that the German Government has no knowledge of the inquiry made about eighteen months ago by Mr. Scanlan, by order of Secretary Blaine, and of the pamphlet, "American Pork," published by this able expert on the results of his investigation. German gentlemen perfectly familiar with American business and the character of American wholesale merchants have explained over and over again that houses which pack and ship millions of hogs are too far-sighted—apart from common honesty and practical considerations—to ruin their reputation and business by a mean trick of mixing fallen hogs with the slaughtered ones. But it was all in vain, and the Secretary of the Treasury still falls back upon his hearsay evidence, which he fortifies with some stale and superficial arguments taken from a handbook on protective duties. It is a singular policy, not only to hurt the commercial interests of a nation which is a large customer of our manufacturers, but also to ruin the pork trade of our seaports. In deeming a tariff and "prohibition" war expedient, our Government overlooks the fact that its subjects will lose more than the Americans, who by revenging themselves can injure some of our most vital interests. This unexpected measure seems like an answer to former American prohibitions directed against German imports, not to mention the antiquated feudal but nevertheless American law which prohibits foreigners from inheriting real estate in most of the older States, and which has not yet been set aside, in spite of repeated remonstrances on the part of Germany, whose citizens, on account of their intimate relations with the United States, lose more under it than the members of any other foreign nationality.

† † †

A DIPLOMATIC INTRIGUE.

FLORENCE, Nov. 28, 1882.

THERE are circumstances connected with the death of our late Minister at Rome which I think ought to be widely known, as a help toward getting our foreign representation out of its generally disgraceful and imbecile condition. Mr. Marsh was an old man, whose physical forces were failing, and who could not have survived many years, but whose condition had no immediate menace of change. His death was precipitated by the action of his Government, through a measure as wretched as any cheeseparing administration ever adopted. The failure of his physical powers had made him dependent more and more on his assistants, chiefly on Mr. Wurtz, Secretary of Legation, to whom Mr. Marsh was very much attached, and in whom he had the most unlimited confidence, and who from long tenure of the office and intimacy with his chief was an aid such as no new man, however capable, could be. The habits of the old man had settled into a comfortable substitution of Mr. Wurtz's energy and efficiency for his own failing physical powers, and it would seem that no petty advantage to be gained from any official changes could, under such circumstances, have justified what must be looked on as a deliberate attempt to make untenable Mr. Marsh's position, on the part of some home officials who wished it to be vacated and dared not dismiss the incumbent.

Under a sheer pretext of economy, the functions of Consul-General and Secretary of Legation were laid on one person, and, to dismiss Mr. Wurtz, a new Consul-General was appointed who was to be also Secretary of Legation. Of course, in the characteristic neglect of decency of our Government when dealing with diplomatic matters, not only was an old and tried employee dismissed, but a new man appointed who, however intelligent and willing, could not take Mr. Wurtz's place, and whom Mr. Marsh had not the physical energy left to initiate in his duties. The perpetration of such an open and extreme act of ill-will toward a functionary whose condition was so well known as was Mr. Marsh's, cannot have been through ignorance; and what makes the malevolence more apparent is that advantage was taken of Mr. Edmunds's absence from Washington, on account of a grave domestic affliction, to carry out the proposed change. This, concocted in all the secrecy of which a Congressional committee is capable, was carried out in a spirit of hostility to Mr. Marsh, who was never consulted as to the merits or advantages of the scheme, and was only notified by a telegram announcing the fact of the change in the personnel and organization of his legation. There was not even the degree of consideration shown him that an interval of warning would have been—Mr. Wurtz was suspended from all official functions abruptly.

It is reported that the change was not so much because of a desire for economy (for, when a new secretary was charged also with the duties of the consulate, the labor became such that an under-secretary was necessary, and the economy realizable was not more than $500 a year, even at the loss of efficiency) as because the diplomatic corps at Rome had refused to receive as an official colleague a consul-general of the United States of America; and the committee proposed to compel them to do so by uniting in one person the two offices. The consequences are curious: the Italian Government, which recognizes some rules of etiquette in its diplomatic proceedings, of which our Congressional committeemen and their advisers had no conception, refuses point-blank to recognize the two officers in one individual, and will only give the exequatur in one capacity. In its usual bungling manner, our Government had jumped into the dark and found itself in the mud. As Mr. Wurtz had been imperatively suspended, and the new double functionary had to drop one of his functions, he was compelled to become simple Secretary of Legation, and the consulate is vacant, being occupied pro tem. by a local banker who enjoyed the reputation (and merited it) of being the most disloyal Northerner in Rome during our war, and who actually negotiated with the Papal Government the nullification of the official action of our own Government with regard to those who were then known as Secessionists. We have a new minister with no knowledge of diplomatic matters, a secretary who cannot help him, no consul, and only a *locum tenens* whose disloyalty to the Government in the great crisis of its existence should forbid his ever having any relations with it.

To add to the obloquy which the Government merits by its trifling with the interests (if there be any) of the country in its foreign representation, the malignant blow at Mr. Marsh gave him a shock which was the immediate cause of his death. With his usual unselfishness and consideration for others, his first care and anxiety were given to Mr. Wurtz, so unworthily suspended from functions he had performed with the truest zeal and fidelity so long. But the sudden change in all Mr. Marsh's official relations, the contemplation of the difficulties thus thrown on him, and the conviction of his physical inability to carry out the accustomed duties in the new conditions; the derangement in his habits thus forced on him, and the slower-coming grief and annoyance at the indignity thrown both on him and his secretary by his own Government, gave him a shock which broke his courage and moral force together. He understood it as an act of hostility, but I do not believe that he felt—so great was his humility, and so complete his indifference to himself—that the movement was really the grossest insult ever

offered to a person of his position by our Government even in its worst days. The moral violence done him brought on the illness which ended, with needless acceleration, his life.

The facts are sufficiently known to the Italian Government to make the position of Mr. Marsh's successor delicate, and that of our own Government not enviable. There was no American living who had anything approaching the personal prestige with the Italian Government that Mr. Marsh enjoyed, and that not for the sake of his Government, but for his own; and not only will any man who goes into his place in this generation have a difficult example to follow, but he will have to convince people in Rome that he had no part in the conspiracy which killed the man so beloved by every one in the official Roman world, from the King down.

As for the agencies at Washington which have to be responsible for the crime against the dignity of their country, it can only be said that the affair shows in a more painful light than usual how they can unite utter ignorance of everything which pertains to diplomatic propriety and usage with utter indifference to the character and prestige of their representation abroad, and that the disasters of our wretched civil service affect not only our taxpayers and the resources of the country, the purity and efficiency of our home Government, but the decent dignity of the country in the eyes of foreign nations.

As for the conspirators in the petty intrigue which has shortened, even by a few days, the life of one of the noblest men America has ever produced, and made his last days days of pain and humiliation, I have only to say, as I know none of them, that they have, in recklessness or malice, committed a crime for which I hope public opinion will hold them responsible, and which will be remembered against them. W. J. S.

Correspondence.

BASTIEN-LEPAGE'S JOAN OF ARC.

To the Editor of The Nation:

Sir: Your recent notice of our heliotype of Bastien-Lepage's "Joan of Arc" refers to an apparent joint in the print, as if the negative were taken "in two parts," "as in a wood engraving in which the blocks have sprung."

Your critic has probably forgotten that the original picture is painted on two pieces of canvas joined up and down the centre, making a very visible seam.

Our print is made from a single negative only, but this joint in the original is necessarily indicated in our reproduction, and your critique is therefore a complete testimony to the fidelity of the heliotype.—Very respectfully,

James R. Osgood & Co.

Boston, Mass., December 15, 1882.

CELLINI AND THE CONSTABLE DE BOURBON.

To the Editor of The Nation:

Sir: Is not the passage in your Paris correspondent's interesting review of Plon's 'Benvenuto Cellini,' published in the *Nation* of Dec. 14, relative to the death of the Constable of Bourbon, likely to prove a little misleading? It is true, "Cellini does not boast in his memoirs of having killed the Constable," but he certainly means us to understand that the shot he fired caused the death of the French commander. This is the long-established popular impression; and that it is the natural deduction from Benvenuto's words would seem to be indicated by the fact that in the index to the Italian edition of the 'Life' (Milan: Carpani, 1806–11), and in that to the English translation by Roscoe (London: Bohn, 1847), we are referred to the page where we shall find how "Cellini kills the Duke of Bourbon." But here is Cellini's own account of the matter. After relating how he went to the fight, accompanied by Alessandro del Bene, Cecchino della Casa, and another youth whom he does not name, he continues:

"—Alessandro, much alarmed, answered: 'Would to God we had never come hither!' and, so saying, he turned with the utmost precipitation, in order to depart. I thereupon reproved him, saying, 'Since you have brought me hither, I am determined to perform some manly action,' and, levelling my arquebuse where I saw the thickest crowd of the enemy, I discharged it with a deliberate aim at a person who seemed to be lifted above the rest; but the mist prevented me from distinguishing whether he was on horseback or on foot. Then, turning suddenly about to Alessandro and Cecchino, I bid them fire off their pieces, and showed them how to escape every shot of the besiegers. Having accordingly fired twice for the enemy's once, I cautiously approached the walls, and perceived that there was an extraordinary confusion among the assailants, occasioned by our having shot the Duke of Bourbon. He was, as I understood afterwards, that chief personage whom I saw raised above the rest."

Roscoe translates Carpani's note to this passage: "All historians agree that Bourbon fell by a musket-shot early in the assault, while, distinguished by his white mantle, with a scaling-ladder in his hand, he was leading on his troops to the walls."—Truly yours, C. C.

New York, December 16, 1882.

SOUTHERN HOMICIDE.

To the Editor of The Nation:

Sir: "Rebuke a wise man and he will love thee" is one of the utterance of that Book by whose precepts large numbers of Southern people profess to regulate their lives. I believe there are many such wise men among us, who earnestly desire to see much good done by your articles on homicide at the South, even though the reading of these articles may cause great pain, and even exasperation at times. I know that my own feeling at first was that I would stop my paper because of one of these editorials. But instead of acting in such a petulant and foolish way, I began to examine into the matter, and to discuss it with my friends. I will give you the testimony of four persons who are earnestly devoted to the South, and all of whom are persons of intelligence. One of the four felt no inclination to "bristle up" at your severe strictures, but instantly acknowledged: "As far as my experience goes the *Nation* is right." Another felt so indignant that he thought of writing you a sharp rebuke. But he first set his memory to work, and found that as far back as he could recollect he could recall on an average nearly a murder a year in his part of the country, but unfortunately could *not* remember that any of these murderers had been hung. So his article was never sent. The other two are ministers, one of them a man of great wisdom and experience. Both of these admit that in the main you are right, and think that you will probably do much good in the end. Your recent correspondent, "Y," seems to have unwittingly sent you a strong corroboration of your charges.

I wish now, through your columns, to say a few words to a certain class of your Southern readers, many of whom have no doubt been exasperated without being led to a right view of the matter. To such I would say: The sensible course for us to adopt is to direct our attention first of all to the important point of determining whether the grievous indictment of the *Nation* can to any considerable extent be laid at our door. The *animus* of the writer of these articles has nothing to do with our duty in the case. It matters not whether he has written in a spirit of hostility to us as a people or not. The question for us to decide is this: Is the charge to any fair extent *true?* Neither will it serve the purpose to say that the North is just as bad as we are, though perhaps in a different way. There is undoubtedly more Sabbath desecration North than South. In some of the Northern States the marriage-tie is dreadfully weakened beyond anything that we know at the South. We cannot afford to be so unwise, so blind to our own interests, as to take shelter behind such a worthless defence as this. The question still stares us in the face: Is the charge *true?* If it is—and many devoted Southerners lament that it is only too true—let us address ourselves to the task of correcting the evil as far as in us lies, and then we shall be in a better position to help our brethren of the North mend their ways. Even if we imitate no higher example than that of a heathen philosopher, let us have sufficient greatness of soul to say to the *Nation*, as Socrates said to an opponent: "If you convict me, I shall not be angry with you, but you will be enrolled as one of my greatest benefactors."

In one thing, Mr. Editor, I believe you have greatly erred, and that is, your statement that Southern men are in the habit of carrying arms. I do not pretend to quote your exact words, but I am certain that is their purport. Several of your correspondents have given their emphatic testimony against this, but you have taken no notice of it, and the charge still stands. It is certainly against all that I know of the matter, and I have met with no one who did not protest against it as contravening all of his experience. How are you prepared to sustain your assertion that the mass of Southern men are in the habit of carrying arms—or whatever the precise statement was? And if you cannot establish your charge, your character for fair and honorable dealing leaves you only one thing to do.

Yours respectfully,

X. Q. Z.

Virginia, December 18, 1882.

[We are not prepared to "sustain," if this means prove, that all or even the majority of Southern men carry arms. This is something not susceptible of proof. That a very large number carry arms, we infer from the frequency with which, whenever a sudden "difficulty" occurs, both parties are found to have weapons ready for the fray. But the question whether they carry arms or not is of no importance to our argument, and if our statements be either incorrect or exaggerated, it costs us nothing to withdraw them. We need hardly say that we have not brought the subject up either through hatred, malice, or uncharitableness. No journal at the North has so persistently pleaded the cause of the South as the *Nation*, and it did so at a time when it cost something to a Northern journal to plead it, and when journalistic defence or apology was of more consequence to the South than it is now. There is no possible or probable change in the condition of the Union which, in our mind, is so desirable as the growth of the South in wealth, population, and influence. We say influence, because we acknowledge freely that there are traits of Southern character and manners and social outlook which the North would be much the better for adopting or imitating. But the South can never be an influence at the North or anywhere else, can never produce a

social type which any civilized people will copy or admire, as long as it tolerates the practice of private murder in the settlement of disputes. These homicides, whatever Southerners may think or their newspapers may tell them, put the South, in the eyes of the rest of the world, in the category of semi-barbarous communities, and make its superior morality in other ways count for nothing. As the world now is, there is no use in telling people of the piety, the honesty, the domestic purity, the general security of a region where the men when they quarrel can shoot each other "on sight" with impunity. Southern young men who wish to raise their country—and not alone their section—in the eyes of the world, even if they are open to no higher motive, could do no nobler work than associate themselves to promote the faithful execution of the laws, and to discountenance the brutal and barbarous practice of public assassination.—Ed. Nation.]

SENATOR HOAR'S RE-ELECTION.

To the Editor of The Nation:

Sir: In to-day's issue of the *Evening Post* I find the following:

"The opposition to his [Mr. G. F. Hoar's] reëlection still seems to be strong and active, especially among the younger Republicans—those who have come forward since the war; but the grounds of objection have not yet been very clearly stated."

As one entirely sympathizing in this opposition to Senator Hoar, I agree that the grounds for it have not, as you say, been clearly set forth. At least, if they have been, I have not seen them. I think, however, they can be set forth clearly enough. Put in the fewest possible words, I take them to be simply these: The younger Republicans, to whom you refer, instinctively feel that Mr. Hoar does not sympathize with them, or understand them, or interest himself in the objects they have in view. He is a man of a past generation.

Now, let me put the case in detail. Speaking roughly, from 1850 to 1870—a score of years—the political thought of this country was wholly absorbed in questions of human rights. Economical and administrative issues were little regarded, or regarded only as ways and means to the settling of things more important. There grew up, consequently, a whole race of public men—statesmen of the school of human rights. To this school Mr. Hoar belongs. He was educated in it as a youth; he has lived and had his being in it as a man; he now responds to its appeals, and to its appeals only.

Meanwhile time passes. While the country year after year was practically absorbed in these questions of human rights, our whole administrative machinery underwent an abnormal development, and economical education, from the political point of view, ceased. Grave abuses grew apace. Now, at last, intricate problems of finance, taxation, production, and distribution have presented themselves, and some one has got to handle them. Every younger and reflecting man knows that these are the pressing questions of the day. They are just as much the pressing questions of to-day as human rights were the pressing questions of yesterday. The years from 1870 to 1890 are not as the years from 1850 to 1870.

The questions peculiar to a political period can only be successfully dealt with by men of that period who have been trained to deal with them. They must be interested in the questions, and understand them. Accordingly, our public men of the earlier period—though Clay and Webster were among them—wholly failed to deal with the questions which had arisen in 1850. They were then succeeded by the men who actually, as we know, did deal with those questions. The objection we make to Senator Hoar now is, therefore, exactly the objection which the school to which Senator Hoar belongs made, and made justly, to men of the school anterior to 1850—the school in Massachusetts of Webster, Davis, Everett, and Winthrop. They belonged to a past generation.

No one questions Mr. Hoar's ability or experience; least of all do we question his honesty or singleness of purpose. The personal relations many of us have had with him have always been pleasant. We fully appreciate the peculiar influence which seniority in the Senate will give him. We simply say that, notwithstanding all this, he is not fitted, either by the natural temper of his mind or by education, to deal successfully with the public questions now before the country. And in saying this we insist that we say nothing derogatory to Mr. Hoar. He is an able man; but he is no abler than Mr. Winthrop, or Mr. Everett, or Mr. Webster. To say that not one of these understood the slavery question, or could possibly have grappled with it successfully, no matter how long they had been kept in the Senate, is only to repeat an acknowledged historical truism. The course of political events has simply swept by Mr. Hoar now, as it then swept by them.

This is no narrow criticism. It is, for instance, no good ground for objection to Mr. Hoar that he belongs to the most extreme protectionist school. An intelligent protectionist—one who thoroughly understands his side of the subject, and can present it—is always formidable, and always to be respected. His presence now in the Senate is quite as essential to any wise treatment of the tariff as is the presence of an equally intelligent freetrader. If anything, he is the more necessary man of the two. The difficulty with Mr. Hoar is that, while on this subject he talks freely, he does not talk upon it intelligently. What he says smacks of the shopkeeper and the village politician. There is in it no trace of the student or thinker. Accordingly it fails to command the respect of any man on either side of the question who really understands it. Were I called upon further to explain what I mean, I should but have to quote those more recent utterances of Mr. Hoar's at Washington, at Worcester, and upon the stump, which can be adequately met only by ridicule of the kind in which Dean Swift was an adept. So on finance. When the country struggled back to specie payments Mr. Hoar was in Congress. If he took any part at all in that great debate, his name is not remembered in connection with it. So also of the well-nigh incalculable fraud and outrage, the Arrears-of-Pensions Act. When that act was passed Mr. Hoar was in the Senate. It belonged to a class of acts which did not interest him; he was probably thinking at the time of the general and incalculable wickedness of the Democrats, or of the wrongs of the freedmen, or of the Poncas, or of the Chinese, or of the prospects of female suffrage, or of the Whittaker case. He was meditating on some aspect of human rights; and so he never scrutinized a measure which imposed on the producers of the country a burden of a thousand millions, fifty millions of which fell to the share of Massachusetts. It was only an economical question. Well, we think that the questions of the day are economical questions.

This then, as I understand it, is why the younger generation of Massachusetts Republicans instinctively dislike to reëlect Senator Hoar. They may not have thought the matter out so as to say so, but nevertheless they feel that what they are concerned in does not interest him. He is a vigorous relic of the past. With the utmost personal respect for him, they do not see the propriety of sending to the Senate a statesman of the school of human rights to solve questions of administration and political economy. It is much the same as it would have been in 1851, if, in order to avail ourselves of his experience, recognized ability, and seniority, Massachusetts had sent Robert C. Winthrop to the Senate which was to deal with the slavery problem as the question of the day, instead of sending the untried Charles Sumner. In fine, we of the opposition to Mr. Hoar, after long years of trial, firmly believe that he does not understand administrative and economical problems, that they do not interest him, that he is too old and too firmly set in his lines of thought to apply himself successfully to them.

Any one who will turn to Morley's recent life of Richard Cobden—one of the best and most instructive political treatises of the day, let me remark in passing—any one who will turn to that book, will find that all through his career Cobden was confronted in Parliament by a set of men honest, able, conscientious, experienced, who simply could not understand what he was talking about In answer to him, they kept repeating, over and over again, catchwords and cant phrases which to them were conclusive. They were incapable of learning by heart even, much less of comprehending, the horn-book of political economy. To that class, judging by his utterances and record, Mr. Hoar belongs in this country. If we return him to the Senate, therefore, any unfortunate Richard Cobden who may turn up there during the next six years will always run great risk of finding Massachusetts, with all her Senator's experience, seniority, and acknowledged ability, arrayed on every issue of to-day in the front rank of unintelligent opposition.

This we do not want to see. Consequently we prefer Governor Long to Mr. Hoar; not that Governor Long is the man we would choose, but, as compared with Mr. Hoar, he belongs to the year 1882, as opposed to the year 1862. We know he can learn, and we believe he will. In any event, however, we are very sure that if, in selecting a man to deal with the questions of the present, any thoughtful consideration were given to what those questions really are, Mr. Hoar's name would rarely be suggested as that of his own successor. If you choose to put it so, Why select an old war-horse to tug at a plough?

Bostoniensis.

New York, December 20, 1882.

Notes.

'Pen and Lute' is the title of a volume of poems by Richard Storrs Willis, brother of the late N. P. Willis, announced for immediate publication by Thorndike Nourse, Detroit, Michigan.

Mr. Joel Benton will, toward the close of the winter, publish, through M. L. Holbrook & Co., his essay on 'Emerson as a Poet,' read last summer before the Concord School of Philosophy—a more appropriate point of view, in our judgment, than "Emerson as a Philosopher" would have been. An excellent portrait of Emerson will be prefixed to the book, which will also contain a concordance to his poetry, and a bibliography of the periodical articles on Emerson from the beginning of his career.

Henry Holt & Co. desire us to state that the authorized edition of Serjeant Ballantine's 'Reminiscences,' which is being advertised by J. M. Stoddard & Co., is the work which the for-

mer firm brought out under an arrangement with the English publishers, and of which they have since sold the plates to the Philadelphia house.

Harper & Bros. will publish early in January the seventh edition of Liddell & Scott's 'Greek-English Lexicon.' The size of the page has been significantly increased in both dimensions, and the columns lengthened a full inch. American scholars have had a large and recognized share in the revision of this standard work.

Mr. Elizur Wright, whose address is Box 109, Boston, Mass., offers to send a copy of his book, 'Myron Holley, and What He Did for Liberty and True Religion,' to any public or circulating library in the State of New York, without any other charge than nine cents for postage enclosed in the application; and any newspaper inserting this notice will be entitled to a copy of the book on the same terms.

Mr. William Cushing, No. 18 Wendell Street, Cambridge, sends out specimen pages of his 'Century of Authors—1780-1880,' of which the first number is now on the eve of appearing. Each part will consist of eighty pages, octavo; and the four, or possibly five, volumes will contain each twelve parts. The scheme is unlike Allibone's in making the biographical feature predominant, and in not mentioning in detail or with bibliographical literalness the works of each author. Thus Jacob Abbott, who fills so large a space in library catalogues, is disposed of in thirteen lines. John Quincy Adams, on the other hand, to whom not a single work is here ascribed, has thirty lines. The dictionary will have its value, and even its interest, but the execution of it is very peculiar.

The *Interchange*, an alphabetical index to subjects in current and forthcoming reviews and magazines, is announced to be published monthly by Howard Challen, No. 123 South Seventh Street, Philadelphia. It will have a variety of literary departments, including notes and queries.

We must, by the way, add to our list of note-and-query periodicals the fortnightly *Journal des Curieux:* Revue des Curiosités littéraires, historiques, et scientifiques, published, beginning in 1881, at Besançon, by MM. Ferrand and Vuillemin. We may also add the department "Notes and Queries" in the *Chrysanthemum*, a monthly magazine published at Yokohama, now in its second volume, and a very readable publication.

A new eclectic monthly periodical is to be launched with the new year at Buffalo, N. Y., under the title of the *Modern Age*. Its broad page, with two broad columns and clear print, has an attractive look. At the end is original matter pertaining to current events, books and authors, art and the drama. The subscription price is very moderate.

In January the newly-established Dutch newspaper of this city, the *Nieuws en Handels Courant*, will begin a series of articles in both Dutch and English on the early history of New York and the doings of the Knickerbockers. The history of the Reformed Dutch Church will receive special attention. The editor, Mr. J. Van't Woud, No. 3 Bowling Green, solicits such information as will further this object.

About six years ago Mr. Henry C. Meyer, a New York merchant, became deeply interested in sanitary matters, and commenced the publication of a monthly paper, which at first was devoted mainly to questions of plumbing and house drainage. As he continued to study the subject it grew more interesting, the field widened, and the demand for information increased, until now the *Sanitary Engineer* has become a large and flourishing weekly journal, covering the whole field of sanitary science, and recognized as a leading authority upon the subject. In the number for December 7 Mr. Meyer for the first time publicly announces his connection with the journal. He has now withdrawn from mercantile life, and proposes to devote his whole time and energy to his paper. Who shall say after this that journalism has not its fascinations? It is a good sign that he is able to say that while "he is gratifying his tastes and inclinations, he is yet taking up an occupation sufficiently practical and remunerative to place it beyond the limits of a merely philanthropic enterprise." We bid him welcome and wish him success.

Little, Brown & Co. have issued a second edition of Mr. R. B. Forbes's interesting 'Personal Reminiscences,' which was first published in 1878.

Miss Mary Thomas, daughter of one of the Trustees of the Johns Hopkins University, has just taken the degree of Ph.D., *summa cum laude*, at the University of Zurich—a distinction rarely attained by male graduates. Miss Thomas is a graduate of Cornell, and studied three years at Leipzig; she took her examinations at Zurich because the University of Leipzig does not grant degrees to women. Her subject was philology, a particularly difficult one in Germany.

The requisite sum for the continuation of the explorations at Assos was raised, and a seasonable telegram sent to Mr. J. T. Clarke to that effect.

Last June, by order of the Mexican Secretary of State, Lieut.-Col. Bodo von Glümer, of the National Army, prepared a large wall-chart of statistics of the Republic, having a considerable permanent as well as temporary value. In the middle was set a topographic map, constructed from the best available sources by the same engineer, representing the "Heart of Anahuac [the central Mexican tableland] and its Railways." This map has since been made available by itself, in a pocket folding-form (New York: B. Westermann & Co.), and the authority which necessarily attaches to it will insure it a large sale, in view of the great railroad interests which our citizens now have in Mexico. The scale is four miles to the inch, and the area depicted is that adjacent to and stretching between the two railway centres of Puebla and the City of Mexico. The delineation is very clear, and the explanations have been turned into English.

From the same house we have received the "first systematic part" of the fourth edition, revised and augmented, of Dr. Franz von Holtzendorff's 'Encyclopädie der Rechtswissenschaft.' The contributors to this work, the high character of which is recognized the world over, are among the foremost jurists of Germany, mostly professors of jurisprudence at different German Universities. There are in this edition four new articles by Dr. Mandry, of the University of Tübingen, Dr. von Bar, of the University of Göttingen, Dr. H. Schulze, of the University of Heidelberg, and Dr. Gneist, of the University of Berlin. Westermann & Co. also send us 'Dies Iræ: Erinnerungen eines französischen Officiers an die Tage von Sedan,' published at Stuttgart. This little volume of 120 pages contains an exceedingly spirited description by a French staff officer of the battle of Sedan.

—A few children's books may be mentioned here, if somewhat tardily. 'Cradle Songs of Many Nations,' by R. L. Hermann, illustrations by Walter Satterlee (Dodd, Mead & Co.), is a book compiled on the correct conception that good melodies cannot be written to order by any one for a holiday book. It includes Scotch, English, Irish, French, German, Hungarian, Norwegian, and even Chinese, Japanese, and Zulu cradle songs, the original words being occasionally added in the language of the country, and the melodies often of considerable individuality and beauty. Each song has a corresponding colored picture on the opposite page, and the book is tastefully covered and enclosed in elegant loose covers with silk ribbons. Mr. Edward Greey, author of the 'Young Americans in Japan' and the 'Wonderful City of Tokio,' gives us, under the form of 'The Golden Lotus, and Other Legends of Japan' (Boston: Lee & Shepard), the results of his own rambles in and around Yedo bay. The eleven so-called legends are told by one who evidently enjoys a full flow of animal spirits and good digestion, who is cosmopolitan in his tastes, and who, having looked at life from behind and on the stage, knows a good deal about the oblique side of it. He laughs with the Japanese rather than at them; he is a keen observer, and catches every wink and notices every significant glance. No reader of the "Legend of the Dead Ass" can possibly enjoy the perusal more than the writer enjoys the telling of it. Only two or three of the legends are new to English, but all are told with fresh points. The "Toad of Tomioka" is amusing and sad, that of the "God-Fox" highly illustrative of the native superstitions concerning that animal, while that of "Lu Wen," the Rip Van Winkle of the Orient, was first told in a shorter form in 'The Mikado's Empire.' Adults will find an after-dinner hour well spent in chuckling over the pages of this book of faultless typography, and the young folks will learn how the children of Japan think, dream, and play. There is fun in 'Troublesome Children' (A. Williams & Co.), and Mr. F. G. Attwood's hand as a comic designer has not lost its cunning; but, after all, this is not a book for children. Neither a literal nor an imaginative mind could safely be left alone with it. Mr. E. E. Hale's 'Stories of Discovery' (Roberts Bros.) has the qualities of the rest of the series to which it belongs. The five tales included in 'The New Arabian Nights,' translated by W. F. Kirby (Lippincott), are not more or less doubtfully proper for children than the familiar collection which they supplement. Mrs. Anna C. Lowell's 'Posies for Children' (Roberts Bros.) is not new, but it is better than that, for it has now the approving verdict of many years behind it.

—J. Eastman Chase, Boston, sends us an artist's proof of Mr. W. B. Closson's wood-engraving after his own painting, "Saxon." With Mr. Closson's ability with the graver the public is already familiar, and it has lately had an opportunity of judging somewhat of his powers as a designer in the new illustrated edition of Mr. Aldrich's poems. The present design confirms the impression that his fancy is as delicate as his touch on the wood. The subject is a little maiden just out of bed, apparently, and standing with her feet nearly hidden from view in a fur rug. Her arms are behind her back, and she is clutching the nether part of her one garment with an air of dubiety which is well expressed on her face—perhaps before an invitation to the bath. A heavy curtain forms the background. The blonde hair of the child is doubtless the key to the title of the print. In this perfectly simple but charming composition the drawing of the ear alone is felt as a slight blemish. It is a rather unshapely ear, and it seems to us to be set too high on the cheek. The engraving, however, is masterly, and at first sight—such is the softness and fineness of it—one would pronounce it either an etching or a line-engraving on steel. The publisher offers it not as a counterfeit of either, but as a coördinate work of art, which it undeniably is. Like Cole's portraits and his Vedder's "Samson," it merits framing with the same respect and circumstance that we accord to the favorite products of metal engraving. Of any room it would be a poetic adornment.

—A Western librarian writes us:

"I was very glad to see your comments upon the change of librarians in Indiana and Michigan, and trust you will not drop the matter entirely. The State of Ohio has a fine library of about 60,000 volumes, of which much could be made. Unfortunately, the librarian is changed every time a new Governor is elected. The evil has not been so great as might have been anticipated, because the library has been practically in charge of a permanent and capable assistant. The present librarian has, however (properly, so far as I know), shown a disposition to manage things himself, and I understand that there is, or has been, some trouble. But the next administration is sure to appoint a new librarian before the present one has fully learned the duties of his office. It seems to me that you will confer a great boon upon many of our Western States if you can induce them to place their libraries in charge of a board of trustees similar to that of New York, with such permanent tenure of office as to remove any temptation to make political appointments."

—The December number of the *Magazine of American History* contains several articles timely to the coming anniversary of the Landing of the Pilgrims, the place of honor being given to "Plymouth Rock Restored," by Mr. Herbert B. Adams, of Johns Hopkins University. "Plymouth before the Pilgrims," by Mr. De Costa, and "Samoset and New England Colonization," by Mr. Rufus King Sewell, are choice papers, and helpful withal to every student of New England history. The "reprints" in this number are "Martin Pring's Voyage," "Articles from the Church of Leyden," "Why did the Pilgrims leave Holland for America?" and "The Mayflower Compact." A portrait of Captain John Smith, copied from the one on his map of 1616, is an admirable piece of work, but, as if to offset it, there is a frightful representation of Miles Standish "from an old oil-painting found in a bookstore in Boston!" We receive it as a compliment that Mr. Adams should say "the *Nation* is undoubtedly right in maintaining that December 22 is the true Forefathers' Day, in the sense that this is the day originally celebrated and historically consecrated by 'oration, sermon, song, drama, painting, and print.'" And he might have added, quoting Palfrey, that "the *twenty-second* of December has taken a firm hold on the local thought and literature, which the *twenty-first* will scarcely displace." Following, however, the argument of "various historical specialists," he comes to the conclusion that the event to be commemorated was the landing made by the exploring party from the shallop, and not the landing "by the whole body of Pilgrims from the *Mayflower*." We hope to be pardoned by the "historical specialists" if we express once more the opinion that the "shallop landing" was an event of no significance whatever except as it may be connected with a subsequent event of real importance—to wit, the landing from the *Mayflower;* that the Old Colony Club never intended to commemorate the landing of the exploring party, but did intend to commemorate the landing of their pious ancestors—men, women, and children—from the *Mayflower;* and that the Club, in its first celebration of Forefathers' Day, made no "natural mistake," but fixed upon the traditional day which had been established for generations. Mr. Adams will surely not contend that Mr. Winslow, in delivering "the first oration ever spoken in memory of the landing of the Pilgrims," had in mind any landing by the shallop explorers, when he made "their wives, their helpless offspring," partakers in the landing. Another claim set up by the "historical specialists" for the exploring party is that the Sunday spent on Clark's Island was the "First Christian Sabbath" observed in New England. To establish this claim they must first make it probable that the pious Pilgrims, with Elder Brewster at their head, were a whole month in Provincetown harbor and neglected to keep the "Sabbath."

—After the *Revue Critique*, conducted by Protestant scholars, had done most excellent work for thirteen years, certain learned Catholics, thinking it a pity that the devil should have all the good music, founded the *Bulletin Critique*. Both periodicals testify to the remarkable revival in France during the last two decades of the so-called *hautes études*—that is, of critical learning—a revival which, so far as it extends, bids fair to place France on a level with her old rival. Both periodicals, too, seem to be edited with an attempt at perfect impartiality and the intention of judging the works reviewed simply by their accuracy and ability. The *Bulletin*, however, in an occasional sneer or parenthetical remark, lets its polemical tendencies get the better of its self-restraint. As the *Polybiblion* rejoiced greatly at the amiable weakness with which the Positivist Littré yielded to the desires of his wife and saw a priest in his last moments, so the *Bulletin* records that Paul de Saint-Victor died while revising the proofs of the second volume of 'Les Deux Masques,' "presque à la tâche, en poussant ce cri d'appel—qui aura été entendu, espérons-le: Mon Dieu! mon Dieu!" And in a notice of Vaudon's charming 'Avant Malherbe,' M. Largent cannot deny himself a little fling at the conviction which prevails in many minds—"non pas les plus délicats, je le confesse"—that France was born in '89. Nor can we positively affirm that the *Revue* has always maintained itself at the elevation of pure learning. It is rare, however, that either journal permits itself a mystification or a joke of any kind. But in a late number of the *Bulletin*, the leading editor, M. Duchesne, finds that Renan offers too great a temptation. The great Hebraist's books have always been printed with lines very far apart, which M. Duchesne avers aroused suspicions, and on applying to the recent translation of Ecclesiastes a certain liquor whose secret he had received from a monk of Mt. Athos, he was able to read *between the lines*, and recovered the following text:

"I, Renan (Ernest), am the author of Koheleth. Metempsychosis is not an empty fable. Before being professor of Hebrew at the College of France and of epigram at the Palais Mazarin, before governing the Roman Empire under the name of Marcus Aurelius, I was a householder at Jerusalem. My father had made a fortune at the Court of Ptolemy Philometor. He left me a considerable capital, which I increased by good investments. I lived on the King's Garden Road at the end of Orphel Street—as one might say, on the Champs-Élysées of Jerusalem. From the terraces of my villa every morning I could see the altar of the Temple smoke; pilgrims covered with dust, beggars from the suburbs, fierce-eyed zealots, cavalcades of the Court of King Hyrcan met my eyes; sometimes I let them wander further off, to the tombs in the Valley of Jehoshaphat. All these sights and the experiences of a life somewhat long engendered in me a sort of melancholy scepticism; weary of the burden of my thoughts, I intrusted them to a roll of parchment, which was found long after my death in the corner of some writing-desk. A complaisant rabbi, rather short-sighted, declared the book inspired, and put it in the Bible, adding a decorous postscript to silence the scrupulous. God has permitted that I should revisit the earth, under the guise of a Hebrew scholar, to study this curious phenomenon of inspiration, and to convince myself over again, by the good fortune that has fallen to my grumblings, that *all is vanity*."

—The reader will see that this reproduces the substance of Renan's preface, in which he maintains that the author, such as he is described above, lived in the second century B. C.; that he was not an atheist or even an irreligious person; that his book was translated into Greek by Aquila or one of his disciples about 130 A. D., not long after it had been inserted in the Hebrew Bible. Evidently none of M. Duchesne's staff is competent to pick flaws in the work of the Jew-Emperor-Professor, for he is content with his raillery, and, after praising the style of the preface, with asking the Lord why it is that those who think so badly write so well; to which the Lord answers, "Be not troubled, my child, since you have read Ecclesiastes and know that except the fear of the Lord all is vanity, even style, philology, rhetoric, and the Academy"—which, after all, we fear M. Duchesne finds rather cold comfort.

—A little more than a year ago M. Octave Uzanne put forth the first of a series of volumes on 'Feminine Adornments,' to include the fan, the glove, the slipper, the muff, the parasol, etc. The first volume was devoted to the fan; the second, which has just appeared, groups together the parasol, the glove, and the muff, and it is to be the last of the series. In a touching preface M. Uzanne deplores his inability to play second fiddle to the illustrator, and it must be confessed that it was a Procrustean bed which M. Avril, the artist, and M. Quantin, the publisher, had prepared for the author. Like 'L'Éventail' of last year, the present volume on 'L'Ombrelle, le Gant, le Manchon' (New York: J. W. Bouton) has a heliogravure printed in colors on every other page, or, rather, there are a pair of heliogravures on every other pair of pages, and the writer was forced to bend and clip and fit his prose into the spaces left vacant by the artist. It results that M. Uzanne's prose is indeed of quite secondary account when compared with M. P. Avril's designs. On half the pages are elaborate compositions printed in appropriate and changing colors, and sketching by example the history of the object treated. We have the Three Graces shielding themselves with a parasol from the rays of Apollo's chariot. This is printed in a rich umber, and leaves room in the centre of the page for a few lines of M. Uzanne's lively writing. We have Heliogabalus drawn in a chariot by nude female slaves, and protected from the sun by an *umbellifera*. We have Robinson Crusoe with his umbrella of skins; Japanese jugglers with their paper parasols; Léandre and Isabelle, à la Watteau, with a sunshade at the feet of the fair lady; a night scene in camp, showing a Napoleonic general reading a despatch by the light of a lantern while sheltered from the storm by a huge umbrella; a street scene in Paris on a rainy day. All these and many more decorate the page, and often completely surround the islet of prose in the centre. Next to the charm and beauty of the drawing is the extraordinary variety and propriety of the artist's style. A scene from Pompeii is done in the Flaxman manner; a picture of eighteenth-century life is drawn as though it were an engraving after Moreau or Eisen; a Japanese sketch attempts the simplicity and naïveté of the Japanese artists; and the young girl with a muff of Sir Joshua Reynolds reappears in bistre quite in the manner of Bartolozzi. Altogether, the book is one of the most beautiful we have ever seen. The typography is excellent, as becomes M. Quantin; the plate-printing only a little less excellent. It is greatly to be regretted that M. Uzanne has seen fit to give up so promising a series, and that the artistic conditions of the two volumes already issued have absolutely limited the number which has been printed.

—The Siamese twins are outdone. They had only begun to be united in comparison with a new prodigy, now or lately on exhibition at Geneva. They had separate bodies; the new wonder has only separate heads. They could not walk away from one another; it is difficult to see how their successor, or shall we say successors, can walk at all; for each head has its own ideas

and one leg, the other head being sole director of the other leg. Any one who has observed a baby learning to walk knows how hard it is for him to coördinate the motions of all his muscles so as to keep his balance and make progress. How much harder the problem to coördinate not only one's own muscles, but somebody else's. The baby, too, is doing what his forefathers have done before him for thousands of years, and has all the advantages of inherited habit; but the Swiss child (he is five years old) has struck out a new path, in which the past gives him no assistance. Some curious speculations arise in regard to his future life. The Siamese twins lived to a good old age. It is not unreasonable, then, to expect that the Genevan twins will outlive the century. The Siamese in due time married and became fathers of a family, though it was always a wonder how either could have found a lady courageous enough to say Yes in the presence of a third party. How will the Swiss twins manage? There is only one of them, and yet he is two. The heads think, and will, and speak separately. But the head is not supposed to fall in love; that is the function of the heart, and there is only one heart in the case. That will fall in love with some young lady. She may have defects. Suppose one head—more clear-headed than the other head—sees them. Will it yield to the promptings of its heart? and if it resists, then what will the other head do? And if finally they agree and pop the question, will both heads do it at once, or successively; or will they take it in alternate sentences? And if she marries them both will it be bigamy? The wife owes obedience to her husband, but if one head permits and the other denies, if one commands and the other countermands, which shall she listen to? No woman can serve two masters, for either she will hate the one and love the other, or else she will hold to the one and despise the other. It would be very inconvenient to love one side of one's husband and hate the other side. And how miserable she might be if she had any desire to have the last word—that is, if the two heads combined against her. But perhaps she would "by dividing rule." The mind wearies of such a succession of puzzling questions. For our own part we think the whole story is a myth. As is well known, Switzerland has no language of its own, but the cantons on the French side speak French, and those on the German side speak German, and the waiters at the hotels speak English. Perhaps the twin is an allegorical representation of this duplication of language, which has at last materialized itself as the beliefs of the early Aryans about the sun and the moon are said to have been incarnated in the gods and goddesses of the Indo-European pantheon. Our conjecture is, we admit, a little incomprehensible, but not more so than much comparative mythology that we have read.

THE MERV OASIS.

The Merv Oasis. Travels and Adventures East of the Caspian, during the Years 1879-80-81, including Five Months' Residence among the Tekkes of Merv. By Edmond O'Donovan. 2 vols. London: Smith, Elder & Co.; New York: G. P. Putnam's Sons. 1882.

THE troubles in European Turkey which culminated in the Russo-Turkish war began, it will be remembered, in the form of an insurrection in Herzegovina. A lady of the London fashionable world, hearing the words "the Herzegovina" constantly repeated in conversation, had her curiosity stimulated, and was overheard to inquire, "Who is the Herzegovina?" To most of our readers it is not improbable that "the Merv Oasis" will be almost as completely a blank as was "the Herzegovina" to the heroine of the foregoing anecdote. Nor will they in this respect compare unfavorably with the majority of English ladies and gentlemen. Whenever the British public is afflicted with its periodical visitations of Russophobia, the cause will generally be found to be that some "expert" in Central Asian geography has announced the startling fact that the Russians are advancing in the direction of Merv. The British public does not know where Merv is—is certainly dubious whether it be a country or a large city; but the Russophobist "expert" has diligently taught it to believe that when once this mysterious geographical expression is included in the Asiatic dominions of Russia, the British Empire in India is as good as overthrown. It is this singular state of mind to which the Duke of Argyll has given the designation of "Mervousness"; and the wrath of Achilles was not nearly so mischievous to the Greeks before Troy as this same "Mervousness" has been to the English in India. In the absence of more definite geographical information, it appears probable that the better-educated portion of the British public derived such knowledge of Merv as they were possessed of from Tom Moore's "Veiled Prophet of Khorassan." The scene of this is laid in Merv, or in "Merou," as it was formerly called, and there is a couplet which describes the place thus:

> "And, fairest of all streams, the Murga roves
> Amid Merou's bright palaces and groves."

It is these "bright palaces and groves" which have caused the British public to fall an easy victim to Russophobia whenever an "expert" declared that the independence of Merv was in danger. They pictured the Russians as coming into possession of a magnificent and stately city, from which, as a secure basis, they would prepare and work out their nefarious projects upon British India. Mr. O'Donovan is the first Englishman—we think the first European—who has penetrated to the heart of the Merv Oasis, and removed the veil which caused Merv to be such a source of terror to the imagination of the British public. The result is that the Russophobist "expert" finds himself in the melancholy position of a magician suddenly deprived of his incantations and his wand of power. He has become as helpless as Samson when shorn of his locks. The British public have learned, to their great relief, that there are no "bright palaces and groves" to be found at Merv—nothing, indeed, but a predatory horde of Turcomans.

Mr. Edmond O'Donovan, as special correspondent of the London *Daily News*, had been sent by that journal to accompany the Russian expedition which was assembling in 1879 on the eastern shore of the Caspian to attack Geok Tepe, the stronghold of the Akhal Tekkes. General Lazareff was then the commanding officer of the expedition, and Mr. O'Donovan was received into the Russian camp as his friend and guest. Before, however, the expedition was ready to start, Lazareff died, and his successor, General Tergukasoff, under instructions from the Government at St. Petersburgh, refused to allow Mr. O'Donovan to accompany the Russian column. After some months of fruitless endeavor to bring about a change in this decision, Mr. O'Donovan formed the adventurous determination to penetrate alone and unattended—a solitary Englishman—to the capital of the Tekke Turcomans; and very strange indeed were his adventures when he got to Merv. He reached that place at a moment when the Turcomans were in a state of great fear and excitement. As he crossed the desert which lies between Meshed and Merv, he witnessed from an eminence Skobeleff's final assault upon the fortress of Geok Tepe. He was attended by two servants and an escort of six or seven Derguez troopers.

"Early on the 24th [January]," writes Mr. O'Donovan, "we ascended the top of the Markov mountain, which towers some 6,000 feet over the Tekke plain and is not twelve miles from Geok Tepe. With my double field-glass I could easily make out the lines of the Turcoman fortress and the general position of its besiegers, but I was too far off to be able to make note of details. I could plainly see, by the smoke of the guns and the movements of the combatants, that the attack had begun in earnest, and I watched its result with intense anxiety. The Russian assault was directed against the southerly wall of the fortifications, and, after what was apparently a desperate conflict there, it was evident that they had forced their way. A crowd of horsemen began to ride in confusion from the other side of the town, and spread in flight over the plain. Immediately afterward, a mass of fugitives of every class showed that the town was being abandoned by its inhabitants. The Turcoman fortress had fallen, and all was over with the Akhal Tekkes."

Three days later O'Donovan was in Merv. General Skobeleff had pushed forward with his accustomed energy after the fall of Geok Tepe, and the Russian troops had taken possession of Askabad on the border of the desert which surrounds the Merv Oasis. A portion of the force had advanced still nearer the Turcoman capital, and parties of cavalry were scouring the country in every direction. When Mr. O'Donovan reached Merv he found the chiefs and the Tekkes generally in hourly expectation of the Russian advance, and laboring hard at a huge fortification which, they fondly hoped, would bar the further progress of the enemy. This fortification, according to Mr. O'Donovan, was constructed in so unscientific a fashion that it could not have resisted the action of artillery for a couple of hours, and the Tekkes' notions of the preparations necessary for fighting a successful battle against the Russians were in other respects as primitive as they could well be. The Tekkes were in possession of twenty-eight pieces of ordnance of different calibres which they had captured, some twenty years previously, from the Persians, but these were without carriages.

"I said that in view of the possible arrival of the Russians I wondered that some pains had not been taken to mount these disabled pieces. 'Oh!' said the Khan, 'there are plenty of people who could do that in a couple of weeks. There is abundance of wood growing in the gardens. Most of the iron work is on the spot; and I know where the tire of one wheel is—it fell off as we were bringing the gun across the river." This was all highly satisfactory to the general audience; but I knew that in the whole of the Merv tree plantations not a trunk of more than eight inches in diameter was to be found. I asked whether any considerable quantity of projectiles was on hand. Thereupon the chiefs told me of several traders in the bazaar who had many, which they used as weights when selling corn. 'Besides,' he said, 'the Persians fired a great deal; and the old men who were looking on could easily point out where the shot fell, and we could dig them up when required.' . . . As regards the gunpowder, there were Ali Baba, and Hussein, and Hodja Kouli, and several others who knew what it was composed of; and besides, there was every reason to believe that the Emir of Bokhara would not be backward in affording facilities for a supply if he got a good 'present.' . . . The Khan further naïvely remarked that he hoped I should be of no small assistance in remounting the guns and founding the necessary projectiles. . . . The fact was that among these more easterly Turcomans, who had never known the contact of stern mechanical drill, each man thought that, armed with his curved brittle sabre, his antiquated cumbrous muzzle-loader with its forked rest, the half-pound of bad gunpowder he bought the last time he was in Meshed or Herat, and the bullets he founded from the material dug up on the battle-fields of his ancestors, he was amply provided with all the necessaries of war."

These barbarians, on Mr. O'Donovan's arrival among them, were at first uncertain whether they should put him to death as a Russian agent or exalt him to high honor as an emissary from the British Government sent to protect them from the wrath of the Russians. Their concep-

tion, by the way, of the British Government was a highly singular one. Of Great Britain itself they had never heard, and stared in blank and silent incredulity when Mr. O'Donovan indicated the relative situations of England and Great Britain. The British Government, according to the philosophy of the Turcomans, was to be found in India, and was otherwise known as "the Koompani." For some time Mr. O'Donovan's fate trembled in the balance, but ultimately the Mervli elders decided that he was an important functionary of "the Koompani"; and that, being such, they could not act more wisely than by making him a ruler among them. As a result of this decision, Mr. O'Donovan became the leading member of a triumvirate which constituted the Government of Merv. An accident may be said to have endowed him with the prestige which caused him to be raised to this "bad eminence." Just after the capture of Geok Tepe, the Emperor Alexander was assassinated, and his successor, the present Czar, lost no time in sending orders to General Skobeleff which forbade the Russians to advance beyond Askabad, and so, for the moment, preserved the independence of Merv. This unexpected reprieve the people of Merv attributed to the presence of Mr. O'Donovan among them, and confirmed them in their impression that he was a British officer of great power and importance. It was in vain that he protested that he was nothing of the kind. The chiefs and the people of Merv were of opinion that it mattered little what he was, if only they resolutely regarded him as a duly accredited representative sent among them by "the Koompani." This belief was so far of advantage to Mr. O'Donovan that during the five months of his residence in Merv his life was in no danger, but no one can read the narrative of his stay without feeling that it must have needed a frame of iron to have survived the awful, immeasurable ennui of life in Merv. That Mr. O'Donovan's sufferings were sufficiently acute is evident from the entries in his diary:

"These Merv Turcomans," he writes, "seem to have nothing to do but loafing about all day from hut to hut to see if they cannot surprise some eatables. They gorge themselves to excess on every possible occasion with greasy food, and are continually ill from indigestion. They throng my house, partly to satisfy their curiosity by staring at me, and partly to devour the greater portion of any food I may have prepared for my own use. . . . It is of no use saying that what you are eating is pig, for they eat pig readily. . . . No one who has not suffered as I have among the Merv Turcomans, by being constantly intruded upon and persecuted in every way by their abominable presence, could appreciate the exquisite luxury of being left in quiet solitude."

And in another place:

"Relay after relay of these vile beasts of Turcomans render life insupportable during the day and night too. One would think they imagined I derived intense pleasure from their uncouth, unfeeling, treacherous presences. The constancy of their intrusion passes all belief. . . . They are like the pestilent flies who vie with them to render life miserable."

Of these delightful savages, it may be truly affirmed that manners they have none, and their customs are beastly. Their most marked characteristic is their enormous appetites. These appear to be literally insatiable. A Turcoman, being a sordid wretch, never appears to treat himself to a "good square meal" when the thing has to be done at his own expense. But the custom of the country enjoins hospitality to the passing traveller, and politeness requires that a traveller thus entertained should exhibit his gratitude by eating prodigious quantities of the viands set before him. The appetite of the Tekke Turcoman has, so to speak, adapted itself in the most admirable manner to this peculiar environment. He wanders over the country, traveller-wise, seeking what he may devour. And no matter, according to Mr. O'Donovan, what quantity of melted mutton-fat he may have swallowed at one entertainer's house, he is always ready, at the shortest notice, to attack a second or a third banquet of the same inviting fare with undiminished zest and alacrity. This enormous consumption of mutton-fat causes nearly every Merv Turcoman to suffer from indigestion and a disordered liver, but neither penalty has any effect in moderating his gluttony. The Turcomans appear to have enjoyed a fine time of it so long as their English Triumvir lived among them. Large uninvited parties assembled at his house, with rigorous punctuality, every morning, and stayed the whole day, for the purpose of partaking of his hospitality. The only device by which the English Triumvir could baulk and disappoint his tormentors was by himself abstaining from food for the whole day, and this, clearly, was a manœuvre which Mr. O'Donovan could practise only very rarely.

For the rest, a more indolent, useless savage than the Tekke Turcoman, as depicted in Mr. O'Donovan's book, it is impossible to imagine. The desert which surrounds the Merv Oasis is not a desert planted there by the hand of nature; on the contrary, the soil is rich, and the surface of the plain is covered with the remains of countless cities and villages which now stand desolate and unpeopled. It is the Turcoman who has converted a flourishing country into a silent and solitary desert. His noble soul revolts from honest labor, and therefore he passes his life in making raids upon his neighbors, pillaging their property and carrying them off as slaves. The Yamud Turcomans, who have now for a considerable time been the subjects of Russia, are in consequence being swiftly humanized. The wilder spirits among them, who cannot give up their old predatory habits, the Russian Government segregates from their tribes, and sends for three or four years to reside in the most civilized part of Russia. The transformation worked by this process is often astonishing. At Krasnavodsk Mr. O'Donovan made the acquaintance of one of these converted Turcomans. He had been a renowned pirate of the Caspian littoral, and his name carried terror with it.

"At the time of which I now speak he was one of the principal commissariat contractors for the Russian camp; and to see him now, with his long robe of blue broadcloth, his coffee-colored trousers of European cut; his European shoes, showing immaculately white stockings; his black fur shako, a trifle less gigantic than those of his compatriots; and his well-cut face of grave though kindly expression—few would dream of what his antecedents had been."

Mr. O'Donovan's travels fill two volumes, the formidable size of which is likely to deter readers; but it is only as measured by weight avoirdupois that they can be counted heavy. They are very pleasant and easy reading, and the picture which they give of the Russian establishments on the Caspian and the internal state of Persia will be found deeply interesting by any one interested in the future of that part of Asia. Nor is it possible to read without hearty admiration of the courage, the tact, and the *aplomb* with which Mr. O'Donovan surmounted the many difficulties of his extraordinary position at Merv.

RECENT LAW BOOKS.

Noted French Trials, Impostors, and Adventurers. By Horace W. Fuller, of the Suffolk Bar. Boston: Soule & Bugbee. 1882.

Humorous Phases of the Law. By Irving Browne. New Edition, Revised and Enlarged. San Francisco: Sumner, Whitney & Co. 1882.

The Geneva Award Acts. With Notes and References to Decisions of the Court of Commissioners of Alabama Claims. By Frank W. Hackett. Boston: Little, Brown & Co. 1882.

A Treatise on Equity Jurisprudence, as Administered in the United States of America; adapted for all the States, and to the Union of Legal and Equitable Remedies under the Reformed Procedure. By John Norton Pomeroy, LL.D. In three volumes. Vols. i. and ii. San Francisco: A. L. Bancroft & Co. 1881-1882.

A Concise Treatise on the Principles of Equity Pleading, with Precedents. By Franklin Fiske Heard. Boston: Soule & Bugbee. 1882.

History of the High Court of Chancery and other Institutions of England, from the Time of Caius Julius Cæsar until the Accession of William and Mary (1688-9). By Conway Robinson. Volume i. To the Death of Henry VIII. (1546-7). Boston: Little, Brown & Co. 1882.

The Reporters. Arranged and characterized, with Incidental Remarks, by John William Wallace. Fourth Edition, Revised and Enlarged. Published under the superintendence of Franklin Fiske Heard. Boston: Soule & Bugbee. 1882.

Mr. Horace W. Fuller has collected a good deal of information, about a number of French criminals, impostors, and adventurers, not generally accessible to English and American readers. The most familiar figure in the book is that of Cartouche; but the story of Mandrin's life is more valuable, as being less affected by legend. French criminal trials are not as entertaining in themselves as American or English *causes célèbres*, because the case is usually so thoroughly prepared by the police in France, and the judge is so much on the side of the prosecution, that the prisoner is not often able to make a good fight, whereas the struggle for life or liberty, with its varying chances on one side or the other, is what makes a trial really interesting. We have arranged matters so that, except in a very clear case, the game between the prosecution and the prisoner is as nearly even as can be, unless, indeed, it may be said that we have handicapped the Government slightly. At any rate, we have made a criminal trial a remarkably fine specimen of manly Anglo-Saxon sport, and its development in the last three centuries from the crude form in which it was practised by our forefathers is one of the strongest proofs of our strong love of fair play, if not of justice. Such a case as that of Martin Guerre may recall to many readers the Tichborne case, but, as a rule, a French impostor receives so little encouragement from the law that he is not given a really fair start.

The papers embraced in 'Humorous Phases of the Law' were originally published in the Albany *Law Journal*, and since the appearance of the first edition many additions have been made. Although Mr. Browne's object is professedly to amuse, there is a great deal of valuable law in his book, and some of it is collected under heads which are not to be found in the digests. For instance, "Practical Tests in Evidence" is a subject which is always coming up in the trial of cases, and on which it is hard to find authorities. There seem to be a great many popular delusions or fallacies on this subject. We have recently seen a judge severely criticised in the press for compelling a witness to remove a veil, and his act referred to as if it were a case of mere wilful tyranny. Yet this point has been considered by courts of last resort, and it seems clear that a prisoner has no right to conceal her face, for her behavior when confronted with the witnesses against her is a part of the evidence in the case, and this must not be cut off from the jury by

any act of the prisoner's. Under ordinary circumstances, tests are a matter of discretion with the Court, though if a test be proposed which would be conclusive one way or the other, a refusal by the Court to allow it ought to be ground for a new trial. One of the most recent cases on this subject is that of State *v.* Linkhaw, in North Carolina, in which, in an indictment for disturbing a religious meeting by bad singing, the question arose whether one of the witnesses should give an imitation of the singing of the defendant. Such an exhibition in other latitudes would probably not be allowed, both on the ground that it would tend to rob the trial of its gravity, and also as being rather untrustworthy evidence. A remarkable collection of cases is given in the chapter on "de minimis," illustrating the practice of the courts in applying the rule that a variance in a name is not material, provided the sound is the same. The courts have evolved some very remarkable acoustic conclusions on this point. Thus the Supreme Court of Missouri have declared that Mathews and Mathers are *idem sonans;* the Supreme Court of Minnesota think there is no difference in sound between Fourai and Forrest; and the Supreme Court of Nevada have declared May and Mayberry to sound the same. Yet so keen are the ears of the Colorado bench that the judges there distinguished a difference between Fitz Patrick and Fitzpatrick; the Supreme Court of Illinois between Amann and Ammon; while, curiously enough, a Canadian court, whether from want of familiarity with Shakespere, or from too thorough an acquaintance with the French language, could not make out any identity between Jacques and Jakes.

In 'The Geneva Award Acts' Mr. Hackett has made an extremely useful compilation from materials beyond the reach of the profession at large. His work is more than a compendium, for his long familiarity with the practice under the Geneva Award Acts has enabled him to throw out some original suggestions which will be of much value to practitioners under the statute of 1882 reëstablishing the Court. He also publishes, in an appendix, a letter from Mr. W. A. Richardson, explaining the ingenious manner in which the Government received the $15,500,000 paid by Great Britain under the Geneva Award without deranging the money-markets, and without expense. The records of the old court fill very nearly sixty volumes, and its decisions were collected in the shape of an official report to Secretary Fish, by Mr. John Davis, now First Assistant Secretary of State. Taking the act of 1882 as a basis, Mr. Hackett has appended to each section the corresponding section of the act of 1874, and all the decisions of the Court are to be found under some one of these. The opinion of the Court in the case of the *Winged Racer,* which settles the general rule of loss of ship, cargo, and freight, is given in full. Under the new act the Court will have to determine whether any claims are recoverable, except for damage caused by "exculpated cruisers" and war risks. Mr. Hackett thinks that the Court will have jurisdiction of all claims for "direct" damage (loss of ship and cargo) which may have been dismissed by the old court for want of prosecution, or because they were not presented in time, or for any other defect not going to the merits of the claim itself. The volume has been prepared with great care and a full knowledge of the subject, and will be found of value not merely by lawyers practising before the new Court of Commissioners, but by all who are interested in the examination of questions connected with marine losses and torts.

Mr. Pomeroy, in his 'Treatise on Equity Jurisprudence,' has attempted, as he says, "to furnish to the legal profession a treatise which should deal with the equity jurisdiction and jurisprudence as they now are throughout the United States, with their statutory modifications and limitations, and under their different types and forms in various groups of States." The two volumes which have thus far appeared show that he has spared no pains to make the book thorough. He has adopted a novel system of classification, in which he separates equity into two grand divisions: the primary rights, duties, estates, and interests which it creates, and the remedial rights and duties enforced by the various remedies which it confers. The reason for the division is, that equitable remedies cover a much broader field than primary equitable rights and interests.

"The remedies administered by equity are not confined to cases in which equitable primary rights have been violated; they are not restricted to the single purpose of maintaining equitable estates and interests. As has already been stated in a preceding section, the peculiar reliefs of equity are given, under certain well-established conditions of fact, for the violation of legal primary rights and for the protection and support of legal estates and interests. In other words, while every equitable right and interest is enforced and preserved by an appropriate equitable remedy, the remedial jurisdiction of equity extends beyond these somewhat narrow limits, and embraces many classes of legal rights and interests for the violation of which, under the existing circumstances, the law gives no adequate relief."

So far as we have examined the manner in which Mr. Pomeroy has executed his task, we have found it well done, and the work, when completed, ought to prove of great value both to courts and lawyers. The author, who is already well known to the profession by several other law books, has a clear style and considerable power of analysis. The book is one of such scope that our space forbids us to attempt to criticise it in detail. We shall content ourselves with calling attention to one or two points connected with the development of the system of equity which, at least in this country, have not attracted the notice they deserve and, in fact, require.

The origin of equity as a branch of jurisprudence is now so fully made out that there is no room for dispute about it. It grew up in England very much as it grew up in Rome in the prætorian courts. There was a *jus civile* in Rome, as there was a common law in England, which had its inflexible rules and its fixed forms of action. The prætor's *equitas* was introduced to modify this, just as the Chancellor's modified the common law in England. The prætor applied the *jus gentium* and the *jus naturale*, as the Chancellor afterward applied the *arbitrium boni viri*, or rules derived from his conscience. So far the development in the two cases seems parallel. But there is one radical difference between the growth of equity in England and of *equitas* in Rome, and that is, that while in Rome it was a growth of the same courts which were the sources of strict law, in England it was introduced by a separate tribunal, between which and the common lawyers and judges there existed from the earliest times the bitterest hostility. Mr. Pomeroy mentions this hostility as one of the causes of the want of uniformity in the development of English law; but whether it be regarded as a cause of the problem to be explained, or the problem itself, the solution is by no means ready to our hands. The fact that the common law was in part feudal, and that there was an antagonism between the Crown and the Roman See, may have had something to do with it, but a fact mentioned by Mr. Pomeroy in his preface seems to show that it goes deeper than this, and that for some reason there is an eternal and irresistible conflict—a sort of struggle for existence—in our system between equity and law, such as never manifested itself at Rome at all. After a lapse of centuries, and after it has come to be understood that law cannot exist without equity, the legislature both in England and in half the American States has swept away the distinction between the two systems. The design of this legislation was, of course, to give the suitor the benefit of either system in any court in which he chose to enforce his rights, and to save him from the danger of being denied redress because he had selected the wrong forum. By this means the fusion of law and equity was assumed to have been made complete. And now what has been the result? We give it in Mr. Pomeroy's own words:

"Every careful observer must admit that in all the States which have adopted the reformed procedure, there has been, to a greater or less degree, a weakening, decrease, or disregard of equitable principles in the administration of justice. I would not be misunderstood. There has not, of course, been any conscious intentional abrogation or rejection of equity on the part of the courts. The tendency, however, has plainly and steadily been toward the giving an undue prominence and superiority to purely legal rules, and the ignoring, forgetting, or suppression of equitable notions. The correctness of this conclusion cannot be questioned nor doubted; the consenting testimony of able lawyers who have practised under both systems corroborates it; and no one can study the current series of State reports without perceiving and acknowledging its truth. In short, the principles, doctrines, and rules of equity are certainly disappearing from the municipal law of a large number of the States, and this deterioration will go on until it is checked either by a legislative enactment, or by a general revival of the study of equity throughout the ranks of the legal profession."

This tendency has been legislated against in England, and also in this country in Connecticut, by providing that whenever there is a conflict between the rules of equity and law, with reference to the same matter, "the rules of equity shall prevail." This curious modern evidence of the inherent antagonism between the two systems is interesting, however, and raises a question to which there is as yet no answer.

Mr. Heard's little hand-book, 'A Concise Treatise on the Principles of Equity Pleading,' is an elementary treatise intended for the use of students and of "young and inexperienced pleaders." Students will find it of considerable value. It deals with a complicated and abstruse subject in a simple and intelligible way. Young and inexperienced pleaders may also find it of use in removing misconceptions, and in giving some of that elementary knowledge of which the more learned books are sometimes devoid, but, of course, it does not take the place, even for them, of such a work as Story's 'Equity Pleadings.'

Mr. Robinson is so learned a lawyer and so industrious a writer that his want of system and order is greatly to be lamented. His 'History of Chancery' is a mine of information gathered from all quarters on the subjects to which it relates, which are very numerous. The account of "other institutions" which he undertakes to give, enables him to draw at will upon any part of the institutional history of England, and a very large proportion of the contents of his book has as little to do with chancery as Julius Cæsar had. The narrative is accordingly confused, and really needs editing to make it useful.

Mr. Wallace's book is a classic, and likely to remain so for a long time. It embodies all the criticisms of value that have ever appeared with regard to the old reports, and in using many of these this body of criticism has to be frequently consulted by judges and lawyers. It is a pity that the work has not been brought down to the most recent times. Since law reporting became a business, as it has in England and this country, the regular series of reports are issued by authority, the judges' opinions being published in full. As to these there is no room for a difference of opinion with regard to the correctness of the report. Of the rest of the report, the summary

of facts or pleadings, the arguments of counsel, and the "head note," a very different story might be told. These, at least in the United States, are often inaccurate and slovenly, and sometimes, indeed, so badly done as to make the whole case almost unintelligible. This is the more inexcusable as the art of reporting is not a difficult one to master, and the modern system of official reports ought to be a guarantee of accuracy and fulness. The old reporters erred from the very fact that they had little or no responsibility of any kind. The market was a perfectly open one, in which judges and lawyers and booksellers competed with one another without any restraints imposed by law. Now we have hedged in the business, which has grown to enormous proportions, with every sort of safeguard, and yet we are very far from perfection. In this State, for instance, no practising lawyer is satisfied with the condition of the reports. An attempt was made a few years ago to introduce the modern English system of having the work done by a grand central board, which should undertake it as a whole, instead of having it, as at present, divided among several reporters, all of whom act independently of each other; but the scheme fell through. Therefore, the reporting of the Court of Appeals and that of the inferior courts from which an appeal lies to that tribunal are still entirely unconnected, and the various series of reports are conducted on different principles. A critical discussion of reporting in America would add greatly to the interest of Mr. Wallace's book.

Nobody can look over the list of American reports, swollen every year by the addition of hundreds of volumes, without being struck with the difficulty of carrying out the idea so often broached by law reformers, that something might be done to relieve the profession by cutting down the number of reports. Forbid, they say, the citation in court of all but a single series of reports, prevent the publication of any others, and one source of confusion will disappear. This might, of course, be done very effectually by a little stringent legislation. It might be provided that any citation of unauthorized reports during the conduct of a case should vitiate the proceedings *ab initio*, and render a new trial necessary. But it is hard to imagine such legislation being submitted to. It must be remembered that such a rule, applied logically, would exclude in each American State the authorized series of every other, and also the English reports—that is to say, nine-tenths of all the authorities that are cited in every case that is tried. There would seem, indeed, to be more reasons for forbidding the citation of Massachusetts decisions in New York courts, or *vice versa*, than to exclude a series of decisions rendered in any domestic forum. Even in England, where more has been done to bring order out of chaos than anywhere else, the old unauthorized issue of reports in periodicals still goes on, and these newspaper series, it should be remembered, make trouble too. It is as necessary for a lawyer in preparing a case to have late cases as it is to have authorized reports, and as the regular series are always in arrears with their reports, he is obliged to go to legal periodicals to know what the courts are doing from week to week and day to day.

It must be remembered that although we talk about the "case-lawyer" as an old-fashioned and nowadays rather uncommon professional type, a new kind of case-lawyer has sprung up in this country whose hunger for reported cases is quite as great as his predecessor's ever was, though for a different reason. The case-lawyer of the last century was a man who knew not mere abstract principles of law, but the facts of the case in which the principles had been laid down by the courts. He was supposed to like cases better than principles, and to infer what the decision in a given case ought to be entirely from a knowledge of what the court in which he practised had decided in previous cases. At the present day and in this country, where the bench is filled with ignorant judges who feel themselves to be rather incompetent for the work they are called upon to perform, they are apt to find an easy road to popularity through a rapid despatch of business, especially in the lower courts, in which decisions are merely obtained to lay the foundation for an appeal. What these judges want is to be furnished with some means of deciding the case rapidly; and a precedent, or anything like a precedent, is to them a godsend. Consequently, lawyers who frequently practise before them make it their business as far as possible to feed them with cases, and for this purpose they make case-hunting a regular part of their business. The lawyer who can find a case similar to the one at bar decided by any court is almost sure of a decision or a ruling in his favor at first instance. We have known of a case being decided at once in this way, by a well-known judge, on the strength of a decision of no great value or authority, when the language in which his opinion was written was unintelligible to both sides, and he admitted to one of them that he had not read the briefs; a single precedent was all he wanted. The fact that decisions can be got out of judges in this way makes the demand for cases very urgent, and is one reason why it is that the bar takes so little interest in any effort for reform in the way of reducing the volume of precedents. This state of things is, it must be admitted, to some extent peculiar to New York, where, owing to the crowded condition of the calendars and the frequent incompetence and occasional corruption of the lower judges, a speedy decision seems often to be of more importance than a correct one.

The learning about the reporters collected by Mr. Wallace throws all sorts of curious lights on the growth of English law. The authority of a reporter of the period prior to the authorized series ought to depend solely on the accuracy and fulness of his reports; but we find that a great many of them have got a bad reputation, owing to causes some of which are purely accidental, while of others we have lost the key. Some reporters have had a good reputation with one judge and a very bad one with another. Thus, Barnadiston's reputation has gone through strange vicissitudes. Lord Mansfield forbade the book to be cited before him, and pretended not to remember his name, referring to him in court as "Barnard-what-you-call-him." This was improved upon by Lord Lyndhurst, who, referring to his 'Chancery Cases,' exclaimed, "I fear that is a book of no great authority; I recollect in my younger days it was said of Barnadiston that he was accustomed to slumber over his note-book, and the wags in the rear took the opportunity of scribbling nonsense in it." Law reports produced in this way would indeed be a curiosity, and there could hardly be much difference of opinion as to their value. Nevertheless, there are weighty opinions, as Mr. Wallace goes on to say, in favor of both the chancery cases of this reporter and his common-law reports as well. Lord Eldon, Chancellor Bland, of Maryland, and other judges of high standing have taken occasion to qualify Lord Mansfield's censure, and Mr. Wallace, in summing up the evidence with regard to Barnadiston, says: "The judgment of Lord Mansfield may therefore be considered as now largely corrected." All that can safely be said, therefore, would seem to be that a lawyer in going to Barnadiston should not take what he says blindly, but use every means external as well as internal to test the accuracy of his report.

The reputation of many of the early reporters was much smirched through their connection with politics, and this is particularly true of the last part of the seventeenth century, when lawyers were hunting up precedents and authorities on the points at issue between the Crown and the people. This period is rich in reports, and the history of Noy's, once among the best known of these, is very curious. Noy was Charles I.'s Attorney-General, and a lawyer of great abilities, and was one of six persons recommended by Lord Bacon for reporters, as being "learned and diligent," and "conversant in reports and records." There can be little doubt that he did some excellent reporting, but the volume which passes under his name is apparently a piece of imposture, for it contains cases reported fifteen years after his death, and besides this the work is throughout ill done. Mr. Wallace thinks that "in this day we have not one case which was certainly by him." Under these circumstances, the lawyer, while not paying much attention to Noy's reports as they stand, may be pardoned for thinking Carlyle's description of him as "a morose, amorphous, cynical law pedant and invincible living heap of learned rubbish," and as a "grisly law Pluto," inadequate, and perhaps attributable to an antipathy in Carlyle's mind to law, quite as much as to a just conception of the political part played by Noy.

We have no space for further examples, but those which we have given show what nice work the criticism of law reports is, if conducted with any attempt to arrive at a just estimate of their value. At the beginning of this century, when there were only a hundred and fifty volumes of reports in existence, it was possible to have this learning at one's fingers' ends, and it was then, of course, more essential than it is now. Such knowledge, however, is still as valuable as ever in nicely balanced cases, where the decision may turn on the view taken of an early report by the Court. Some acquaintance with the reporters is, moreover, essential to every lawyer, and to any real lover of his profession. Notwithstanding a good deal of grotesqueness of style, there is no more entertaining legal volume than Wallace's 'Reporters.'

The Art Life of William Rimmer—Sculptor, Painter, and Physician. By Truman H. Bartlett, Sculptor. Illustrated with Heliotype Reproductions. Boston: James R. Osgood & Co. 1882.

Dr. William Rimmer was well known in Boston for nearly twenty years as an instructor in what is called artistic anatomy, and as an artist of singularly earnest purpose. His enthusiasm for, and devotion to, what he considered the true ends of art were intense and constant, and his influence upon the thought and feeling of the community was considerable. In our own view, Dr. Rimmer, though possessed of certain strong artistic faculties—by force of which he once, at least, produced a good work of art—was more essentially an anatomist than an artist. He possessed a keen instinct for form, but it was too largely an instinct for its mechanism rather than for its beauty. His power of drawing was considerable, but it was employed to embody a scientific rather than a wholly artistic inspiration. In short, both in his teaching and his practice, he unduly magnified the importance, and misapprehended the character, of that anatomical knowledge which may be useful to an artist. The idea that scientific anatomy properly concerns an artist had no existence, either in theory or in practice, during the great epochs of artistic production, and it has arisen in modern times out of a misconception of the artist's function. We do not know that this misconception is anywhere more clearly recognized, or

more forcibly criticised, than it is by the late Dr. John Brown, the well-known author of 'Spare Hours'—himself both an anatomist and an intelligent student of art. Dr. Brown says:

"One other heresy I must vent, and that is to protest against the doctrine that scientific knowledge is of much direct avail to the artist; it may enlarge his mind as a man, and sharpen and strengthen his nature, but the knowledge of anatomy is, I believe, more a snare than anything else to an artist as such. Art is the *tertium quid* resulting from observation and imagination, with skill and love and downrightness as their executors: anything that interferes with the action of any of these is killing to the soul of art. Phidias and the early Greeks, there is no reason to believe, ever dissected even a monkey, much less a man, and yet where is there such skin, and muscle, and substance, and breath of life?"

To this we may add the testimony of the greatest of German archæologists and scholars of art, Müller, who, in his 'Ancient Art and its Remains' (p. 385), says:

"Although in Greece even surgeons, and much more artists, were restrained from the dissection of bodies by an invincible horror, on the other hand, by the opportunity which ordinary life presented, especially in gymnastic schools and games (although models strictly so called were not wanting), the Greek artists, who possessed in a remarkable degree the talent of apprehension, which was improved by practice to a wonderful degree, acquired an infinitely more accurate knowledge of the living human form in action or preparing for action than can ever be obtained by means of anatomical studies. . . . The most accurate study of anatomical science, also, is too weak to appreciate, thoroughly to understand, those masterworks, because it must ever be denied the contemplation of the body unfolding its splendor in the fulness of life and the fire of action."

With these quotations we may compare a passage from the book we are considering as follows:

"Dr. Rimmer had full faith in the necessity of drawing from the life-model, but did not believe in allowing the pupil to do so until a knowledge of the principles of anatomy enabled him to understand what he was doing. 'As well,' he would say, 'to set a person down to read a foreign language before he has learned the value of the letters which compose the words, as to ask a person to draw a human figure without some knowledge of the bones and muscles which compose it'" (p. 146).

Mr. Bartlett's book narrates the circumstances of Dr. Rimmer's life in a straightforward way. It brings out what is important and avoids the insignificant and trivial. It is a truly interesting and instructive life. There is a short chapter on "Rimmer and Hunt," which suggests an interesting comparison of the views of these two most influential of the recent art-teachers of Boston.

"Rimmer," says Mr. Bartlett, "taught that the constructive character of an object was the first thing to learn, and the acquisition of knowledge of the first importance, as the only means of expressing an art sentiment or idea correctly and successfully. The teaching of Hunt made the expression of the essential quality of an object as an artistic effect of the first importance, with the understanding that the knowledge of art, anatomy, perspective, ethnology, and the rest would follow in the pupil's progress as a conscious necessity."

We apprehend that neither of these views is wholly correct, though, when properly qualified, a true view may be found between them. Rimmer's idea of constructive character is an essential one when this character is regarded from the artist's rather than the anatomist's point of view—that is to say, when regard is had to visible and not to hidden constructive character. And Hunt's idea of artistic effect is a right one if it is made to include constructive character, and the more refined and subtle as well as the gross and obvious visual effects.

The illustrations to the book present a fair range of Dr. Rimmer's work in delineation, sculpture, and painting. The more slight point sketches are spirited and powerful in suggestion of difficult foreshortening and violent movement; but the forms are nearly always ugly and abnormally developed, while in some cases —as in the "Horses of the Chariot of the Sun," in plate xii.—the anatomical extravagance is carried so far as to destroy the specific character of the creature which the artist intended to represent. The back and shoulder of the off horse in this sketch are more like those of a lion than a horse. In finished delineation, like that of plates ix. and xix., the work assumes the character of mechanical elaboration and meaningless inequality of line of the modern Germans. The latter of these plates is, moreover, especially repulsive in accentuation of muscles, and the wings have neither grace nor structural form. The conception, too, seems to us a very unimaginative one, for (representing a falling figure) the heavy part of the body would naturally be downmost and the wings would point upward rather than downward—which latter is a position for flight, not for precipitation. This leads us to remark that Dr. Rimmer's work is, as a rule, least interesting when he quits the actual and indulges in flights of fancy. All his designs embodying conceptions of physically unreal things seem to us to display inconsistencies, and even absurdities, similar to these just noticed, and to bespeak want of true and strong powers of imagination. This forcibly illustrates the inadequacy of anatomical science as contrasted with true imagination. Compare Dr. Rimmer's fanciful and grotesque creations with that dragon by Carpaccio in S. Giorgio dei Schiavoni at Venice. There is in Rimmer's work an appearance of (perhaps unconscious) plagiarism. His is not the borrowing of genius, which is constant with great men, and not to be spoken against; Dr. Rimmer takes the *form* rather than the essential quality of what he borrows. The superficial likeness to Michael Angelo and to Blake is stronger, in his work, than expression of anything caught from the imaginative truth, consistency, and spontaneity of the works of those masters. We believe, as we have already said, that he was honest; but it is very easy for a man to deceive himself in this regard.

Dr. Rimmer's best work is, we think, his statue of Alexander Hamilton, and it is singularly unlike nearly all his other designs. This statue is remarkable among the productions of American sculpture for quiet dignity of conception and for artistic treatment. It is grand in total mass, and the details are gracefully designed and rightly subordinated. Had he pursued this line of work more steadily, and let his anatomical studies and theories go, he might have ranked high among modern sculptors.

The Old Masters of Belgium and Holland. By Eugène Fromentin. Translated by Mrs. Mary C. Robbins. Boston: James R. Osgood & Co. 1882.

THIS translation of Fromentin's 'Les Maîtres d'Autrefois' presents to the English reader a book which contains a good deal of interesting and instructive observation and suggestion. M. Fromentin was himself a painter of distinction, and naturally treated his subject from the painter's point of view, giving the technical part of the art of painting its due importance, and showing the intimate and inseparable connection between it and those states of thought and feeling in the mind of the artist which make the technical processes of the fine arts to differ so widely from those of the mechanic arts in character and significance. This difference is one most important to understand. In the fine arts all technical processes are employed solely to subserve the ends of expression, while in the mechanic arts they subserve merely utilitarian ends. We do not entirely agree with Fromentin's estimate of the Northern masters. It appears to us that he does not sufficiently appreciate the fact that the schools of Belgium and Holland, with all their great merits, are distinctly schools of second rank as compared with those of Italy. We think that a more just appreciation of the superior excellences of Italian painting would qualify, though it need not quench, his admiration for such masters as Rubens and Rembrandt, and would make it impossible for him to say of Rubens that "his studio recalls, with as much renown as any, the finest habits of the Italian schools." It is true that this remark implies some acknowledgment of the higher character of Italian "habits"; but a man who fully felt the great qualities of Italian painting could hardly say that Rubens recalls them.

Nevertheless, Fromentin's remarks on these two masters, as well as what he says of the painters of the North generally, are, in many ways, more discriminating than those of most critics. In the course of a very subtle analysis of Rembrandt's painting, he makes some observations on coloring which are admirably true. He says, page 258:

"A colorist properly so called is a painter who knows how to preserve in the colors of his gamut, whatever it may be, rich or not, broken or not, complicated or reduced, their principle, their fitness, their resonance, and their truth; and that everywhere and always, in the shade, in the half-tint, and even in the most vivid light. It is in this especially that schools and men are distinguished. Take an anonymous painting, examine the quality of its local tone, and what that tone becomes in light, whether it exists in the half-tint, if it exists in the most intense shadow, and you can say with certainty whether or not this painting is the work of a colorist, and to what epoch, what country, and what school it belongs. . . . Every time that color undergoes all the modifications of light and shade without losing anything of its constituent qualities, it is said that the shadow and the light are of the same family—which means that both should preserve, whatever may happen, the relationship, most easy to seize, with the local tone. Ways of understanding color are very different. There are, from Rubens to Giorgione, and from Velasquez to Veronese, varieties which prove the immense elasticity of the art of painting, and the astonishing liberties of method that genius can take without changing its aim; but one law is common to them all, and is observed only by them, whether at Venice, Parma, Madrid, Antwerp, or Haarlem: it is precisely the relationship of shade and light."

We have not seen the essential principle of good coloring so accurately stated by any other writer. Fromentin then goes on to show that Rembrandt's principle of coloring was "exactly the contrary," and he describes with equal clearness what that principle was, and says (p. 260), respecting the famous picture called "The Night Watch": "The tone disappears in the light, as it disappears in the shadow. The shadow is blackish, the light whitish. Everything radiates or is obscured by an alternate effacing of the coloring principle." Nevertheless, he maintains that Rembrandt is in some sense a colorist, which perhaps is true. That is, it is true, as we think, that he possessed the native instincts and capacities for coloring, though his extravagant use of shade prevented the consistent and true expression of his color faculty. But Fromentin does not think that Rembrandt's excessive chiaroscuro is a fault, though he admits that it is wholly untrue. With regard to "The Night Watch," he says: "All results by chance from an effect conceived contrary to probability, pursued in spite of all logic; an effect of small necessity, whose theme was this: to illumine a true

scene by a light which was not true—that is to say, to give to a fact the ideal character of a vision." Now, we do not see upon what principle a system of light and shade which is contrary to all probability and in spite of all logic, can give to a fact any ideal character, or be rightly considered an excellent system, as this one is by our author. We should say, rather, that Rembrandt, whatever his merits may be—and we admit that they are many—is a bad chiaroscurist just because he is an extravagant one. Chiaroscuro is but one of the visual properties of things which, in *balanced* perfection, give to painting its highest technical excellence; and when, in mature art, this balance is disturbed by such undue emphasis upon one of the elements of visual effect as to injure the others, we think the result may be characterized as a reprehensible fault. Such we should call Rembrandt's chiaroscuro. The fact is, as Lanzi well observes, that, under the influence of the late Renaissance in Italy, there arose an "academic rage" for chiaroscuro which led to all manner of extravagances, and carried all the finer qualities of painting before it. Leonardo da Vinci was easily affected by it; even the Venetian masters felt it harmfully; and, later, Rembrandt and his followers in the North carried it to most unjustifiable excesses.

Fromentin has an interesting chapter on the "Origin and Character of the Dutch School," another on "The Subject in Dutch Painting," and a particularly good one on the "Influence of Holland upon French Landscape." This translation has eight heliotype illustrations, and the book is handsomely printed on good paper.

BOOKS OF THE WEEK.

Autobiography of Mrs. Fletcher. With Letters and other Family Memorials. Boston: Roberts Brothers. $1 50.
Bible Forget-Me-Nots. A. D. F. Randolph & Co. 40 cts.
Bishop, W. H. The House of a Merchant Prince: a Novel of New York. Boston: Houghton, Mifflin & Co. $1 50.
Björnson, B. Magnhild. Boston: Houghton, Mifflin & Co. $1.
Bloomfield, Baroness Georgiana. Reminiscences of Court and Diplomatic Life. G. P. Putnam's Sons. $7 50.
Bray, S. Alice. The Baby's Journal. A. D. F. Randolph & Co. $1 75.

Fine Arts.

THE MADONNA OF THE CANDELABRA.

THE assertion that the "Madonna of the Candelabra," now on exhibition at the Metropolitan Museum, is worthy the warm discussion excited in regard to its authenticity, will scarcely provoke denial from any one who has seen the picture. It is unquestionably a work of no ordinary degree of merit, and undoubtedly has, in a certain measure, the charm of the flower of the Italian school. All considerations of the picture in its present position must, however, be more or less biassed by the knowledge that its value is placed at the enormous sum of $200,000. Furthermore, it is stated, on the authority of an officer of the Museum, that an attempt will be made to purchase it for the collection. On this account the picture challenges careful criticism.

Remembering the constant opportunities for the purchase of old masters of undoubted genuineness and real merit, both at the frequent auction sales in the European capitals and from private possessors, one naturally asks, first of all, Is it worth while investing so large a sum in any one example of a particular school, unless it happens to be an exceptionally perfect and a thoroughly representative work? Inasmuch as the Metropolitan Museum is established professedly for the education, cultivation, and entertainment of the public, it should be the sole ambition of the managers of the institution to form the collection on the simple broad principles which have been proved, by the experience of the best modern museums, to stimulate most and develop best the public taste of this century. One of these principles is that curiosities of art are of only secondary value.

Is the "Madonna of the Candelabra" a curiosity of art? All pictures by the old masters are curiosities of art which fail to illustrate the style of the painter's work at some period of his life. Direct and minute examination of the picture in question is prevented by the glass over it and by the rail in front of it, the former modifying the color, the latter forbidding near approach. Both are probably necessary to protect the picture from injury. But it can be well enough seen under these circumstances to leave no doubt of its age and source. The composition has the peculiar stamp of that period of the Italian school when the elements of grace and beauty hinted at in the works of such men as Masaccio and Perugino were combined, developed, brought to marvellous perfection in the work of one man, Raphael. At this distance of time it is impossible to estimate the importance of the influence of this painter on the public sentiment and on the art of his time. It is simply unparalleled. His imitators were legion. His methods were repeated, all the superficial elements of his manner were more or less successfully copied. One thing has, however, always defied imitation—the grace of style which belonged to this master alone. On this account it is comparatively easy to distinguish the leader from his followers.

No one but Raphael has ever made a composition of such exquisite grace as the picture under discussion. The design of this work is unquestionably from Raphael's hand. But cases have always been numerous where pictures have been finished after the death of the artist who began them, and, sooner or later, brought forward as the genuine work. In the Museum at Perugia there is, in fact, a painting made by Raphael's pupils on the master's drawing. There are certain points in the execution of the "Madonna of the Candelabra" which warrant the belief that it belongs to this class. A picture so important and so highly finished would, if done by the master's own hand, bear sure proofs of his peculiar method, for an artist's touch is recognizable in the same way that handwriting is. In the execution of the "Madonna of the Candelabra" there is wanting just that completeness of system which is Raphael's own copyright. It is, of course, impossible in the limits of a brief review to explain in accurate detail the method visible in the picture. In general terms it is the accomplishment of an approximate result in execution without the sequence of the intermediate steps. The effect of this method is to produce formality where there should be freedom, stiffness where there should be grace. This analysis is applicable to the color as well as to the modelling. In the period which this picture represents, Raphael gives complete satisfaction, both in the sculpturesque quality of the modelling and in the fulness of the color. To carry the examination still further, it is apparent that the finesse of the master is wanting in the expression of the faces. This is readily ex-

plained by the condition of production suggested above. The sweet maternity of Raphael's Madonnas, and the ideal innocence of his children, are only moderately echoed in this picture.

The "Madonna of the Candelabra" does not, then, illustrate Raphael's best period, as it is alleged to do. Lest it may seem an idle statement that good old masters are still to be bought at comprehensible prices, it is perhaps worth while to call attention to the fact that there is still unsold in Rome Raphael's "Apollo and Marsyas," whose authenticity is unquestioned, and whose perfection is attested by all who have seen it; that at least three Rembrandts are now offered for sale in Paris; that the group of old masters bought at the San Donato sale and exhibited last year in Boston can still be had, and that the whole of these works, all good examples, can be acquired for a less amount than the sum mentioned as the value of the "Madonna of the Candelabra."

O'CURRY'S LECTURES on the Manuscript Materials of Ancient Irish History. 664 pp., with numerous extracts in Irish, and 26 sheets of facsimiles of Rare Irish MSS. and copious Index. CARSON BROTHERS, 7 Grafton St., Dublin, Ireland.

To Investors.

Now is a most favorable time to obtain some of the choicest loans secured by FIRST MORTGAGES upon improved, productive property.

INTEREST GUARANTEED at the Third National Bank, New York.

It will pay any one seeking a most desirable investment to confer with the

Western Farm Mortgage Co.,

LAWRENCE, KANSAS.

Send $200 to $20,000 immediately, or write for special information about the prime loans just now on hand.

Every Loan Guaranteed Satisfactory.

Rates are firm, and Securities never better.

F. M. PERKINS, Pres. L. H. PERKINS, Sec.
J. T. WARNE, Vice-Pres. C. W. GILLETT, Treas.
N. H. HART, Auditor.

Address the Secretary and mention this paper.

Missouri Trust Co.

Offers the safest securities in the market. Also makes a specialty of

7 Per Cent.

Farm Loans, secured by DEED OF TRUST, being a first lien upon the property. Interest payable semi-annually at the CHEMICAL NATIONAL BANK, N. Y. Collection laws effective and speedy. Safety proved by *ten* years' experience. For full particulars and references address

O. A. CRANDALL, President,
Sedalia, Mo.

NOTICE.—The First National Bank of Ripley, O., located at Ripley, in the State of Ohio, has, by a vote of its stockholders, gone into liquidation, and is closing up its affairs. All note-holders and other creditors of said Association are therefore notified to present the notes and other claims against the Association for payment.

W. T. GALBREATH, Cashier.

Dated Nov. 10, 1882.

The above is to conform to law. A new Bank will be organized to succeed the above Bank, and be in full operation before the expiration of the charter of same, which expires on the 24th day of February, 1883. The business of this Bank will be continued by the new Bank without any interruption, either under the same name or another appropriate name, notice of which will be given to the public in a short time.

W. T. GALBREATH, Cashier.

PRINCE & WHITELY,

No. 64 Broadway, New York.

(Branch Office, 180 Fifth Avenue.)

All classes of Railway and Mining Stocks bought and sold on Commission.

Private telegraph-wires to Philadelphia, Wilmington, Baltimore, Washington, Boston, Bridgeport, and New Haven.

The Nation.

NEW YORK, THURSDAY, DECEMBER 28, 1882.

The Week.

THE pretence of some of the Democrats that they are willing to be "doctrinaire" on matters connected with civil-service reform, was curiously illustrated in Mr. Pugh's amendment to the Pendleton bill which was defeated on Saturday night. He proposed to throw all offices, whether vacant or not, open to competitive examination now, and to apportion them among the States and Territories. Of course, it would be physically impossible to carry out any such scheme without totally disorganizing the administrative machinery of the Government, but many honest Democrats may think that this is the only objection that can be urged against it, even if, as is possible, Mr. Pugh intended it as a jocose absurdity. Competitive examination as a means of admission to the public service is a device of practical men for a practical purpose. It is intended mainly to provide means of obtaining admission to the service which shall be free from favoritism. Its advocates do not say that it is the best mode of recruiting the service; they say it is the best attainable mode. Nor do they say that every man who passes a competitive examination is sure to be fit for the service; they say he is more likely to be a good man to try than a man recommended by a Congressman. Nor do they say that a man who gets higher marks in a competitive examination is sure to be fitter for a place than the man now filling it. What they say is, that there is no proof of a man's fitness for a place so good, or nearly so good, as his having long filled it efficiently. No examination, competitive or pass, can approach this for certainty. Any officer now in the service, therefore, who has for some time discharged his duties faithfully and accurately, has a claim to his place such as no other process devised by man could give him. It would be as silly to give the office to another man who beat him in a competitive examination, as to displace a successful commander for a young man who was better read in strategy or tactics. All this to a practical reformer seems as simple as the alphabet. Mr. Pugh, in his funny way, thinks they do not see it. His joke is that if competitive examination be a good thing, there cannot be too much of it; that everybody would be the better for being competitively examined. Therefore, if you propose that everybody who enters the service hereafter shall pass a competitive examination, it is because you think there is some mysterious virtue in competitive examination which would make any officeholder the better for it, just as if it was a new variety of mineral water, or a new chest-protector.

Senator Mahone has defined his position on the civil-service reform question, and also vindicated himself with regard to the charge that he had levied assessments upon the Federal officeholders in Virginia, and caused the removal, for political reasons, of a number of department clerks. Senator Mahone wants to have it understood that he is no civil-service reformer of the modern kind. He thinks that "the direct accountability of public officers to the people" and "the honorable condition of political parties" will keep the public service straight. Consequently, he is in favor of leaving things as they are, and he opposes especially the appointment of a Civil-Service Commission which is to inquire into the fitness of candidates for place, and thus "interposes itself as an irresponsible agency between the executive head and their responsibility." Senator Mahone knows exactly what he is about. If anybody is to interpose, he wants to do that himself; and when he recommends his political strikers or favorites for office, he does not want a Civil-Service Commission to be about and to inquire into their fitness. Now, as to his having assessed Federal officeholders in Virginia, he insists upon having it understood that he did not assess all of them, and that he did not get money from all of those he did assess. And as to his having caused the removal of department clerks for political reasons, he had only four of them removed, although he frankly admits that he urged a larger number of removals which, however, he did not get. And now there are people who assert that Mr. Mahone assessed officeholders and had clerks removed! How the world is given to lying! Seriously speaking, if the Republican party desires to be trusted as a reform party, the sooner it gets rid of all connection with Mr. Mahone and his kind the better.

Unmerited censure has been visited upon the distilling fraternity because they have sought to have the period within which they must take their whiskey out of bond and pay the excise duty on it extended. The philosophy of the whiskey tax and of all other indirect taxes is that the manufacturer or importer is merely to advance the duty and is allowed to collect it back from the consumer. In other words, taxes of this sort are taxes on consumption, not on production. The whole theory of the system implies that the tax shall be collected at the time when the article is wanted for consumption and not before, or not much before. The law fixes a period within which whiskey may remain in bonded warehouse without payment of tax. That period has elapsed as to some 100,000,000 gallons, and the owners are now required to take it out of bond and pay the tax on it, regardless of the public demand for it, unless they can obtain relief by legislation. There has been overproduction of the article. This is an error and a misfortune to the producers. They must lose in consequence of it, but that is no reason why their losses should be multiplied by requiring them immediately to advance $80,000,000 in money to the Government—money which the Government does not want, but which it will surely ruin them to pay unless the public are prepared to purchase this enormous quantity all at once and at a fair price—as of course they are not. There is no reason why the proposed extension of time should not be granted to the distillers. If this were a "grist tax" instead of a whiskey tax, there would be no opposition to the bill. Yet in the purview of fiscal science there is no difference between flour and whiskey—the one is entitled to the same consideration, regarded as a source of revenue, as the other. The question whether the Government ought not to charge for storage as a warehouseman is a separate question, and is to be answered upon quite other considerations.

Mr. Ingersoll continued his opening speech in the Star-route trial on Friday, and made some points which amused the audience a good deal. He complained of Mr. Bliss's lack of veracity, declared that, as for himself, he would rather steal than endeavor to deprive a man of his liberty by misstating a fact, and added that if he were on the jury he would not believe a word that Mr. Bliss might say, not even as to the time of day, at least "without looking at the clock afterward." This certainly must give the jury a vivid idea of Mr. Ingersoll's confidence in Mr. Bliss's unfailing mendacity, and the audience laughed heartily over it; but they became grave again when he explained to the negro members of the jury the nature of the issue in the case. "It is for you, and for you, and for you," said the gallant Colonel, addressing the three colored jurymen directly, "to say whether a man who fought to take the chains off your body, shall have chains put on his by your prejudice and ignorance." And yet people complain that the Star-route trial is hard to follow and technical.

The question raised in the Winslow extradition case as to the right to try a prisoner for a crime other than the one for which he is extradited, has come up again, this time in California, before Judge Hoffman, of the United States District Court. He has decided that extradition treaties being under the Constitution part of the law of the land, the prisoner is entitled to the benefit of any neglect or violation of their provisions, and that if extradited for a treaty crime he cannot be tried for one outside the treaty. The point as to the legal right of the prisoner to avail himself of the objection in our courts is a technical one, but there can be no question as to the necessity of the treaty exceptions being maintained in some way. If a prisoner can be extradited for murder and tried for treason, the right of asylum is gone, and no free government can afford to tolerate this.

The Richmond (Va.) *State* tries to meet our observations on the effect on foreign capitalists of the failure of the Southern people to enforce their own laws against homicide, by alleging, first, that the capitalist we mentioned who refused a good investment in a Southern city to take one at a lower rate of

interest a short distance away in a Northern State, and gave the "shotgun" as one of his reasons, was an "irresponsible imbecile"; secondly, that capital is not so timid as we make it out to be, for it goes to the mining regions to be invested in mines and railroads, which it protects with armed men. This last is true but does not conflict with our argument. Emigrants with families do not go to the mining regions. Those who go are mostly young single men, who do not mind "dying in their boots." Moreover, capital does not go to the mining regions in loans on farm lands, or loans of any kind. When it goes the owner goes with it, with his shotgun and revolver, and turns it over himself, or else buys mining stock, which is nearly always a gambling venture, hardly ever a real investment properly so called. It would go to the South in the same way if the South had similar prizes to offer. What the South needs is a good market for its lands, and a peaceable population to till them. It does not want and cannot get capitalists surrounded by armed guards. Therefore it should offer secure homes to peaceable men who do not fight, or care for "satisfaction," or "shoot on sight," and to whom money may safely be lent to use on their farms.

The news of the Pennsylvania homicide on Sunday has made some of the apologists of Southern homicide jump for joy, and set them to writing us abusive letters. Up to the present they have been obliged to rely for their counter attacks on the North on the ordinary crimes of the last thirty or forty years—the Webster murder, the daughter-whipping case, the Sickles case; but here is a genuine revolver homicide between two men in respectable positions, and this in a Northern State—that is, the very kind of homicide which we have been calling attention to. It would be exceedingly useful indeed, if we had said that such things never occurred at the North, or if they occurred at the South not more than once in five years, or even once in a year. But unhappily the evil we have been denouncing at the South is too common, and its existence too freely acknowledged, to make it possible to cover it up under a silly *tu quoque*. Moreover, our most serious charge against the South is not that homicide is frequent in that region, but that it is rarely punished.

The detailed account, in the Memphis *Avalanche*, of the killing of Speaker Tyson, of the Mississippi House of Representatives, at Baldwin, the other day, is very interesting. The Speaker, as our readers may remember, brought it on himself by chastising one Sanders for "a domestic trouble," with great severity, he and his brother having suddenly felled Sanders with a blow on the head at a railroad station, and then jumped on his body, he keeping off the Mayor with a cocked revolver until his brother completed the beating. "Threats enough to fill a volume," the *Avalanche* says, were uttered after this—the Speaker probably furnishing at least half of them—but his brother "left on a mule through the country." The Speaker would have been wise had he left on another mule. Sanders was in bed for some time; but on recovering his health, stationed himself on a high platform overlooking the sidewalk, with his shotgun, and waited for the Speaker, who came along in due course and received a plunging fire which finished him on the spot. Let no one suppose, however, that the inhabitants of Baldwin view this tragedy with indifference. On the contrary, the *Avalanche* assures us that it has been "a severe shock to the community, although it was known that a serious difficulty, to which he (the Speaker) was a party, was pending." "The feeling is one of universal regret and profound sympathy with his bereaved family." One of the most striking features of the state of mind of Southern communities about these affairs is that, although it is almost always well known when a "serious difficulty is pending"—that is, when two men are going about on the streets threatening to murder each other — "the shock" is just as "severe," and the "gloom" as great, as if it took the community wholly by surprise, and as if "difficulties" were novel phenomena.

The Albany *Morning Express*, the notorious Stalwart organ, actually came out in a recent number in favor of civil-service reform—not from very high motives, it is true, but in order to prevent Democrats, if possible, from getting the offices. But, no matter what the motives, the phenomenon is an extraordinary one, though not more extraordinary, to be sure, than the advice, delivered in somewhat opprobrious language, to the statesmen of the district associations in this city, by leading Stalwarts, to abandon the pledge to support all "regular" nominations, with which they now guard the entrance to their organizations. This, too, is a marvellous sign of the times. The statesmen in question, however, will not heed it; and from their point of view they would be unwise to heed it. As long as they maintain this pledge they are somebody. If they abandon it, they will be nobody, and suicide is no man's duty.

General Hazen, Chief Signal Officer at Washington, has taken the trouble to refute Wiggins, the new Canadian weather prophet and storm seer; Wiggins having predicted a tempest of such awful power and destructive propensities to sweep over land and sea, on the 11th of March next, that it will be unsafe for any vessel, "whatever her dimensions," to be out of harbor on that day. Vennor had already given his opinion that Wiggins is a humbug. De Voe is yet to be heard from. General Hazen's refutation of Wiggins is more minute and circumstantial than Vennor's, and presumably more so than De Voe's forthcoming one. He shows, for instance, that the track of Wiggins's storm is much more zigzag than any storms ever observed and recorded at the Signal Office, and that the influence of the Rocky Mountains imputed by Wiggins to the rush of winds on the 11th of March is essentially different from anything ever noticed by the scientific world. He also alludes to Wiggins's use of the phrase "planetary force" as something which savors of astrology and mediæval superstition rather than of the Baconian philosophy. The force of the argument, it seems to us, is on Hazen's side, but perhaps we ought not to decide prematurely, but wait until we hear from Wiggins again, and also from De Voe.

Judge Arnoux's decision with regard to the effect of the Sunday law on the Jews shows that the code possesses some curious features not hitherto suspected. The code, it seems, makes no exception in favor of the Jews with regard to trade and business, manufactures or mechanical employments. A Jew who keeps his shop or place of business open on Sunday is guilty of Sabbath-breaking exactly as if he were a Christian, and the fact that he observes Saturday makes no difference. The effect of the code is, therefore, practically to make the Jews stop all work on two days of the week, while Christians are compelled to observe only one Sunday. Judge Arnoux declares that the law is explicit, and applies to everybody alike; but, under it, the Jew will be only able to work on five days in the week, unless, indeed, he succeeds, by means which the law never designs the good citizen to use, in inducing the police captain who is placed over him to wink at a violation of the law. If the law is enforced, the Jew seems, therefore, to be placed at a distinct disadvantage in the community, the Christian being given every week one day's start of him. Of course, in the keen struggle for existence which goes on in a great city, the man who can work six days in the week will always do a little better than the man who can only work five, and in the end the six-day man would exterminate and drive away the five-day man; so that the Sunday law looks as if the object of the code was either to convert all the Jews to Christianity, or to drive them out of the State.

Another clause of the code has been discovered by Judge Arnoux, which looks as if the codifiers had done still more for the Christian religion even than this. Section 264 provides that in one case Jews may do work on Sunday, but that is only when the work is "servile labor." The language of the code is, that "it is a sufficient defence to a prosecution for servile labor on the first day of the week that the defendant uniformly keeps another day of the week as holy time, and does not labor on that day." That the effect of the provision is to enable good Christians to harry the Jews seems clear from Judge Arnoux's decision, that under it a Jew may be arrested, though he cannot be prosecuted. "It must appear, therefore, that the accused uniformly keeps another day holy, and that he does not then labor, and yet this does not protect him from arrest. It can only be shown as a defence to a prosecution." The code as it stands is peculiar, but we were assured when its provisions with regard to Sunday were first discovered, that all that was needed was a little judicial interpretation to make it perfectly intelligible. We cannot say that Judge Arnoux's decision is unintelligible, but it makes the Sunday law more grotesque than ever. To revive an obsolete law against Sabbath-breaking is inconvenient, but to revive it so as to make the Jews keep two Sundays, and enable police captains to arrest

them for performing a particular kind of labor, which may still be pleaded as a defence to a prosecution after an arrest has been made, is a consequence of "interpretation" which the Jews, at any rate, cannot be expected to like. If it is necessary for the interests of the Christian religion that the Jews should be persecuted by the police, the law ought to be passed by the Legislature after a full discussion and with a clear understanding of its effect. In the present state of the law the code is an admirable weapon for a corrupt police captain to extort money with.

The failure of the Coöperative Dress Association in this city, which was announced yesterday, is another illustration of the difficulty of getting the better of the "middlemen" in the work of distribution in this country. In England, coöperative stores for consumers have been a great success, not only among the working, but among the middle classes. In London, the stores started by the members of the civil service are doing such an immense business that at one time there was a movement among the London tradesmen to get the Government to prohibit its employees from carrying them on. In the manufacturing districts of the north, too, although success in coöperative production has been rare, coöperative distribution has been the means not only of giving large bodies of working-class consumers very cheap goods of the best quality, but of distributing considerable dividends among the purchasers. For some reason, however, which we have never seen clearly explained, coöperation does not take the fancy of consumers in the United States. No movement in that direction worth mention has originated among the workingmen. A coöperative store for their benefit was got up here three years ago, existed painfully for a year or two, and then died miserably, exposing the leading projector to much obloquy at the hands of the stockholders and creditors. Its failure was, however, to us certain from the beginning, as it was set on foot by philanthropists and clergymen, because they thought a coöperative store would be good for workingmen, instead of being set on foot by workingmen, with their own money, because they wanted it, and meant to deal at it. As a matter of fact, the workingmen did not support it, and it perished partly from inanition and partly from bad management. The most probable reason of these miscarriages is that workingmen in this country who have the foresight and order of intelligence needed to make undertakings of this sort successful, find they can do better with their savings in enterprises of their own. The chances of becoming a boss which open themselves to a canny American artisan are so numerous that those who are made of the right stuff for corporators prefer to go alone. Then, too, it is not unlikely—though we know of no statistics by which it could be proved—that the working population of this country is more nomadic, or rather less settled, than it is in England. The best of them roam more, in the hope of bettering their condition, and are more apt to try a variety of occupations in new places.

The failure of the Coöperative Dress Association is much more easily explicable. It was not a popular movement, in the first place, and could not therefore rely on small profits from large sales. Its clients were of necessity a somewhat restricted class—the women who want expensive clothes at low rates. This must always be a small and shifting body. Its members are apt not to stay long in the position which makes the coöperative store attractive. They either grow richer, and, throwing economy aside as too troublesome, go to the most expensive dressmaker they can find, or else become poorer, and have all their clothes made at home. Then a store intended to supply swell clothes at low rates through hired management is brought into competition with a branch of private business which probably contains more of whatever dry-goods talent there is in the city than any other. There is probably no business to which so much individual skill, shrewdness, enterprise, and capital, in proportion to sales, is applied as the business of supplying women's dress of the finer and more expensive kind in the United States, and especially in this city. The competition in it is very great, and the profits are probably as low as they can be made. It was very unlikely, therefore, from the beginning that hired managers could be got for any such undertaking who could compete with the partners of the great firms carrying on the same business. Any one capable of making such a business succeed in New York finds no difficulty either in obtaining an enormous salary from private firms, or a partnership which gives him a fortune in a very few years. In fact, we fear it will be a good while before American women will be able to dress well without middlemen. The profits of the middlemen may seem large, but such experiments as the Coöperative Dress Association show that the profits need to be large to secure the peculiar capacity which makes the American "dry-goods man" one of the marvels of modern civilization.

The last scene in the Egyptian drama was enacted on Monday at Cairo, when Arabi and his brother Pashas concerned in the late war were publicly degraded from their military rank, preparatory to their starting for Ceylon, which is to be their place of exile. The exile to that distant region is of itself a terrible penalty, and they doubtless feel that it is simply better than death. The worst of it all for Arabi is that he has not only lost his political but his moral and theological position. His trial on the charge of burning Alexandria was probably abandoned because the proof was defective, and on the charge of rebellion because the evidence would have implicated the Sultan and the Khedive, and because he was willing to plead guilty in order to make sure of saving his neck. But enough was revealed to establish the fact that as a prophet and patriot he was a great humbug; that his mendacity was stupendous, even for an Egyptian, and that in his military and political manœuvres he was from first to last carefully looking after his own interests. Mr. Wilfrid Blunt has, however, stuck to him to the last, with purse and pen, with that amiable enthusiasm which has marked his espousal of Arabi's cause from the beginning, and which probably did so much to lead Arabi astray. The settlement of the future government of the country is still delayed by the English difficulty in coming to terms with France about the part to be played by the latter.

It would seem from the news of yesterday that some progress has been made toward solving the old problem how to establish official communications between the British Government and the Pope without endangering the Protestant religion and the liberties of England. It is now nearly a century since England began to have intercourse with the Pope in a sneaking, underhand way, by means of non-official persons, travelling Catholic gentlemen, and the like, but until now it has never ventured to use a regular accredited envoy, so strong has been the feeling among the English middle classes that such a step would be a recognition in some way of the Pope's spiritual claims. The feeling is a tradition of the Elizabethan and Stuart days, when the Pope's agents in England were supposed to be plotting either for the murder or dethronement of the sovereign, or his conversion to Popery, with all its attendant horrors. The creation of a British Legation to the Vatican will probably now be easy, but it will mean not that the Papacy has grown more powerful in England, but that the Pope is regarded by the British public as a harmless old gentleman, whose aid in keeping the Irish in order may be useful.

M. Bontoux, the President of the collapsed Union Générale, who has just been convicted, along with M. Feder, the Secretary of the Company, of a breach of the law on public securities, has been sentenced to the extraordinarily severe penalty of five years' imprisonment and a fine of $600. When first indicted, he was charged with swindling and embezzlement, but these counts were afterward abandoned by the Public Prosecutor, all the securities deposited with him for safekeeping, or as collaterals, being found intact. All that was left was, therefore, counts for speculating in the securities of his own company and false representations, the former of which, on this side of the water, is hardly considered an offence. The Court ruled that if the speculation were moderate, and in good faith for a rise, it would not be an offence in France either. Bontoux denied, and it appears successfully, that he had speculated in the shares on his personal account, but he admitted having sold out during the decline, and was only able to answer the charge of giving a grossly untrue account of the company's condition by alleging that at the time he honestly believed what he said. The chief bookkeeper, too, gave some very damaging testimony as to his having made up a fictitious balance sheet, showing a profit of about $7,000,000, when there was really a huge deficit, under instructions from M. Feder, the Secretary. Bontoux will probably not undergo his sentence, as he has, as is not unfrequent in France, been tried in his absence, and will probably feel under no obligation to surrender himself for punishment.

SUMMARY OF THE WEEK'S NEWS.

[WEDNESDAY, December 20, to TUESDAY, December 26, 1882, inclusive.]

DOMESTIC.

THE White House was thrown open to the public on Wednesday for the first time since last August, when it was closed for repairs, and the President received a large number of visitors. He will hold his first public reception of the season on New Year's Day.

A Cabinet meeting was held on Tuesday at which the principal matter discussed is said to have been the case of Sergeant Kelly, of Fort Popham, Me., who is now awaiting trial for murder. The question was whether the United States should yield jurisdiction in the case to the State courts, and thereby establish a precedent with regard to crimes committed on Government reservations. No conclusion was reached.

On Saturday the President approved the act repealing the discriminating duties on goods produced east of the Cape of Good Hope; the act ceding to the First Taxing District of the State of Tennessee a certain lot of land in that district, and the act authorizing the Board of Commissioners of the Soldiers' Home to sell certain property at Harrodsburg, Ky.

The State Department has been officially notified that the Mexican Government, after full consideration of the subject, has decided to appoint commissioners to meet those appointed by the United States for the purpose of negotiating a commercial treaty between the two countries. As one of the commissioners the President of Mexico has selected Señor Romero, formerly Minister to the United States. The first meeting of the Commission will be held early in January.

On Wednesday the Senate passed the Consular and Diplomatic Appropriations Bill, with all but one of the amendments reported by the Committee, and with an amendment, added on motion of Mr. Pendleton, appropriating $5,000 to enable the President to extend diplomatic relations with the Governments of Eastern Asia. The Pendleton bill was then taken up. Mr. Vest made a speech, in which he said he had agreed that the bill should be reported to the Senate, not because he believed its provisions would remedy the evils existing in our civil service, but rather as a means of emphasizing his convictions of the urgent necessity for reform. Mr. Allison and Mr. Dawes made speeches in support of the bill. On Thursday the House resolution for a recess was called up, which furnished a text for eloquence on the question of the records of the respective parties for the last fifty years. The resolution was finally lost by a vote of seventeen to forty-five. The debate on the Pendleton bill was then continued. On Friday the Allison amendment to the bill, reducing the number of Commissioners, was defeated by a tie vote, twenty-three Senators voting on each side. An incident of the debate on that day was an explanation by Senator Mahone in regard to his use of patronage and his levying of political assessments during the recent campaign. He said there had been only four removals upon his representation, except of persons who were unjustly charged to the quota of Virginia, and who were not in any sense residents of the State. In regard to the charge made by Senators Bayard and Beck, that it had been found necessary to prepare blank forms upon which to inform Virginians in the Government service of their dismissal, he pronounced it lacking in every element of truth. On Saturday the Hale amendment to the Pendleton bill, in regard to the selection and location of the local boards of examiners, was carried. An amendment offered by Senator Brown, striking out the paragraph requiring that "promotion shall be from the lower grades to the higher on the basis of merit and competition," was carried. The debate was continued until 12 o'clock at night with much warmth. The Senate then adjourned till Wednesday without reaching any vote on the Pendleton bill.

On Wednesday the House passed the Post-office Appropriation Bill by a vote of 163 to 21. Much of Friday was passed in attempting to obtain a quorum, and on Saturday, there being no quorum, the House was adjourned until Wednesday.

The President has issued an Executive order, setting apart certain lands in Dakota Territory for the use and occupation of the Turtle Mountain band of Chippewas, and such other Indians of the Chippewa tribe as the Secretary of the Interior may see fit to settle thereon.

Advices received at the Interior Department on Wednesday, dated December 4, and coming through the military channels, report that the Milk River country, in northern Montana, is overrun with half-breeds, Crees, and Lame-Brulé bands of hostile Sioux Indians; also that the Yankton Indians and possibly others are obtaining arms, ammunition, and whiskey in unlimited quantities, and that a collision between the troops and these Indians is apprehended. It is stated at the Department that most of these intruders are Canadian Indians, and that steps were taken some time ago, when the Department was first advised of their presence, to prevent them from obtaining arms, ammunition, etc., from the trading posts in that section.

A circular letter has been sent by Indian Commissioner Price to all Indian agents, containing rules for the establishment and guidance at each Indian agency of a "Court of Indian Offences," which is to be composed of three persons, to be nominated by the agent after consultation with the Indians in council, from among the most intelligent of the tribe, and well known and recognized for their good moral character. The court is to have jurisdiction over such questions as may be presented to it by the agent, or by his approval, and over all "Indian offences" which are designated in the circular. All decisions and orders of these courts are to be subject to an appeal and final revision by the Indian Office.

A letter from the Collector of Customs at Sitka, Alaska, submitted to the House on Thursday, in reply to a resolution of Mr. Hewitt concerning the shelling of the Alaska Indians by the revenue cutter *Corwin*, justifies the action of the officers of the cutter.

Forty Chinese women recently arrived at Victoria, B. C., thirty-two of whom had been sold to Chinamen who reside in the United States. Two Chinamen who wanted to secure certain of the women brought them before the courts on a writ of habeas corpus, alleging that they were forcibly detained. The women, however, swore that they were free agents, and the cases were dismissed. In the course of the investigation it was proved that the thirty-two women who went to the United States were disguised as Indian women. It is feared that this traffic will be carried on on a large scale from Victoria during the ensuing year.

A despatch from Lieutenant Harber, dated at Yakutsk, was received by Secretary Chandler on Wednesday. Lieutenant Harber says he has made a thorough search of the coast of the Lena without finding any trace of Lieutenant Chipp's party. He will return to the delta. On Thursday Secretary Chandler received a despatch from Minister Hunt, at St. Petersburg, saying that the Russian Minister of Foreign Affairs considered the removal of the bodies of De Long and his men impracticable at present, endangering the dogs and reindeer required, which cannot be replaced if lost.

Mr. John Eaton, United States Commissioner of Education, delivered an address at the Union League Club, New York, on Thursday evening, on "Illiteracy as shown by the Census of 1880." He said that, according to the last census, there were in the United States over 3,200,000 colored persons, over 2,200,000 native whites, and over 7,000,000 foreign-born whites over ten years of age who could not write. Although this represents relatively a gain of 10 per cent. over 1870 in the number who can write, it is an absolute increase of 581,000 in the number who cannot write. Mr. Eaton gave a mass of figures, from which he drew the conclusion that if the illiterates were all taught to read and write, the value of their labor would be so increased that an increment of wealth amounting to $488,757,000 a year would be added to the whole country. He said that all the present agencies for grappling with the problem of illiteracy were overtaxed, and that only the general Government could meet the greatness of the present emergency by aiding the States in helping and extending established agencies.

An important conviction of a mail robber has been secured in West Virginia. His name is Price, and he was a member of the Redmen's Society, an organization like the Ku-klux, which has created a reign of terror in Barbour County, in that State. The citizens were afraid to testify for fear of the Redmen's revenge. One of Price's companions, however, after Price's conviction, made a confession, giving the secrets of the Redmen. The result is that several persons have been arrested for perjury.

The issue of standard silver dollars from the mints for the week ending December 23 was $776,999, as against $421,490 for the corresponding period of last year.

It is announced that there will soon be established in Washington an institution to be known as the "National Club of American Economists." Its purpose will be to fight the freetraders and revenue-reformers. The President will be First Comptroller Lawrence of the Treasury.

The industrial census of Philadelphia shows a large increase as compared with the census of 1880. There has been an increase of 2,000 establishments and of 50,000 persons employed.

Citizens of Louisville, Ky., have subscribed over $200,000 to the Cotton Exhibition to be held there next year.

Captain A. C. Nutt, Cashier of the Pennsylvania State Treasury, was shot and killed on Sunday morning, at Uniontown, Penn., by N. L. Dukes, a member of the Fayette County bar, and member-elect of the State Legislature. Nothing was developed in the evidence before the coroner's jury to show what led to the encounter, but it was unquestionably a domestic scandal. The affair caused much excitement in Pennsylvania.

The Grand Jury at Louisville, Kentucky, has found nine indictments against the Auditor, Back-Tax Collector, and Clerk of the Assessor's office of the city, charging them with conspiracy to defraud the city and other misdemeanors. The Mayor has declared the offices vacant, and the Council will impeach the delinquents.

It is stated that the Trustees of Trinity College, Hartford, have invited Dr. Potter, President of Union College, Schenectady, N. Y., to become the President of Trinity College, in place of Dr. Pynchon, who has resigned, but who will remain at the College, retaining the Professorship of Moral Philosophy.

FOREIGN.

In the French Senate on Wednesday M. Léon Say concluded his speech on the budget. He dwelt upon the necessity of keeping down

the floating debt, and contended that the best means of continuing the railway enterprises advocated by the Department of Public Works was to treat with the railway companies. At the Cabinet meeting on Thursday, President Grévy assented to the proposal of Admiral Jauréguiberry in regard to the proposed expedition to Tonquin, and the Cabinet decided to despatch the expedition, and will demand a credit of 11,000,000 francs therefor. On Friday, during the discussion of the budget in the Senate, M. Buffet appealed to the Senators in the name of patriotism to rescue the finances of the Government from embarrassment. He said they should bear in mind that the country might one day be called upon to make a supreme effort either for the preservation of order at home or safety abroad. M. Tirard, Minister of Finance, protested against the alarmist campaign which was being prosecuted against the finances of the country.

The Committee for the Promotion of a Treaty of Commerce between France and the United States held a meeting in Paris on Saturday, at which a communication was read stating that, according to the latest news, the American Government and Congress were disposed to effect considerable reductions in the customs tariff. The Committee, in consequence of this information, decided to make representations to the French Government, urging it to watch carefully the interests of French commerce during the discussion in Washington on the tariff question.

M. Bontoux, President, and M. Feder, Manager, of the collapsed Union Générale, were on Wednesday sentenced to five years' imprisonment and to pay a fine of 3,000 francs.

On Friday nine of the rioters of Montceau-les-Mines were sentenced to imprisonment for terms varying from one to five years, with recommendations to mercy. Fourteen others were acquitted.

It is stated that the examination of the papers found in the residence of Prince Krapotkine, who was recently arrested, reveals ugly facts. The papers are said to implicate, among others, a relative of the Czar. The Prince was examined for three hours by a Judge of Instruction on Monday. He answered "No" to every question put to him. He is kept in solitary confinement, not even the police in charge being allowed to speak to him. He and forty-five other Anarchists will be tried at Lyons early in January before the Correctional Tribunal.

M. de Lesseps, presiding at a banquet in Paris given by the Contractors on Public Works, on Sunday, announced that the scheme for the creation of an inland sea in Africa will be resumed by private enterprise.

The hanging of Overdank, at Trieste, caused great excitement in Italy. In the Chamber of Deputies on Thursday, notice was given of an interpellation inquiring whether the Government had interposed with Austria with a view to obtaining Overdank's pardon. On Friday, Signor Depretis stated in the Chamber that the Government declined to reply to the interpellation, as the statements made in connection with it had served as a pretext for disorders which the Government was determined to suppress. On the same day a number of young men made a demonstration in front of the Austrian Embassy in Rome, crying "Down with Austria!" The military was called out to disperse the crowd. Demonstrations were also made at Milan and Turin in protest against the hanging of Overdank. The Italian Government sent severe orders to the prefects to suppress demonstrations. On Sunday the Italian Minister of Foreign Affairs called upon the Austrian Ambassador at Rome to express his regret at the display of feeling against Austria made by the Italians engaged in the disorders. On Sunday and Monday it was necessary to surround the Austrian embassy at Turin with troops to protect it from the mob.

On Friday the Italian Chamber of Deputies adopted the Parliamentary Oath Bill introduced by the Government, by a vote of 222 to 45. During the debate on the bill on Wednesday Signor Depretis made an eloquent speech in defence of the bill. He said the oath was simply a mutual agreement between the King and the representatives of the nation. The House of Savoy, he said, had always faithfully kept its promises, and he was convinced it would keep them. On Thursday, a motion expressing confidence in the Government was carried by a vote of 324 to 32.

In his reply to the new-year congratulations of the Cardinals on Sunday, the Pope, in alluding to the Martinucci case recently decided by the Italian Court of Appeals, said: "A fresh attack upon the sovereignty of the Papacy has recently been made. The consideration which was formerly shown for the Holy See, and which was dictated by political prudence and reasons of state, has now been put aside." He added that, despite everything, he would continue to defend the rights and interests of the Church.

A despatch from Sofia, Bulgaria, says that the Chamber of Deputies held its first sitting on Sunday. The state of siege proclaimed in some of the Turkish districts, in consequence of the prevalence of brigandage, has been raised.

King Milan of Servia, replying to an address presented to him by the Skupshtina, said on Tuesday that since 1815 Servia had passed through a gigantic struggle for progress and freedom, and was now assuming an honorable place among the educated races of Europe. The King's speech is reported to have created a favorable impression.

In the Greek Chamber of Deputies on Monday the Opposition protested against a proposal to proceed with the discussion of the budget on the ground of informality, and retired in a body. M. Tricoupis then said that if the Opposition persisted in retiring, the Government would ask the Chamber to proceed to vote the budget without further debate.

In the Spanish Chamber of Deputies on Sunday the Ministerial motion declaring against any change in the Constitution of 1876 was adopted by a vote of 221 to 18. The Cortes then adjourned to January 8. Only the Republican members voted against the motion, and the Conservative members of the dynastic Left abstained from voting, being unwilling to show their small numerical strength. The opinion prevails that although the new party obtained greater success in the political debates in the Chamber of Deputies than in the Senate, the Government has not been materially weakened, and therefore no Cabinet changes are expected for the present. On Friday Señor Castelar made a speech in the Chamber which excited much comment. He maintained the superiority of the democratic system of government, and the incompatibility of monarchy with liberty. He declared that he would never alter his views, and would remain a Republican to the day of his death. He said he believed in the ultimate triumph of his cause.

The Khedive's decree degrading Arabi and the other rebel Pashas was published Monday morning. Their public degradation was carried out in the afternoon in the presence of two battalions of the new Egyptian Army. Only a few Europeans and about 100 natives were present. The prisoners have started for Ceylon.

Mr. Chamberlain, President of the Board of Trade, speaking at a meeting of the National Federation at Ashton-under-Lyne, on Tuesday, the 19th instant, energetically condemned the doctrines of "non-intervention and peace at any price" as ignoble and unworthy of a great nation. England, he said, had great legitimate interests in Egypt which should be guarded by the establishment of stable institutions leading toward self-government, but a protectorate or annexation would be disastrous.

On Monday the London *Daily News* announced that Sir Charles Dilke will enter the Cabinet as President of the Local Government Board, while the Right Hon. George Dodson, the present incumbent of the office, will become Chancellor of the Duchy of Lancaster.

The Government has ordered the prosecution of Mr. Harrington, Secretary of the Organizing Committee of the Irish National League, for a speech recently delivered by him, and prosecutions are understood to be pending against the proprietors of various provincial journals for articles published by them inciting to crime.

The Government has determined to prosecute Mr. O'Brien, editor of the *United Ireland*, for seditious libel uttered in an article which appeared in that paper, and which, in referring to the recent executions of Irish murderers, attempted to show that they had been hanged on the principle that somebody must be hanged—the right person if possible, but, at all events, somebody.

A large meeting was held in London on Sunday night, for the purpose of organizing a fund to relieve the distress in Ireland. Many letters and telegrams from clergymen in Ireland were read, describing the outlook as appalling and stating that the people are on the verge of famine. A resolution was passed urging the Government to prevent the people in Ireland from perishing for want of the necessaries of life.

The Secretary of Mr. Tuke's Emigration Fund has issued an appeal for aid to enable distressed people in Ireland to emigrate to Canada and the United States. The local Government Board has applied to Mr. Tuke's Committee for coöperation in furthering the Government's emigration scheme. The districts already intrusted to the Committee contain an aggregate population of more than 30,000. In a speech on Thursday evening Mr. Davitt said that emigration was no cure for the discontent in Ireland. A system of public-works enterprises, he said, would be far more creditable to English statesmen than forcing thousands into workhouses and then forcing them to quit the country. From his knowledge of the new Ireland in America, he said he could tell Lord Derby that English statesmen before long would have to take into account the Irish element in America in the settlement of the Irish question.

All the witnesses summoned in connection with the Phœnix Park murders were brought to Kilmainham Jail, to see if they could identify Westgate, who had accused himself of being one of the assassins. They failed to identify him as one of the murderers, and it has been since found out that Westgate occasionally labors under hallucinations, which probably accounts for his self-inculpation.

The Rev. Dr. Benson has been appointed to and has accepted the Archbishopric of Canterbury.

The peace negotiations between Bolivia and Chili have again been broken off. Bolivia requested the presence of two Peruvian commissioners at a conference to take place at Santiago or Valparaiso, but Chili would not consent. In reply to a speech by General Maney, the new United States Minister to Bolivia, on presenting his credentials, General Salinas, President of Bolivia, said that Bolivia and Peru now understood fully that there was no chance of the United States interfering in their behalf against Chili, and that Bolivia now understood that its future depended on itself

CHRISTMAS.

THE Anglo-Saxon Christmas was, forty years ago, in a somewhat declining condition—that is, considerable weariness of it, or indifference to it, was beginning to show itself—when Dickens restored it by associating it with the spirit of kindliness and good-will to all friends and neighbors which he preached so successfully in his earlier novels. He made it fashionable, as it were, to be unusually affectionate and generous not only to one's own family, but to every one with whom one came in contact about that time of the year. He filled the imagination of the Anglo-Saxon world with pictures of the happiness which could be brought to poor homes by Christmas cheer, in the shape of turkeys and roast beef, and venison and other game, and—which was perhaps more effective—with pictures of the virtues, both social and domestic, which were to be found among the humble and lowly by rich people who went in search of them. The result was a prodigious Christmas renaissance. The illustrated Christmas book began to appear, and the "Christmas number" of the illustrated paper, with Christmas tales and pictures of delightful Christmases in country houses, with girls being kissed under the mistletoe, elderly men dancing country-dances with almost unseemly vivacity, "waits" singing in front of brilliantly-lighted windows, wagons hauling home "yule logs," and young ladies helping the curate to dress the church in Christmas green. The most marked feature of this Dickens revival was the conversion of the elderly people to a liking for Christmas, for it must be admitted that the elderly are the worst enemies of Christmas as the feast of good cheer and good-fellowship. As a general rule, the leading anniversaries of the world have to be kept alive by the young. In most people past middle life they touch sore spots in the memory, and mark with somewhat startling emphasis the flight of time; so that there is apt to be more or less indifference to them, or even positive aversion, on the part of that portion of society which pays the expenses of formal merry-making and remembering. To Dickens belongs the credit of having convinced this class, for a brief period at all events, that Christmas was unlike other fêtes in having a distinct rôle for the elderly—namely, that of being young again. He makes his middle-aged men dance furiously, and laugh immoderately, and eat late suppers, and drink punch, and kiss pretty girls, and gives them a claim to be heard patiently at this one season when giving accounts of their doings, "at your age," as they say to the youths and maidens. He greatly magnified the office, too, of a benefactor of poor relations and dependents, and, in fact, thoroughly popularized Christmas with all classes and ages.

The English Christmas is, however, of late years, not holding its own, in its old form. Dickens's influence has spent its force, and the old agencies which were working for Christmas abasement before his time have begun to reassert themselves. The spread of education, the love of reading, the increasing seriousness and independence of the working classes, the great scattering of families which steam-travelling has brought about, make the old "merry Christmas" no longer possible. The association of happiness, too, with repletion of the stomach, which did so much for Christmas in the olden time, is rapidly disappearing—has, in fact, disappeared among all but the very poor. The huge joint, like "the baron of beef," or the boar's head, or the haunch of venison, which once was the glory of the Christmas dinner, no longer holds its old position. Its attractiveness has been ruined by the growth of French cookery—especially that feature of French cookery, called "little dishes," which torments the imaginations of so many housekeepers—and by an undoubted decline in eating capacity on the part of the modern world. Gluttony, which used to be one of the seven deadly sins, is now an all but unknown vice. Cases of very excessive eating are almost unheard of; and among the well-to-do people of our time the sight of huge joints, or the sound of a table "groaning" under cheer of any kind, instead of stimulating, destroys the appetite. The weakening of the ties of blood also, which has undoubtedly taken place, under the influence of the immense scattering which has been produced by modern improvements in locomotion, has damaged the old-fashioned Christmas. In the days when relatives dwelt rather near together, and kept the sense of relationship alive by frequent intercourse, and when families had heads who were deferred to, the Christmas gathering of the tribe under its largest roof was both pleasant and significant. It strengthened a well-recognized and often very useful bond, and renewed cherished associations. In our time, however, when the cynical press denounces "family gatherings" as an awful infliction, and asks to have a prayer for deliverance from one's relations inserted in the litany, it cannot be denied that its utterances find an echo, about Christmas time, in many not by any means hard or cold hearts. The relation is, in fact, not what he used to be, and the Christmas tradition can do nothing for him. Few people now care much about him as such. He is put in the same category with the rest of the human race, whom we like or dislike not for their fathers or mothers, but for themselves. In fact, many of us feel about him as the gentleman felt who was asked "whether he liked children." "What a question," said he; "you might as well ask me whether I like grown-up people." The relation, in fact, begins to feel more and more that those who do not care to see him on other days will not be beguiled into setting Christmas apart as a day for pretending to enjoy his society.

The general tendency of the Anglo-Saxon Christmas is, therefore, in the German or French direction. The French do not make as much of Christmas as a family fête as of New Year's Day, but their practice, as well as that of the Germans, has always been to celebrate their family fêtes by gifts rather than by eating together. In this country as well as in England, in fact, the present-making German Christmas is rapidly displacing the old Anglo-Saxon eating Christmas, in which present-making (except in the shape of gifts to the poor and tips to servants) had but a small space. In fact, the American Christmas may now be said to be a day of the year when everybody makes a present to everybody of his friends under a certain age whom he thinks it will gratify—children getting most presents, and the old persons but few. Among people of small means, utility is apt to govern the selection of the articles; among the richer, beauty has more to do with it. But the number of things which may be converted into Christmas presents every year increases. There is no store nowadays which does not contain "holiday goods," and the result is to popularize Christmas in a way which probably even Dickens never dreamed of. A present-giving Christmas, with stockings and trees for the children, and packages by express and Christmas cards by mail for the not old, diffuses Christmas feelings over the land in a way which the old eating Christmas never did. This was at best but a day of remembrance for but few. The most generous observer of the day could have but a small number at his board, while the giver of gifts can reach the uttermost ends of the earth with tokens of either affection or good wishes, whichever he feels or cares to show.

The new régime has of course, like all things of the kind, its weak side, in that it tends, like all human expressions of feeling, to become mechanical through long use, and, like all things effected through expenditure of money, to exalt the man with the longest purse, and to impose obligations on those whom obligations make uncomfortable. This is, however, only another way of saying that no human institution is without its drawbacks or imperfections, and that all modes of human expression are liable to abuse. The fact remains that, however celebrated, the devotion of one day in the year to the remembrance of other people; to small attempts to make their lives a little brighter, their future seem a little more hopeful, their journey through the world a little less lonely; to a little closing up of the ranks of those who still survive the ravages that Time every year makes in the column in which each generation marches across the field, is one of the best things the Christian Church has done for the modern world.

ORTHODOX PROTECTIONISTS.

A NEW protectionist association, calling itself the "National Club of American Economists," has been formed at Washington city. This association is apparently based upon the idea that genuine "protection" means the highest rate of duty that anybody wants to have imposed upon anything, and that any other kind of protection is bogus. Its prospectus, as formulated by its President, tells us that "a majority of freetraders have unexpectedly entered Congress"—meaning, we suppose, the next Congress, although nobody can tell at this time what the views of the next Congress may prove to be. We have not the least expectation that the freetraders will have a majority of the next Congress, but we presume that a majority of that body will be at least as far advanced in their ideas

as the "report" of the Tariff Commission appears to be, and will be opposed to duties of 100 per cent. *ad valorem*. It is a fact worthy of note that there are protectionists of considerable reputation who think that the Tariff Commission has betrayed the cause. Mr. Henry Carey Baird is one of this class, if we may credit an interview with him recently published in a Philadelphia newspaper. According to Mr. Baird, the Commissioners, although selected to represent the interests of protection, have yielded supinely to the demands of their opponents, and have put their names to a document containing the worst heresies of free trade. We have no doubt that the National Club of American Economists are substantially in accord with Mr. Baird, and are prepared to take a decided stand against anybody who favors any lower rate of duty than the highest which anybody else wants.

In mentioning the "report" of the Tariff Commission we by no means intend to include the bill which accompanies it. The report is a very good argument for the use of revenue reformers, while the bill is, upon the whole, rather worse than the existing tariff. The following extracts from the report might have been written, with some slight change of phraseology, by David A. Wells, Edward Atkinson, or W. M. Grosvenor. Indeed, Colonel Grosvenor claims that the substance of it was set forth by himself in his work, 'Does Protection Protect?' published in the year 1871. The report says:

"Early in its deliberations the Commission became convinced that a substantial reduction of tariff duties is demanded, not by a mere indiscriminate popular clamor, but by the best conservative opinion of the country, including that which has in former times been most strenuous for the preservation of our national industrial defences. Such a reduction of the existing tariff the Commission regards not only as a due recognition of public sentiment and a measure of justice to consumers, but one conducive to the general industrial prosperity, and which, though it may be temporarily inconvenient, will be ultimately beneficial to the special interest affected by such reduction. No rates of defensive duties, except for the establishment of new industries, which more than equalize the conditions of labor and capital with those of foreign competitors, can be justified. Excessive duties, or those above such standard of equalization, are positively injurious to the interest which they are supposed to benefit. They encourage the investment of capital in manufacturing enterprise by rash and unskilled speculators, to be followed by disasters to the adventurers and their employees, and a plethora of commodities which deranges the operations of skilled and prudent enterprise. It would seem that the rates of duties under the existing tariff—fixed for the most part, during the war, under the evident necessity at that time of stimulating to the utmost all domestic production—might be adapted, through reduction, to the present condition of peace requiring no such extraordinary stimulus. And in the mechanical and manufacturing industries, especially those which have been long established, it would seem that the improvements in machinery and processes made within the last twenty years, and the high scale of productiveness which has become a characteristic of their establishments, would permit our manufacturers to compete with their foreign rivals under a substantial reduction of existing duties."

These words will be pasted in the hats of many stump speakers in the interest of revenue reform a year and a half hence, and the Washington Club of Economists will be kept busy answering them.

The bill reported by the Commission is, however, a delusion and a snare. The average reduction of duties, they tell us, is not less than 20 per cent., and they believe that it will reach 25 per cent. This reduction is reached, if reached at all, by lowering duties which are now prohibitory, but still leaving them prohibitory. Take the precious example of steel rails. The existing duty is $28 per ton. The lowest price in England is $25 per ton, and the price in this country at present is $40. The Commission make a great merit of reducing the duty to $18, which is quite as prohibitory as the present duty, since no rails can be imported under it. The whole bill is made up of subterfuges of this kind, interspersed with additions here and there to the existing scale of duties, as for instance in the cases of earthenware, glass, and tin plates.

Tin plates are the raw material of one of the most extensive branches of our manufacturing industry. There is hardly a village that has not its tinsmith, while the great cities turn out millions of dollars' worth of utensils and tin cans, which become the raw materials and necessary adjuncts of other branches of manufacture even more extensive. Tin plates ought to be put on the free list, as a measure of true protection to American industry. The duty is 1 1-10 cents per pound, and the amount imported is between 200,000,000 and 300,000,000 pounds per annum. The Commission recommend that the duty be increased to 1 9-10 cents a pound—at the instance, it is said, of a Pittsburgh firm who have taken it into their heads to import block tin and make the plates in this country, and who wish to have all the tinshops and canning establishments of the United States, as well as all the consumers of their products, handed over to them as subjects of taxation. What a formidable *octopus* this Pittsburgh tin-plate company would be if it could have its way! Even tin can be produced in this country under a sufficiently high rate of duty. After the Pittsburgh firm get well started the right thing will be to put a duty of 10 cents a pound on block tin to encourage the miners.

It is this sort of protection that the Washington Club of Economists is apparently organized to promote. It was this sort of protection that ruined a flourishing American industry (that of copper smelting) a few years ago, and transferred to English houses the trade in metal sheathing for American ship-bottoms—at the instance of the rich owners of copper mines on Lake Superior. The sublimated and refined variety of protection which now obtains in the orthodox schools holds that foreign trade is essentially infamous, and that any domestic industry (manufacturing or other) which depends upon it ought to be delivered over to some domestic devil-fish to have its blood sucked—as soon as possible.

THE MEANING OF THE FOURTEENTH AMENDMENT.

THE argument now going on in the Supreme Court, in the Southern Pacific Railroad Company's tax case, over the construction of the Fourteenth Amendment, presents some important points of constitutional law. The suit is brought to recover from the company State and county taxes levied on its property in California. One of the defences of the company is that in the assessment of its property an unlawful discrimination was made between it and the property of individuals, the company not being allowed any deduction from the valuation on account of a mortgage upon it, although such deductions are allowed in the case of individuals; that the defendant had no notice or opportunity to be heard respecting the value of its property, or to correct any errors of the State Board of Equalization. The company contends, too, that the tax thus laid conflicts with the provisions of the Fourteenth Amendment —"nor shall any State deprive any person of life, liberty, or property without due process of law, nor deny to any person within its jurisdiction the equal protection of the laws." Passing over the questions of fact and technical points involved, the case brings up the true construction of the Fourteenth Amendment in its relation to the taxing powers of the States.

Ten years ago, in the New Orleans slaughter-house cases, there was a very full argument in the Supreme Court with regard to the general effect of the provisions of this amendment; but the opinions of the judges throw little light upon the disposition likely to be made of the present case. The facts then before the court were that the Legislature of Louisiana had incorporated a company with the exclusive right to carry on the business of slaughtering cattle within a large district embracing the city of New Orleans. The butchers protested against this act as interfering with their trade and in violation of the Fourteenth Amendment. Five judges upheld the act as being an exercise of the police power of the State for the benefit of the public health, and held that the Fourteenth Amendment had no bearing upon the matter.

On the other hand, four judges thought the act created a monopoly, and conflicted with the amendment. The argument chiefly turned, it is true, on the provision in the amendment that "no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States"; but the other clauses were discussed, and the view of the minority appears to have been that the amendment was designed as a Federal *magna charta*, authorizing the interposition of the United States to protect its citizens against any injustice or oppression on the part of the States; while the majority thought that the Thirteenth, Fourteenth, and Fifteenth Amendments ought to be construed together, as part of a general scheme designed to free the negroes and to guarantee them civil and political rights. It must be said, however, that the views of the majority as to the effect of the amendment, consisting of Judges Clifford, Miller, Davis, Strong, and Hunt, were by no means as clearly expressed as those of the minority, consisting of Chief-Justice Chase, Judges Swayne, Field, and Bradley. This was but natural, for the majority did not consider the act of the Louisiana Legislature objectionable in itself as creating a monopoly, and therefore were hardly called upon to discuss the amendment at all.

But, besides this, the complete reorganiza-

tion of the court within the last ten years, through the appointment of new judges, is of itself enough to preclude us from drawing any inferences from the slaughter-house cases. Only three members of the court as it then existed—Judges Field, Bradley, and Miller—are now on the bench. The Chief Justice, and Judges Blatchford, Gray, Harlan, Woods, and Matthews—two-thirds of the court—are recent appointments, and are all Republicans, and none of them are likely to prove very strict constructionists. At the same time, the consequences of a liberal construction of the amendment will necessarily be so far-reaching and comprehensive that there is still likely under any circumstances to be a great diversity of opinion among the judges.

We must confess that we see no escape from the dilemma that, if the amendment has anything to do with the taxing powers of the States, in the sense of preventing injustice and discrimination, it must necessitate the supervision by the Supreme Court of the revenue system of the States to a degree hitherto undreamed of. It is hard to believe that the provision with regard to "due process of law" can be construed to give authority for this purpose, for it is a phrase the meaning of which in constitutional law is well settled. It signifies the established principles of the administration of justice as commonly laid down by the courts—the due course and forms of legal proceedings. The power of taxation is a sovereign and arbitrary power, exercised at the discretion of the State. "Due process of law," so far as taking property under the taxing power is concerned, means one thing in one State, and another in another. If the phrase "equal protection of the laws" means any more, it must mean everything more—in other words, that the test of what is a fair and just system of State taxation is the opinion of the Federal judiciary. We do not say that this may not be the meaning of the Fourteenth Amendment. But if it is, certainly the sooner we know it the better.

A REVIEW OF THE RULES OF PROCEDURE.

LONDON, December 7, 1882.

THE special autumnal sittings of the House of Commons have just come to an end, after having lasted a little more than five weeks. Except for a part of four or five evenings, when other subjects were forced on by the extreme method of moving the adjournment of the House, this period has been exclusively devoted to the consideration of the new Rules of Procedure, brought forward by the Government for the purpose of checking obstruction. This may appear an extravagant length of time to give to a matter which lies in so small a compass, and at any former epoch it would doubtless have been so regarded. Twenty, or even ten, or seven, years ago new methods of procedure would have been debated temperately and without party feeling, and a decision on them, whether wise or not, would have been promptly given. Now, however, the spirit of party runs so high, and the two Oppositions, Tory and Irish, are so much disposed to discover a sinister purpose threatening their own several interests in every proposal of the Government, that people are rather thankful that the subject has been got rid of at all than mortified that it should have consumed so much precious time. Nor is it time only that has been consumed, but strength also. The constitutions of our public men are worked so nearly up to breaking point that a slight additional strain tells severely. The Speaker and the Chairman of Committees have both been unwell. Sir Stafford Northcote and Mr. Childers (Secretary of War) have fairly broken down and been sent off for rest and change of scene. Mr. Gladstone himself felt during the last few days the effect of his constant efforts—for the labor of carrying the procedure resolutions has devolved almost entirely upon him—and has on several evenings either not appeared, or retired earlier than his wont.

Readers on your side of the Atlantic would not be interested by an analysis of the new Code of Procedure which these sittings have produced. Most of the details are unintelligible, even to Englishmen, since they relate to small arbitrary rules governing the conduct of parliamentary business. There are, however, several points of more consequence, on each of which some remarks may be desired by those who understand how important even rules of procedure may be when they regulate an assembly which governs an empire.

The first matter of controversy, and the one which roused most feeling, was the proposal to introduce a means of closing debates and coming to a division. Hitherto no such power has existed. Members might talk on as long as their voices could last, and thus delay a division for weeks, the only restriction being that no member could, except in committee, speak more than once to the same question. The new rule, as carried, differs somewhat from the original proposition of the Government. It provides that the Speaker, when he thinks the House generally desires a division, and when he is himself satisfied that the subject has been adequately discussed, may so inform the House. Thereupon any one may move that the main question be forthwith put; and if a motion to that effect is carried, in a House of a certain size, by a majority of specified numbers, the main question shall be so put. This system leaves the initiative to the Speaker; and the Ministry insisted on his intervention as an important safeguard against any abuse of the power. Others, however, thought that it was an injury to the impartiality of his office to bring him in at all, and maintained that if he did use the power he would incur resentment from those he was the means of silencing; while if he did not use it, things would remain as bad as they have latterly been, and the resolution would have been passed in vain. However, the Government carried their point, as they have been able to carry every point they insist on. Strenuous efforts were made to induce them to accept the vote of a majority of two-thirds, instead of a bare majority; but they stood firm, and were deserted on a division by a comparatively small number of their usual supporters.

When the first resolution, creating the closing power, had been carried, it was supposed that the irritation it had produced among the Conservatives would lead to systematic obstruction, directed by them against the remaining rules. Some attempts of the kind were made by that little group of Tory skirmishers which claims the name of the Fourth Party, and makes up by its activity and the strength of its language for its numerical weakness. However, the attendance of members soon began to slacken, and where there are few to listen, and still fewer to applaud, it is hard to be vivacious, or even pertinacious. Thus, although there was a great deal of minute opposition, it was never really formidable, and at last, almost suddenly, collapsed, everybody having grown too tired of the whole affair to wish to keep up the fight. After the first resolution, the proposal on which the Government laid most stress was the appointment of large standing committees, which were, in the case of measures exciting no party feeling, to be substituted for committees of the whole House, and thereby save its time and enable more business to be despatched. They proposed to try the experiment first with two committees only: the one to undertake legal, and the other commercial bills, and urged that by setting these committees to work at hours when the House was not sitting, several topics of great consequence might be despatched which the House has been unable, for some sessions past, to find time for. There has already, of course, been a practice of referring bills of a technical nature to select committees, consisting usually of from fifteen to twenty-three members, but which might consist of any number; but after such a committee has gone through a bill and reported it to the House, it still has to pass through the Committee of the Whole House, the stage in the progress of a bill which consumes most time. Hence the novelty of the present proposal lay not in the appointment of large committees, but in the dispensing, in the case of bills dealt with by them, with the subsequent Committee of the Whole. There were some obvious objections to this plan, and the Government did not venture to go further than recommend it as an experiment which might fairly be tried, and ought to be tried for one session at least. But the Opposition conceived that by packing these committees the Government might smuggle through measures which they disliked, and were not appeased until Mr. Gladstone, somewhat late in the day, announced that the plan was intended for three bills, all of them long, troublesome, technical, all of them delayed for several years, and anxiously awaited—a reform of the patent law, a new law of bankruptcy, and a consolidation into one statute of the criminal law. These are subjects on which, though there is a great deal of controversy, there are no Liberal or Tory proclivities to warp men's minds; and there will, therefore, be no likelihood of any party quarrels over the composition of the committees. Such committees exist in many other countries, and in some—in France, for instance—the bulk of legislative work is done by them. But there will in England be a greater difficulty in managing them, for many of our most useful members are occupied in their own avocations during the day, and could not give up the hours between 11 A. M. and 4 P. M. to sitting at Westminster, when they might be arguing cases, if they are lawyers, or conducting their business, if merchants. Something, however, must be done to help Parliament to clear off the vast arrears of legislation which have been accumulating since 1876, the year when the bitter party conflicts—first about Eastern affairs, then about Ireland—began to absorb the time of the House of Commons; and Mr. Gladstone has found so much difficulty in inducing the House of Commons to shorten its own discussions, that he is naturally anxious to supplement it by such organs as these committees.

A third point, which was lengthily debated, was the punishment to be meted out to members guilty of obstruction. Hitherto the first offence has been punished by the suspension of one night only. This worked badly, because it often cost the House some time to get the member suspended, and then he, coolly walking out, went home to bed, and came back next day as if nothing had happened. In future the suspended member is to be excluded for a week, with longer periods for the second and third offences. The process is for the Speaker to name the member

to the House, which thereupon votes whether he shall be suspended; and upon this another question arose: whether, when several members have together committed the offence to be punished, they can be jointly named and their suspension voted *en bloc*, or whether the suspension of each one must be voted separately. The former was done in 1881, when the great ejection of Irish members took place, and again last summer, when Dr. Playfair named fifteen as guilty of obstruction. It was felt that this was an undesirable plan, because it may well lead to the punishment of the innocent with the guilty, or else to the escape of the guilty because some innocent man has been among them. Hence it is now to be permitted only in one or two extreme cases, and, as a rule, every member's case will be reported and decided separately.

Lastly must be mentioned the discussion of a curious regulation called the Half-Past Twelve o'Clock Rule, which provides that when any member has given notice of his intention to oppose any motion, or any stage of a bill, that motion or bill cannot be brought on after 12:30 night. This was intended to enable members to go home with an easy mind half an hour after midnight, knowing that no opposed business would then be taken. But its operation has been to delay all business seriously. The bills of private members seldom come on before 12:30, because on Mondays and Thursdays the Government has the whole evening, while on Tuesdays and Fridays motions take precedence of orders of the day, and are usually discussed till late. Hence, any one who wants to stop a private bill has only to put down a notice of opposition to it, and in nine cases out of ten its chance of passing is gone. Even the Government have been considerably worried in this way, one Irish member having made a practice of "blocking" (as it is called) nearly all their bills. But as the Government, when they care about a bill, can secure its coming on before 12:30, the hardship to them is less than to private members, whose right of proposing legislation has by this rule been rendered almost nugatory. They accordingly, or rather a few among them who are anxious to pass their own measures, urged the abolition, or at least the modification, of this rule, insisting that the signature of six or twelve or twenty members should be required to make a notice of opposition valid instead of allowing it to emanate from one member only. Neither the Government, however, nor the House would listen to these complaints, for neither really cares about private members' bills. The Government obtained a slight alteration in the rule, which rendered it less annoying to themselves, but they showed no disposition to aid in any legislation but what they themselves bring forward. The House of Commons at large does not much care about legislation. Most of its members never have brought in a bill, and never mean to do so. They are pretty well satisfied with the world as it is, and doubt if more laws would improve it. They prefer animated party debates, or the process of fencing and sparring between Ministers and those active members of the Opposition who question them, which goes on for an hour and a half every evening, to sitting through debates on such social or economical topics as are generally undertaken by private members. And thus it happens that our legislation is now falling almost entirely into the hands of the Government of the day, which of course takes up only questions as to which a pretty lively interest already exists in the country.

Throughout these autumnal sittings, the attitude of Mr. Parnell and his friends has been quiet and guarded. They brought on one discussion on the state of Ireland, and tried to bring on another, but otherwise they have not interrupted the regular progress of business, nor have they ever obstructed in debate. When it has suited them, they have voted with the Tories; and of course it generally does suit them to oppose the Government. But they have sometimes, as on the question whether debates should be closed by a two-thirds majority or by a bare majority, supported Mr. Gladstone. The dissensions said to have existed among them have produced no open outbreak; Mr. Parnell's authority seems as generally recognized as it has ever been before. There is more disorganization in the Conservative camp, for the more ardent spirits murmur at Sir Stafford Northcote's leadership as far too gentle and decorous, desiring some one who will be always ready to lead them to a charge, however strong the enemy's entrenchments. Yet no one appears qualified to replace Sir Stafford: no one with anything like his ability, his tact, his quickness, his experience; so that one may safely predict that, if his health returns, he will remain for long enough to come at the head of his party. Y.

THE FRENCH FINANCES.

PARIS, December 8, 1882.

THE attention of all the political minds in France is at present completely engrossed by the state of the finances. We have been living, since 1871 and the comparatively easy payment of the heavy ransom of five milliards, in a state of absolute optimism with regard to the financial capacities of the country. Year after year, month after month, the receipts of the treasury were augmented; now the current is suddenly reversed, and we have entered on an era of pessimism. The signal of the change in the state of public opinion was given by the highest authority we have at present in matters of finance, M. Léon Say, the eminent economist, who has held several times since the war the post of Minister of Finance. M. Say belongs to the party which calls itself the Left Centre; he accepted the Republic without much enthusiasm, being one of the followers of M. Thiers. He was Minister of Finance in the late Cabinet of M. de Freycinet, and was almost absolute in his department. Everybody was surprised by an article which he published in November in the *Journal des Économistes*. The economists, who have much regard for M. Léon Say, had been surprised before—namely, when they saw him declare himself, two or three years ago, against the conversion of our five per cents, which were issued at 82 after the war, and which rose steadily to 116. This conversion would make for the state a saving of sixty millions a year. But it is evident that in this case M. Léon Say made a sacrifice to his political friends: the Republicans believe, justly or unjustly, that the conversion of the five per cents would be highly unpopular, and they dare not take the responsibility of such a simple and natural measure.

On the question of the public works, and especially of the railways, the policy of M. Léon Say was also faltering and timid at first. He is an economist, and consequently could not but declare himself against the absurd idea of state management of the railroads. There are in France no perpetual concessions, and the state has reserved for itself, under specified conditions, the right to buy in the lines of the six companies, called the great companies—the East, the North, the West, the Paris-Lyons-Marseilles, the Orléans, and the South. The "rachat," as it is called, has been the great ambition of many politicians, because they belong to the school which would place everything in the hands of the state. This *rachat* could only be approached by degrees. First of all, the state constituted, with some small lines put together, a network of state railroads, administered by officials, and even by Deputies and Senators, chosen by the Minister of Public Works. The incongruity of such a combination was obvious; the administrators, not being appointed by any shareholders, were dependents of the Minister: in the morning they were his administrators, his clerks; in the afternoon, in the Senate or in the Chamber, they became legislators, they became his judges.

The second step was what was called the Freycinet network. This able engineer traced new lines all over France in every direction, and it was decided that they should be constructed by the state. Who should work them after they were constructed? This was left in the dark. The enemies of the great companies prophesied that they would be worked either by the state directly or by new farming companies, who would become the rivals of the old lines. All over France the state engineers began their work. It was expected that four milliards of francs would be spent in the construction of the Freycinet network, but every year the Deputies succeeded in adding new lines to it, in order to please their electors. Every farmer, every important man in a department, asks with the greatest composure for the line which is most convenient for him. The question of the railways is still in suspense; immense works are begun everywhere, and nobody knows what will become of the lines which are in construction in all the departments. The experiment of the "state line" has proved a complete failure. The accounts of this line are difficult to establish, as the accountants do not take into consideration the price paid by the state for the acquisition of the various lines which form this network; they simply compare the working expenses and the receipts, without taking into consideration the interest on the capital or the sinking fund, and, even while they omit these items, they cannot help showing a yearly deficit. The state line does not pay; it has cost already forty millions of francs, and people cannot help asking themselves what would become of the dividends of the existing lines not managed by state officials, if they became the property of the state.

It is, of course, not impossible for the state to manage a railway successfully, as it manages the post or the telegraphs. French functionaries, as a whole, are a very intelligent and a very honest body; but state management is not economical, and the pressure of the yearly dividend is not felt in the working of the state railways. The words of M. Say are very severe: "State management is a disaster." In four years, the net earnings of the lines which form what is called the old *réseau* of the state have diminished by 20 per cent. The proportion of the expenses to the receipts rises yearly: from 78.76 per cent., which it was in 1878, it had risen in 1881 to 84.63 per cent. In three years the operating deficit has been 40,000,000 francs. The taxpayers have borne the expense of this experiment; they are out of pocket a large sum, and are liable to pay every year increasing sums to cover the losses.

It was said at first that the state line would be a model; it is clearly not a model. It was said that it would give tariffs which would serve as an ideal—the French are so fond of equality, that they have been enamored with notions of equal tariffs; they have understood the tariff as something equivalent to taxes. The inventors of formulas have not understood what part tariffs take in the expense of production. Why should the state pay the expenses of transportation any more than any other commercial ex-

penses? The price of most things is formed by the addition of expenses of transportation. A ton of coal has no great value in the mine; it becomes more valuable by being first transported horizontally to the pit, then vertically to the surface, then again by rail to the port, to the city, to the engine. It is a perfect absurdity to ask the state to provide the means of transportation, or railways. The state, in a country conducted on sound economical principles, ought to have nothing whatever to do with the tariffs. Therefore it is idle to represent the state railways as a field of experiment for the application of the best tariffs.

The state, nevertheless, is constructing now, as I have said, an immense network of new lines. These lines are not finished, but already it is known that they will be extremely costly. I hear of some lines in the south where the condemnation of the land alone has cost as much as 300,000 francs per kilometre. The plans of M. de Freycinet involved the expenditure of immense sums. M. Say says that "a year ago the budget for this plan of extraordinary works was steadily on the increase; from four milliards we arrived at six milliards, and the public asked itself if we should not soon attain to seven milliards. During the year spent since these prophecies were made, new accounts have been rendered, and now it is no longer a question of seven milliards, but of eight milliards." And what is there to show for all the expense already incurred? "There are not 100 kilometres finished out of the great scheme voted by the Chambers." Everywhere, to be sure, the works are begun; I have it from a good authority that if the works begun were finished, the expense would be four milliards. In that case, we should have to drop half of the Freycinet plan. What is really begun—the lines which have made condemnations, and works of art—cannot be abandoned; we cannot leave the new lines unfinished.

"Pendent opera interrupta."

With the strictest economy, and even if a Chamber were found ready to abandon for the present all the lines which are not fairly begun, we have to face an extraordinary expense of four milliards—an expense almost as large as the ransom of the late war.

This would not be a very alarming future if the receipts kept on the increase, and if there was a strict economy in all the departments of the state. But economy is not the order of the day; the Chamber has a very laudable desire to improve public instruction, but was it necessary to vote nearly a milliard for the construction of new schools, to build in every village a sort of palace, quite out of proportion with the modest houses of the peasantry? M. Say says boldly that he believes the Government will soon be forced by necessity to interrupt all its works.

"Let us have no illusion; we shall be dragged slowly to the suspension of all our works in our ports, on our railways, in our schools, on our district roads, if we do not take vigorous measures and get out of the confusion in which we have lived for several years. If things go to this extremity, we shall fail in all the promises we have made to the people, and shall compromise—perhaps for a long time—the credit of France. It is really a horrible situation for those who love their country and republican government. It is high time that the Chambers should hear the truth."

This is surely strong language; and M. Say ends by advising the Government to sell the state line on the best possible terms, and to treat with the old companies for the construction and working of the new lines which have been found absolutely necessary. The budget of 1882 has a deficit—not a very high one; but M. Say prophesies that we are entering on a period of deficits. He produces some curious statistics on infractions in respect of indirect contributions (wine, brandy, beer, tobacco, custom-house, etc.). In 1876 there were 13,270 infractions of the privilege of transporting wine (*droit de circulation*); in 1881 there were only 6,138. The licensed wine merchants have free play. In 1876 they were convicted of 17,308 infractions; in 1881, of only 9,134. They have not become less desirous to defraud the Treasury, but the officials are now afraid of them, as they are great electoral agents, and they can complain of an unlucky receiver of indirect taxes to their Senator and their Deputy, and have him changed and sent to the other end of France, under the pretext that the official is not sufficiently devoted to republican institutions. "In reality," says M. Say, "there is no longer any repression, and fraud becomes a common right." It is not possible, with this alarming extension of petty frauds, that the public receipts should keep on the increase; and this increase was a necessary item of our budgets. "There is much to do," says M. Say, "in order to save our budget. The difficulties are political, administrative, and financial. Financially, there is nothing to do but to give to private industry all the railways managed or undertaken by the state; politically, we might stop the evil by adjourning all expensive projects and all propositions to diminish taxes."

THE HAMILTON COLLECTION.

BERLIN, November 25, 1882.

THE purchase of the manuscripts of the Hamilton Collection by the Prussian Government still forms the leading topic among our scholars and artists. The more becomes known of these rich treasures the more gratified are the connoisseurs and will be the scholars of all countries. The whole business of their acquisition was carried on with the utmost secrecy, and only leaked out after the arrival of the manuscripts here. All parties interested acted with a wonderful discretion, and deserve the highest praise. Dr. Lippmann, the director of the engraving department in the Royal Museum, secretly went to London and succeeded in carefully examining the single pieces. Mr. Schoene, the chief councillor of the Minister of Public Instruction, to whose department the decision on artistic and literary purchases belongs, agreed at once with Dr. Lippmann, while Minister Gossler endorsed Mr. Schoene's proposals, and Mr. Scholz, the Finance Minister, without a moment's hesitation, furnished the cash. Last, but not least, the Crown Prince obtained his father's consent to spending so large a sum, which the old gentleman ordinarily does not like to part with for such purposes. Besides being an able and successful general, the Crown Prince is a gentleman of great taste and refinement, who fully appreciated the extraordinary value of the collection, and acted accordingly, for without his good offices the purchase would never have been completed. The price paid amounts in all to $750,000 (3,000,000 marks), of which about one-half will be recovered by the resale of a part of the collection, of no moment for scientific purposes, and by the sale of duplicates of other rare, but not so fine, pieces in our libraries and museums.

It is not from an egoistic national, but from a broader scientific, point of view that Prussia glories in the acquisition of these manuscripts, for they now belong to the scholars of all nations, while, for the last thirty years at least, at a castle on the frontier of England and Scotland, they have been inaccessible to all outsiders. It is, in my opinion, a great boon that so many noble and instructive *chefs d'œuvre* had to be sold by a ducal spendthrift. As the ancestors of the present Hamilton were for centuries patrons of fine arts, it may be deplorable in the interest of the family that the young Duke fritters away by his vices a noble inheritance; but it is much better that the finest specimens of old manuscripts, instead of being locked up or spread over one-half of Europe and America, or of adorning the shelves of a modern parvenu, are kept together in Berlin as an undivided treasure. If Prussia, by buying the Hamilton manuscripts, has outflanked England, as the English papers represent, let her take revenge by acquiring other treasures of art or literature, and let her throw them open to the civilized world.

The collection has for the present been deposited on the third floor of the new museum, where, as far as it was possible in the time allowed me, I have carefully examined it. It will take several months before everything will be put in order for general use. Of the 692 manuscripts which form the stock of the collection, the Occidental ones, with a few exceptions, are written on parchment, but the Oriental ones on palmetto leaves and papyrus, while Turkish and Persian manuscripts have softly-toned paper in red and gold. Above all, I would mention several editions of the Koran with alternating red and gold lines, and a variety of prayer-books of which the binding, the nice little chains and reticules, with the girdles in and on which they were worn, exhibit the most exquisite workmanship. Of the authors of antiquity I found three editions of Horace, among them the splendid Neapolitan copy for Ferdinand I., and four editions of Virgil, all belonging to the fourteenth and fifteenth centuries. Aristotle is represented by several copies written between the thirteenth and fifteenth centuries, while two fine editions of the Justinian Digests are as old as the twelfth century. The richest of all, however, is the clerical literature of the Middle Ages. Among the Biblical copies, the Irish psalter, dating from the middle of the seventh century, is the oldest: it was written by Saint Salaberga for the nuns of her convent. The big initials form the most valuable ornaments of the volume. They represent dragon-heads, and are founded on the old prototypes of Northern wood-cutting. There is another copy of the Gospels, of the seventh century, written on purple parchment with golden letters, and remarkable for its history, for it was a present from Leo X. to Henry VIII. of England, when the latter declared against Luther and obtained as a token of gratitude from the Pope the title of "Defensor fidei." An old Hebrew Bible with rare and remarkable ornaments leads us back to the year 1292. Of English historical works I will only adduce a history of Cnut the Great, written by an Anglo-Saxon in 1036, which, after the death of the King, by order of his widow, Queen Emma, was written for her use, and for centuries had been preserved in the monastery of St. Augustine at Canterbury.

The Italian volumes, which are illustrated under Byzantine influence, form a direct contrast to the above, and offer a very rich store of knowledge for the development of Christian painting. Among the several editions of the Latin Bible, let me call your attention to that written by John of Ravenna in the fourteenth century. The profuseness of artistic motives—of portraits and ornaments—contained in its 279 large compositions and in the numerous initials and borders is unparalleled in a work of that time. The great missal of 1520, owing to the artistic importance of each of its pages, occupies the first rank among the Florentine manuscripts. It is profusely illustrated with ornaments and figures of the Italian Renaissance, and was written by Ludovico Vincentino for the Cardinal Julius Medici, afterward Pope Clement VII. What increases the value of this matchless collection is the vividness of the colors, which have never been renewed. These miniatures are the more

interesting as they were executed at the time when the art was already doomed by the invention of the printing-press. It is as if this noble art, before yielding to a new epoch, strove to show what perfection it could attain. The lower German and Burgundy school and the Augsburg calligraphers, toward the end of the fifteenth century, by works such as the Grimani Breviarium, now in the St. Mark's Library at Venice, or Dietrich Wagner's prayer-books, written for the Emperor Maximilian, and still in the city library of Augsburg, amply corroborate this fact. I can only point out the two gems of the collection. The first is the Beauvais Law-book. It contains the habits, customs, and statutes of the French territory of Beauvais, written in 1283 by the most celebrated French mediæval lawyer, Philip Beaumanoir. It was unknown to Count Beugnot, the last editor of this work, and was, toward the end of the eighteenth century, bought from a French gentleman, M. Bucquet de Brucheux, who had inherited it from the heirs of old Beaumanoir. Being one of the most prominent French illustrated manuscripts of the Middle Ages, it has seventy-one elegantly-finished miniature paintings, which were evidently drawn in the fourteenth century, and, adorning the head of each chapter, are intended to interpret juridical acts and symbolize them. A learned jurist is now comparing this copy with the printed editions of the work, in order to ascertain whether it has any value for comparisons and amendments of the text.

Far above all, however, stands one manuscript, the acquisition of which is sufficient to make an epoch in the history of any museum. It is Dante's 'Divina Comedia,' with not less than eighty-eight drawings by Sandro Botticelli, one of the most remarkable masters of the early Italian Renaissance. The present copy was made in or about the year 1480, and was evidently written for illustration by this artist; sixty-eight folio pages are only written on one side, the other side having been kept open for Botticelli. The parts containing the "Purgatorio" and the "Paradiso" are completed, but some cantos of the "Inferno" are still unfinished. There are two other manuscripts of Dante in the collection, made between 1340 and 1350, which are much more important for the criticism of the poem; but the drawings of Botticelli are a work complete and perfect in itself, unsurpassed by that of any great master of his time. All the drawings are sketched with the pen; some of them are not finished, but fully executed in their outlines, and render all that the artist aimed at with consummate beauty and efficacy. One single leaf is executed in colors—whether by the master himself or by one of his successors, I cannot decide. The book is quite fresh; all the sixty-eight drawings are in the best state of preservation. It alone is worth the money paid for the whole collection. A single leaf from Botticelli's hand would have been a treasure, but the complete work can hardly be valued. Its acquisition is a national conquest much better for ourselves and humanity than a victory in the field.

We Germans have the ambition to make Berlin one of the leading centres of liberal arts, science, and scholarship. For the attainment of this end very large sums are necessary, but they will be spent most cheerfully. Having succeeded in securing the Pergamon marbles, having paid the necessary funds for the excavations in Olympia, made under the direction of our best scholars and antiquarians, and having purchased the Hamilton manuscripts, we all know that this is only the beginning. May the future be as propitious in this respect as the past has been!

Correspondence.

SOUTHERN HOMICIDE.

To the Editor of The Nation:

Sir: You will observe that Redfield's statistics are "assailed" in the November number of the *Deutsche Rundschau*, in an article entitled "Individualismus in den Vereinigten Staaten." The author has evidently given the subject considerable thought, and these few pages might be read with profit by a large class of intelligent people whose opinions have been formed from the sensational reports of partisan journals. Is not moderation in judgment resulting from freedom from prejudice one of the essentials of the highest civilization? W.

Texarkana, Texas, December 16, 1882.

[We have read the article in the *Rundschau*. The writer of it wholly errs in ascribing anti-Southern feelings to the late Mr. Redfield, and the only point of any consequence he makes against his book does not touch the essential facts which Mr. Redfield gathered with so much labor and presented with so much force. We are persuaded that the circulation of his book at the South as a tract would be productive of enormous good.—Ed. Nation.]

COL. BYRD, OF VIRGINIA.

To the Editor of The Nation:

Sir: In your last issue, of December 14, containing the article on "The Dismal Swamp," occurs the following sentence: "It was a certain Col. Byrd, it seems, to whom was assigned the task of running a survey," etc.

It would appear from this that the writer of the article was not aware of the fact that Col. Byrd was one of the most prominent and distinguished among the colonial gentry of Virginia. The book known as 'Byrd's Survey' is one of the wittiest and raciest of the colonial writings. Prof. Tyler, in his 'History of American Literature,' says:

"Perhaps the most accomplished and the wittiest Virginian of the colonial time was William Byrd, of Westover, a man of princely fortune and princely ways. Educated in England, he was called to the bar in the Middle Temple, studied in the Low Countries, visited the Court of France, and was Fellow of the Royal Society. In England he had the acquaintance of many of the first persons of the age for knowledge, wit, virtue, and high station. Returning to his native land, he entered upon a long career of public and private usefulness. He was receiver-general of the King's revenues, for thirty-seven years member of the Council, and at last its President. His course in private life was brilliant and attractive. On his estate at Westover he lived in great magnificence. He was a student of science, a man of wit, of letters, of elegant tastes, and had the best library in that part of America."

William Byrd kept a journal of his 'Survey,' which, after lying in manuscript for a century, was first published in 1841, under the title, 'The History of the Dividing Line.' Of this little book Tyler says: "It is almost unique in our colonial age; one of the most delightful of the literary legacies which that age has handed down to ours."

The late John R. Thompson thus writes:

"I carried no letter of introduction to Macaulay. Some months before, I had sent him a copy of the Westover MSS. of Col. Wm. Byrd. On receiving my card he bade the servant show me to his sitting-room. I was greeted with a kindly shake of his hand, and with thanks for the volume. He said he had derived great delight from the narrative and the pictures it presented of society in Virginia one hundred and twenty years ago. He commended the style as conformed to the best English standards."

A complete edition of Byrd's writings was published in 1866, edited by T. H. Wynne.

Augusta, Ky., Dec. 18, 1882.

THE NATURAL METHOD OF TEACHING LATIN.

To the Editor of The Nation:

Sir: Will you allow me a brief space in your columns for a statement of what we are attempting to do towards instituting a reform in the method of teaching Latin?

I took charge of this institution in September, 1881. The first year I devoted attention to remodelling the work in the training school, and to improving the methods of teaching geography and the English language.

My own unsatisfactory experience in college and a good many years of observation had led me to feel that the ordinary way of teaching Latin and Greek is very unsatisfactory. It is drudging for the teacher, a burden to the student, and yields no results commensurate with the expenditure of time and strength given to it. These facts have been a terrible weapon in the hands of those who have been attempting to supplant the classics by the sciences or by modern languages. By the terms of the contract establishing this normal school, an academic department is to be maintained and boys and girls are to be fitted for college. I am constantly in receipt of applications for teachers who are competent to take charge of union or graded schools, and to teach Latin and Greek. These considerations led me, when a vacancy occurred in the chair of ancient languages, to seek for a teacher fitted to introduce into teaching the ancient languages something of the same spirit of life, enthusiasm, progress that characterizes our teachers in other departments (no word of English is spoken in our class-rooms where French and German are taught).

Prof. E. S. Shumway, A.M., Amherst, who had been teaching Latin with rare success, was invited to take up the work. He entered upon his duties here in September with three classes composed of those who had begun their work under his predecessor, and two classes of about thirty each, of beginners. The first class is composed of boys and girls of from ten to fourteen years of age. In this class no book is used. Constant appeal is made to the eye. Objects, pictures, maps, etc., are exhibited and talked about (in Latin) until the children learn to associate the Latin name with the object as readily as they do English words. Questions are asked and responses given in Latin. Usually little or no English is used by teacher or pupils. The ear as well as the eye is thus trained, and a nicety in pronunciation is secured. The colloquial feature is made so prominent that all must be on the alert, and thus attention is secured. It is quite noticeable with what interest the children take part in the recitation. They are taught fables, which they thoroughly memorize and recite until they become as familiar as a, b, c. These are made the basis of questions, which at first are so formed as to admit of answers in the exact words of the text. After this the questions require answers involving the use of words in new relations, and thus the children become acquainted with inflection and other grammatical points. This way of teaching grammar by leading pupils to observe the necessary changes words undergo in actual use is one of the distinctive features of the method.

The other class of beginners is composed of older pupils, ranging from sixteen to twenty-five years of age. They begin by committing to

memory portions of the first book of Cæsar. This they recite and use as the little ones do the fables and easy Roman history. The meaning of new words is explained to them in Latin by their derivation, or by synonyms or opposites, or by explanations, so that the student is compelled to think in Latin. The exercise in forming answers, at first very simple, soon grows into exercises in prose composition, with this important point in its favor, that the student is talking of that which he knows something about and in which he is very deeply interested, and his language is modelled after the Latin of Cæsar. A series of questions is given to which written answers are required, and simple English sentences based on the Latin text are given which are to be turned into Latin. As soon as the student has progressed far enough to feel the need of it and to be able to do it, he is set to work scheduling the nouns and verbs with which use has made him familiar. Points of syntax and the law of arrangement come into view naturally. As soon as he is prepared for it the student is set to reading at sight easy portions of Cæsar, the difficult places being omitted from the first reading.

These are the essential features of the method. It will be seen that the plan is not wholly novel. Many of its points have been insisted upon by the great educational reformers of the past. It is in some respects the same plan which is employed in teaching modern languages, and in teaching Latin in the various so-called summer schools. It has, however, features of its own, and, so far as I know, this method is not employed anywhere else in this country. It is attracting a great deal of attention. Commendatory letters have been received from many of our most eminent educators. "The Latin Chain"—composed of teachers of Latin in colleges, academies, and normal schools in more than half the States of the Union—comprises many wide-awake, progressive men and women who only want a leader in a great reform. *Latine*, a monthly journal in Latin, is furnished to members of the Chain, and aims to give practical help and suggestions to those who are interested in this method.

This is not a money-making scheme, but is an honest endeavor to make this school helpful in the great work of improving our methods of teaching. Very respectfully,

T. J. Morgan.

Potsdam, N. Y., December 1, 1882.

Notes.

Funk & Wagnalls have arranged with Cassell & Co. to issue from their imported plates a very cheap edition of Canon Farrar's new work, 'The Early Days of Christianity.' There will be no abridgment of the original.

Chatto & Windus, London, have in preparation 'The New Southwest: Travelling Sketches from Kansas, New Mexico, Arizona, and Northern Mexico,' by Ernst von Hesse-Wartegg. It will contain one hundred illustrations and three maps.

We learn from the Boston *Christian Register* that the Rev. James Freeman Clarke intends giving a number of week-day evening talks on "The Anti-Slavery Conflict in the United States." The course will not be free, but the proceeds will be used to meet the expenses of the Sunday-school of the Church of the Disciples. In time these lectures, we suppose, will find their way into print as a book.

The "interview" in which Mr. Herbert Spencer summed up his impressions of this country, and the proceedings at the farewell banquet in his honor, have been printed in pamphlet form by D. Appleton & Co., under the title 'Herbert Spencer on the Americans.'

Harper & Bros. have brought out Blackmore's 'Lorna Doone' in their two-column Franklin Square Library series.

Mr. Robert Grant's metrical "tragedy," 'The Lambs,' which, we believe, first appeared in the *Century*, has been made into a book with paper covers, illustrated, and handsomely printed (Osgood). The lambs themselves can hardly afford to buy it, though it is written for their good. The bulls and bears of our exchanges will therefore have their own way, as usual.

One of the most acceptable books of the season is 'Epics and Romances of the Middle Ages' (Lippincott), "adapted from the work of Dr. W. Wägner by W. W. Macdowell, and edited by W. S. W. Anson." It is a thick octavo of nearly five hundred pages, copiously illustrated, and consists of three parts. The first is "the Amelung and kindred legends," including Dietrich, of Bern. Part II. is the Nibelung group, including Beowulf; Part III., the Carolingian legends—those of King Arthur and Tannhäuser. It would have been well, we think, considering that this is at any rate only a selection, to omit the Arthurian legends, which have been made so familiar of late. The Nibelung song is not so well known but that we are grateful for this part of the work, but it is a real acquisition to have such stories as those of Dietrich and Roland in so convenient and satisfactory a form.

Two new volumes have been added to the "Young Folks' History" series (Estes & Lauriat): 'Mexico,' by Frederick A. Ober, and an abridgment of Mrs. Strickland's 'Queens of England,' by Rosalie Kaufmann. Both are decided acquisitions. We do not know of any other accessible history of Mexico from the earliest times to the present, and Mr. Ober has done his work with great industry and thoroughness. The 'Queens of England,' too, though very agreeable reading, is too voluminous in its entirety, and this abridgment appears to have been made with excellent judgment. Both volumes are copiously illustrated, but with illustrations of very varying merit. The history of Mexico contains numerous good representations of Mexican monuments and antiquities.

Mr. Rossiter Johnson's 'History of the French War ending in the Conquest of Canada' (Dodd, Mead & Co.) is hardly to be reckoned a juvenile so much as a brief popular history of the series of events which led to the acquisition of Canada. It covers the whole history of that colony and of the French in America down to the treaty of peace in 1763. It is illustrated with half-a-dozen double-page woodcuts of high merit. This will be found a very serviceable book for those who wish for a short connected account of the relations between the French and the English colonies.

Marcus Ward & Co., 734 Broadway, send us two of their ornamented calendars for 1883—'Day unto Day,' the daily date block containing selections from the Scriptures; and the 'Shakspere Calendar,' correspondingly equipped. Other reminders of the season and of the new year come to us from Raphael Tuck & Sons, London, through their agents, the Forbes Company, Boston. These are illuminated Christmas and New Year's cards, called of the 'Royal Academy,' with reference to the designers of them. The style of a few is sufficiently individual to be noticeable as uncommon, but neither the fancy nor the art is of a very high order.

Vol. viii. of the Proceedings of the Naval Institute at Annapolis contains at least two interesting articles, one, by Lieut. J. B. Murdock, U. S. N., on "The Naval Use of the Dynamo Machine and Electric Light"; the other, by Lieut. W. H. Jaques, U. S. N., on "The Fryer Buoyant Propeller," an amphibious vessel which crawls upon the land or rolls through the sea, the body being entirely lifted above the waves. Diagrams accompany both these articles.

With the December number the *Bibliographer* (London: Elliot Stock; New York: J. W. Bouton) begins its second year and third volume. Mr. Wheatley and his assistants have made a very interesting publication, for which a long life is doubtless in store. It is very neatly printed, but just falls short of being a thing of beauty typographically. The current number corrects Franklin's autobiography by showing that while at the case in London, in 1724–25, he worked not upon the second but the third edition of Wollaston's 'Religion of Nature,' copies of which are common enough.

Our occasional London correspondent, Mr. Albert V. Dicey, has just been appointed Vinerian Professor of English Law, at Oxford.

Apparently it pays to sell libraries at auction rather than at private sale. We mentioned not long since the offer of the Sunderland collection (which has already brought over £46,000) to an American library for £25,000. We have since heard that Quaritch offered £18,000 for it before the sale. He must have already paid almost as much for what he has taken. The O'Callaghan library, sold in this city a fortnight since, was refused by Columbia College at $7,500, and brought over $12,000. The sale of the second portion of the Beckford Library, by the way, was concluded in London on Saturday last.

From J. Rothschild, Paris, we have received Charles Yriarte's 'Un Condottiere au XVe Siècle—Rimini,' which was reviewed at length in our Paris letter last February. It is a beautiful book, rich in some two hundred illustrations, quite equalling in interest those of the same author's 'Venice.' The name of Rimini, says M. Yriarte, "recalls to the majority only a woman's frailty, a husband's fury, and a few verses of an immortal song." He briefly relates the story of Francesca da Rimini in his second chapter, reserving fuller treatment for a separate work, 'Françoise de Rimini dans la légende et dans l'histoire,' which has also been published by M. Rothschild, and of which we shall give some account hereafter.

Mr. S. L. Fleishman, who, in his 'Prose Miscellanies from Heinrich Heine,' had proved his ability to translate into English one of the most untranslatable of German writers, has now published a version of 'The Romantic School' (Henry Holt & Co.). The volume contains, in addition, 'The Suabian Mirror' and the 'Introduction to Don Quixote'—the former a fitting complement to the 'Romantic School,' though not written for the delectation of the French; the latter unquestionably the greatest prefatory luxury which any *édition de luxe* ever offered. Heine will never appear natural in an English garb. He was the most sentimental of Germans in his moods, and the most brilliant of Frenchmen in *esprit*, and thoroughly anti-British in his prejudices. Still, much of his wit and grace is retained in this translation, which is generally smooth and idiomatic. Careful proof-reading, however, would have detected some inelegances and Germanisms, not to speak of the numerous typographical errors, such as "Wittemburg" (p. 19), "Hamelin" (p. 37), "Henirich" (p. 42), "Barnhagen" (p. 66), "Phédra" (p. 90), "at Würtemburg" (p. 130), etc., etc.

According to *Das Magazin*, the "French officer" whose 'Dies Iræ' we briefly mentioned last week, is a young German author, Karl Bleibtreu—a singular name to be associated with such a personification.

B. Westermann & Co. have received Parts 57-60 of the chromo edition of Brehm's 'Thierle-

ben,' which conclude with the Mammals the first volume of this standard natural history. Besides the regular colored plates and the interspersed woodcuts, there is a figured title-page and a full-page portrait of Brehm himself, his gun at his side and note-book in hand. An index completes this portion of the work.

The same firm also send us Parts 7–11 of H. Düntzer's illustrated edition of Goethe's Works (Stuttgart: Deutsche Verlags-Anstalt), breaking off amid the "West-östlicher Divan." And while this popular publication is so near its beginning, there comes to hand the long-anticipated second edition of Hempel's pioneer critical text of Goethe's works (Berlin: Gustav Hempel; New York: Westermann). No longer of pocket size, it appears as a broad duodecimo, with clear print, wide margins, and numbered lines, being uniform in these respects with the Hempel 'Faust' of 1879. The revision has been intrusted to that eminent Goethe scholar, Dr. G. von Loeper. In his introduction he explains the arrangement he has adopted for the poems, and otherwise makes known his aim to prepare an edition not scientific, but for the general use of cultivated readers. The notes (*Anmerkungen*) are placed at the end, and contain bibliographical information in regard to the first appearance of the poems, the circumstances that gave rise to them, their various readings, the music composed for them, etc., with a fulness and learning which give a biographic-psychologic character to this edition. Combined with the foregoing is a commentary for the obscurer or more interesting passages. The notes fill the better half of the first part of vol. i. The purchaser of this Loeper-Hempel edition of Goethe will have the most scholarly and accurate yet produced.

The pretended daughter of Alfred de Musset, who bore the anagrammatic name of Norma Tessum-Onda (Dona Musset), and died near Rochelle not long ago, is said now to have been one Joséphine Ménard, who had still another alias—Norma d'Estève de Visconti. The *Bulletin* of the Société des Archives Historiques de la Saintonge et de l'Aunis makes this correction, and adds that the young person in question "était en relations" with Henri Rochefort.

'Le Scandale d'Hier' is the title given to a pretty little pamphlet (Paris: Brunot; New York: F. W. Christern), reproducing the documents in the recent squabble between the *Figaro* and the actors of Paris. The whole affair was highly characteristic, and the pamphlet deserves a place in the collection of every student of Parisian psychology. The *Figaro* article was both brutal in expression and commonplace in theme, and it did not deserve the very keen and clever answer made by M. Coquelin in a letter to the *Temps*, reprinted in this volume. A peculiarity of the make-up of the pamphlet merits notice: it is a "double-ender"—that is to say, the *Figaro* article, with its title-page, is at one end, and the Coquelin letter, with its title-page, but upside down, is at the other.

'Les Célébrités Contemporaines' is M. Quantin's latest venture. It is to be a series of brief biographies of French notabilities published at short intervals, each sketch being accompanied by an etched portrait and a facsimile of the celebrity's signature. The fact that nine of the first twenty notabilities are dramatists shows the importance of the theatre to-day in France. These dramatists are to be touched off by M. Jules Claretie, except M. Zola, who is sketched by his disciple M. Guy de Maupassant, and M. Claretie himself, who falls to the hand of Mme. de Cherville.

—The death of Colonel Chester must have seemed to many American genealogical investigators fatal to their hopes of tracing English connections. But before that untiring searcher passed away, a little volume, published at Salem, Mass., called 'Gleanings from English Records about New England Families,' showed that capable successors could be found. It now appears that they can also be had. At least, of the two compilers of the 'Gleanings,' Messrs. James A. Emmerton and Henry Fitzgilbert Waters, Mr. Waters is ready to continue as a steady avocation what was in 1879 but a holiday pastime, yet a most fruitful one (see the *Nation* for September 30, 1880). The Directors of the New England Historic-Genealogical Society announce that they are ready to begin and maintain, through Mr. Waters, "a thorough and systematic search of the English records for everything which relates to the family history of the first settlers of this country." They add that "a thorough knowledge of the genealogies of New England families, and great experience in making such investigations on both sides of the ocean, are prerequisites," and justly assert that Mr. Waters is preëminently qualified for the work in both these respects. The results of his investigations will be published in the Society's *Register*, or separately; and as they will be impartial and general in their bearing, the number of families interested in this enterprise and likely to profit by it is very great. The Society, therefore, asks for public contributions to a fund in support of it. They may be sent to the librarian, Mr. John Ward Dean, 18 Somerset Street, Boston. We hope the response may be speedy and liberal; no more interesting historical mission has ever been instituted in this country. Mr. Waters will occupy the position of counsel whose services are retained by the Society, while he is at liberty to give some portion of his time to private clients—in this latter particular exactly replacing Colonel Chester.

—The valuable Shakspere library collected by Col. E. H. Thomson, of Flint, Michigan, has recently been purchased for the State University, at Ann Arbor. Mr. Thomson has been engaged in collecting this library for more than thirty years; and, during two periods of residence in London, he was able to take advantage of unusually favorable opportunities for adding to its extent and its value. The library contains nearly five hundred volumes of texts of Shakspere, and about two hundred volumes of Shaksperiana, besides fifty other volumes relating to the English drama in general. The volumes are all bound, many of them in half calf or half morocco, and some in full calf. The earlier folio editions and the quartos are lacking; but, beginning with the fourth folio (1685), all the more important editions down to the present time are included. The texts comprise, among others, the following: Theobald's (1733), seven volumes; Hanmer's quarto (1744), six volumes; Johnson's first and second editions (1765-68), eight volumes each; Capell's (1767), ten volumes; Bell's (1774), nine volumes, and (1788) twenty volumes; Rann's (1786), six volumes; Johnson's and Steevens's (1793), fifteen volumes; Malone's (1794), sixteen volumes; Boydell-Steevens's (1802-3), atlas folio, nine volumes; Manley Wood's (1806), fourteen volumes; Heath's quarto (1807), six volumes; Reed's variorum (1813), twenty-one volumes; Pickering's diamond edition (1825), nine volumes; Knight's pictorial (early copy), eight volumes; Verplanck's (1847), three volumes; Dyce's first and second editions (1857-66), fifteen volumes; Chambers's (1861), ten volumes; White's (1863), twelve volumes; Cowden Clarke's (1864), four volumes; Le Tourneur (Paris, 1776-81), twenty volumes. Of the Shaksperiana the following are more especially worthy of mention: Kemble's 'Macbeth Reconsidered,' with Kemble's autograph; Ireland's Forgeries, original atlas folio; Howard's 'Spirit of Shakespeare's Plays' (1833), five volumes; an elegant set, full and complete, of the Shakespeare Society Publications (1841-53); the Boydell Plates, elephant folio (Philadelphia, 1852). The exact amount paid Mr. Thomson for the library has not been made public; but it is known that Mr. James McMillan, of Detroit, gave to the University the sum of $5,000 with which to make the purchase, and that a part of this sum still remains to be used in supplying, as far as possible, what is still needed to make the library complete in all that pertains to Shakspere and Shakspere's works. This munificent gift from Mr. McMillan is one sign, it is to be hoped, of an increasing disposition among men of wealth to regard educational institutions that are supported largely at public expense as proper recipients of private bounty. And it may be added here, that during the past year the library of the University of Michigan received large gifts of works on international law, classical literature, and philology, from Mr. Philo Parsons, of Detroit, and of mathematical works from Mr. E. C. Hegeler, of La Salle, Ill. Mr. George C. Mahon, of Ann Arbor, has also presented a full set of the proceedings and transactions of the Royal Irish Academy.

—We have received the following communication:

"I trust the late painful information the *Nation* has been giving us on Southern homicides may have a good effect. Facts seem to be on the *Nation's* side, but I think the inference pushed too far when it is made to explain the absence of emigration to the South and of capital invested there. Our own men, brought up on the shotgun system, are going to greener pastures in the West; and until the virgin soil of that region is reduced to the unproductive condition of our own, the tide of emigration must continue to flow there."

—A Southern clergyman, writing us upon another subject, subjoins the following postscript:

"Let me add: What you say about shooting at the South is all *true*. Born and bred in the South, and intensely a Southerner, having lived among *gentlemen* and plain people, and having had charges in different States at the South, I *know* that what you say is *true*. Our conduct in this matter is a disgrace to our civilization."

—The *Atlantic* for January opens with the first part of a dramatic sketch by Longfellow, called "Michael Angelo," in which Vittoria Colonna appears as one of the *dramatis personæ*. The dramatic faculty was never very vivid in Mr. Longfellow, and his characters can hardly be said to live again in his lines. They think, act, and speak with the voice of the author of the "Psalm of Life," and it is almost possible here and there to doubt whether the scene is laid in Italy or in Cambridge, Mass. No poet can resist writing dramas, no matter how little dramatic his genius, and, where so many brilliant minds have failed, it would be hypercritical to say that the attempt should not have been made. Hawthorne reappears, posthumously also, with another instalment of the "Ancestral Footstep," while Dr. Holmes, whose prose contributions have been recently as rare as if he were unwilling to let the public enjoy his survivorship of the old *Atlantic* generation, has "an after-breakfast talk" in which he gives some good advice to that large and importunate class which pesters authors for interviews and autographs. Mr. Whittier has a poem too, while, of the younger race of contributors, Mr. Harrison continues his "Studies in the South," and "H. H." writes in her chatty, feminine way (her way, that is, when she writes prose) of "Chance Days in Oregon." Mr. Harrison gives an entertaining account of an interview with an "outrage" manufacturer in Mis-

sissippi. He was led to make the visit through hearing from Northern men, with regard to a horrible tale of wrong sent to the Northern press during the Hayes campaign, that there was no foundation for it in fact. The author of the despatch, on being asked whether it was true, laughed, and declared that it was "true as to the spirit of the South generally at that time."

"'But why did you say that such and such things happened at a particular place, if they did not?' 'Well, now, you know, it would not be worth while to say, at such a time, that there was lots o' devilish feeling in the South. But it rather wakes people up to tell them that something's been done at a place that they 've heard of.' 'Yet it was not true.' But he thought the use of a fable or parable was justifiable, under the circumstances, because it was the only way to give point or effectiveness to any account of the condition of the South at that time. 'All writers does pretty much the same thing,' he urged; 'they have to.'"

He showed no embarrassment in talking of the affair, and seemed greatly pleased with the recollections it afforded him.

—A look into "Hawthorne's Workshop" in the *Century* contains a number of preliminary notes and studies for "Dr. Grimshawe's Secret," placed in the hands of the editor of the magazine by Mr. Julian Hawthorne. As a literary curiosity these notes, together with those published in the *Atlantic*, occupy a very high rank. They constitute "a full and clear recipe for making a Hawthorne romance"—though one, we may add, which no plagiarist will ever be able to put to use. If we did not know the notes to be authentic, we should suspect them of being a gigantic Hawthornian hoax or burlesque. This is the way, for instance, that he works up one of the characters:

"Something monstrous he must be, yet within nature and romantic probability—hard conditions! A murderer—'twon't do at all. A Mahometan—pish! If I could only hit right here, he would be the centre of interest. . . . What natural horror is there? A monkey? A Frankenstein? A man of straw? A man without a heart, made by machinery?—one who has to wind himself in order to go through the day? Wicked as he must be, there shall still be relations between him and the pauper saint. What? Shall there be an influence in the house which is said to make everybody wicked who inherits it? Nonsense! Remorse it must not be. A resurrection-man? What? what? what? A worshipper of the sun? A cannibal? a ghoul? a vampire? a man who lives by sucking the blood of the young and beautiful? He has something to do with the old Doctor's spider-theory; the great spider has got him into his web. The Doctor, before he left England, had contrived a plot of which this man is the victim. How? He has been poisoned by a Bologna sausage, and is being gnawed away by an atom at a time. He shall need a young life every five years to renew his own, and he shall have fixed upon Elsie for his next victim. Now for it! How? At any rate, he must have dreadful designs on Elsie—dreadful! dreadful! dreadful! May it not be that the revenge of the Doctor has fallen on him? No, no! Let the real difference between him and other people be very small, but pile up upon it! Ye heavens! A man with a mortal disease?—a leprosy?—a eunuch?—a cork leg?—a golden touch?—a dead hand?—a false nose?—a glass eye? The rumors of his devilish attributes may be very great; but the circumstance itself may be comparatively trifling. Some damn'd thing is the matter."

This brings us certainly much nearer the original processes of Hawthorne's mind than we ever before have got. It would be more valuable, from an artistic point of view, if "Dr. Grimshawe's Secret" had ever been artistically completed. As it is, we see the block in the rough, but the final shape which the artist would have given it we do not know. People who are fond of tracing literary relationships may possibly find in these raw notes something which makes the connection between Hawthorne's mind and that of his son plainer than it has hitherto been. The principal illustrated articles are "Hydraulic Mining in California," by Taliesin Evans, and "The Planting of New England," by Edward Eggleston. Mr. Alfred R. Wallace, a most competent critic, writes on "The Debt of Science to Darwin," the frontispiece of the magazine being an excellent portrait from a photograph by his son, Lieutenant Leonard Darwin.

—*Harper's* for January opens with "Artist Strolls in Holland," by George H. Boughton, the illustrations, by Messrs. Boughton and Abbey, being unusually good. The return of Christmas gives Mr. J. T. Trowbridge an opportunity to teach, in characteristic verse, the duty of the rich toward the poor. Mr. Higginson has an historical article on "Old English Seamen," in which he gives some account of the exploits of Drake and Hawkins. Mr. Higginson's style is simple and natural, but his task being to describe the adventures and exploits of men who were half buccaneers, he is not at his best, for he has small sympathy with the savage instincts of the race which still lead it to make heroes of men of blood and iron, rather than of those who advance the arts of peace. Mr. Higginson is evidently puzzled, as Mr. Ruskin is, to account for the admiration that the mere destruction of life and property excites in the midst of a society which is devoted to the arts of peace, and whose first aim seems ordinarily to be the relief rather than the infliction of pain. Charles Reade contributes a literary curiosity, in the shape of a Russian love story. How far "Tit for Tat" is genuinely Russian we will not undertake to say; its authorship could hardly be mistaken, even if it were published in patristic Greek. It is not a very interesting or probable tale. Mr. Curtis discusses Mr. Herbert Spencer's remarks on American civilization, in his usual pleasant vein, in the "Easy Chair," and again introduces "Americus" as objecting to being "lectured" by English observers, however wise and good. Suppose, he says, testily, "that some American guest in England should say to his hosts that he wanted to give them some good advice, and point out to them a few of their defects, and then proceed to pat them on the head with patronizing praise, don't you think there would be a storm?" But Mr. Curtis reminds Americus that we are always asking them "how they like us?" and cannot therefore very well object to their telling us. Much of the criticism, however, is due to the fact that, until within the last ten years, each country has been a stranger to the other, and the process of cementing an international acquaintance and friendship has been full of surprises on both sides. Now that these have worn off, and we have become really familiar with each other's virtues, vices, faults, and foibles, there is getting to be less and less to say about each other, and, as a matter of fact, most of Mr. Spencer's criticism is far from new. The time will probably soon come when the English passion for analyzing the defects of American civilization, as differing from their own, will die out, because everybody will know all that is to be said on the subject.

—An article on church music in *Lippincott's*, by Mr. William F. Biddle, opens with the cautious suggestion that it may be "taken for granted that church music is meant to aid in awakening and expressing devotional feeling in the congregation," and from this Mr. Biddle safely infers that "the presence or absence in music of anything which, when performed, draws attention to the mere performance, is one of the factors governing the absence or presence of religious character in music." But the difficulty of this rule lies in the application of it, and Mr. Biddle would, if we understand him rightly, put it to a somewhat original use in "expurgating" the works of acknowledged masters—Handel, for instance—so as to get out of them what he calls their "absurdities," and leave in them all their really devotional character. No one objects, he says, to expurgated editions of Boccaccio, Chaucer, and Rabelais, so long as their beauties are preserved—an argument which, besides being irrelevant, seems to show that Mr. Biddle is not familiar with the position of modern criticism on the subject of expurgation. The great difficulty in rewriting Handel would be that it would be impossible to reach a common agreement as to the principles on which he ought to be rewritten, or as to what are the "absurdities" that ought to be eliminated, and this Mr. Biddle seems to concede. His rule, however, might safely be observed in the composition of church music, and, in fact, in a modified form, would probably apply to all kinds of art used in aid of religion.

—The *North American* for January contains an article by Mr. Gilbert M. Tucker, in defence of "American English" against the aspersions of Mr. Fitzedward Hall. Mr. Hall, it seems, said not long since in the *Nineteenth Century*—in explanation of what he considered to be the degeneracy of the language as it appeared in the letters of Mr. William Cullen Bryant—that he, Mr. Bryant, lived "among a people among whom our language is daily becoming more and more depraved." This statement in Mr. Tucker's ears is much as if one should say of Shakspere that he wrote bad plays because he lived among a people with whom the drama was going to the dogs; but he philosophically declares that it is not surprising when we reflect that Mr. Hall is "one of those extraordinary Americans of the Henry James, jr., stripe, who seem to regard it rather as matter of regret than otherwise that they were not born in Europe." Mr. Tucker maintains that, on the whole, the language is preserved in greater purity in this country than in England; and if he does not make this out to a certainty, he makes it very clear, at least, that the English themselves are busily engaged in corrupting and depraving the poor old common tongue on their own side. One cause which, we fancy, always makes for the preservation of good English in this country is the extraordinary sensitiveness of the average American as to solecisms in grammar, spelling, or pronunciation. In no country in the world, probably, are there so many dictionaries to the square mile, and such constant consultation of them, and such faith in them when appealed to against tradition or common local use. In this, as in other respects, an American is apt to be more conscious of what he is doing than an Englishman, who talks merely the language to which he has been accustomed from infancy without thinking of it as either right or wrong. The English, for instance, who drop and multiply their h's, or transpose their v's and w's, do it almost by nature. Here the habit is unknown; early education prevents it from growing up. Any American boy in a public school would recognize either trick as a mark of vulgarity or ignorance, much as an English gentleman or lady would. But in this question, as in so many other points at issue between the two countries, the matter is confused by the different structure of society. There is undoubtedly a larger highly educated class in England than in the United States. There are greater numbers of people whom Matthew Arnold would not call Philistines. On the other hand, there is in this country a much larger class of persons of average education. The type of the

"general reader," of whom, according to Mr. Freeman, every American editor stands in such awe, is much more common. Add to this that by the use of slang the highly educated class in England does more to deprave the language in a year than the "general reader" in this country does in ten, and it is evident that the question as to which of the two branches of the race is doing most harm to the common tongue is very complicated and difficult to determine.

—Mr. Henry James, who died in Boston on December 18, had led so retired a life for the last twenty years, and the religious philosophy of which he was the exponent was so recondite, that probably but few of the younger generation know what a striking personality he was, and what wonderful command of English he possessed. Twenty-five years ago, when he lived in New York, and took, if not an active, a sufficiently conspicuous part in the discussions then current on the various social topics of the day, the vigor and originality of his writing made one of the great treats furnished by the newspapers and periodicals. No one who has never read his side of a controversy on a subject which roused him can have an adequate idea of the picturesque vigor of his style. It was full, too, of the most delightful surprises in the way of combination and arrangement, without ever being vague or obscure. A discussion of his with Horace Greeley in the columns of the *Tribune*, about 1859, on the marriage question, apropos of the Sickles case, was a rich entertainment for those who could enjoy masterly declamation, even if they by no means shared his somewhat mystical views of the relation of husband and wife. His books reached but a small audience, and his philosophy might perhaps be best described by calling it eclectic. It had in it a little of the good of all systems and all religions, though Swedenborgian in some of its main features; but it was not a philosophy which any one but the Master could expound, and his diction was not altogether well adapted to be the medium of philosophic teaching. It was more remarkable for force and lucidity than for subtlety, and it had a power and swing which overawed the reader rather than persuaded him. Mr. James, nevertheless, had disciples all over the country. Every State contained some for whom he had solved the problem, or who believed he could solve it, and who looked to him for counsel or elucidation. To such he was an unwearied adviser, whose patience and sympathy were never exhausted. The smallness of the public, too, which read his books never discouraged him. His literary industry was independent of sales, because constant expression was necessary to his mental comfort, and a private fortune made him indifferent to publishers' accounts. Nothing which could be got from his writings, however, gave any adequate idea of the man who stood behind them. His humor was rich and perennial, and his remarkable powers of expression were never so well displayed as in giving vent to it in conversation. There were touches of the grotesque, in his comments on men and events, which gave one a new idea of what the grotesque was capable of as a contribution to social enjoyment. A more delightful companion than he was it would be hard to find. He was running over with sympathy for all sorrow, wrong, and ruth, and running over, too, with admiration for all the good men and good causes of his time. He was gifted with an abounding kindliness and generosity which did much for the amusement of his friends, owing to his occasional attempts to conceal it under a show of grimness, the hollowness of which was always exposed by the unchanging benevolence that beamed from his eyes. He was in all things a gentleman in the best sense and in all senses of the word, a gentleman both of the old and new school, and would have been a gentleman in any society or in any age. His latter years were much cheered by the success of his sons—one the well-known novelist, and the other a professor at Harvard, who has made his mark in psychology and physiology, and is one of the most promising of the younger explorers in the field of philosophy. Neither of them, unfortunately, was with him at his death. The flow of his humor continued to the last, and left no doubt that the end came to him, as for some time past he said it would come, as welcome rest. Mr. James was an early but not a frequent contributor to the *Nation*.

—Considerable interest relative to the antiquity of man on this continent is likely to be awakened by the discovery, announced some little time since, of fossil human footprints (so called) in the rock on which the Nevada State Prison, situated one and one-half miles from Carson City, is built. The prison, which is described as lying in a valley having an elevation of 4,600 feet, with the Sierra Nevada on the west, the Washoe range on the north, and the hills of the Carson desert on the east and south, occupies the crest of a sandstone hill sixty feet in height, the materials of which, extracted through convict labor, have been largely utilized for building purposes. As a result of quarrying operations the rock has been removed from an area covering approximately one and three-quarters acres, and to a depth varying from fifteen to thirty-two feet, the actual depth beneath the surface of the stratum containing the footprints being about fifteen feet. From the presence of fresh-water shells of the genera *Anodonta* and *Physa*, and the general lay of the strata, it would appear not improbable that the locality represents the border of an ancient lake or pond, whose basin had gradually been filled in by the detritus washed off the neighboring mountain slopes.

—The so-called human footprints (and, indeed, an inspection of the outlines furnished by Dr. Harkness would scarcely permit of their being classed as anything other than the footprints of the genus *homo*) are grouped into six series, each series being represented by a number of impressions (from eight to seventeen) in regular order, "and each showing more or less plainly the imprint of a sandal." In no instance is there a *complete* impression of the foot—*i. e.*, toe and heel—but enough remains in most cases to enable a probably correct restoration to be made of the entire outline. In the series of tracks most carefully measured the average stride was found to be two feet and three inches, or very nearly that which is made by the human species at the present day. But, singularly enough, the straddle, or transverse distance between the opposite feet, reckoned from the centres of the impressions, measured fully eighteen inches; and, indeed, the length of the impressions themselves marked eighteen and one-half inches, with a breadth of heel of six inches—proportions very much beyond what we expect to meet with in normal man. These circumstances, taken in connection with the fact that there are no differentiated toe marks—the portion of the tracks corresponding to the front of the foot "being as smooth as the work of a mason for the distance of two or three inches"—have led to the supposition that the feet making the impressions must have been encased in sandals, possibly hollowed out of wood. Associated with these foot-tracks are stated to be those of various birds, the wolf, deer, horse, and mammoth, those of the last-named animal in some instances obliterating the supposed human tracks, and consequently being of later formation. As far as can be determined from the drawings and descriptions furnished by Dr. Harkness ("Footprints found at the Carson State Prison"), there would appear to be but little if any ground for doubting that the prints in question were produced by an animal closely allied to, if not identical with, *homo*. The absence of overlapping in the impressions, such as would be brought about by the treads of the hind foot on (or near) to the mark of the fore foot, almost positively precludes the possibility of the organism having been a quadruped, such as a bear or one of the extinct megatherioids, as has been hinted at by some authorities. Again, the uniform outline of the inner border of the foot in the region of the big toe, showing no trace of opposition, would debar the claims of the anthropoid apes. No satisfactory stratigraphical evidence has thus far been submitted tending to prove, as has been maintained by some, that the rock formation containing the impressions is of older date (Pliocene) than the Post-Pliocene or Quaternary period, nor is there anything in the associated fossil remains to indicate this greater antiquity. The contemporaneity of man and the mammoth has long since been established, but it is interesting to prove that a similar contemporaneity on this continent existed between man and the indigenous horse.

—It is well known that for some years the relations between Björnson and King Oscar II. have been extremely unfriendly. Indeed, the King has been suspected of stooping to undignified attacks upon Björnson's character. Björnson is a poet, and his Majesty King Oscar is also known to be a friend to the muses. From time to time he has published translations from Goethe and other standard poets, and he has also now and then produced original poems. The latter were recently published in a German translation by Emil Jonas. For this the translator received from the author a medal "pro litteris et artibus," and he has since received other decorations from the same source Last summer, by royal invitation, he accompanied the King on a visit to Norway. Still more recently a cyclopædia has been published at Oberhausen by A. Spaarmann, entitled 'Pierer's Konversations-Lexikon,' and among the articles relating to Norway are found an exceedingly abusive one on Björnson and a highly laudatory one on King Oscar. Of Björnson it is said that "his talents are damaged by an assumed, affected Norse air—in short, by an affectation in which he is surpassed only by his competitor Ibsen. The mannerism (*Manirirtheit*) and unnaturalness of both are particularly offensive in their language, style," and so on in a long tirade without one word of praise. Of King Oscar we read that he is a poet of the highest rank; the particular excellences of his verse are all enumerated, and it is stated that there is a "perfectly masterly metric translation into German by Emil Jonas." A Norwegian residing in Saxony was struck with the strange character of these and other articles, and accordingly wrote to the publisher for information in regard to their authorship. The answer revealed the facts, (1) that Emil Jonas was the author of the articles, including the one on Oscar II., with its "eine ganz meisterhafte Uebersetzung"; (2) that the articles had been submitted to his Majesty before they were printed, and that he had read and approved them; and (3) that King Oscar had decorated the publisher, Mr. Spaarmann, with the Vasa order, in recognition of the excellent manner in which the Norwegian and Swedish portions had been cared for. These facts need no comment. Mr. Spaarmann's letter was written simply with a view to emphasizing the value of the work in regard to Norway, for he himself had no suspicion of the bias of his Scandinavian editor.

SYMONDS'S RENAISSANCE IN ITALY.

Renaissance in Italy. Italian Literature. By John Addington Symonds. New York: Henry Holt & Co. 2 vols., 8vo.

INSTEAD of the quotation from Machiavelli's 'Art of War,' "Questa provincia pare nata per risuscitare le cose morte, come si è visto della Poesia, della Pittura, e della Scultura," Mr. Symonds should have taken as a text a passage in Taine's Introduction to his 'History of English Literature': "The more a book represents important *sentiments*, the more it is the work of literature; for the proper office of literature is to take notice of *sentiments*." He is in full accord with the above maxim, and, imitating and following Taine's practices and ideas, he has dragged to light all the low, deservedly forgotten writings of the period of the Renaissance in Italy, provided they expressed sentiment of some sort—good, bad, indifferent, crazy, childish, and above all licentious—and displayed them for the admiration of refined modern readers. In this, therefore, he cannot claim the merit of originality, as any one may see by comparing Taine's chapter ii. on the English Theatre of the days of Beaumont and Fletcher with Mr. Symonds's reviews of the 'Mandragola,' 'Clizia,' 'Cortigiana' of the days of Aretino.

After a preliminary exposition of the three periods of growth, Mr. Symonds discusses the origin and formation of the Italian language. In this inquiry he adheres closely to his Italian authorities; but we are sorry to notice that he also follows them, and with a great deal of partisan spirit, into that bitter and wearisome contest about the Sicilian or Tuscan origin of the language, and whether as late as the Renaissance it should be called Tuscan or Italian, taking sides decidedly with the *Toscaneggianti*. We have neither space nor desire to enter into this discussion, noting only that the author takes issue even with the authority of Dante himself in this petty war that disgraced Italian literature for centuries, stating in reference to the origin of the Italian form of poetry in Sicily that "there is reason to believe that when Dante treated of the courtly Sicilian poets in his essay 'De Vulgari Eloquio,' he knew their writings in a form already *Tuscanized*." That Dante, writing a few years after these Sicilian poets had sung, should have known less about their poems than we do, and given credit for creating this new form of language to the court of Frederick II. in Sicily rather than to his beloved native Tuscany, is a statement which we cannot accept.

In the second chapter, which the author entitles "The Triumvirate," he treats of the three fathers of Italian literature—Dante, Petrarch, and Boccaccio, with the addition of some of their contemporaries. But he is altogether too diffuse in his exposition, and seems to attach as much importance to the lesser as to the greater poets. Speaking of Dante's 'Commedia,' he says:

"We may, perhaps, feel a certain confusion between the personalities of Virgil and Beatrice and the thoughts they represent, which chills our sympathy, raising a feeling of indignation when Virgil returns *unwept* to Hell, and removing Beatrice into a world of intangible ideas" (p. 81).

"Unwept" is a very ill-considered expression, and the celebrity of the passage in the "Purgatorio" makes it seem all the more strange. In fact, the very first commentator we chanced to consult calls special attention: "all' arte del poeta in questa scena, e all' affeto che spirano tutti i suoi versi." Let us produce the passage. Dante has just beheld Beatrice in person, and at this point Virgil vanishes:

"I would have said (the words to my lips came),
'No dram of blood that in my heart is left
Trembles not now—I feel that old-time flame,'
But of his guidance Virgil had bereft
Both me and Statius, Virgil my control—
Virgil, my Father, whom as loved the most
For my salvation I had given my soul:
Nor all the joys our ancient Mother lost
Could save the cheeks he late had cleansed with dew
From turning back to darkness and to *tears*.
Dante! *weep* not that Virgil parts from you,
Weep thou not yet; however deep appears
This wound, a sharper sword must pierce thee through.'"

(T. W. Parsons's translation.)

It is needless to repeat, after this quotation, that Virgil does not go back to the Limbo of the Poets unregretted or "unwept."

We doubt in this respect whether the author is fully capable of appreciating the greatness of Dante; for, though he dares not openly to avow it, yet he seems to lean more toward Petrarch. He makes "Petrarch the first Italian, while Dante remained a Florentine," saying that "from his [Petrarch's] lips was for the first time heard the passionate cry of *Italia mia*" (p. 87). Has Mr. Symonds wholly forgotten the meeting with Sordello, and Dante's indignant outburst of mingled bitterness and tenderness, so replete with the loftiest Italian patriotism, so steeped and throbbing with "la carità del natio loco"—

"Ahi serva Italia! di dolore ostello!
Nave senza nocchier in gran tempesta"?

In his endeavor to make out Dante a Florentine and Petrarch an Italian patriot, Mr. Symonds states that: "He [Dante] *refused* the poet's crown unless it could be taken by the font of baptism upon the square of Florence." And further on, repeating the statement, which the reader may suppose to be an historical fact, he deduces from it what follows:

"Thus, while Dante remained a Florentine, Petrarch was the first Italian. Nor is it insignificant that whereas Dante *refused* the poet's crown unless he could place the laurels on his head in Florence, Petrarch ascended the Capitol among the plaudits of the Romans, and, in the absence of Pope and Emperor, received the wreath from the Senator Romanus. Dante's renunciation and Petrarch's acceptance of this honor were equally appropriate" (p. 88).

When was Dante offered a poet's crown, and when did he renounce it? The only hint at such an honor is a desire of an obscure Latin poet, Giovanni del Virgilio, who in some of his Eclogues invited Dante to come to Bologna and take the laurel crown. It was not even the University of Bologna, but the wish of a private person. Is it wonderful that Dante should refuse; and is such a refusal of sufficient importance to base upon it the provincialism of Dante? The only allusion to a wish for the laurel crown is in the twenty-fifth canto of the "Paradiso," in which Dante, "knowing partly," as Carlyle says, or, as Mr. Lowell says, fully, "that his work was the great, the greatest a man could do," felt convinced that after its publication it would mollify his fellow-citizens, and that, recalling him from his unjust exile, they would crown him with laurels in his "bel San Giovanni." But he died before his work was fully published, and his wish remained only a poet's prophetic vision.

Mr. Symond's treats of Boccaccio with a prolixity absolutely wearisome, dilating upon his every work with what may be called indecent minuteness. We find in this respect a most reprehensible tendency to sift out the most obscene specimens of the writings of that corrupt age, even from authors who do not deserve mention either for eminence, talent, or style. All but one or two of the authors in the third chapter, for instance, interesting as they may be to Italian scholars in the study of that epoch of transition in their literature, are of no value whatever to an English student, and worthy only to be left under the dust of the libraries where the Italians themselves have buried them. Why should we quote Alberti's disgusting 'Novelle' *usque ad nauseam*? his 'Ecatomfila' and 'Amiria'; and notice that "Heliogabalus might have used her precepts in his 'Concio ad Meretrices,'" even quoting in a note (in the original) filthy passages, as if the Italian were a dead language that only one in a million understood? Was Alberti of such importance to the history of Italian literature? We never heard that he was a genius, nor has he ever been thought so, except by the fanatical worshippers of the *Cinquecento*. At the end of this chapter the author, with his wonted inclination for what is sensual, devotes fourteen pages to a disgusting effusion of a distempered brain, the 'Hypnerotomachia Poliphili' of Francesco Colonna, a vile monk. What has that to do with Italian literature, since it is written in a maccaronic Italo-Latin jargon?

The chapter on "Popular Secular Poetry" is a fair exposition of the popular literature of the *Quattrocento*, demonstrating that, while the upper classes used a bad Latinism, the people of all Italy kept up the Italian language. Though, with his Tuscan bias, in one place Mr. Symonds says "that the music of these lyrics still lingers about in the Tuscan highlands and the shores of Sicily," he then speaks of "the romances of Charlemagne and Arthur being translated into Tuscan," and further on calls Tuscan the *Rispetti, Stornelli, Ciuri*, which are of Southern origin. Why should they be called Tuscan and not Italian? This study of popular songs, or folklore, lately illustrated by such eminent writers as Professor D'Ancona, Carducci, Pitrè, and others, is exceedingly interesting, and the author has made a good use of their works.

In continuation of this study Mr. Symonds dedicates a full chapter of eighty pages and an appendix of eleven more to "Popular Religious Poetry." But where is the poetry in all the doggerel and worse of the 'Sacred Representations' of that period of decadence? As an example of this, after a description of the religious fanatics called *Flagellanti*—crazy people who went about half naked scourging themselves to death—he enumerates a long string of forgotten authors of what he calls religious poetry, beginning with Jacopone da Todi, in this wise:

"From the *Laudesi* [hymn-writers] of the fourteenth century rose one great lyric poet, Jacopone da Todi, whose hymns embrace the whole gamut of religious passion, from tender emotions of love to sombre anticipations of death and thrilling visions of judgment. Reading him we listen to the true lyrical cry of the people's heart in its intolerance of self-restraint, blending the language of erotic ecstasy with sobs and sighs of soul-consuming devotion, aspiring to heaven on wings sped by the energy of human desire. The flight of his inebriated piety transcends and outsoars the strongest pinion of ecclesiastic hymnology. Such lines as—

Fac me plagis vulnerari
Cruce hac inebriari
Ob amorem filii—

do but supply the theme for Jacopone's descant. Violently discordant notes clash and mingle in his chords, and are resolved in bursts of ardor bordering on delirium. He leaps from the grotesque of plebeian imagery to pictures of sublime pathos, from incoherent gaspings to sentences pregnant with shrewd knowledge of the heart, by sudden and spontaneous transitions which reveal the religious sentiment in its simplest form, unspoiled by dogma, unstiffened by scholasticism. None, for example, but a true child of the people could have found the following expression of a desire to suffer with Christ:

O Signor per cortesia
Mandame la malsania.

A me la freve quartana
la contina e la terzana
la doppia cottidiana
Colla grande ydropisia.

A me venga il mal de dente
Mal de capo e mal de ventre
a lo stomaco dolor pungente
en canna l' asquinantia.

Mal de occhi e doglia de fianco
e la postema al lato manco
tysico me longa enalco
e omne tempo la frenesia.

Agia el fegato rescaldato
la milza grossa el ventre enfiato,
lo polmone sia piagato
con gran tosse e parlasia" (p. 283).

Is the author serious, or making fun of his readers? Paolo Emiliani-Giudici, in his 'History of Italian Literature,' Lesson Third, says:

"Since I have mentioned religious poetry, the subject leads me naturally to speak of two authors [Jacopone da Todi and Guido d'Arezzo] whom nobody now reads in Italy, and, nevertheless, especially of one of them, they rave about (*si farnetica*) out of Italy in the most incredible manner.

"The eloquent Villemain, fourteen years ago, portrayed before an elegant assemblage in Paris the aspect of European literature in the Middle Ages, with that refined and brilliant art, that charming brightness, that distinguishes the French. Returning home after having delivered the twelfth lesson of his literary course, he found a letter in which he was bitterly reproached for not having spoken of a certain monk, Jacopone da Todi, from whose poems Dante had derived his inspiration. Let those who know the fantastic brains of that illustrious country imagine the case of the good Villemain, who, until that day, had never heard of the wonderful Jacopone. He immediately procured a copy of his works, and began to peruse them with surprising patience. He read, reread, searched, scrutinized, and then he returned to read, to search, to scrutinize, to investigate, here, there, up and down, with the passion and good-faith of an antiquary who examines the ruins of an ancient edifice, but the looked-for inspiration did not appear. Accordingly, trusting in the honesty of his own convictions, in the full expectation of being hissed by those who sent him the letter, he presented himself to the assemblage, and, after a short but exquisite apology, he announced candidly that Dante, like himself, had absolutely ignored the works of the monk, and that he was the clown of that mystic style of which Dante was the poet: 'C'était, si vous le voulez, le bouffon du genre dont le Dante était le poète'"

It is noteworthy that, after the extravagant praises given to Jacopone and his contemporaries, Mr. Symonds concludes his long chapter in these terms:

"As an apology for the space here devoted to the analysis of plays childish in their subject-matter, prosaic in their treatment, and fruitless of results, it may be urged that in the 'Sacre Rappresentazioni' better than elsewhere we can study the limitations of the popular Italian genius at the moment when the junction was effected between humanism and the spirit of the people."

And to show these "limitations" the author has thought it necessary to fill nearly one hundred pages with trash, for which four pages would have been all-sufficient.

We have no space to follow our author in the portrayal of the Italian epic literature of the Renaissance, noting only that, though it was a revival of letters, the subject-matter was not of Italian origin, not Dantesque, but foreign, derived from the stories of Charlemagne and the Paladins of the Round Table, which pleased the despots of the period, who endeavored thus to revive the feudalism of the Middle Ages. All the poets of this literature were servants in their courts, and wrote to please and flatter them, and not to instruct the people, which is the true aim of literature, in spite of Mr. Taine and the school of sentimentalists. It was, therefore, destined to decay and expire, as it did, in the vast sheepfold of Arcadianism, feebly piping and bleating itself to death. The true Italian genius revived only in the present century from the pure Italian sources of the *Trecento*.

In the second volume Mr. Symonds continues his upturning of obscure Italian names, of no consequence whatever in literature, and only interesting to antiquarians, or people who morbidly gloat over debasing reading. He himself acknowledges this after a long review of the 'Novelle' of Bandello, saying: "But the majority of these tales are simply obscene, with no point but a coarse picture or a shockingly painful climax." Why mention them at all, then, if they had neither literary merit nor influence in literature? Yet, for page after page, he rakes the gutters for the unread and forgotten Italian scribblers of the period, among others, the "indescribable licentious novelists of Siena," the forgotten Sermini and Fortini, "whose best passages from the *Ars Amandi* admit of no quotations"; the Lombard Cornazano, whose "carefully-wrought sixteen stories are very droll, but very dirty." Then he continues with a chapter on the Drama, still preferring the *Cinquecento* filth—the 'Talanta,' the 'Clizia,' the 'Mandragola,' the 'Calandra,' the 'Cortigiana,' quoting in the original Italian some of their indecencies, and taking more pains about Aretino's disgusting comedies than about the 'Aminta' of Tasso. Even in the next chapter, treating of "Pastoral and Didactic Poetry," he quotes Pontano's lascivious Latin works, the 'Fannia,' 'Focilla,' 'Ariadne,' the three books 'De Amore Conjugali,' etc., of which we do not see the slightest relation to Italian literature.

In chapter xiii., on the Purists, we feared that Mr. Symonds would resuscitate the old pedantic war on style and words that stifled the true literature of that period; but, fortunately for the reader, he stops short, acknowledging that "to stir the dust of those obsolete controversies on the language of Italy is no part of his present purpose." He enumerates a long string of poetasters, male and female, who, with one or two exceptions, deserve the oblivion to which they have been relegated. Why even mention the courtesan Tullia d'Aragona, who, he says, "ruled society in Rome, and lived in infamy in Venice"? What society did she rule in Rome, except that of the *demi-monde* and the *roués*? And what verses did she write worthy to be recorded even among the poetasters? There is only one deserving of mention among the women, Vittoria Colonna, and though Mr. Symonds does her justice, yet we regret that, having filled his two bulky volumes with worthless quotations, he should not have given us some of her charming sonnets.

In the chapter on burlesque poetry and satire, reviewing Berni only briefly toward the end, scarcely mentioning Tassoni, and leaving out Redi entirely, the only three poets worthy of note, Mr. Symonds fills the whole chapter with the licentious filth of the maccaronic poet, Girolamo Folengo, and lesser ones of the same tribe, as if it was his intention to show to what depths of degradation the Italo-Latin muse had sunk in the hands of these dissolute verse-makers. He even seems to regret that modern decency does not allow him to quote more of this stuff, for he says on page 330: "It is *unfortunately* impossible to bring either the cook-shop-keeper or his female servant, the mountebank or the glutton, before modern readers. These pictures are too Rabelaisian."

In the same spirit Mr. Symonds quotes, of all the charming satires of Berni, the most scurrilous one, which he addressed to the foul-mouthed Aretino, whom, in turn, Mr. Symonds has considered worthy of a full chapter of forty-five pages, which he has not allowed to any other author of the Renaissance, detailing his life, his habits, his poems, his blackmailings, even his traditional death in "a house of ill fame, kept by his two sisters" at Venice. It is surprising that in a book which treats of literature of the period of Ariosto, Tasso, Guarini, Bojardo, Bembo, Castiglione, Trissino, Michelangelo and Vittoria Colonna, Aretino should occupy so much space. The effect is as if we should be suddenly and unexpectedly transported from the classical picture gallery of the Neapolitan Museum to the Pompeiian *Gabinetto Osceno*. What most astonishes us is that the author acknowledges that "Aretino contrived to render himself formidable by reckless evil-speaking; and, while he had no learning and no style, he managed to pass for a writer of distinction."

The volumes end with a chapter on "History and Philosophy," and another, a "Retrospect of the Renaissance Literature." They are the best in the whole work, the first especially, showing that the author has made good use of the exhaustive study of Machiavelli, by Prof. Villari, the 'History of Italian Literature,' by De Sanctis, and the Italian authors mentioned in the preface. In conclusion, let us say that the two bulky volumes contain a mass of heterogeneous information which, if sifted, purified, and reduced in amount to 400 pages, might be very instructive; for Mr. Symonds is a most learned scholar and delightful writer, his industry is marvellous, and the patience with which he has dived into the most hidden recesses of history very praiseworthy. But his discrimination is faulty, and the proclivity to what is indelicate absolutely reprehensible.

Corea: The Hermit Nation. By W. E. Griffis. Charles Scribner's Sons.

Even the enthusiastic inquirer into the history and ways of any nation of the Far East takes up a book of comprehensive information with the feeling that he has a weary road to travel before he has ploughed through the dry-as-dust details of religion and morals, dress and demeanor, habits and customs, traditions and history. Here, for once, he need not fear. This author should be engaged by some benevolent lover of students to make such learning a pastime and not a task, by writing a text-book for each one of the Asiatic nations. His sense of humor—not too broad—his power of condensation without loss of interest, his judgment in enlarging, his apt and complete metaphors, make him the most pleasing of guides in a strange land. In writing of Corea he had, to be sure, the peculiar advantage of a complete knowledge of Japanese affairs, and in fact is so much identified in feeling with that country that as one reads he sometimes feels as if it were a "Jap" that was speaking. But there is sufficient Western individuality to show that he could make himself competent to discourse of other portions of the Far East with nearly equal success. Corea, in itself, though interesting, is not peculiarly so, either from its history or the character of its people. It owes the retention of its nationality through so long a period mainly to its peculiar situation on an isolated peninsula, partly to the indifference of China, which preferred to leave it independent as a buffer against Japan, and in a less degree to a quality of patient endurance in its people, rather than active courage, which saved it at various epochs from the attacks of the fierce warriors of Japan. The principal invasion from that country, however, which happened in 1592-1598, and which reminds one in many of its details of the invasion of Mexico by Cortes, would probably have been successful but for the help given by China. One singular circumstance connected with that expedition is that one of its two leaders was a Christian, and an ardent one at that, much given to proselytizing; and as the other was an equally ardent Buddhist, there was no love lost between them, and to their mutual ill-will are ascribed many of the misfortunes which befell the Japanese. One learns with some surprise that Corea was the nursery of Japan in the arts and sciences and in religion, in such early times as the ninth century, conveying the learning of India and China across the narrow seas to her then more barbarous neighbor.

Coming down to present times, Mr. Griffis tells well the story of the French expedition, and almost piratical foray, as well as of "our little war with the heathen," being the history of the gallant but unjustifiable retribution inflicted on the Coreans because of the burning of the American schooner *General Sherman*. There was, to be

sure, the excuse of a misunderstanding, but, viewed from Mr. Griffis's standard of international ethics, an inexcusable excuse. Mr. Griffis considers the country ripe for change. The King and the nobles are all in all, while the people are nothing, and even the King's authority has suffered by the encroachment of the feudal power. He says a native caricature thus depicts the situation:

"Chōsen (Corea) is represented as a human being of whom the King is the head, the nobles the body, and the people the legs and feet. The breast and belly are full, while both head and lower limbs are gaunt and shrunken. The nobles not only drain the life-blood of the people by their rapacity, but they curtail the royal prerogative."

He sums up the state of education as follows:

"The present position of Chōsen is that of Europe in the Middle Ages. The Confucian temples and halls of scholars, the memorial stones and walls inscribed with historical tablets and moral maxims, the lectures and discussions of literary coteries, and the poetry parties, concentrate learning rather than diffuse it. Nothing like the number of bookstores, circulating libraries, private schools, or ordinary means of diffusing intelligence, common in China and Japan, exists in Corea. Science and the press, newspapers and hospitals, clocks and petroleum, and, more than all, churches and school-houses have yet a mighty work to do in the land of morning calm."

In 1876 the Japanese exacted a treaty of friendship and commerce, and the port of Fusan, at the southeastern corner of the peninsula, was opened to them to be followed by Gensan on the east coast, in 1880, and Inchiun, on the west coast, and twenty-five miles from the capital, at the end of the same year. The Chinese and Americans followed suit in this present year, and the nations of Europe will be included before it expires. With such elements of change from the outside world and disaffection within, it needs no prophet to foretell revolution within a limited period of time; and as those who are to be overthrown have lived by the sword, it is likely that it will be by the sword that they will perish. As respects her future connection with the world at large we think Mr. Griffis overvalues Corea's position in the East. He thinks that "on her soil will be decided the problem of supremacy by the jealous rivals, China, Japan, and Russia." If ever appropriated by either, we think it is likely it will be done by whichever Power has already, on other fields, attained that supremacy. There is good chance, however, that neither rival will so far overcome one of the others as to leave it free to act with the Corean peninsula without regard to the views of the third and that between them Corean independence has a long existence before it.

The Mississippi. By Lieut. F. V. Greene, U. S. A. [Vol. VIII. of the Campaigns of the Civil War.] Charles Scribner's Sons.

In the new realms of space in four dimensions there may be vast possibilities for military genius, but Vicksburg belongs to the commonplace, and offers access from the customary points of the compass. If, then, west, north, and east had been tried unsuccessfully, it would seem that a resort to the south was not so much the choice of a general as a necessity of geography. Hence the establishment of a base of operations at Grand Gulf. Finally, the race experience, left to clarify through the slow years, deposits a proverbial sediment such as, "the longest way round is the shortest way home," in instinctive deference to which the Union troops, instead of taking a bee-line direct for Vicksburg across the Big Black Valley, go round *via* Jackson, using the various means of communication thence to their objective point, and then leaving these wholly unavailable by the enemy gathering in their rear.

All this was very cleverly done and is quite plainly described by Lieut. Greene. It does not seem probable that the Union troops could have manœuvred better, or the Confederates have been handled worse. The result was the surrender of Vicksburg in due process of time, as well as Port Hudson. As these things were certain to follow, unless the Confederate Government previously accumulated an adequate relieving force, a tender economist of human life might have been tempted to wish that a sociable blockade could have been agreed upon, with the understanding that in the usual forty days, unless interfered with by outsiders, or that when the party of the one part had starved long enough, the party of the other part quietly holding its own, the inevitable surrender should follow with all proper form. This would have saved a heartache or two, but the roses of garlands earned in war must always be red.

Port Hudson was bound up in the fortunes of Vicksburg, of course, and also contributed largely to the surgical education of the country, being mainly another siege in which the assaulting troops reached the ditch promptly enough, but never got any further, unless a peep over (as at Corinth or Manassas) revealed the enemy's absence. True, there are some exceptions. Terry's brigadiers carry the proofs thereof with them to this day.

The maps of this volume are not particularly better than those of its predecessors. Their information is much like that of a wrecked guideboard. As to the text generally, we should say it lacks exactly that which is to be found very frequently, and always most happily, in the author's 'Army Life in Russia'—touches of local color, namely, that make the narrative more of a picture and less of a directory. There are two kinds of detail: the dry, arithmetical sort, and the detail which links you to the history so closely that its characters seem part and parcel of your own experience, and it is you yourself who storm Badajos with Napier, or drive back the Russians at Inkerman with Kinglake, or press toward the Sadowa bridge with Prince Frederick Charles and Hozier. This latter is the sort of detail of which there is none too much in any of the Scribner series. 'The Mississippi,' however, does not profess to be other than a compilation of facts and the interpretation of them. For the former the official archives are responsible, and only they who have undertaken the labor of reference and verification know anything of the drudgery involved. The task in this instance has certainly fallen into careful, and the interpretation into competent, hands, and if the description lacks somewhat of the glow of the forge, it is marked by the accuracy of the cabinet.

In the issues of Vicksburg siege, Port Hudson may have been a mere episode, but there was plenty of material for dramatic treatment. In some respects its history was a curious parallel to that of Vicksburg, and the points of difference are quite worthy of consideration. General Grant passed the Mississippi to the south, and moved east to Jackson, returning thence to the river. General Banks for like reasons went west to Alexandria, and then, falling back, crossed the Mississippi to the north and closed in on Port Hudson. But General Grant penned up the Confederates in Vicksburg, after hammering them soundly, as was his wont, while General Banks only elbowed them out of his way. Introducing himself direct to the enemy at Bisland, he sent the Fourth Division round by Grand Lake on the right to disembark at Indian Bend on the Teche Bayou, up which lay General Taylor's only line of retreat. The Teche at this points presents to the landing a V with impassable swamps for the background. The Fourth Division moved down the left arm towards the lower extremity of which Taylor was met, hurriedly retiring before the main body of the Federals. With some friction he rubbed by straight across the angle and went thankfully on his way, soon, however, to return. Had the Fourth Division taken the other horn of the dilemma, the subsequent reconstruction of General Taylor might have been a matter of more difficulty.

But New Orleans, with a population of some 200,000 hostiles—women and children worse than the men—gave to the situation before General Banks elements of very serious perplexity that were absent from the Vicksburg complication. Fortunately, General Butler had preceded General Banks, and New Orleans was still torpid from the vigorous throttling administered by the former commander. That problem of New Orleans, and how it was solved by the present Governor-elect of Massachusetts, deserves close study, but lies outside of our limits, except to note that the tranquillity of this city, which helped things along mightily for General Banks, was not so much his achievement as the legacy of his astute predecessor.

Some 24,000 men were gathered about Port Hudson in May. There were some 8,000 fit for duty when that place surrendered in July. The rest were scattered through graveyards and hospitals, not altogether the victims of bullet and shell, but rather the prey of disease incident to climate and exposure. The men from Arkansas and Missouri got through a troglodyte existence very comfortably in the burrows of the ravines with their daily handful of ears of corn, but the young pilgrim from New England missed the snug comfort and plenty of the old farmhouse. The transition to camp life and cookery was much less of a shock to Pike County than to Berkshire, and it told accordingly. The Arkansas Traveller was more at home in mud and rain than Sam Lawson.

Jewish and Christian History. Vols. i. and ii.: Bible Narrative and Jewish History; vol. iii.: the Gospel Story and Christian History. Boston: James R. Osgood & Co. 1882.

We are not surprised that there is in this book no indication whatever of its author or authors. It is all the work of scissors, excepting a few lines of introduction, the headings, and possibly a little more in the third volume, to which we confess we have not extended our examination. "No originality is claimed" for the scissors in the Introduction, but considerable familiarity with "authorities for the Old-Testament volumes," including "Xenophon, Grote, 'Bampton Lectures,' Plumptre, Book of Enoch, Milman, Brugsch's 'Egypt,' . . . Kuenen, Conant, Raymond's 'Job,' Stanley, Ewald, Westcott, Noyes, Thalheimer." The scissors' familiarity with such authorities as Xenophon or Kuenen seems to be infinitesimal: from Kuenen three lines have been taken, we believe; but Stanley's works, Smith's 'Old-Testament History,' 'Bible Educator,' and 'Encyclopædia' (which, whose, or what kind we are not told) have been mercilessly cut up, at random, for notes. Miss Thalheimer, who is ranged as an authority between Noyes and Sears, has been made to contribute some pages on Simon, Hyrcanus, Aristobulus, etc., and Herod and his family, introduced thus: "The remainder of the Book of Maccabees is taken from Thalheimer's Ancient History"—the scissors having confounded the Book (*sic*) of Maccabees with Josephus's narratives on the later history of that house and its exterminator.

The scissors and the heading-writer together have confounded less congruous things than those. Thus, chapter xxiii. is devoted to "Zechariah, the Favorite Prophet of King Uzziah in his

Prosperous Days," and consists entirely of pieces cut out of the book of Zechariah—like all other cuttings, pell-mell, without reference to verse, chapter, or book—and beginning thus: "Upon the four and twentieth day of the eleventh month, which is the month Sebat, in the second year of Darius, came the word of the Lord unto Zechariah," etc. Now, "the second year of Darius" was 520 B. C., and King Uzziah, whose favorite prophet Zechariah is here said to have been, died in "B. C. 758," as a little cutting from Smith's Bible Dictionary correctly informs us at the beginning of the following chapter. Whence this confusion? Critics have established the fact that there was more than one prophet Zechariah, and that one was a contemporary of King Uzziah, and our heading-writer, finding a sensational sentence referring to this one, placed it over the cutting from the Zechariah who prophesied two hundred and forty years later. Things referring to two Assyrian kings are equally mixed up in the chapter headed, "The Expedition of Sargon; the Invasion of Sennacherib," etc.—a confusion not remedied by the quotation from Smith, whose remark caused it. All the pieces taken from Isaiah, in the chapter devoted to him, are from those portions of the book of that name which all but universal critical opinion ascribes to much later authorship.

On a level with the chronological sense which determined the order of the pieces is the taste which dictated the selections. We have two pages (one in a supplement) from Isaiah, and the apocryphal "Prayer of Manasseh" in its full dreary length; the noblest and most lucid sentences of Micah are left out, and the following given, without a word of explanation: "Now gather thyself in troops, O daughter of troops; he hath laid siege against us; they shall smite the judge of Israel with a rod upon the cheek." The book is for "the young," but while no note, under "Nahum," tells them what Elkoshite means, or Put, or Lubim, they are informed in a cutting, in connection with the Wisdom of Solomon, of "Vach, or Sarasvati, the goddess of speech, the Sakti, or female form of Brahma, . . . corresponding to the Avalokitesvara, or Kwan Yin, the Sakti of Amitabha, of the later Buddhists—'the manifested voice (of the Deity),'" etc, etc. The quotation may possibly be correct, though the only two quotations which we have compared with the source—those from Stanley, in the chapter on Micah—are disfigured by misconnection and by verbal additions equally useless and tasteless.

Art and Nature in Italy. By Eugene Benson. Boston: Roberts Brothers. 1882.

MR. BENSON'S little book is an appreciative and discriminating record of impressions and reflections on Art and Nature in Italy. The surpassing beauty of the country, together with its touching and significant historic associations, its pathetic and noble monuments, and its interesting conditions of human life—especially in the rural districts—do not appeal in vain to his sympathetic and discerning mind. His language is expressive and often forcible, and in his descriptive passages, which are numerous, the word-painting is clear and beautiful. Mr. Benson's observations on art and artists are generally suggestive and just, especially those concerning Giorgione, Carpaccio, and Titian. His estimate of the character and influence of the art of Fortuny is also remarkably clear-sighted, and we think it will be especially helpful at the present time, when the bizarre, extravagant, and tasteless impulse derived from that and kindred sources is telling so harmfully on our modern arts. There are some minor points in which Mr. Benson seems less clear-sighted, as where, in his fondness for tracing a painter's antecedents, he fancies he finds the prototypes of Raphael's "thin trees" at Urbino, his birthplace. Raphael really got his thin trees from his master Perugino. The book is not profound, but it is true in spirit, and very pleasant to read.

BOOKS OF THE WEEK.

Anson, Sir W. R. Principles of the English Law of Contract and of Agency in its Relation to Contract. Oxford: Clarendon Press.
Armsby-Jenkins. The Farmer's Annual Hand-book for 1883. D. Appleton & Co.
Arnold, E. Pearls of the Faith; or, Islam's Rosary. Boston: Roberts Bros. $1.
Brehm's Thierleben. Chromo edition. Parts 57-60. New York: B. Westermann & Co.
Brockhaus' Conversations-Lexikon. Parts 24-41 (end of Vol. iii.). Leipzig: F. A. Brockhaus; New York: L. W. Schmidt.

For descriptive circular and price-list, address the sole makers, LOCKWOOD, BROOKS & CO., 17 Franklin Street, Boston.

The Nation,

Established in 1865, was a pioneer in the United States as a weekly journal of literary and political criticism of the highest order, conducted free from the control of party, school, or interest of any sort, and has long been a recognized authority at home and abroad. Since its consolidation with the New York *Evening Post*, it has increased its facilities in every department, enlarged its size to twenty-four pages, and added many able writers to its previous list. Its editorial management has been unchanged from the first, and its projectors intend that the *Nation* shall become more than ever before the medium of the best thought of the country and time. The names of the principal contributors will be found below.

Its Departments are :

The Week. Brief comments on the most important current events, domestic and foreign, together with a summary of the week's news in six columns of brief paragraphs.

Editorial and Miscellaneous Articles. Careful and moderate discussion of leading political and social questions.

Special Correspondence. From all quarters of the globe, by intelligent and trustworthy observers.

Occasional Correspondence. Letters to the editor on every subject germane to the scope of the paper.

Notes. Short paragraphs, chiefly on literary, scientific, musical, and dramatic topics.

Reviews of Books. By able writers and scholars (mainly specialists) of both hemispheres.

Fine Arts. Competent criticism of art exhibitions and works of art, the drama, etc.

The form and style of the paper are chosen with a view to the most suitable shape for binding, and a set of the *Nation* preserved, bound, and indexed, makes one of the most complete and readable records of current events of importance in the political and literary world available. Two volumes are completed annually. The index and title-page accompany the last issue of each volume.

Terms, $3 per annum, post-paid. Specimen copies sent on application. Publication Office, 210 Broadway, New York.
